– Ernst Zierke, charged with aiding and abetting with others the murder of 30 persons.[529]

While the acquittals of Jührs and Zierke may be understandable in the light of the low number of murders in which they allegedly participated jointly, those of Lachmann, Schütt, and Unverhau are surprising on account of the seriousness of the indictment and are in striking disagreement with the sentences in the cases of Wolf, Ittner, Dubois, Lambert, and Fuchs who had likewise claimed an emergency state of putative compulsion and had not been charged with any excesses.

Schelvis explains Lachmann's acquittal on the grounds that the court had considered Lachmann to be "mentally impaired."[530] What is much more illuminating, however, is what Schelvis has to say about Unverhau:[531]

> *"He* [Unverhau] *was cleared after both the Hagen and the Bełżec trials* [the latter of which took place in Munich between 1963 and 1965]. *He was the only SS man who voluntarily spoke of his part in Operation Reinhardt immediately after the war."*

In other words: Unverhau had enlisted voluntarily as a witness for the prosecution in the NS trials after the war – and hence received his reward. Schütt's acquittal as well can be explained by his readiness to adopt the prosecution's cause, for he said in the trial:[532]

> *"In answer to the question why I was on the ramp when the transports arrived, I declare I was there out of curiosity. I wanted to convince myself of the inhumanity of the final solution, and to relay my*

531 *Ibid.*, p. 263.
532 *Ibid.*, p. 261.

> *impressions back to Berlin so that I might be released. Under no circumstances did I ever get actively involved* [in the crimes committed] *at Sobibór. In fact, the crude manner in which the Ukrainians carried on repulsed me. The Jews were often pushed and beaten by them. They were merciless."*

All this indicates that the Hagen Sobibór trial, in line with most of the trials against "NS perpetrators," was primarily seen as an instrument to establish the judicial notoriety of the alleged mass murders. Defendants who were ready to cooperate with the court could more often than not count on a lenient sentence.

The Hagen judges behaved at times as if they were mentally deficient, swallowing even the most ridiculous lies uttered by the witnesses. Here is one example:[533]

> *"The witness Moshe B. asserted credibly: while he was waiting at the tables in the German mess hall in the entry camp, SS-Scharführer B. had approached him, asking him bluntly whether he was aware of what was happening in Camp III. When he said he did not know, B. was dissatisfied. He then placed an empty can on* [Moshe's] *head and tried to knock it off by pistol shots, all the time asking him whether he really did not know anything."*

Hence, the *Scharführer* himself did not know what was going on in Camp III, but expected a detainee, who (at least according to the traditional accounts of Sobibór) was strictly forbidden to enter that part of the camp, to tell him! The person behind the abbreviation 'Moshe B.' was actually our old acquaintance Moshe Bahir, whose credibility can be judged by the fact that, earlier on, he had spoken of a gas chamber with a collapsible floor and had asserted that in February of 1943 there had been a celebration at Sobibór on the occasion of the annihilation of the first million Jews (cf. Section 2.2.8., p. 32).

The fairy tale of SS men shooting tin cans off detainees' heads also appears in connection with other camps: at Auschwitz Gottfried Weise[534] and at Majdanek Anton Thumann[535] are said to have played the part of 'Wilhelm Tell' with fatal consequences for the detainees concerned.

535 Tadeusz Mencel (ed.), *Majdanek 1941-1944*, Wydawnictwo Lubielskie, Lublin 1991, p. 167.

It goes without saying that even the dustiest of shelf-warmers of black propaganda, Himmler's visit in early 1943 where he allegedly witnessed the gassing of Jewish ladies, was accepted by the Hagen court at face value:[536]

> *"Actually, at that time, very probably on 12 February 1943, Himmler was present at Sobibór. The court based its clear conviction on statements of the defendants who belonged to the camp personnel at that time, as well as on testimonies of former detainees heard as witnesses, and on the irrefutable opinion provided by the expert, Dr. Scheffler.* […] *In Himmler's honor, a group of pretty young Jewish women was brought in from some labor camp and gassed to provide Himmler with a show."*

By saying that the victims had been brought in from "some labor camp," the court circumvented the difficulty of saying where the women actually came from. There was a good reason for that: while most of the witnesses claim that the victims came to Sobibór from Lublin, Moshe Bahir stated that they came from Trawniki, and for Toivi Blatt they hailed from Włodawa (cf. Subchapter 2.5). Blatt, incidentally, caused a stir during the Hagen trial when he placed on the witness table two braids allegedly found on the former Sobibór camp site.[537]

Finally, we have to talk about the inglorious part Erich Bauer played in the run-up to the Hagen trial. Once the abolition of the death penalty had saved him from the guillotine, Bauer attempted to obtain his freedom by blaming his former comrades. Among other things, he drew a map of the Sobibór Camp for the Hagen court, including the "gas chamber,"[538] and he stated:[539]

> *"I estimate that the number of Jews gassed at Sobibór was about 350,000. In the canteen at Sobibór I once overheard Karl Frenzel, Franz Stangl and Gustav Wagner. They were discussing the number of victims in the extermination camps of Bełżec, Treblinka and Sobibór and expressed their regret that Sobibór 'came last' in the competition"*

539 J. Schelvis, *op. cit.* (note 60), p. 238.

It is said that traitors reap money but no gratitude, but in this case, Bauer reaped neither. After thirty-one years behind bars, at the age of seventy-nine, Bauer died in jail in 1980[540] – because two liars named Samuel Lerer and Esther Raab had decided to nominate him *Gasmeister* and because a court had decided to believe every syllable they uttered. After all, they had testified under oath!

6.5. The Sobibór Trial that Never Took Place

As opposed to the defendants in the Sobibór trials in Berlin, Frankfurt, or Hagen, who had merely occupied low-level posts during the war, the man brought to trial in Vienna in 1962 in connection with the events at Sobibór, Bełżec, and Treblinka was a real heavyweight. Hermann Julius Höfle, born in 1911, had been "*Referent für Judenangelegenheiten – Aktion Reinhardt*" (counselor for Jewish affairs – *Aktion Reinhardt*) in Lublin and deputy of Odilo Globocnik, the chief of SS and police in Lublin. It was he who reported in a radio message that up to the end of 1942 1,274,166 persons had been transported to "B.," "S." and "T." Referring to a meeting with Höfle, Fritz Reuter would write in March of 1943 that the Jews deported to Bełżec would be moved on "across the border and would never return to the General Government" (cf. Chapter 9, p. 297).

Hermann Höfle had been taken prisoner by the British in 1945 and handed over to the Austrian judicial authorities in 1947 but was liberated soon thereafter. In 1961 he was arrested once again and indicted. On 20 (other sources make it the 21st) August 1962, just prior to the opening of the trial, he hanged himself in his Vienna prison.[541] This, at least, is the official version, which is not altogether convincing, though.

After Höfle's arrest, enough evidence was collected against him to fill nine volumes, but "the Vienna prosecutor's office had not managed by that date [Höfle's alleged suicide] to extract a formal indictment from those substantial files."[542]

---

[540] J. Schelvis, *op. cit.* (note 61), p. 247.
[541] www.deathcamps.org/reinhard/hoefle.html
[542] Sabine Loitfellner, *Die Rezeption von Geschworenengerichtsprozessen wegen NS-Verbrechen in ausgewählten österreichischen Zeitungen 1956 – 1975*; www.nachkriegsjustiz.at/prozesse/geschworeneng/rezeption.pdf.

This clearly indicates that Höfle had never admitted the annihilation of the Jews that the prosecution intended to lay at his feet. If he had indeed confessed, it would have been the easiest thing in world for the prosecution to prepare "a formal indictment from those substantial files." This leads one to believe that Höfle, who knew very well what went on in the camps at Bełżec, Sobibór, and Treblinka, had stolidly maintained in the face of the Austrian judiciary that the three camps had been transit camps and that the alleged annihilations were nothing but propaganda.

In view of the important part played by Höfle in connection with the deportations of the Jews, the impending trial would have encountered great international coverage in the media. The Austrian authorities simply could not afford a defendant who refuted, point blank and in front of journalists from all over the world, the alleged extermination of Jews in the three camps of "*Aktion Reinhardt*." Seen in this light, we believe that Hermann Höfle did not commit suicide but was probably eliminated.

6.6. The Three Sobibór Trials in the Soviet Union

Three trials were conducted in the Soviet Union against former Ukrainian guards of the Sobibór Camp. On the subject of the first trial, we have not been able to find out such details as the number of defendants or the place and date of the trial. The website "Aktion Reinhard Camps" gives only the following somewhat laconic information on this point:[543]

> *"A few of the Ukrainian guards who served at Sobibór were brought to trial in the Soviet Union, such as B. Bielakow, M. Matwijenko, I. Nikfor, W. Podienko, F. Tichonowski, Emanuel Schultz and J. Zajcew. They were found guilty and executed for their crimes."*

The second and third trials took place in Kiev in April of 1963 and June of 1965, respectively. During the former, ten defendants were sentenced to be shot, another was sentenced to 15 years imprisonment. During the latter, the Soviet court pronounced three death sentences. If we follow the website "Aktion Reinhard Camps,"[543] A. Pechersky took the stand in the first trial, but according to B. Distel[544] he was a witness for the prosecution at both trials. Alexander A. Pechersky could thus boast of

[543] www.deathcamps.org/sobibor/sobibortrials.html
[544] B. Distel, *op. cit.* (note 59), p. 400.

having brought ten or thirteen men in front of a firing squad and of having had another man locked up for a decade and a half through his lies.

6.7. The Brazilian Extradition Proceedings against F. Stangl and G. Wagner

The first commander at Sobibór, Franz Stangl, as well as SS-*Oberscharführer* Gustav Wagner who had also been stationed at Sobibór emigrated to Brazil after the war. Stangl was arrested in 1967 at the instigation of Simon Wiesenthal and extradited to Germany. Gustav Wagner gave himself up to the São Paolo police in 1978, after Wiesenthal had launched a hunt against another man by the name of Wagner. The Brazilian newspaper *Folha de São Paolo* reports in its edition of 2 June 1978 that he adamantly denied the existence of gas chambers at Sobibór.[545] After having been jailed for some time, Wagner was released. No fewer than four states (Israel, Poland, Austria, and Germany) requested his extradition, but the Brazilian courts rejected all demands.[546] In the proceedings against both Stangl and Wagner the former Sobibór detainee Stanislav Szmajzner appeared as a witness for the prosecution[547] – we have drawn his profile elsewhere in this book.[548]

Franz Stangl was sentenced to life imprisonment by a Düsseldorf court in December of 1970 for the murder of 'at least 400,000 Jews.'[549] He launched an appeal. While the appeal was being processed, the journalist Gitta Sereny visited him in his cell on several occasions. He suddenly died on 28 June 1971. After his death Gitta Sereny wrote her book *Into that Darkness*, which has become a classic of 'Holocaust' literature. The book claims that Stangl had confessed without reservation to the mass murders at Sobibór and Treblinka, which he had been charged with. Still, Gitta Sereny could not really prove her point: there is no recording of her conversations with Stangl, and since dead men don't talk, she could have Stangl say whatever she liked. Gitta Sereny

gives us an interesting account of her last interview with Stangl, though:[550]

> *"The last day I spent with Stangl was Sunday, 27 June 1971. He had not been feeling well during the better part of that week and had stomach problems. I had brought him, on that day, a special soup in a thermos bottle. It was an Austrian soup that he said his wife cooked for him when he was feeling poorly. When I came back after being away for half an hour to have lunch, he had changed completely – he was in good spirits, his face was smooth and his eyes were fresh. 'I cannot tell you how fine I feel, all of a sudden,' he said. 'I have eaten this wonderful soup and then taken a nap. And I have never had such a good rest. Ach, I feel wonderful,' he repeated."*

A day later, Franz Stangl, who had liked Gitta Sereny's soup so much, left this world, and the master chef could write her book without worrying about any arguments. We leave it to the reader to draw his own conclusions from these bare facts.

Once the requests for Gustav Stangl's extradition had been definitely rejected in October of 1980, Gustav Wagner allegedly committed "suicide by stabbing himself." Schelvis designates the suicide thesis as the "official Brazilian version" and adds:[551]

> *"Szmajzner, however, let on that he had not been an entirely passive bystander at his death."*

Shaindy Perl tells us more about this matter:[552]

> *"Wagner's victory* [i.e. the refusal by the Brazilian legal authorities to let him be extradited] *was short-lived; he could not escape his avengers forever. One day in 1980, he was suddenly attacked and killed outside his home. His assailants left his mutilated body on his property and disappeared without a trace."*

7. National-Socialist Policy of Jewish Emigration

The establishment of the Bełżec, Sobibór, and Treblinka Camps took place within a historical context which must be well understood, before one can judge whether these camps – as traditional Holocaust historiography asserts – were extermination camps. For that purpose it is necessary to outline once again, with some more recent amplifications, the framework of the National-Socialist policy towards the Jews, which has been presented before in a separate study.[553]

7.1. Emigration

In one of the first written documents of his political career, Hitler, in a letter dated 16 September 1919 addressed to his friend Adolf Gemlich, proposes:[554]

> *"An anti-Semitism based merely on emotion will ultimately result in pogroms* [sic]. *Rational anti-Semitism, however, must lead to a planned* [and] *lawful fight against, and to the removal of, Jewish prerogatives, which set the Jew off from other aliens living in our midst (legislation concerning aliens). The final unalterable objective, though, must be the removal of the Jews."*

A few months later, on 13 August 1920, Hitler made a speech in Munich on the subject "Why are we anti-Semites?," in which he stressed that scientific evaluation of the Jewish question should result in moves bringing about the "removal of the Jews" from among the German people.[555]

This aim became the cornerstone of Hitler's Jewish policy after his ascent to power.

555 Reginald H. Phelps, "Hitlers 'grundlegende' Rede über den Antisemitismus," in: *Vierteljahrshefte für Zeitgeschichte*, 16(4), October 1968, p. 417.

As early as 28 August 1933, the Reich ministry of economics concluded an agreement with the Jewish agency for Palestine which was to constitute the basis for the emigration of some 52,000 German Jews to Palestine over subsequent decade.[556] In a note of 19 March 1938, the ministry rescinded the agreement on the grounds that Germany was not interested in the emigration of rich Jews taking along their capital, but rather "in a mass emigration of Jews."[557]

The Nuremberg Laws of 15 September 1935 would reaffirm in a legislative manner articles 4 and 5 of the Party's program as elaborated in Munich on 24 February 1920. The aim of the law regarding Reich citizenship and of that concerning Germanic blood and honor was to separate and isolate the Jewish body, which was considered alien, from the German host with a view towards its pending expulsion. Gerald Reitlinger comments: "The Jews were meant to leave the Reich for good."[558]

At the end of 1936, a "Jewish section" was set up within the *Sicherheitsdienst* (Security Service), the main objective of which, according to Léon Poliakov, was "the examination of all problems in the preparatory stages of a mass emigration of Jews."[559]

A *Zentralstelle für jüdische Auswanderung* (central office for Jewish emigration) was established in Vienna on 26 August 1938 and was entrusted to Adolf Eichmann by Reinhardt Heydrich, the head of the Security Police.

A few days after the so-called "Night of broken glass," on 12 November 1938, Hermann Göring called a council of ministers to discuss the difficult situation which had arisen. Heydrich stated that the exclusion of Jews from German economic life had "not really resolved" the basic problem, i.e. the removal of the Jews from Germany. Thanks to the Vienna "*Judenauswanderungszentrale*" (Center for Jewish Emigration), at least 50,000 Jews had already left Austria, whereas, over the same period, only 19,000 emigrated from the *Altreich* (Germany in the borders of late 1937). He therefore proposed to set up an emigration office in the Reich proper modeled on Vienna and to embark on a vast migration policy, to be carried out over the next eight to ten years. Fi-

559 L. Poliakov, *op. cit.* (note 83), p. 16.

nance minister Johann L. Graf Schwerin von Krosigk seconded Heydrich's proposal: it was necessary to move the Jews abroad by all means available. Interior minister Wilhelm Frick stressed that the objective should be to bring about the emigration of the maximum possible number of Jews.[560]

On 24 January 1939, after having received Heydrich's proposal, Göring issued a decree approving the establishment of a *Reichszentrale für jüdische Auswanderung* (Imperial Center for Jewish Emigration), which was inaugurated in Berlin on 11 February. It was to put into practice the core idea of National-Socialist policy towards the Jews: "The emigration of the Jews from Germany must be promoted by all available means." The task of the new office was, in fact, "to take all measures necessary for the preparation of an increased emigration of the Jews," to further, preferentially, the emigration of poor Jews and, where necessary, to ease the bureaucratic practices in individual cases. Göring made Heydrich the head of this office.[561]

A report of the Ministry of Foreign Affairs dated 25 January 1939, entitled "The Jewish question as a factor of foreign policy in 1938," stresses unequivocally:[562]

> *"The ultimate goal of German policy towards the Jews is the emigration of all Jews residing on the territory of the Reich."*

Following the creation of the Protectorate of Bohemia and Moravia, Eichmann – meanwhile promoted to the rank of *Hauptsturmführer* – was ordered on 15 July 1939 by Heydrich to establish a *Zentralstelle für jüdische Auswanderung* (Center for Jewish Emigration) in Prague as well. The founding act defines its objective as "the promotion and accelerated realization of the emigration from Bohemia and Moravia."[563]

This Jewish emigration program encountered an unexpected obstacle in the undisguised anti-Jewish attitude of the great democracies which, while decrying vociferously the persecutions of the Reich's Jews, refused to shelter the victims. In his speech of 30 January 1939, the Führer declared:[564]

564 Max Domarus, *Hitlers Reden und Proklamationen 1932-1945*, Vol. II, first half, R. Löwit, Wiesbaden 1973, p. 1056.

> *"We are witnessing today the shameful spectacle of the whole democratic world shedding bitter tears, but remaining solidly hard-hearted toward the sufferings of the poor Jewish people at a time when it is their obvious duty to help."*

Hitler was alluding to the failure of the Evian conference, held from 6 to 15 July 1938 at the famous French spa. It had been convened at the suggestion of U.S. President Roosevelt and was to provide help for the victims of National-Socialist persecutions, primarily the Jews. But right from the beginning the good intentions of the U.S. President appeared dubious, as we hear from the Jewish historian Michael Mazor:[565]

> *"At his press conference in Warm Springs, President Roosevelt had already limited the possibilities for Evian by saying that no revisions or increases in the immigration quotas of the United States were planned in this respect. In the invitations to the conference sent to 33 countries, Roosevelt had underlined that it was not expected of any country to accept more immigrants than were presently scheduled by its laws."*

On such a basis, the Evian conference was doomed from the start. The result was that "the free world abandoned the Jews of Germany and Austria to their merciless fate."[565]

On 25 November 1939 Ehrhard Wetzel and Gerhard Hecht, officials concerned with racial policy, penned a memorandum entitled "The question of the treatment of the formerly Polish territories from the point of view of racial policy," which constituted a first draft of the future "*Generalplan Ost*." It contained, i.a., a plan for the resettlement of "some 800,000 Jews from the Reich (*Altreich*, Austria, Sudetenland, and Protectorate)" into the occupied Polish territories and of "another 530,000 Jews" from the formerly Polish territories now incorporated into the Reich.[566] The destination of these deportees was undoubtedly the General Government, which had been set up officially on 12 October.

The plan followed directives by Heydrich, addressed by express letter to all heads of *Einsatzgruppen*, on the subject of the "Jewish question in the occupied territories" dated 21 September 1939.[567] One of these directives, the Nisko[568] plan, suggested the creation of a Jewish

568 Between 20 October 1939 and 12 March 1941, 6,615 Jews from Austria were taken to

reservation in eastern Poland. The attempt was possibly initiated by Eichmann, but it failed.[569]

In any case, the idea of Jewish emigration had not been altogether abandoned, for it was recommended in the above memorandum:[570]

> *"In order to render the Jew fit for emigration, it will be advisable, if need be, to improve his education."*

Himmler wrote in a memorandum of May 1940:[571]

> *"I hope to see the notion of a Jew melt away through the possibility of a major emigration of Jews to Africa or some other colony."*

In the same document, he rejects "the Bolshevik method of the physical eradication of a people [as it is,] according to my deeply rooted conviction, ungermanic and impossible."[571]

On 24 June 1940 Heydrich, the head of the RSHA, asked the minister of foreign affairs, Joachim Ribbentrop, to be informed of any ministerial meetings concerning the "final solution of the Jewish question," explaining the request by saying:[572]

> *"In 1939, the General Field Marshal* [Göring]*, in his quality as administrator of the Four-Year-Plan, entrusted me with the implementation of the Jewish emigration from the territory of the Reich. Subsequently, it was possible, even during the war and in spite of considerably difficulties, to carry on the Jewish emigration successfully. Since 1st January 1939, when my office took over this task, more than 200,000 Jews have so far emigrated from the Reich area. However, the problem as a whole – we are dealing with some 3¼ million Jews in the areas presently under German sovereignty – can no longer be solved by emigration.*
>
> *Thus, a final solution on a territorial basis will impose itself."* (Underlings in the original)

As a consequence of this letter, the foreign ministry developed the Madagascar plan.[573]

573 Two extensive treatments of this question are provided by Magnus Brechtkens, "*Madagaskar für die Juden": Antisemitische Idee und politische Praxis 1885-1945*, R. Oldenbourg Verlag, Munich 1998; and Hans Jansen, *Der Madagaskar-Plan. Die beabsichtigte Deportation der europäischen Juden nach Madagaskar*, Herbig, Munich 1997.

7.2. The Madagascar Plan

On 3 July 1940, Fritz Rademacher, head of the Jewish section in the foreign ministry, drew up a report entitled "The Jewish question in the peace treaty," introducing it as follows:[574]

> *"The impending victory gives Germany the possibility and, I think, makes it our duty, to resolve the Jewish question in Europe. The most desirable solution is: All Jews out of Europe."*

Rademacher goes on to explain that France – in a peace treaty considered to be imminent – would relinquish the island of Madagascar as a mandate, with all European Jews to be deported there, forming an autonomous state under German supervision:

> *"Germany will be given the island as a mandate.* […] *Within this territory, the Jews will be given autonomy in other respects: their own mayors, their own police, their own postal and railroad services etc. The Jews will be solidary debtors for the value of the island."*

Ribbentrop approved the project and forwarded it to the RSHA, which was to take care of the material preparations for the resettlement of the Jews on the East-African island and for the supervision of the evacuated Jews.[575]

This was precisely the "final solution of the Jewish question on a territorial basis" imagined by Heydrich.

On 30 August 1940, Rademacher elaborated a paper entitled "Madagascar project." Its section on "Financial considerations" begins with the words:[576]

> *"The execution of the final solution proposed requires considerable means."*

Hence, "the final solution of the Jewish question" meant nothing but the resettlement of the European Jews on Madagascar. On 12 July 1940, Hans Frank, Governor General in Poland, made a speech announcing the decision[577]

> *"to ship the whole lot of Jewry from the German Reich, the General Government, and the Protectorate to some American or African colony as soon as this can be done after a peace treaty. Madagascar is being considered, and is to be ceded by France for that purpose."*

575 NG-2586-J.
576 NG-2586-D.
577 PS-2233. *IMT*, Vol. XXIX, p. 378.

On 25 July, Frank reiterated that the Führer had decided to deport the Jews "as soon as overseas transportation permits the deportation of the Jews."[578]

In October of 1940, Alfred Rosenberg wrote an article entitled "Jews on Madagascar," in which he reminded his readers that as early as the anti-Jewish congress at Budapest in 1927 "[…] the question of a future removal of the Jews from Europe [was] discussed, and here, for the first time, the proposal was made to promote Madagascar as the intended homestead of the Jews." Rosenberg himself endorsed this idea and expressed his wish for the Jewish "circles of high finance" in Britain and the USA to help with the creation of a Jewish reservation on Madagascar, something which constituted a world-wide problem.[579]

At a meeting dedicated to the topic "The Jewish question as a world-wide problem," which took place on 29 March 1941, Rosenberg declared:[580]

> *"For Germany, the Jewish question can only be considered solved when the last Jew has left the Greater German space."*

Among other things in this connection, he mentioned a "Jewish reservation," which apparently was to be located on Madagascar, even if he did not explicitly say so.

According to statements by Moritz von Schirmeister, a former official in the ministry of propaganda, Joseph Goebbels himself spoke about the Madagascar plan in public on several occasions,[581] and Ribbentrop recalled the Führer's decision to deport the European Jews to North Africa or Madagascar.[582]

The deportation of the European Jews to Madagascar was not a fictitious plan, but a real and concrete project. It was elaborated a few weeks after the armistice in France (22 June 1940), when a peace treaty involving the French surrender of Madagascar to Germany was being mulled over and, above all, when the end of the war was thought to be imminent. The protraction of the war prevented the implementation of this project.

581 *IMT*, Vol. XVII, p. 250.
582 *IMT*, Vol. X, p. 398.

Alongside these developments, the Reich administration continued to promote energetically the Jewish emigration, primarily from Germany.

On 20 May 1941 Reinhardt Heydrich stopped all emigration of Jews from France as well as Belgium "in view of the final solution of the Jewish question, no doubt about to be realized."[583] He obviously expected the imminent implementation of the Madagascar plan. Still, Heydrich reiterated the central tenet of NS policy toward the Jews:[583]

> *"In accordance with an instruction emanating from the Reich Marshall of the Greater German Reich* [Göring]*, the emigration of Jews from the Reich territory including the Protectorate of Bohemia and Moravia is to be implemented actively, even under the present state of war, within the conditions prevailing and taking into account the directives for the emigration of the Jews."*

Then Heydrich goes on to explain in no uncertain terms the reasons for his having prohibited the emigration of Jews from France and Belgium:[583]

> *"As the Jews on the territory of the Reich, for example, have only a limited choice of departure* [routes]*, mainly via Spain and Portugal, an emigration of Jews from France and Belgium would further reduce these possibilities."*

Two months later, on 31st July, Göring entrusted Heydrich with the task of undertaking all necessary preparations for the "*Endlösung*" (final solution), i.e. emigration or evacuation to Madagascar of all Jews within the German sway. In the letter, Göring said:[584]

> *"In addition to the task already entrusted to you by the decree of 14 January 1939, viz. to bring about an optimum solution to the Jewish question by emigration or evacuation in accordance with the conditions prevailing, I order you herewith to undertake all necessary preparations – organizational, administrative, and material – for a comprehensive solution of the Jewish question within the German sphere of influence in Europe. To the extent that the competence of other central agencies is concerned thereby, the latter are* [to be requested] *to participate.*
>
> *I order you furthermore to submit to me in the near future a comprehensive proposal concerning the organizational, administrative,*

and material requirements for the implementation of the final solution of the Jewish question so envisaged."

This document is in complete agreement with the Madagascar plan. The instructions given by Göring to Heydrich "in addition" to those already contained in the decree of 24 January 1939 were for all intents and purposes the implementation of the solution of the Jewish question "by emigration or evacuation"[585] of the Jews in the Reich exclusively, while simultaneously aiming for a territorial "final solution" by resettlement in Madagascar of all Jews in the European countries occupied by Germany. For the very reason that it was to include all Jews of the occupied European states, this solution was labeled a "comprehensive solution" [*Gesamt*lösung], a designation which echoes the "problem as a whole" [*Gesamt*problem], the term used in Heydrich's note of 24 June 1940 (cf. above).

Heydrich clearly alluded to the task entrusted to him by the decree of 24 January 1939 when, on 6 November 1941, he wrote that, years earlier, he had been given the order to prepare an "*Endlösung*" in Europe.[586] He himself identified the "*Endlösung*" with the solution "by emigration or evacuation" targeted in Göring's note of 31st July 1941. This is also the context of the order conveyed to the foreign ministry by Adolf Eichmann on 28 August 1941, which prohibited "an emigration of Jews from the territories occupied by us in view of the impending final solution of the Jewish question in Europe now being prepared."[587]

7.3. From Madagascar Plan to Deportation to the East

Over the months to follow, with the vision of large territorial gains appearing on the horizon since the beginning of the Russian campaign, new perspectives opened up, leading to a significant change of course in the NS policy in respect of the Jews. The "*Endlösung*" by deportation to Madagascar was now replaced by a "territorial final solution" involving the deportation of the European Jews into the eastern territories occupied by the Germans.

585 Legal emigration to other countries or deportation to the East (Poland: October 1939 through March 1940) and/or to the West (unoccupied France: October 1940).

586 PS-1624.

587 PA, *Inland II* A/B, AZ 83-85 Sdh. 4, Vol. 59/3.

This change of course was proposed on 22 August 1941 by SS-*Sturmbannführer* Carltheo Zeitschel, advisor to the German embassy in Paris, who wrote in a note to the attention of ambassador Otto Abetz:[588]

"The continuing conquest and occupation of large territories in the East could at present offer us a rapid solution of the Jewish problem throughout Europe. As we can see from the cries for help addressed to the American Jews in the press of all the Jews in Palestine, some 6 million Jews are living in the regions recently occupied by us, especially in Bessarabia, amounting to one third of world Jewry. In the course of any new disposition of the eastern space, these six million Jews would in any case have to be grouped and a special territory would have to be staked out for them. It should not be a major problem to include the Jews from the remainder of the European states and to move there as well the Jews who are presently crammed into the ghettos of Warsaw, Litzmannstadt (Łodź), Lublin etc.

As far as the occupied areas are concerned, such as Holland, Belgium, Luxemburg, Norway, Yugoslavia, Greece, it would be easy to issue military orders for the removal of the Jews to the new territory in mass transports; other states could be encouraged to follow this example and to expulse their Jews to this territory. Within a short period of time, Europe could be made free of Jews.

The idea of moving all Jews to Madagascar which has been mulled for years and has recently been revived by admiral Darlan, is not a bad thing in itself, but would run into serious logistic problems so soon after the war when the world tonnage of ships, seriously diminished by the war, would be needed for purposes other than offering cruises to masses of Jews. In addition, moving nearly ten million people by ship would take years, even if enough shipping capacity were available.

I therefore submit to you to raise this question with the Reich ministry of foreign affairs in the near future and to suggest a meeting in this sense with the recently designated future minister for the eastern Territories, Reichsleiter Rosenberg, and the Reichsführer-SS for an examination of my proposal. Moving the Jews into the eastern territories, even during the war, should not present insurmountable diffi-

588 CDJC, V-15.

culties, particularly so as the Jews in the General Government could use their own vehicles and public roads."

After having alluded to the situation of the Jews in France, he concluded:

"Furthermore, I suggest approaching the Reichsmarschall [Göring] *in this matter since he is, at the moment, receptive to the Jewish problem; as his present disposition and his experience indicate, he can certainly be expected to become a strong supporter for the implementation of the idea expounded above."*

A plan for the removal of the Jews into the East had been considered earlier on several occasions. On 2 April 1941, i.e. before the beginning of the Russian campaign, Reichsminister Rosenberg had envisioned "to make extensive use of Muscovite Russia as an area for undesirable elements of the population."[589]

On 17 July 1941, Governor General Frank noted in his official journal:[590]

"The Governor General does not favor any further ghettos because the Führer expressly declared on 19 June that the Jews will soon be removed from the General Government with the latter becoming, as it were, a mere transit camp."

On 20 August 1941, Goebbels, noted in his diary after a visit to the Führer HQ:[591]

"Furthermore, the Führer promised me that I could remove the Jews from Berlin immediately after the termination of the eastern campaign."

On 24 September 1941, the day after a conversation with Heydrich at the Führer HQ, Goebbels noted in his diary, that the Jews in the East "would all be deported to the camps […] set up by the Bolsheviks."[592]

On the same day he wrote that the Führer's opinion was for the Jews to be pushed out of Germany step by step and wished:[592]

"Berlin will be first in line, and I am hopeful that we will succeed in moving a significant portion of the Berlin Jews to the East within this year."

591 *Ibid.*, p. 750.

592 *Ibid.*, p. 751.

On 28 September, Himmler transmitted to Arthur Greiser, *Gauleiter* of the Wartheland district, Hitler's order for the rapid deportation to the East of the Jews from the *Altreich* and the Protectorate. For this purpose Himmler strived, if possible even before the end of 1941, to move these Jews "initially, as a first step, into the eastern territories that were made part of the Reich two years ago, and to move them further east next spring," and thus he envisaged "to move some 600,000 Jews from the *Altreich* and the Protectorate to the Litzmannstadt ghetto […] for the winter."[593]

In a memo dated 7 October 1941, Werner Koeppen, a liaison official for Rosenberg, recorded that Hitler had made the following declaration the day before on the subject of the Protectorate:[593]

> *"All Jews must be removed from the Protectorate, and not just into the General Government as a first step, but right away further on to the East. We just cannot do this right now because of a shortage of transport capacity. Together with the Jews from the Protectorate, all Jews from Berlin and Vienna are to disappear."*

On 10 October 1941, during a meeting at Prague on the subject of "Solution to Jewish problems," Heydrich declared that he planned to deport some 50,000 Jews from the Protectorate of Bohemia and Moravia to Minsk and Riga between 15 October and 15 November. They were to be housed in the "camps for communist prisoners in the operational area."[594]

On 13 October 1941, Frank and Rosenberg met for a discussion which also touched on the deportation of the Jews from the General Government:[595]

> *"The Governor General then raised the subject of the possibility of deporting the Jewish population of the General Government into the occupied eastern territories. Reichsminister Rosenberg remarked that similar suggestions had already come to him from the military authorities in Paris.*[596] *At the moment, however, he did not think that such resettlement plans could be implemented. Still, for the fu-*

596 A clear allusion to the proposal made by SS-*Sturmbannführer* Carltheo Zeitschel.

ture he was ready to promote Jewish emigration toward the East, also in view of the intention to move undesirable elements from the Reich territory into the sparsely populated eastern regions."

Thus, just a few months after it had been made, Zeitschel's proposal was accepted by Hitler himself when he decided to shelve the Madagascar plan and to move all Jews living in the occupied territories into the East. He probably took this decision at some point in September of 1941. On 23 October 1941 Himmler stopped all Jewish emigration,[597] effective immediately, and the evacuation of 50,000 western Jews to the East was ordered the following day. On 24 October 1941 Kurt Daluege, the chief of police (*Ordnungspolizei*) issued a decree on the subject "Evacuations of Jews from the *Altreich* and the Protectorate":[598]

"Between 1st November and 4 December 1941, 50,000 Jews will be deported by the security police from the Altreich, the Ostmark [Austria]*, and the Protectorate of Bohemia and Moravia into the region of Minsk and Riga in the East. The deportations will be carried out by Reichsbahn trains of 1000 persons each. The trains will be assembled at Berlin, Hamburg, Hanover, Dortmund, Münster, Düsseldorf, Cologne, Frankfurt/M., Kassel, Stuttgart, Nuremberg, Munich, Vienna, Breslau, Prague, and Brünn."*

The new NS policy towards the Jews was announced to the higher party echelons at the *Wannsee-Konferenz*, a meeting specially convened for this purpose. It had originally been scheduled for 9 December 1941,[599] but was then postponed. It eventually took place in Berlin, Am Großen Wannsee 56/58, on 20 January 1942. The main speaker was Reinhardt Heydrich. The minutes of the meeting begin with a broad overview of the National-Socialist policy towards the Jews:[600]

Editor's remark: Although the authors of the present work consider the content of the Wannsee Protocol to be plausible and therefore see no need to doubt its authenticity, it should be pointed out that other revisionist authors strongly disagree, cf. Roland Bohlinger, Johannes P. Ney, *Zur Frage der Echtheit des Wannsee-Protokolls*, 2nd ed., Verlag für ganzheitliche Forschung und Kultur, Viöl 1994; Roland Bohlinger (ed.), *Die Stellungsnahme der Leitung der Gedenkstätte Haus der Wannsee-Konferenz zu dem von Bohlinger und Ney verfaßten Gutachten zur Frage der Echtheit des sogenannten Wannsee-Protokolls und der dazugehörigen Schriftstücke*, Verlag für ganzheitliche Forschung, Viöl 1995; cf. Johannes P. Ney, "Das Wannsee-Protokoll – Anatomie einer Fälschung," in: Ernst Gauss (ed.), *Grundlagen zur Zeitgeschichte*, Grabert, Tübingen 1994, pp. 169-191; Engl.: "The

"SS Lieutenant General [Obergruppenführer] *Heydrich, Head of the Security Police and the SD, opened the meeting with the announcement that the Reich Marshal* [Göring] *had put him in charge of preparations for the final solution of the Jewish question. He noted that this conference had been called to clarify fundamental questions. The Reich Marshal's request that a draft be submitted to him regarding the organizational, technical and material aspects of the final solution of the Jewish question required prior joint consideration by all central agencies directly concerned with these problems in order to coordinate their subsequent course of action.*[601]

The authority for directing the final solution of the Jewish question rests with the Reichsführer-SS and Chief of German Police [i.e. Himmler] *(Head of the Security Police and the SD)* [i.e. Heydrich], *without regard to geographic boundaries.*

The Head of the Security Police and the SD [Heydrich] *then gave a brief review of the struggle conducted so far against this foe. The most important elements are:*

a) forcing the Jews out of the various spheres of life of the German people,

b) forcing the Jews out of the German people's living space (Lebensraum).

In pursuance of these endeavors, an accelerated emigration of the Jews from the territory of the Reich was seen as the only temporary solution and was accordingly embarked upon in an intensified and systematic manner.

On instruction of the Reich Marshal [i.e. Göring], *a Reich Central Office for Jewish Emigration was established in January 1939; its direction was entrusted to the Head of the Security Police and the Security Service (SD)* [i.e. Heydrich]. *Its particular tasks were:*

a) to take <u>measures</u> for the preparation of increased Jewish emigration,

b) to <u>direct</u> the flow of emigration,

c) to speed up the emigration process in <u>individual cases</u>.

The aim of this task was to purge German living space of Jews by legal means."

Wannsee Conference Protocol: Anatomy of a Fabrication," online: www.vho.org/GB/Books/dth/fndwannsee.html.

601 Translation corrected by www.ghwk.de according to what Heydrich probably said. The original German sentence here is nonsense grammatically, literally stating that "prior all central agencies directly concerned with these problems have to be treated."

As a result of this policy and despite many difficulties, Heydrich stressed, roughly 537,000 Jews had emigrated by 31 October 1941:

> *"Of these,*
> *ca. 360,000 left the Altreich* [Germany with its 1937 borders].
> *ca. 147,000 left the Ostmark* [Austria after 15 March 1938],
> *ca. 30,000 left the Protectorate of Bohemia and Moravia* [after 15 March 1939]*."*

The protocol goes on to say:

> *"In the meantime, the Reichsführer-SS and Head of the German Police* [i.e. Himmler] *has forbidden any further emigration of Jews in view of the dangers posed by emigration in wartime and the looming possibilities in the East.*
> *III. As a further possible solution, and with the appropriate prior authorization by the Führer, emigration has now been replaced by evacuation to the East. This operation should be regarded only as a provisional option, though in view of the coming final solution of the Jewish question it is already supplying practical experience of vital importance."*

Hence, on Hitler's orders, expulsion to the occupied territories in the East replaced any voluntary or forced emigration of the European Jews to Madagascar, but it was to be only a "temporary possibility" while awaiting a definitive solution of this question to be realized after the end of the war.

As early as August of 1940 Hitler had announced his intention to evacuate all European Jews after the war.[602] On 7 March 1942 Goebbels noted in his diary:[603]

> *"The Jewish question must now be resolved on a comprehensive European scale. There are more than 11 million Jews in Europe.*[604] *At a later date, they will have to be initially concentrated in the East. Possibly, after the war, they could be given an island, say Madagascar. In any case, Europe will not be at peace as long as the Jews have not been neutralized completely on European soil."*

602 Luther's memorandum for Rademacher dated 15 August 1940, in: Auswärtiges Amt, *Documents on German Foreign Policy 1918-1945*, Her Majesty's Stationery Office, Series D, Volume X, London 1957, p. 484.

603 Heinrich Fraenkel, Roger Manvell, *Goebbels, eine Biographie*, Verlag Kiepenheuer & Witsch, Collogne-Berlin 1960, p. 256.

604 Excessively high figure, taken from the population statistics given on p. 6 of the *Wannsee Protokoll.*

According to a note of the Reich chancellery dating from March or April of 1942, Hitler had repeatedly informed Lammers, the head of the chancellery, "that he wanted to postpone the solution of the Jewish question until after the war."[605] On 24 July 1942, according to Henry Picker, Hitler underlined this intention by saying squarely that "he would, after the end of the war, take the rigorous stand of squeezing one city after another until the Jews came out, ready to emigrate to Madagascar or to some other Jewish national state."[606]

The intention of the National Socialists to solve the Jewish problem after the war results also from the so-called "Brown File" drafted by Rosenberg on 20 June 1941 and later integrated into the "Green File" of September of 1942. Its section "Directives for the treatment of the Jewish question" begins as follows:[607]

> *"All measures regarding to the Jewish question in the occupied territories in the East must be taken from the point of view that the Jewish question will be solved in a general way for the whole of Europe after the war. They must, therefore, be conceived as preparatory partial measures and must be in agreement with other decisions in this domain. On the other hand, the experience gathered in connection with the treatment of the Jewish question in the occupied eastern territories may have a bearing on the solution of the problem as a whole, as the Jews in these territories, together with those of the General Government, constitute the largest contingent of European Jewry. Any kind of purely vexatious actions, being unworthy of a German, are to be abstained from."*

In a typed copy of these "Directives," undated but surely stemming from the same period, the text continues as follows after the word 'domain':[608]

> *"This is applicable, in particular, to the creation of at least temporary facilities for the settlement of Jews from the territory of the Reich."*

A note by Martin Luther, an official in the Ministry of Foreign Affairs, referring to Jews of Spanish nationality living in occupied France and

608 PS-212. *IMT*, Vol. XXV, p. 302

dated 17 October 1941, speaks of "measures to be taken after the end of the war towards a fundamental solution of the Jewish question."[609]

During a meeting of *Reichsmarschall* Göring with the *Reichskommissars* for the occupied territories and the military commanders, which took place on 6 August 1942, Rosenberg declared:[610]

> *"The Jewish question for Europe and for Germany can be considered solved only when no more Jews exist on the European continent."*

We may thus conclude that the Wannsee meeting was convened solely for the purpose of informing the agencies concerned that emigration and the Madagascar plan had been abandoned, replaced as they were by the start of a new policy of large scale deportations of Jews into the East, and of discussing the problems arising from the new situation. The Madagascar plan officially was shelved on 10 February 1942. The reasons are explained in a note by Rademacher to envoy Harald Bielfeld of the Foreign Ministry, written on that day:[611]

> *"In August of 1940 I transmitted to you for your files the plan elaborated by my department for the final solution of the Jewish question, whereby the island of Madagascar was to be ceded by France, with the practical implementation of this task to be entrusted to the RSHA. In accordance with this plan, Gruppenführer Heydrich was ordered by the Führer to carry out the solution of the Jewish question in Europe.*
>
> *The war against the Soviet Union has meanwhile opened up the possibility of providing other territories for the final solution. The Führer has decided accordingly that the Jews will not be deported to Madagascar but to the East. Hence, Madagascar need no longer be considered for the final solution."*

This shows clearly that the "*Endlösung*" was of a territorial nature and consisted in the deportation of the Jews to the territories held by Germany in the East. This is in perfect agreement with another important document, the Luther memorandum of August of 1942. In it, Luther resumed primarily the essential elements of NS policy towards the Jews:[612]

609 PA, *Politische Abteilung* III 245, AZ Po 36, Vol. I.
610 URSS-170. IMT, Vol. XXXIV, p. 417.
611 NG-5770.
612 NG-2586-J.

> *"The basic premise of the German policy in respect of the Jews, starting with the seizure of power* [by Hitler in 1933]*, was to promote Jewish emigration by all available means. For this purpose, Generalfeldmarschall Göring, in his quality as head of the Four-Year-Plan, created a Reich central agency for Jewish emigration and entrusted its leadership to Gruppenführer Heydrich, the chief of the security police."*

Having expounded the origins and the development of the Madagascar plan – which by now had been scrapped in view of the changed situation – Luther stressed that Göring's letter of 31 July 1941 was a follow-up to Heydrich's letter of 24 June 1940, which claimed that the Jewish question could no longer be solved by emigration but required a "territorial final solution." Luther went on to say:

> *"For that reason, Reichsmarschall Göring requested Gruppenführer Heydrich on 31 July 1941 to carry out all necessary preparations for a comprehensive solution of the Jewish question within the German sphere of influence in Europe (cf.* [document] *DIII 709g). On the basis of this order, Gruppenführer Heydrich convened a meeting of all German agencies involved for 20 January 1942, with secretaries of state from the other ministries and myself from the foreign office attending. Gruppenführer Heydrich explained at the meeting that Reichsmarschall Göring had issued his order being so directed by the Führer, and that the Führer had now approved the evacuation of the Jews to the East."*

Luther added that on the basis of this order the evacuation of the Jews from Germany had been started. The eastern territories were their destination, to which they would be deported by way of the General Government:

> *"The removal to the General Government is a temporary measure. The Jews will be moved on to the occupied eastern territories as soon as the material means are available."*

A circular dated 9 October 1942 and sent to Party officials, entitled "Rumors concerning the situation of the Jews in the East," explains in the following manner the measures taken against the Jews:[613]

> *"In connection with the elaboration of the final solution of the Jewish question, the inhabitants of various parts of the Reich have recently been discussing 'very severe measures' against the Jews, par-*

---

613 PS-3244.

ticularly in the eastern territories. We have been able to ascertain that such representations – usually in a distorted or exaggerated manner – had been conveyed by members of the various units operating in the east who had, themselves, been able to observe such measures.

It is conceivable that not all members of our people will be able to comprehend the necessity of such measures, those members in particular who are not in a position to form their own opinion of the horrors perpetrated by the Bolsheviks.

In order to counter the spread of such rumors which often have an intentionally tendentious character, we hereby furnish the information found below in an effort to reflect the present state of the situation:

For the past 2000 years, a fruitless fight against Jewry has been going on. It was only after 1933 that we have been able to look for ways and means allowing us to bring about a complete separation of Jewry from the German host body. The portions of the solution carried out so far can be described as follows:

1) The repulsion of the Jews from the various domains of life of the German people. The laws passed by the legislature are to constitute the foundation guaranteeing that future generations, too, will be shielded from a renewed onslaught of the opponent.

2) The effort to expel the opponent completely from the territory of the Reich. In view of the fact that the living space available to the German people is very small, it was hoped that this problem could be solved by an accelerated emigration of the Jews.

Since the beginning of the war in 1939, emigration has become increasingly more difficult; at the same time, the economic space of the German people steadily increased in size compared to its living space so that, at the present time, a complete elimination through emigration is no longer possible in view of the large number of Jews present in this [economic] *space. It is to be expected that already the coming generation will no longer perceive this problem neither as vividly nor as clearly* [as we do] *on the basis of their own experience. Also, the matter has been set in motion and must be settled; hence, the problem as a whole must be resolved by the present generation.*

Therefore, the complete expulsion or elimination of the millions of Jews present in the European economic sphere is an imperative task in the fight to guarantee the existence of the German people.
Starting in the Reich itself and then extending into the other European countries made part of the final solution, the Jews will be moved into large camps in the East, some already in existence, others yet to be set up, where they will be used directly as labor or moved on further east. Elderly Jews, as well as those with high military decorations (EK I [Iron Cross]*, Golden medal for bravery etc.) will be moved successively to Theresienstadt, a town in the Protectorate of Bohemia and Moravia.*
It is in the nature of this task that some of these very difficult problems can, in the interest of the survival of our people, be solved only by the utmost severity."

On 23 November 1942, Himmler spoke at Bad Tölz, saying:[614]

"There has also been a complete change in the Jewish question in Europe. The Führer once said before the Reichstag [the Reich parliament]*: If Jewry were to instigate a war, for example to eradicate the Aryan peoples, it will not be the Aryan peoples that will be eradicated, but Jewry. The Jew has been removed from Germany; he now lives in the East and works on our roads, railways etc. This measure has been carried out thoroughly, but without any cruelty. We will not torture anyone, but we know that we are fighting for the existence and the survival of our Nordic blood."*

In a report written on 14 December 1942 by Walter Maedel, a German ministerial department head, and entitled "Financing the measures for the solution of the Jewish question," the National-Socialist policy towards the Jews is summarized as follows:[615]

"Some time ago, the Reichsmarschall ordered the Reichsführer-SS and Chief of the German Police to prepare the measures serving the final solution of the Jewish question. The Reichsführer-SS has entrusted the Chief of the Security Police and SD with the execution of this task. The latter initially promoted the legal emigration of Jews overseas by special measures. When emigration overseas had become impossible after the outbreak of the war, he implemented the gradual cleansing of Jews from the Reich by their deportation to the

East. Lately, within the Reich territory, old age homes (old age ghettos) for Jews have been set up, for example at Theresienstadt. For details see note of 21 August 1942. The establishment of other old age homes in the eastern territories is being planned."

7.4. First Deportations to the East

The expulsion of 50,000 Jews from the Protectorate and the *Altreich* to Minsk and Riga, decided on at the meeting held on 10 October 1941, started a month later. It constituted only the first phase of these deportation, however, for the deportees were supposed to be taken further East eventually. One of the first reports concerning these transports to the eastern territories is a telegram sent on 9 November 1941 by Hinrich Lohse, Reichskommissar for the Reichskommissariat Ukraine to Rosenberg, Reichsminister for the occupied eastern territories, reading:[616]

"Security police announces implementation of transport of 50,000 Jews into eastern territories. First transport to arrive Minsk 10/11, Riga 19/11. Urgently requesting to prevent transport, as Jewish camps must be moved considerably further east."

On the same day, Dr. Georg Leibbrand, *Reichsamtsleiter* in the Rosenberg ministry, sent Lohse the following cable:[617]

"Concerning Jew transports into eastern territories. More detailed letter in mail. Jews will be moved further east. Camps at Riga and Minsk only temporary measure, hence no objections here."

The local administration was anything but happy about this influx of western Jews and objected on several occasions. On 20 November 1941, the German army commander for "*Ostland*" wrote Lohse a letter on the subject "Transportation of Jews from Germany to White Ruthenia"[618] specifying:[619]

"Hearing from 707 Division 25,000 Jews to be moved from Germany to White Ruthenia, apparently 3000 destined Minsk with 1500 already arrived from Hamburg. The influx of German Jews, consider-

> *ably more intelligent than the mass of White Ruthenian population, presents great risk for pacification of White Ruthenia."*

The report goes on to state that the Jewish population of White Ruthenia was "Bolshevik and apt to adopt any kind of anti-German stance," being involved in clandestine resistance activities. Hence, the German-Jewish deportees would get in touch with communist organizations. For that reason, and also because the transports were hampering the German army, the commander asked "to ensure that no Jews will be sent from Germany to White Ruthenia."

The protests, however, would always be ignored. Franz Walter Stahlecker, chief of the security police and SD for the *Reichskommissariat Ostland*, notified Lohse:[620]

> *"Jewish transports will continue to arrive at Minsk as planned. Of the 25 transports originally scheduled for Riga, the first 5 will be sent to Kowno."*

On 13 January 1942, a note from Lohse's staff reiterated:[621]

> *"Submitted to Reichskommissar* [Lohse] *requesting acknowledgement of report from Minsk city Kommissar regarding evacuation of allegedly 50,000 Jews from Germany to Minsk.*
>
> *In the absence of other orders from Reichskommissar, the instruction of 28/11 will remain in force to the effect that objections against any kind of transport from Germany are no longer to be raised."*

The Minsk local Kommissar, Wilhelm Janetzke, who opposed deportations into this city, turned directly to Rosenberg on 5 January 1942. In a letter concerning "The evacuation of Jews from Germany to Minsk" he explained that he had learned that the central agencies intended "to send another roughly 50,000 Jews from Germany to Minsk."

The city lay literally in ruins, with some 100,000 civilians living there, in addition to "some 7,000 Jews from Germany," as well as "approximately 15 to 18,000 Russian Jews" as prisoners. Hence, it was impossible to house any more people. In addition to these difficulties, there were "the very serious problems of feeding the population (including the Jews)." For these reasons, Janetzke requested the deportations of Jews to Minsk to be suspended.[622]

620 GARF, 7445-2-145, p. 62. The original has *Kauen*, the German name for Kowno.
621 GARF, 7445-2-145, p. 67.
622 GARF, 7445-2-145, pp. 65f.

Counselor Wetzel, a member of Rosenberg's staff, answered on his behalf by means of a letter dated 16 January 1942 addressed to Reichskommissar Lohse:[623]

> *"Re: Evacuation of Jews from Germany to Minsk.*
> *I have received the letter dated 5 January 1942 from the city commissar at Minsk, of which I enclose a retyped copy for your information.*
> *I have been informed by the RSHA that 25,000 Jews from the Reich were scheduled for Minsk to be temporarily housed there in the local ghetto. Of these, some 7-8,000 have arrived at Minsk. The remainder cannot be moved to Minsk for the time being because of transportation problems. However, as soon as these problems will have been overcome, it is likely that these Jews will reach Minsk. I ask you to instruct the Minsk city commissar in this sense and to request him to get in touch with the competent police commander in the matter of food and housing for the Jews. I ask you moreover, to advise him* [the city commissar] *to use the official way of communication in the future."*

On 6 February 1942, however, the *Generalkommissar* for White Ruthenia, Wilhelm Kube, backed Janetzke's request. He restated that it was impossible to accept a further contingent of 25,000 Jews in a city like Minsk, 80% of which lay in ruins.[624]

On 26 June 1942, the Chief of the security police and the SD said in a report:[625]

> *"The measures taken by the security police and the SD must bring about basic changes in White Ruthenia as well. In order to establish control over the Jews, regardless of any future dispositions, Jewish councils of elders were set up which are responsible to the security police and the SD for the attitude of their racial brethren. Furthermore, registration of the Jews as well as their concentration in ghettos has started. Finally, the Jews have been identified by a yellow mark to be worn on the chest and on the back similar to the Jewish star used in the Reich territory. In order to make use of the labor potential of the Jews they are normally employed in groups and for clearing operations.*

By these measures, the basis for a final solution intended for the future has also been established in White Ruthenia."

These measures were nothing but the actual implementation of the policy set out in the "Brown File," which specified a future solution to the Jewish question "after the war" for the whole of Europe.

The available railway documents[626] enable us merely to reconstruct a portion of the whole picture for the Jewish transports that were moved directly into the eastern territories. The transports coming in from the Reich were arranged by the German *Reichsbahn* via the Königsberg *Reichsbahn* directorate whose task it was to inform all agencies concerned. The transports were labeled "Da"[627] and numbered successively. The empty trains, labeled "Lp," were given a number above 1,000. Altogether 66 such transports are known. Between 8 November 1941 and 28 November 1942 they moved 56,221 Jews[628] into the eastern territories, comprising

– 26 transports from the Altreich with 16,057 persons aboard
– 11 transports from the Protectorate with 11,000 persons aboard
– 29 transports from Vienna with 29,164 persons aboard

The destinations of these transports were: Baranoviči (1), Kaunas (2), Maly Trostinec (5), Minsk (34), Raasiku (1), Riga (23).

The four transports which left Berlin for Riga on 4 November 1941 as well as on 13, 19 and 25 January 1942, comprised some 5,000 individuals.[629] In the period between 17 November 1941[630] and 6 February 1942, there were 25 transports conveying a total of 25,103 persons to Riga,[631] but only 15,114 can be found on the list published in the source mentioned. This brings the total number of persons deported to [56,221+(25,103–15,114)=] 66,210. The Korherr report helps us in closing the gaps in the documents and to draw a complete picture of the

630 This transport reached Riga on 19 November.

631 Enclosure to "*Meldungen aus den besetzten Ostgebieten*" No. 10, 3. July 1942. RGVA, 500-1-775, p. 233.

deportations of Jews into the East for 1942. We will come back to this question in Subchapter 9.4.

The National-Socialist policy towards the Jews, as discussed above, is well documented in all its aspects and in all its twists and turns (starting with the territorial final solution, initially targeting Madagascar, later on the East). No document, however, supports that radical change of principle, which an extermination policy would have been. When, how, why, and on whose orders would this policy of deportation and resettlement in the East have been turned into a program of total physical extermination? When did the deportation to the East become a mere "euphemism" for massacre? Who decided to build "extermination camps" and when, how, and why did this occur?

To these questions, mainstream Holocaust historians can furnish only conjectural and contradictory replies. What is certain is that such a radical about-face would have required an order just as radical: the alleged *Führerbefehl*, the order by Hitler.

The following chapter will deal with this fundamental question of Holocaust historiography.

8. The *Führerbefehl* and the Origins of the "Extermination Camps" in the East

8.1. The *Führerbefehl* and Holocaust Historiography

During the Nuremberg trial, at the morning hearing of 15 April 1946, the former commander of the Auschwitz Camp, Rudolf Höss, declared that, in the summer of 1941, he was ordered, by *Reichsführer* SS Heinrich Himmler to come to Berlin and that Himmler told him on that occasion that Hitler had given the order to exterminate the Jews.[632] This *Führerbefehl* immediately became the cornerstone of mainstream Holocaust historiography then taking shape but still lacking any kind of documentation. Over the following decades these historians went on to build upon this meager foundation a fortress of assertions and hypotheses so full of internal inconsistencies that in the late seventies David Irving would go so far as to question whether Hitler was even aware of the alleged genocide.[633] The ensuing debate of these theses, moved along by Martin Broszat, then director of the Munich *Institut für Zeitgeschichte*,[590] generated new points of view which brought with them a new historiographic concept, known as the functionalist or structuralist concept. Right from the start and in a way inevitably, this concept was at odds with the ailing Nuremberg concept – which we may call intentionalist – because at heart it constituted a critical reaction to the teachings of this "courtroom-based" historiography, the historiographic failings of which it exposed all too clearly. Hitler's role in the alleged genocide was reassessed along entirely different perspectives, becoming more and more obscure in the process and finally ending up in a "nod" by Hitler or in a "meeting of minds."

Mainstream Holocaust historians dedicated two major meetings to these burning problems.

The first of them was an international congress on the topic "Nazi Germany and the extermination of the Jews," organized by the *Ecole*

---

632 *IMT*, Vol. XI, p. 398.
633 D. Irving, *Hitler's War.* Wiking Press, New York, 1977.

des Hautes Etudes en sciences sociales and the *Sorbonne*, was held in Paris from 29 June through 2 July 1982. The proceedings were published in 1985 in a volume of the same name.[634]

On that occasion, Uwe Dietrich Adam analyzed the National Socialist policy on the subject of the Jews between September of 1939 and June of 1941, a period which "can be regarded as being the descent towards the 'final solution.'" He stressed immediately, however, that:[635]

> *"*[…] *the precise date at which this 'final solution' was ordered constitutes a problem not yet resolved for German and for world history."*

On the subject of the origins of the alleged genocide of the Jews, Adam took a decided stand against the radical intentionalist thesis supported by Eberhard Jäckel, stating that he "agreed with the vast majority of historians in thinking that the order to liquidate the Jews on the German territory was never given, not even planned, in any way whatsoever, prior to the beginning of the war."[635] Given that "no written trace of this order has ever been found" and that it is highly unlikely that it will be found in the future, Adam stated that:

> *"*[…] *it becomes the task of the historian to date it in the most precise manner possible, using* [the tool of] *interpretation. Methods and hypotheses in this respect are limitless, we face very diverse opinions. Some people see the conception of the 'final solution' as having taken place at the time of Landsberg (Jäckel, Dawidowicz); another dates it to March of 1941 (Krausnick) or July of 1941 (Hilberg, Browning), still others to the fall of 1941 (Adam, Broszat). Neither the laws nor the measures taken by the Third Reich against the Jews allow us to fix a date for the issuance of the order. However, for those who are conversant with the institutional structure of the Third Reich after the beginning of the war, each measure taken reduces the possibilities of interpretation and allows, in the end, to eliminate certain dates or to confirm others with some degree of certainty."* (pp. 177f.; emph. added)

At the outbreak of the war the Jewish question, as it had been formulated in the Party program and defined by the early protagonists of race legislation, had been resolved; Adam (p. 179):

---

634 Colloque de l'École des Hautes Études en sciences socials, *L'Allemagne nazie et le génocide juif*, Gallimard, Paris, 1985.

635 *Ibid.*, p. 177. Subsequent page numbers in the text refer to this.

> *"If you want to summarize the essence of the Nazi policy towards the Jews, there is one permanent and primary objective: to separate the Jews from the 'Aryans.' This political and racial objective of Nazi ideology – the elimination of the Jews from the '*Volkskörper*' (the body of the nation) – was reached in 1938."*

After the start of the hostilities the National Socialist policy towards the Jews aimed at a consolidation of this separation, but according to Adam (p. 185):

> "[it was] *worked out to a great extent under the influence of imponderable factors, of short-term ideas, of rivalries between officials, of accidental or intentional allusions by Hitler. The absence of any central authority for the coordination, the administration or the direction of anti-Jewish measures played a non-negligible role in this absence of unity and this aimless legislation."*

During this period before the outbreak of the war, the RSHA carried on with the policy of emigration. Adam (p. 186):

> *"Before the beginning of the war, the security service*[636] *in particular insisted on a 'solution of the Jewish question' by way of emigration. The creation of the Central Agency for Jewish Emigration*[637] *in January of 1939 allowed Heydrich to assume the leading role of the Jewish policy at ministerial level. He rapidly activated the SD plans for emigration and obtained his first major success when, in July of 1939, he created the 'Reich Association of Jews in Germany.'*[638] *It operated under the authority of the RSHA and he thus had the control of the large cultural Jewish associations and, above all, of the financing and the direction of the Jewish emigration."*

But the RSHA had not "reckoned with the anarchic structure of the Third Reich," which slowed down the Jewish emigration and did not allow Germany to reach "the astonishing figures reached by Eichmann in Vienna. Once the war had broken out, we may assume that the RSHA policy was in tune with Hitler's wish to attain as soon as possible a '*judenreines Deutschland*,' a Germany free of Jews." (*ibid.*)

The RSHA desperately tried to solve the problem of emigration:

> *"The taxes on emigration certainly went up continually, but at the same time the RSHA tried to soften the foreign exchange controls. In spite of all official regulations, it eventually obtained the employ-*

636 *Sicherheitsdienst, SD*
637 *Zentralstelle für jüdische Auswanderung*
638 *Reichsvereinigung der Juden in Deutschland*

ment of Jews in the agricultural sector 'in order to ease their emigration by providing them with a professional education.' The RSHA also managed to lower or to do away with all sorts of special taxes and limits on the export of capital. In December of 1940 they succeeded in convincing the Ministry of the Economy to accelerate the financial procedures in all cases of emigration against all regulations in force. This search for a global solution of the 'Jewish question' can still be found in the attempt by the RSHA to obtain a general directive for emigration from Göring. Later on this document[639] *would often be misinterpreted because of its wording. Göring ordered all Reich authorities to facilitate the emigration of Jews away from the Reich and the territories under protection to the extent possible, even in wartime. On the other hand, the emigration of Jews from France and Belgium was to be prohibited on account of the 'final solution, which was doubtlessly drawing near.' This seductive term 'final solution' was interpreted by generations of historians as to mean the physical destruction, whereas, at that time, it meant only the emigration of the Jews to Madagascar. The trap closed only in August of 1941. The RSHA prohibited the emigration of able-bodied Jews.*[640] *At the end of August 1941 Eichmann extended this regulation to all Jews who lived in areas occupied by Germany. On 23 October 1941 the RSHA informed all units of the police and the SD of an order issued by Himmler which stopped any Jewish emigration whatsoever, without exception, for the duration of the war."* (pp. 186f.; emph. added)

Christopher R. Browning took up the specific topic of the decision concerning the alleged genocide. He underlined above all the "major divergences" which divided the two Holocaust interpretations at the time (p. 190):

"The decision concerning the final solution has been the subject of a large number of historical interpretations. The essential divergences appear in respect of two connected questions: on the one hand the nature of the process by which the decision was taken and more particularly the role of Hitler and his ideology, on the other hand the moment at which this decision was taken. As Martin Broszat has

639 W. Schellenberg's letter dated 20 May 1941. Document NG-3104.

640 Eichmann's order concerned actually the Jews "fit for military service" (*wehrfähig*) and was obviously meant to keep the enemy from obtaining potential soldiers. Joseph Walk (ed.), *Das Sonderrecht für die Juden im NS-Staat*, C.F. Müller Juristischer Verlag, Heidelberg-Karlsruhe 1981, n. 227, p. 347.

> *rightly stated, a diversity of interpretation advises us that any kind of theory on the origin of the 'final solution' belongs to the field of probability rather than to that of certainty."* (Emph. added)

Browning then sketched out a summary of these "major divergences" (p. 192):

> *"For Lucy Dawidowicz the conception of the final solution antedates its implementation by twenty years; for Martin Broszat the idea emerges from practice: the sporadic assassination of groups of Jews gave rise to the idea to assassinate all of the Jews systematically. Between these two extremes we have a great number of interpretations. Thus, Eberhard Jäckel believes that the idea to kill the Jews sprang up in Hitler's mind at the end of the 1930s. Karl Dietrich Bracher supposes that it already existed at that time. Andreas Hillgruber and Klaus Hildebrand maintain the supremacy of ideological factors but do not propose any precise date. Others, not all of them functionalists, place the decisive turn into the year of 1941; but as far as that year is concerned many dates have been suggested. Léon Poliakov believes that the most probable date is the beginning of 1941, whereas Robert Kempner and Helmut Krausnick sustain that Hitler took this decision in the spring in connection with the preparations of the invasion of Russia. Raul Hilberg thinks that the decision was taken in the summer when the massacres perpetrated in Russia led to the belief that this solution would also be possible in all of Europe for a victorious Germany. Uwe Dietrich Adam asserts that it was taken in autumn when the military offensive slowed down and it became apparent that a 'territorial solution' by way of a mass expulsion into Russia thus became impossible. Sebastian Haffner, finally, who is certainly not a functionalist, supports an even later thesis, early December, when the feeling of an eventual military defeat caused Hitler to seek an irrevocable victory over the Jews."*

Here Browning wonders:

> *"How are we to explain such a diversity of interpretations as to the type and the date of the decision concerning the final solution?"*

This diversity can be explained, according to Browning, by a subjective reason – the different viewpoints of the intentionalists and the functionalists – and an objective one, which is actually the true reason: "by the absence of documents." He said, in fact (p. 193):

> *"There are no written records about what was discussed between Hitler, Himmler and Heydrich on the subject of the final solution,*

> *and none of the three survived to testify after the war. Hence the historian must himself reconstruct the decisional process from the top down, extrapolating from external events and testimonies. Like Plato's man in the cave who sees only the reflections and the shadows, not the reality. This bold process of extrapolation and reconstruction invariably leads to a great variety of conclusions."* (Emph. added)

In fact, Browning insisted repeatedly on the almost total absence of documents concerning the origins of the decision on the subject of the alleged "final solution" (pp. 196f.):

> *"And yet, in spite of all that is known about the preparations for a German invasion of Russia, there is no specific documentation on the subject of the Russian Jews. In order to obtain an answer to this question, it is necessary to turn to post war testimonies, to indirect proofs, and to references dispersed throughout more recent documents.* […]
>
> *If the decision to kill all the Jews in Russia was undoubtedly taken before the invasion, the circumstances and the exact moment, on the other hand, remain obscure. It is impossible to say whether the initiative came from Hitler or from somebody else, from Heydrich, for example. Moreover, we do not know whether Hitler had already made his choice in March, when he clearly announced to the military that the war in Russia would not be a conventional war, or if the servility of the military later pushed him into extending his search for victims beyond the Judeo-Bolshevik intelligentsia. An insufficient documentation does not allow us to reply definitively to these questions and permits only an educated guess."* (Emph. added)
>
> *"We don't know and, no doubt, we will never know precisely, when and how Heydrich and his direct superior, Himmler, learned of their new assignment."* (p. 200)

In conclusion, Browning stated (p. 211):

> *"There was no written order for the final solution, and we have no reference to an oral order except what Himmler told Heydrich when he said that he acted with the Führer's approval."* (Emph. added)

Browning himself supports the following thesis (S. 190):

> *"The intention to massacre systematically all the European Jews was not clearly present in Hitler's mind before the war; it crystallized only in 1941, after the solutions considered previously had turned out to be unrealizable and after the imminent offensive against Russia brought along the perspective of having to deal with*

> *an even greater number of Jews than in the expanding German empire. The final solution took shape starting with a certain number of decisions taken in that very year. In the spring Hitler ordered the preparation of the massacre of the Jews who would fall into German hands in the course of the impending invasion. During the summer of that same year Hitler, sure of his military victory, had a plan prepared aiming for the extension of the extermination process to the European Jews. In October, even though the hope for a victory had not been borne out, Hitler approved the general lines of this plan, which entailed the deportation to extermination centers and the use of a lethal gas."*

But even this theory is purely conjectural. In any case, Browning himself declared that this alleged decision did not fit into a general plan for the extermination of the Jews (p. 198):

> *"However, the Jewish policy of the Nazis in the rest of Europe was not changed immediately in this sense. One continued to talk about emigration, of expulsion, and of plans for a future resettlement. In the autumn of 1940 Jews were expulsed to unoccupied France from the region of Baden and from the Palatinate in Germany as well as from Luxemburg; there were also expulsions from Vienna to Poland in early 1941. In February of 1941 Heydrich still spoke of 'moving them to a country which will be determined later.' And the Ministry of Foreign Affairs went on talking to the RSHA, the Reich agency of security, about blocking the emigration of Jews from other countries, thus monopolizing, for the German Jews, the possibilities of emigration, which were limited. This policy was even reconfirmed in a circular, dated 20 May 1941 and signed by Walter Schellenberg, which prohibited the emigration of Jews from France and Belgium. The former policy of emigration, expulsion, and resettlement was abandoned only progressively. In July of 1941 the RSHA informed the Ministry of Foreign Affairs that no more expulsions to France were planned. In February of 1942 the Ministry of Foreign Affairs officially dropped the Madagascar plan. <u>The preparations for the murder of the Russian Jews would thus not have any immediate repercussions on the Nazi Jewish policy in other countries.</u>"* (Emph. added)

Still, Browning did not have any doubt that his conjecture concerning an order to massacre the Russian Jews was unfounded. He maintained on the contrary that the "idea of a final solution for the European Jews

developed in a separate process and resulted from a decision of its own" (*ibid.*).

But since not even this alleged decision was supported by documentary evidence, the field remained open to the most wildly diverging conjectures on this point as well, which Browning sums up in the following manner (*ibid.*):

> *"Hilberg dates the decision to July 1941 at the latest; Uwe Dietrich Adam opted for a date between September and November; Sebastian Haffner suggests December and Martin Broszat rejects even the idea of a global decision and a particular date and believes in a gradual and unconscious process of intensification."*

On the subject of the alleged extermination order Browning's position was as follows:[641]

> *"In July of 1941, when the Nazi armies had shattered the defenses on the border of the Soviet Union, captured masses of Russian soldiers, and in the end covered two thirds of the distance to Moscow, Hitler approved the outline of a plan for the mass extermination of the Jewish population in Europe. In October of 1941, with the victorious encirclement of Vyasma and Bryansk and with the brief glow of a hope for the final triumph before the onset of winter, he approved the final solution."*

Yet this is just another conjecture unsupported by documents.

The problem of the origins of the decision to embark on the alleged extermination, which had remained unresolved at the Paris meeting, was again examined at the Stuttgart convention which took place from 3 to 5 May 1984 under the general heading "The Murder of the European Jews in the Second World War. Genesis and Implementation." The respective proceedings were published a year later under the same title.[642]

Eberhard Kolb formulated with great clarity the two fundamental questions which the meeting faced:[643]

> *"1. Was the 'Final Solution' the realization of a project which had been on the books for a long time and which aimed – in the last instance – at the physical annihilation of the European Jewry?*

---

641 C.R. Browning, *Verso il genocidio*, Il Saggiatore, Milano 1998, p. 36.

642 Eberhard Jäckel, Jürgen Rohwer (eds.), *Der Mord an den Juden im Zweiten Weltkrieg. Entschlußbildung und Verwirklichung*, Deutsche Verlags-Anstalt, Stuttgart 1985.

643 *Ibid.*, p. 61.

2. Was there a specific order – at least an oral one if not a written one – by Hitler to kill not only the Jews living in Eastern Europe but all Jews within the German sway, and when was this order given?"

From there, Kolb goes on to set out the replies furnished by the Holocaust historiography up to the date of the meeting:[644]

"If I am not mistaken, the majority of the researchers today tend to put a big question mark on the idea of a National Socialist policy towards the Jews based on a plan which unfolded and moved along on a straight line – from the anti-Semitic slogans of the 'Kampfzeit,' via the anti-Jewish measures of the 1933-1939 period towards the organized mass murder from 1941 on. The real question today is whether (and when) Hitler gave a specific extermination order. Into the 1970s there was almost unanimous agreement on this point. Certainly: a written extermination order emanating from Hitler had not come down to us and we could assume that there never was such a written order. However, an express 'Führerbefehl' in the form of an oral instruction given by Hitler to Himmler was regarded as the indispensable condition for the assassinations which were begun in 1941.

On the other hand, there was no general agreement on the moment at which this order had been given: Raul Hilberg (1961) believes that the general extermination order was issued by Hitler in 'early summer' of 1941, Helmut Krausnick (1965) dates such an order to 'March of 1941 at the latest,' Uwe Dietrich Adam has a span 'between September and November of 1941'; if we follow Andreas Hillgruber (1972), Hitler's decision was taken in July of 1941 in connection with the expected triumph over the Soviet Union and with the planned expansion towards the East. As opposed to this, Martin Broszat (1977) questioned the thesis that there had been an express and specific extermination order issued by Hitler. The physical elimination of the Jews, according to Broszat, had not been planned a long time in advance and then carried out systematically, had not been set in motion by a single decision and a single secret order issued by Hitler; rather, the 'program' to annihilate the Jews had grown over time out of 'individual actions' until it became an institutionalized fact in the spring of 1942; it had assumed its defining characteristics, after the extermination camps in Poland had been

644 *Ibid.*, pp. 61-63.

set up (between December, 1941, and July, 1942). Such an interpretation, according to Broszat, could not be documented with absolute certainty, but could claim a greater degree of probability than the assumption of an all-embracing secret order to annihilate the Jews, issued in the summer of 1941 […].

Broszat's explanatory model of the genesis of the assassination plan was more clearly stated by Hans Mommsen (1983). In agreement with Broszat, Mommsen expressly asserts that there was no 'formal order' […].

Still, the majority of researchers cling to the idea that Hitler was the deciding factor in the murder of the European Jews and that there was an annihilation order issued orally.

Hans-Heinrich Wilhelm admits that there is no proof for an order to annihilate the Jews generally to have been issued prior to the start of the Russian campaign in 1941. He refuses, however, the thesis of an 'improvised radicalization' of the persecution of the Jews culminating in their systematic assassination and asserts that, without an overall directive from Hitler and without his approval, no partial activities eventually leading up to the program of a final solution would have been possible.

Christopher Browning (1981), explicitly targeting Broszat's explanation, comes to the conclusion that Hitler did order the elaboration of an annihilation plan in the summer of 1941; the foundations of the murder project are said to have been approved by Hitler 'in October or November of 1941.'

Gerald Fleming (1982) notes that the fateful change in the Jewish policy of the Third Reich occurred in the 'summer of 1941'; it was then that Hitler ordered the annihilation of the European Jews and simultaneously decreed that these murder operations had to be executed in a most carefully hidden manner and in the greatest possible secrecy.

Wolfgang Scheffler (1982) insists that all essential decisions concerning the implementation of the mass annihilation were taken between March and November of 1941. […]

Finally, we will briefly summarize the latest opinions. In view of the coincidence of several factors Shlomo Aronson (1984) comes to the conclusion that Hitler took the decision to kill the European Jews in 'late fall of 1941.' Also, if we follow Saul Friedländer, the existence of a general annihilation plan by the autumn of 1941 can no longer

> *be doubted; we must assume that Hitler approved such a plan 'some time in the summer of 1941.'"* (Emph. added)

As of 2005 the controversy around the *Führerbefehl* was not only unresolved but continued to rage to a greater degree to the point where Ian Kershaw felt the need to write an article on "Hitler's role in the final solution," in which he explained that with a few exceptions:[645]

> *"detailed research on the decisions and policies of genocide began as late as the 1970s, expanding greatly over subsequent decades, especially once the archival repositories in the former eastern bloc were opened. Only in the light of such research has it become possible to evaluate more precisely the role Hitler played in the emergence of the Final Solution. Yet even now, after exhaustive analysis, much remains obscure or contentious. The problems of interpretation arise from the complexities and deficiencies of the surviving fragmentary evidence, reflecting in good measure the obfuscatory language of the Nazi leadership as well as the extreme unbureaucratic leadership style of Hitler, who, especially once the war had begun, placed a high premium upon secrecy and concealment, with orders on sensitive issues usually passed on verbally and on a need-to-know basis. Until the 1970s it was generally taken for granted that a single, direct Hitler order launched the Final Solution. The presumption emanated from a Hitler-centric approach to the Third Reich, which placed heavy emphasis upon the will, intentions, and policy-directives of the dictator."* (Emph. added)

As opposed to this view, which was called intentionalist, a new interpretation sprang up during the 1970s, labeled functionalist or structuralist, which no longer placed Hitler in the center of the National Socialist regime, replacing him instead by an oligarchic government having chaotic and confused administrative limits and led by a "weak dictator" engaged primarily in propaganda (p. 13).

In the section "Interpreting the decision for the final solution," Kershaw goes through the beginnings of the functionalist interpretation, starting with Martin Broszat's views which we have already examined above (see p. 227). I will therefore begin with later interpretations from the 1980s onwards.

---

645 Ian Kershaw, "Hitler's role in the final solution," at: www1.yadvashem.org/about_holocaust/studies/vol34/Kershaw%20E.pdf, p. 12; subsequent page numbers in the text refer to this paper.

In 1989 Philippe Burrin, in marked contrast with almost all of his colleagues, asserted according to Kershaw that it

> *"would be mistaken to see in the Göring mandate of 31 July 1941 a reflection of a fundamental order by Hitler for the Final Solution, that is, to extend the genocide already taking place in the Soviet Union into a program for the physical extermination of the whole of European Jewry. Rather, according to Burrin, the Göring mandate still fell within the remit of attaining a territorial settlement in the east once the war was over."*

The alleged extermination order is considered to have been issued in September of 1941 and to have been confirmed by Hitler's decision to deport the Jews to the East (p. 18). Soon after the publication of Burrin's study, Ian Kershaw informs us,

> *"the archives of the former eastern bloc started to divulge their secrets. Predictably, a written order by Hitler for the Final Solution was not found. The presumption that a single, explicit written order had ever been given had long been dismissed by most historians. Nothing now changed that supposition. In fact, little was discovered in Moscow or other east-European archives that cast new light directly on Hitler's role in the Final Solution. Indirectly, nevertheless, new perspectives on the emergence of a genocidal program did provide fresh insights into Hitler's own role."* (p. 18; emph. added)

For a study that appeared in 1995 Götz Aly had made use of these archives, as Kershaw explains (p. 19):

> *"Aly concluded that there was no single, specific decision to kill the Jews of Europe. Rather, analogous to Mommsen's notion of a system of cumulative radicalization, he posited a long and complex process of decision-making, with notable spurts in March, July, and October 1941, but continuing still as a series of experiments down to May 1942. Hitler's role, according to this interpretation, was confined to decisions as an arbiter between competing Nazi leaders whose own schemes to deal with the Jewish question had created insoluble problems."*

Other studies linked the alleged exterminations to decisions taken by local authorities, but "the role of Hitler, too, seemed scarcely to figure in the new explanations. Was it likely, or plausible, that the most radical of radical anti-Semites had played no direct part in shaping the policies aimed at destroying his perceived arch-enemy?" (p. 21)

David Bankier (1988) and Saul Friedländer (1997), Kershaw goes on to explain, had shown that during the 1930s Hitler had been more active in anti-Jewish politics than was believed earlier and that it was therefore difficult to accept that he would later stay out of the decisional process leading to the alleged genocide.

Kershaw writes that Browning maintained in 1994 the importance of the *Führerbefehl,* which he dated to the summer of 1941, stressing that, in this way, Browning "was not positing a single decision, but envisaging the point at which Hitler inaugurated the decision-making process, the first move in developments that would stretch over the subsequent months" (*ibid.*).

Kershaw maintains that Richard Breitman's point of view in 1991 was that he "dated 'a fundamental decision to exterminate the Jews' by the dictator to as early as January 1941, adding, however, that 'if the goal and basic policies were now clear, the specific plans were not,' and followed only after some time with the first operational decisions in July," something which Kershaw himself believes to be unsustainable (pp. 21f.).

Against this Kershaw summarizes Tobias Jersak as stating in 1999 that "the declaration of the Atlantic Charter by Roosevelt and Churchill on August 14, 1941 (meaning that Germany would soon be at war with the USA) was the trigger for Hitler, suffering at that point from a nervous collapse and reeling from the recognition of the failure of his strategy to defeat the Soviet Union, to take the fundamental decision that the Jews of Europe should be physically destroyed." But Kershaw states that Jersak "probably exaggerates the impact of the Atlantic Charter on Hitler," so that this interpretation, too, is unsustainable (p. 22).

Kershaw then goes on to examine Christian Gerlach's interpretation of 1997, according to which "by the time the meeting [of Wannsee] eventually took place, on January 20, 1942, Hitler's basic decision to kill all the Jews of Europe had been taken," but Kershaw judges that such a perspective is difficult to imagine, hence, once again, unsustainable. Going on to a study by Florent Brayard published in 2004, Kershaw continues (p. 23):

> *"A recent, meticulous examination of the complex evidence of decision-making on anti-Jewish policy between 1939 and 1942 offers yet another variant. Florent Brayard places the date of Hitler's order to commence the Final Solution as a comprehensive program later*

> *than any other historian had done, to June 1942, immediately following the assassination of Reinhard Heydrich in Prague."*

But to Kershaw it is "perhaps a little more plausible" to see in this event the last and greatest phase of an expanding process which resulted in the extermination program being extended to all European Jews (p. 24).

In what Kershaw calls a "magisterial study of the 'politics of annihilation'" that had appeared in 1998, Peter Longerich had established that "a comprehensive program of extermination of European Jewry developed as an incremental process, with a number of acceleratory spurts, between summer 1941 and summer 1942," as Kershaw summarizes it (*ibid*.), but in order to reach this somewhat trivial conclusion in respect of the Holocaust, a "magisterial study" was not really needed.

In the end, Kershaw strikes the balance of the studies concerning the *Führerbefehl* (pp. 25f.):

> *"It seems certain, given the fragmentary and unsatisfactory evidence, that all attempts to establish a precise moment when Hitler decided to launch the Final Solution will meet with objections. And, of course, much depends upon what is envisaged as a Führer order. Was it a precise and clear directive, or merely a green light or nod of the head? Interpretation rests additionally upon whether decision-making on the Final Solution is regarded as a continuum, with adjustments and acceleratory phases over the period of a year or so, or whether a point is sought where one precise quantum leap can be distinguished as forming* the *decision.* […]
>
> *It seems impossible to isolate a single, specific Führer order for the Final Solution in an extermination policy that took full shape in a process of radicalization lasting over a period of about a year. At the same time, much indicates that the extermination program did not develop without a decisive role being played by Hitler himself. To reconcile these two statements, we should look* both *for a* series *of secret authorizations for particular radicalizing steps, which can only be deduced from indirect or secondary evidence,* and *for a* number *of public signals or 'green lights' for action. We should also recognize that Hitler was the supreme and radical spokesman of an ideological imperative that, by 1941, had become a priority for the* entire *regime leadership."*

Within this scope, Kershaw's conclusion is that Hitler's "prophecy" of 30 January 1939 must be considered "as a key both to Hitler's mentali-

ty, and to the ways he provided 'directions for action.'" The prophecy supposedly shows (p. 42):

> *"how Nazi activists at different levels of the regime were adept in knowing how to 'work towards the Führer' without having to wait for a precise Führer order. It seems unlikely that Hitler ever gave one single, explicit order for the Final Solution. Within the unchanging framework of his prophecy, he needed do no more than provide requisite authorization at the appropriate time to Himmler and Heydrich to go ahead with the various escalatory stages that culminated in the murder of Europe's Jews."* (Emph. added)

But was such an intangible "authorization" (a mere excuse for not saying "order") given by a simple nod of Hitler's head?

It is certain that functionalism, far from resolving the hermeneutical problems of earlier times, only added new and more serious ones, pushing a disintegrating historiographic process into the dissection of elementary terms like "decision" and "order" and their vaporization in the rarefied and volatile atmosphere of a Holocaust universe which serves as an ethereal basis for Hilberg's "telepathic" interpretation.

In such a universe, the very concept of *Führerbefehl* loses its concrete connotation, with the "decision" evaporating into an unstable "decisional process" with an uncertain beginning and no more certain "developments," some of them possibly gradual, possibly discontinuous, or into "public signals" and "green lights" for Hitler, or into a vague "telepathic" intuition. This latter parapsychological conjecture was expounded by Raul Hilberg in 1983 at the Avery Fisher Hall:[646]

> *"But what began in 1941 was a process of destruction not planned in advance, not organized centrally by any agency. There was no blueprint and there was no budget for destructive measures. They were taken step by step, one step at a time. Thus came not so much a plan being carried out, but an incredible meeting of minds, a consensus-mind reading by a far-flung bureaucracy."*

Höss' declaration on the subject of the *Führerbefehl*, which mainstream Holocaust historiography had tenaciously clung to for decades, had been thrown quietly overboard by the functionalists with the result we have just discussed. But one had to wait until 1999 for a drastic revision of "the older research literature" by Karin Orth's article on Rudolf

---

646 *Newsday*, Long Island, New York, 23 February 1983, p. II/3. Quoted by R. Faurisson, *Écrits Révisionnistes (1974-1998)*, Édition privée hors commerce, Vichy 1999, Vol. III, pp. 958f.

Höss.[647] In it Orth pushed back the alleged order by Himmler calling Höss to Berlin by one year into June of 1942.[648]

Another fundamental testimony which has disappeared from the mainstream debate about the Holocaust is the one by SS-*Hauptsturmführer* Dieter Wisliceny, who had been Eichmann's representative in Slovakia. His deposition in Nuremberg (3 January 1946) was widely used by the early Holocaust historiography, especially with respect to the alleged confidential remark ascribed to Eichmann that "he would leap laughing into the grave because the feeling that he had 5 million people on his conscience would be for him a source of extraordinary satisfaction."[649] Wisliceny is today remembered only for having supplied the fateful figure of 5-6 million Jewish victims, even though a little earlier he had declared that at least 4 million Jews had come within the scope of the "final solution," but that he did not know how many had survived. Actually, the Jews able to work were not subjected to this "final solution," e.g. the 25-30% of some 450,000 Hungarian Jews deported to Auschwitz,[649] hence the number of victims is less than 4 million. This brings us back to the *Führerbefehl.* During the same hearing Wisliceny declared that he met Eichmann in Berlin in late July or early August of 1942. On this occasion Eichmann is said to have shown him an order written by Himmler, which Wisliceny summarized as follows:[650]

> *"The Fuehrer had ordered the final solution of the Jewish question; the Chief of the Security Police and the SD and the Inspector of Concentration Camps were entrusted with carrying out this so-called final solution. All Jewish men and women who were able to work were to be temporarily exempted from the so-called final solution and used for work in the concentration camps. This letter was signed by Himmler himself. I could not possibly be mistaken since Himmler's signature was well known to me."*

During his interrogation by the prosecutor of the national Slovak tribunal, Wisliceny confirmed:[651]

651 Slovenský Národný Archív, 36/48, p. 142.

> *"This order was dated April 1942 and showed Himmler's personal signature, which I knew well. The order mentioned that able-bodied Jews were to be exempted, for the time being, from extermination and were to be put to work in the factories attached to the KZs."*

Seeing that the alleged *Führerbefehl* transmitted by Himmler to Höss in June of 1941 concerned *all* of the Jews *without exception*,[652] i.e. also those apt to work, mainstream Holocaust historiography must prove the existence of a triple *Führerbefehl* – the first one for the total extermination of the Russian Jews, the second one for the total extermination of the western Jews, and a third one of a later date of a partial extermination. But there is yet another twist. According to mainstream Holocaust literature Sobibór and Treblinka were opened in May and July of 1942, respectively, hence after the alleged *Führerbefehl* of April 1942, and were to be *pure* extermination camps, i.e. for the total and indiscriminate extermination of able-bodied and other Jews. This would have required yet a fourth *Führerbefehl*, revoking the third one, regarding the two camps mentioned and also regarding Chełmno and Bełżec, the other two camps where a total extermination is said to have been carried out.

The fundamental problem of mainstream Holocaust historiography – when, how, and why the National Socialist policy of emigration/evacuation was abandoned in favor of extermination – remains thus unresolved. Hence, the *Führerbefehl*, which would have to coincide with this epoch-making change and clarify it, dissolves into subjective conjectures which border on parapsychology.

This historical inconsistency is necessarily reflected by the genesis of the alleged extermination camps in the East as well.

8.2. Origins and Significance of "Aktion Reinhardt"

Whereas the origin of the term *Aktion Reinhard(t)* is controversial even among mainstream historians – leading to two different ways of spelling it – they agree that it stood for the murder of Jews in the Gen-

---

652 Himmler is alleged to have informed Höss of the following order by Hitler: "Alle für uns erreichbaren Juden sind jetzt während des Krieges ohne Ausnahme zu vernichten." (All Jews whom we can seize are to be annihilated without exception now during the war.") Martin Broszat (ed.), *Kommandant in Auschwitz. Autobiographische Aufzeichnungen des Rudolf Höß*, Deutscher Taschenbuch Verlag, Munich 1981, p. 157.

eral Government and the Byałistok region, although the documents clearly prove them wrong.

8.2.1. The "Generalplan Ost"

On 24 June 1941 Himmler ordered SS-*Oberführer* Prof. Dr. Konrad Meyer-Hetling, his best specialist in this domain, to draw up plans for the German colonization of the eastern territories recently integrated into the Reich (primarily the *Reichsgaue* Danzig-West Prussia and Wartheland). On 15 July Meyer-Hetling terminated a study entitled "*Generalplan Ost*."[653] The general lines of the project had already been worked out for Poland by E. Wetzel and G. Hecht in the form of a secret memorandum. In it the objective of the *Ostpolitik* was defined in the following words:[654]

> *"The objective of the German policy in the new territories of the Reich must be the creation of a racially, spiritually, and mentally, as well as ethnically and politically homogeneous German population. It follows that all elements which cannot be Germanized will have to be removed relentlessly."*

This removal consisted of a population transfer which included exceptions constituting a "*Sonderbehandlung*" (special treatment).[655] Jews, however, were to be moved into the non-incorporated Polish territories (the General Government):[656]

> *"The remaining Polish territory which, at the moment, has a population of 12.7 million, would thus reach 19.3 million.*[657] *In addition, there would be another 800,000 Jews from the Reich (Altreich area, Austria, Sudetenlands, and Protectorate). Finally, another 530,000 Jews from the former Polish territories now integrated into the Reich would have to be transferred as well."*

654 "Die Frage der Behandlung der Bevölkerung des ehemaligen polnischen Gebietes nach rassenpolitischen Gesichtspunkten," PS-660, p. 16.

655 *Ibid.*, p. 18, "Sonderbehandlung rassisch wertvoller Kinder"; pp. 24f., "Sonderbehandlung der nichtpolnischen Minderheiten."

656 *Ibid.*, p. 25.

657 Following the planned evacuation of 6,636,000 Poles residing in the Polish territories annexed by Germany.

As far as the treatment of these populations was concerned, the guiding principle was to separate and oppose Poles and Jews. The Jews might even have enjoyed a somewhat more favorable treatment:[658]

> *"The treatment of the Jews in the remaining territory could, in certain respects, be different from that of the Poles. Regardless of the question raised initially, whether the Jews are to be treated differently, i.e. more leniently than the Poles or not, the German administration will have the task of setting up the Poles and the Jews against each other.*
>
> *In order to make the Jew fit for emigration, it would be advisable, if need be, to provide him with a better educational training. Jewish political associations are to be prohibited in the same manner as Polish associations of this kind. On the other hand, cultural Jewish groups are more easily tolerable than their Polish counterparts. The Jews may probably be given more autonomy here in view of the fact that they do not possess real political power, as opposed to the Poles and their Greater Polish ideology. Obviously, an eye must be kept on Jewry and their well-known tendency to conduct political and economic intrigues.*
>
> *Yiddish as a language may be acceptable in public affairs. The Hebrew script, however, would be impossible here."*

There are other limitations concerning the press, the use of names, agricultural matters, as well as measures aiming at limiting population growth, such as abortions.

On 17 July 1941 Himmler, in his role as *Reichskommissar für die Festigung des deutschen Volkstums* (Reich commissar for the consolidation of German ethnicity)[659] named SS-*Brigadeführer* Odilo Globocnik, at the time head of SS and police in Lublin, to the post of *Beauftragter für die Errichtung der SS- und Polizeistützpunkte im neuen Ostraum* (commissioner for the installation of SS and police agencies in the new eastern region). In a note written on 21 July 1941, item 13, Himmler ordered that the commissioner should "primarily issue orders, by autumn, for the installation of the SS and police agencies in the new eastern region."[660] As Jan Erik Schulte tells us, "other orders issued

---

658 *Ibid.*, pp. 35f.

659 To implement this task, which Hitler had given him with his decree of 7 October 1939, Himmler set up the "RKF office" (*Dienststelle* RKF [*Reichskommissar für die Festigung deutschen Volkstums*]) directed by *SS-Oberführer* Ulrich Greifelt, which changed into "RKF-Stabshauptamt" (Central staff agency RKF) in June of 1941.

660 NO-3031.

by Himmler from Lublin indicate as well that he wanted to make use of detainees for projects arising in connection with the settling of the East."[661]

Himmler's high-flying projects transpire in his secret order of 5 December 1941 concerning the "use of detainees from concentration camps" transmitted to the head of RSHA, *SS-Gruppenführer* Reinhardt Heydrich, to the inspector of the concentration camps *SS-Brigadeführer* Richard Glücks, to all camp commanders, and to *SS-Gruppenführer* Oswald Pohl, head of *SS-Hauptamt Verwaltung und Wirtschaft* (Main Office for administration and economy). He ordered Pohl to train, "by the date of a peace agreement, for the projects to be undertaken from that moment on: 1) at least 5,000 stone masons, 2) at least 10,000 bricklayers." The size of this endeavor can be judged from the fact that Germany had only 4,000 stone masons before the war. After the peace treaty the company *Deutsche Erd- und Steinwerke GmbH* was to provide at least 10,000 cubic meters of granite annually "for the Führer's major construction projects."[662]

As Schulte states:[663]

> *"For the building projects within 'Generalplan Ost' Meyer estimated a need for at least 850,000 workers over the first five years, with 400,000 of them assigned to the settlement areas in the occupied Soviet Union. Over the following five years there was still a need for 580,000 men, with 130,000 of them being employed in the new 'eastern region.'"*

In order to furnish the required manpower, Himmler ordered the construction of a concentration camp at Lublin in July of 1941 for 25,000 to 50,000 unspecified detainees. When the initial military successes in the war against the Soviet Union supplied the Germans with a large number of prisoners, Himmler decided to use them for the projects and thus ordered a prisoner of war camp to be built at Lublin, the first plan of which dates from 7 October 1941.[664]

The man in charge of this task was *SS-Oberführer* Hans Kammler, head of *Amt II – Bauten* (Dept. II, Constructions) within *SS-Hauptamt Haushalt und Bauten* (SS Main Office for Budget and Constructions).

661 J.E. Schulte, *op. cit.* (note 653), p. 44.
662 NO-385.
663 J.E. Schulte, *op. cit.* (note 653), p. 48.
664 Cf. in this respect J. Graf, C. Mattogno, *Concentration Camp Majdanek: A Historical and Technical Study*. Theses & Dissertations Press, Chicago 2003, pp. 20-24, and Document 2 on p. 256.

On 1st February 1942, *SS-Wirtschafts- und Verwaltungshauptamt* was set up, absorbing *Hauptamt Verwaltung und Wirtschaft* and *Hauptamt Haushalt und Bauten*, *Amt II* of which became *Amtsgruppe C*, under Kammler's leadership.

On 1st November 1941 Kammler sent a post-dated order for the construction of the Lublin camp to the Central Construction Office of the Waffen-SS and Police in Lublin (*Zentralbauleitung der Waffen-SS und Polizei*):[665]

> *"Construction order for the installation of a PoW camp at Lublin, to house 125,000 prisoners of war, is hereby given."*

But the camp strength was soon raised to 150,000 prisoners. On 8 December 1941 Kammler issued the following order to the local *Zentralbauleitung*:[666]

> *"In addition to the construction order of 1.11.41, I hereby issue the enlarged construction order for the installation of a PoW camp at Lublin to house a total of 150,000 PoWs and/or detainees."*

A few weeks later, on 26 November, Globocnik, in his function as commissioner for the installation of SS and police agencies in the new eastern region, ordered the Central Construction Office at Lublin to provide for the "installation of a transit support camp for the superior head of SS and police of Russia-South (and Caucasia) at Lublin," which comprised about 13 barracks, 11 of which were to be used for storage.[667] The camp was completed and handed over on 11 September 1942.[668] Its function was to supply the various agencies involved in construction projects in the eastern territories. A circular issued by the head of Office CV/Central Construction Inspection (*Amt CV/Zentrale Bauinspektion*), SS-*Sturmbannführer* Lenzer, dated 1st September 1942 and concerning "SS construction agencies and construction projects in the occupied territories, especially in the eastern region," gave instructions to split all construction work into exterior (*A-Arbeiten*) and interior works (*B-Arbeiten*) and requested the various construction groups (*Baugruppen*) to report by 1st November which projects were completed

in 1942 and which could be expected to be completed by 1st April 1943.[669]

The origins of the Auschwitz-Birkenau Camp are part of this context and retrace faithfully the initial vagaries of the Lublin camp. Birkenau was conceived on 30 October 1941 for 125,000 prisoners to be housed in 174 barracks (*Gefangenenunterkunftsbaracken*) with a maximum capacity each of 744 persons,[670] but the respective construction order was also post-dated to 1st November:[671]

> *"Construction order for the erection of a PoW camp at Auschwitz with a capacity of 125,000 prisoners of war is hereby given."*

The first drawings for the camp, the lay-out plan for the PoW camp at Auschwitz, Upper Silesia (*Lageplan des Kriegsgefangenenlagers Auschwitz O.S.*) of 7 and 14 October 1941[672] comprised 174 housing barracks, but a plan dated 5 January 1942[673] had 282 such barracks, the one dated 6 June 1942[674] had 360, and the one dated 16 August[675] had 513. Only the last one indicates a camp strength: 200,000 prisoners.

The enlargement of the PoW camp at Birkenau to a total of 200,000 persons was approved by Himmler during his visit to Auschwitz on 17 and 18 July 1942. In a letter dated 3 August 1942 and addressed to *Amt CV* of *SS-Wirtschafts-Verwaltungshauptamt*, SS-*Hauptsturmführer* Karl Bischoff, then Head of the Auschwitz Central Construction Office, wrote:[676]

> *"The enlargement of the project was submitted to Amtsgruppenchef C, SS-Brigadeführer und Generalmajor der Waffen-SS Dr.-Ing. Kammler, on the occasion of the visit of Reichsführer on 17 and 18 July 1942; approval mark on one copy of the site plan enclosed and rapid return of the latter is requested."*

On 27 August, Bischoff told the same office:[677]

"The site plan enclosed comprises the recently requested enlargement of the PoW camp to a strength of 200,000 men."

The enclosed drawing was the one dated 16 August 1942 mentioned above.

Initially the "*Generalplan Ost*" also comprised the camp at Stutthof. Himmler visited it on 23 November 1941 and wrote to SS-*Gruppenführer* Pohl on 19 December:[678]

"I have come to the conviction that Stutthof is of prime importance for the eventual settlement of the Danzig – West Prussia Gau. […] *Stutthof must furthermore be enlarged to the point of being able to accommodate eventually 200,000 Russians who will be used to carry out the settlement project of the Danzig – West Prussia Gau."*

Schulte asserts that "Himmler, Pohl, and Kammler therefore expected a total of 300,000 Soviet PoWs in mid-December of 1941 who were to be employed for the building of settlements in the East, later to be raised step-wise to at least 375,000 PoWs and/or detainees."[679]

In reality, however, the number of prisoners of war actually moved to the camps was extremely low, and those who had been transferred died by the thousands because of the disastrous conditions under which they had to live and work. Schulte observes:[680]

"Himmler and Pohl thus again faced the question as to who should build the SS and police agencies and the large settlements 'in the new eastern region' and improve the local infrastructure. After the brutal treatment applied to the prisoners in the PoW camps run by the SS and in the Stalags of the Wehrmacht, Red Army personnel would no longer be available, at least not for the foreseeable future. A modification of the gigantic projects being out of the question, the SS chiefs had to focus on a new group of victims for the recruitment of their forced laborers."

This new group would be the Jews who were to primarily carry out road works within the colonization of the East. In this context – which, as we shall see, clarifies the real meaning of Heydrich's decisions as he explained them at the Wannsee meeting – Himmler instructed Glücks on 26 January 1942 as follows:[681]

---

678 Facsimile of the document in: Konrad Ciechanowski, Franz Dwertmann, Donald Steyer *et al.*, *Stutthof: Das Konzentrationslager*, Wydawnictwo "Marpress," Gdańsk 1996, outside of text.

679 J.E. Schulte, *op. cit.* (note 653), p. 53.

680 *Ibid.*, p. 56.

681 *Ibid.*, p. 59. NO-500.

> *"As Russian PoWs cannot be counted on in the near future, I shall dispatch to the camps a large number of the Jews and Jewesses who are being emigrated* [sic] *from Germany. You should take measures so as to be able to accept in the camps 100,000 male Jews and up to 50,000 Jewesses over the next 4 weeks. Major economic tasks and jobs will be entrusted to the concentration camps. SS Gruppenführer Pohl will supply you with details."*

Himmler viewed these 150,000 detainees "primarily as manpower for the *Generalplan Ost*."[682]

In accordance with the above directives, the first transports sent to Auschwitz and Majdanek contained only able-bodied Jews (cf. Subchapter 9.3). Schulte himself acknowledges that "according to the will of the *Reichsführer* SS, it was mainly the "able-bodied" Jews who would be deported to Auschwitz,"[683] and that "Himmler and Pohl considered [Auschwitz] to be a forced-labor camp of Jews for the 'settlement of the East' as late as June of 1942."[684]

The construction of any camps for the alleged *total* extermination within "*Aktion Reinhardt*" where even able-bodied Jews are said to have been murdered contrasts starkly with Himmler's and Pohl's search for Jewish manpower to be employed for "*Generalplan Ost*."

The crucial contradiction is Globocnik's claimed second "appointment" by Himmler to be the head of "*Aktion Reinhardt*." In this respect, J. Schelvis writes:[685]

> *"Globocnik was personally appointed by Himmler to lead* Aktion Reinhard*. It is certain that on 13 October 1941 Hitler ordered the Bełżec extermination camp to* [be] *built, and probably the one at Sobibór as well."*

Leaving aside the fact that "certainty" in this case stands for mere conjecture, how can we explain that Himmler made Globocnik commissioner for the installation of SS and police agencies in the new eastern region on 17 July 1941 and then, on 13 October of the same year, asked him to build an extermination camp while still retaining his former function?

With an unusual lack of consistency, the *Enzyklopädie des Holocaust* states:[686]

---

682 *Ibid.*, p. 60.
683 *Ibid.*, pp. 65f.
684 *Ibid.*, p. 67.
685 J. Schelvis, *op. cit.* (note 60), pp. 33f.
686 I. Gutman, et al. (eds.), *op. cit.* (note 14), Vol. I, p. 546.

> *"When he visited Lublin in July of 1942, Himmler charged Globocnik with the planning and erection of SS and police agencies on the territory of the Soviet Union to be occupied in the future, and soon thereafter with the erection of extermination camps."*

Globocnik thus would have had to simultaneously carry out a task that needed a very large supply of Jewish manpower – within his tasks as commissioner for the installation of SS and police agencies in the new eastern region – and a task which required him, as head of the future "*Aktion Reinhardt*," to arrange for the complete extermination of these very same Jews.

Such mutually contradictory functions would call for an order by Himmler, which is even more mysterious and ambiguous than the *Führerbefehl*.

8.2.2. "Aktion Reinhardt"

The *Enzyclopedia of the Holocaust* has this to say under the heading "Aktion Reinhard":[687]

> *"Code name for the murder of most of the Jews in the General Government and the Byalistok region as part of the final solution. The name was coined a few months after the beginning of the Aktion in memory of Reinhard Heydrich, the chief planner of the 'final solution' in Europe, who had become the victim of an attack on his life by members of the Czech underground. According to the minutes of the Wannsee conference, the purpose of Aktion Reinhard was the killing of the 2,284,000 Jews who were then living in the five districts of the General Government – Warsaw, Lublin, Radom, Cracow and Lemberg (Lwów)."*

This claim would require that "final solution" was another "code name" designating the biological extermination, but this assumption is not backed up by documents. It is even in direct disagreement with the existing documents, as we have shown in Chapter 7.[688] As far as the "Wannsee conference" is concerned, we have already explained its real significance, which had nothing to do with any alleged plan for an extermination of the Jews. Actually, the respective minutes do not men-

---

687 *Ibid.*, p. 14.

688 For an in-depth study of this question we refer the reader to the study by C. Mattogno, *Raul Hilberg e i "centri di sterminio" nazionalsocialisti. Fonti e metodologia.* 2008, pp. 5-24. Accessible online at the following address: http://aaargh.vho.org/fran/livres8/CMhilberg.pdf

tion any kind of program for the mass assassination of Jews in extermination camps, although one such camp (Chełmno) was allegedly in operation in January of 1942, with another one (Bełżec) under construction. As opposed to this, the minutes sketch out a project which was perfectly in tune with the National Socialist policy towards the Jews valid at the time:[689]

> *"The evacuated Jews will first be taken, group after group, to so-called transit ghettos, from where they will be transported further to the East."*

This is in perfect agreement with Hitler's remark noted by Governor Frank on 17 July 1941, which we have discussed in Chapter 7 (p. 211) and which spoke of "the General Government, with the latter becoming, as it were, a mere transit camp."

The following item on the agenda of the Wannsee meeting is also in blatant contrast with an alleged policy of extermination:[689]

> *"The intention is not to evacuate Jews over the age of 65 but to send them to an old people's ghetto. Theresienstadt has been earmarked for this purpose."*

This latter category comprised some 30% of the 280,000 Jews still remaining in the *Altreich* and the *Ostmark*[689] on 31 October 1941, i.e. 84,000 persons.

The *Protokoll* states that "emigration has now been replaced by evacuation to the East" as a possibility and as a provisional option in the process towards a final solution of the Jewish question. Hence, if "evacuation" were synonymous with extermination, the SS would have decided not to exterminate the 84,000 German Jews who were over 65 years old but to move them into an "old people's ghetto"!

The only passage of the *Protokoll* which Holocaust historiography invariably brings up in its effort to demonstrate that the decisions announced at Wannsee aimed at the extermination of the Jews, actually demonstrates the contrary:[690]

> *"In the course of the final solution and under appropriate direction, the Jews are to be utilized for work in the East in a suitable manner. In large labor columns and separated by sexes, Jews <u>capable of working</u> will be dispatched to these regions to build roads, and in the process a large number of them will undoubtedly drop out by way of natural attrition.*

---

689 NG-2586-G, p. 8 (protocol text following the English translation on www.ghwk.de).
690 *Ibid.*, pp. 7f.

> *Those who ultimately should possibly get by will have to be given suitable treatment because they unquestionably represent the most resistant segments and therefore constitute a natural elite that, if allowed to go free, would turn into a germ cell of renewed Jewish revival. (Witness the experience of history.)"* (Emph. added)

This paragraph refers to "Jews capable of working"; the *Protokoll* says nothing about the fate of those *incapable* of working, but one cannot believe that they were going to be exterminated if 84,000 of them were going to be moved into an "old people's ghetto."

In this context the term "suitable treatment" has nothing sinister about it: If these people, "if allowed to go free," constituted "the germ cell of renewed Jewish revival," they would simply not be allowed to go free.

The employment of the able-bodied Jews "to build roads" in the East was part of *Generalplan Ost*, as has been pointed out by J.E. Schulte:[691]

> *"Rather, the Jews were to further the colonization of the East planned by the SS and build an enormous system of roads, not so much for military use but for the strategy of colonization. Generalplan Ost did not needlessly stress the significance of a network of superhighways which were to link the individual settlements. This program of road-building was to be carried out by Soviet prisoners of war, as Adolf Hitler stressed in mid-October of 1941. In accordance with these ideas, Organisation Todt, too, had banked on the use of Red Army prisoners for the construction of Dg IV.*[692] *When these men were no longer available, Jewish forced laborers replaced their murdered predecessors. Their utilization for road works in the Ukraine was envisaged in January of 1942."*

Hence, Heydrich referred to this project during the Wannsee conference.

The SS was also thinking of the improvement of the swampy regions of the Pripyet, which stretched out between eastern Poland and White Ruthenia, as can be seen for example from two studies which appeared in December 1941 and June 1942, respectively.[693] Furthermore, the idea of a system of canals to link the Black Sea and the Baltic Sea had al-

Völkerverschiebung und der Mord an den europäischen Juden*, S. Fischer Verlag, Frankfurt/Main 1995, pp. 275f.

ready been raised by Alfred Rosenberg on 8 May 1941 in a directive to a Reich commissariat for the eastern territories.[694]

On 14 August 1942 SS *Brigadeführer* Otto Rasch, head of *Einsatzgruppe C*, proposed to Berlin the following solution of the Jewish question:[695]

> *"The surplus of the Jewish masses could well be employed and used up in the cultivation of the vast Pripyet swamps as well as those of the northern Dnyeper and along the Volga."*

Drainage operations were also being carried out in the Sobibór region and employed Jewish manpower. Schelvis tells us:[696]

> *"Dutch Jews are known to have been working on a drainage project alongside German and Slovakian Jews at Arbeitslager Ujazdów, fifteen kilometres to the southwest of Osowa, around 15 June 1942."*

He then mentions the presence of an engineer Holzheimer from the water company at Chełm, and drainage projects using Jewish labor in the area of Krychow.[697]

Let us return to *Aktion Reinhardt*. As far as the name is concerned, Peter Witte and Stephen Tyas affirm that "the well-known hypothesis of Robert L. Koehl, Uwe Dietrich Adam, Wolfgang Benz, the Institut für Zeitgeschichte in Munich, *et al.* that Einsatz or Aktion Reinhardt was named after State Secretary of Finance Fritz Reinhardt is highly questionable."[698] They underline that Heydrich's given name was, in fact, "Reinhardt" (and not "Reinhard") and that "the codename Reinhardt for the mass murder first appeared immediately after Heydrich's death in June 1942."[699] But this document – a letter from "Waffen-SS Standortverwaltung" of Lublin "an den SS- u. Polizeiführer – Reinhardt – Lublin" – is only a request for "50 empty suitcases stemming from the known action,"[700] without the slightest reference to any "mass murder" of Jews.

Aside from this arbitrary interpretation, the hypothesis concerning the name of Heydrich appears plausible. Globocnik wrote in an undated report:[701]

"The whole of Aktion Reinhardt can be split up into 4 areas:
A) the deportation itself
B) the use of the manpower
C) the use of objects
D) the securing of hidden values and real estate."

Here, the deportation was to be the major aspect, which brings us back to Heydrich.

All surviving documents about "*Aktion Reinhardt*" refer exclusively to the economic aspect. Even at Auschwitz was a "disinfestation and storage chamber Aktion Reinhard" (*Entwesungs- u. Effektenkammer Aktion Reinhard*), which was called "*Kanada I*," i.e. *Bauwerk* 28, officially called "delousing and storage barracks" (*Entlausungs- und Effektenbaracken*), and a "*Station 2 der Aktion Reinhardt*."[702] As late as May-June of 1944, a "*Sonderkommando Reinhardt*" (special detail Reinhardt) was operating at Birkenau, with 2,505 detainees assigned to it as of 19 June.[703]

In 1999 Bertrand Perz and Thomas Sandkühler tried to prove that even in the case of Auschwitz *Aktion Reinhardt* stood for an alleged extermination,[704] but this thesis has no historical foundation.[705]

Summarizing what has been stated in Chapter 7, Heydrich

– was appointed by Göring as head of the *Reichszentrale für jüdische Auswanderung* in Berlin on 24 January 1939;
– requested Eichmann on 15 July 1939 to set up a *Zentralstelle für jüdische Auswanderung* in Prague;
– wrote to Joachim von Ribbentrop, Minister of Foreign Affairs, on 24 June 1940 saying that the Jewish problem could not be solved "by emigration" but required "a territorial final solution;"

705 Cf. in this respect C. Mattogno *"Azione Reinhard" e "Azione 1005,"* Effepi, Genova, 2008.

– prohibited the Jewish emigration from France and Belgium on 20 May 1941 in an effort to render the emigration of "Jews from the Reich territory" easier;
– was entrusted by Göring on 31 July 1941 with the task of making preparations "for a comprehensive solution of the Jewish question within the German sphere of influence in Europe" in "addition" to the tasks Göring had given him on 21 January 1939, viz. to resolve "the Jewish question by means of emigration or evacuation;"
– was requested by Himmler on 18 September 1941 to implement the *Judenwanderung* (Jewish migration) via Łodź;
– declared in Prague on 10 October 1941 that it was being planned to deport 50,000 Jews from the Protectorate to Minsk and Riga between 15 October and 15 November, where they were to be housed "in the camps for communist detainees in the operational territory;"
– reported on 20 January 1942 during the Wannsee meeting on the policy of Jewish emigration directed by himself, thanks to which some 537,000 Jews had emigrated from the Reich territory by 31 October 1941, and stated that the *Reichsführer* SS had "forbidden any further emigration of Jews in view of the dangers posed by emigration in wartime and the looming possibilities in the East" and that, "as a further possible solution and with the appropriate prior authorization by the Führer, emigration has now been replaced by evacuation to the East."

Heydrich was therefore in actual fact "the chief planner of the final solution in Europe," but this term, in actual fact, designated the evacuation of the Jews from Europe, i.e. from the area of the General Government.

The following order given by Himmler to the higher SS and police leader in the General Government Friedrich-Wilhelm Krüger must be seen in this light:[706]

> *"I decree that the resettlement of the total Jewish population of the General Government must be implemented and terminated by 31 December 1942. On 31 December 1942 no persons of Jewish descent must any longer be present in the General Government unless they are held in the collection camps at Warsaw, Cracow, Chenstohova, Radom, Lublin. All other work projects employing Jewish labor must be terminated by that date, or, if their termination is im-*

[706] NO-5574.

> *possible, must be assigned to one of the collection camps. These measures are required to assure the ethnic separation of races and peoples in Europe as well as in the interest of the security and purity of the German Reich and its region of interest."*

The well-known letter written by the engineer Albert Ganzenmüller to SS-*Obergruppenführer* Karl Wolff, Himmler's assistant, is part of this framework:[707]

> *"Since 22 July there has been a daily train with 5,000 Jews from Warsaw via Malkinia to Treblinka, plus twice a week a train with 5,000 Jews from Przemysl to Bełżec. Gedob*[708] *is in permanent contact with the Cracow security service. The latter has agreed to stop the trains from Warsaw via Lublin to Sobibór (near Lublin) as long as the revamping of this line renders these transports impossible (until about October of 1942)."*

This was actually a "population movement" (*Bevölkerungsbewegung*), as Wolff wrote in his reply dated 13 August 1942.[709] The choice of Heydrich's first name "Reinhardt" in this context thus indicates the continuity of the task entrusted to him by Göring in 1939 and extended in 1941, viz. to resolve "the Jewish question by means of emigration or evacuation." It follows that *Aktion Reinhardt* in its main aspect, "resettlement" (*Aussiedlung*), was nothing but the implementation of this task. And the executor Globocnik acted in his quality of commissioner for the installation of SS and police agencies in the new eastern region.

This is borne out, moreover, by the fact that the resettlement entrusted to Globocnik was not limited to Jews, but comprised Poles and Ukrainians as well, as we can see from three documents relative to *Aktion Reinhardt*, assembled in the document file PS-4024: "measures for the conciliation of the foreign ethnicities in the case of resettlement,"[710] "measures for further resettlement,"[711] and the "note" of 1st July 1943, which described the operation "Werwolf 1" targeting the evacuations from an area surrounding the German settlement area in the Lublin district and the creation of a protective belt of Ukrainian settlements.[712] In

this respect Himmler gave specific directives two days later, which also mentioned the operation *Werwolf*.[713]

The report written by *SS-Hauptsturmführer* Helmut Müller of the *Rasse- und Siedlungshauptamt* (Main Office for Race and Settlement) on 15 October 1941 to the head of this office, SS-*Gruppenführer* Otto Hofmann, documents that Globocnik was entertaining grandiose plans of resettlement, which had brought him into trouble with the local authorities. He dreamed of cleansing the General Government of Jews and Poles and of creating a territory for German settlements in the Lublin district with Himmler's approval.[714] Even then Globocnik acted in his role as commissioner for the installation of SS and police agencies in the new eastern region, not as the man in charge of an extermination of the Jews.

8.3. Alleged Genesis and Organization of the Extermination Camps of *Aktion Reinhardt*

8.3.1. Administration and Financing

At the Stuttgart congress mentioned above, Hilberg presented a paper entitled *Die Aktion Reinhard*, in which he stated:[715]

> *"The initial phase of Aktion Reinhard raises three separate questions. Why were there three camps instead of only one? Why were they built in succession, Bełżec first, then Sobibór, and finally Treblinka? Why did each camp have only three gas chambers when they turned out to be insufficient? One could argue that they were approaching the objective hesitatingly, without having a clear view of it. That is not really inconceivable, but is is certainly not the complete explanation, and perhaps not even the most important one. It was, to sum it up, a difficult administrative problem. For the 'Final solution of the Jewish question,' the Third Reich had neither a central agency nor even a separate budget."*

As far as the alleged extermination camps of *Aktion Reinhardt* are concerned, this explanation is clearly wrong even from the Holocaust point of view, because "a central agency" did indeed exist, with its line of

command Himmler → Globocnik → Höfle → Wirth,[716] whereas the financing could be provided for by the economic proceeds from *Aktion Reinhardt*, i.e. the goods confiscated from the Jews.

The facts set out by Hilberg in the form of questions are thus inexplicable.

Hence, if we followed mainstream Holocaust historiography, we would have three chains of command regarding the gas chambers:

– Hitler → Führer Chancellery[717] → KTI[718] → Carbon monoxide in steel cylinders → euthanasia institutes → *Gaswagen* → Chełmno;
– Hitler → Himmler → Eichmann → Höss → Zyklon B → Auschwitz/Majdanek;
– Himmler → Globocnik → Höfle → Wirth → exhaust gases → Bełżec/Sobibór/Treblinka.

This creates obvious and serious problems, especially as far as the choice of the "weapon of the crime" is concerned, which mainstream Holocaust historiography has never been able to solve. We will return to this question in Subchapter 8.5. below.

8.3.2. Construction of the Camps

Schelvis tells us that the construction of the Bełżec Camp began on 1st November 1941 "under the leadership of the central construction agency at Zamość" and "under the supervision of Richard Thomalla."[719] Blatt speaks of "engineers from the SS Zentralbauleitung (SS Central Construction Office) in Zamość."[720] Rückerl affirms that SS-*Hauptsturmführer* Thomalla "came from the SS construction office at Zamość."[721] Schelvis adds:[722]

> *"When Bełżec was almost finished, the Thomalla group, in March of 1942, went to Sobibór to continue the construction work there."*

In the General Government, construction work and the corresponding technical, financial, and administrative aspects were handled by *Bauinspektion* (construction inspection) *der Waffen-SS und Polizei Reich*

719 J. Schelvis, *op. cit.* (note 60), p. 113.
720 T. Blatt, *op. cit.* (note 17), p. 13.
721 A. Rückerl (ed.), *op. cit.* (note 34), p. 72, note 65.
722 J. Schelvis, *op. cit.* (note 60), p. 38.

Generalgouvernement, which ruled over 5 central construction offices with 9 (local) construction offices. The central offices were located at Warsaw, Lublin, Lemberg, Debica, and Cracow.[723] This was the situation on 14 November 1941.

The *Bauwirtschaft* (construction industry), on the other hand, was directed by an SS-*Wirtschafter* (economist) attached to the *Höhere SS- und Polizeiführer im Generalgouvernement*. Both *Bauinspektion* as well as SS-*Wirtschafter* were at that time attached to *Amt II (Bauten)* (Dept. II, constructions) of *Hauptamt Haushalt und Bauten* (Central office of Budget and Constructions), run by SS-*Oberführer* Hans Kammler.

Thus, if the Bełżec Camp and subsequently the camp at Sobibór were built by the *Bauleitung* at Zamość, the construction order came from Kammler and the construction work was governed by the complicated bureaucratic procedure applying to all other camps, including the one at Majdanek.[724] This procedure was so complicated that, on 14 May 1943, Kammler sent out three pages of instructions for the "simplification of administrative procedures" concerning the rules then in force.[725]

The camp was therefore planned and built within the framework of responsibility and authority of *Amtsgruppe C* of *SS-Wirtschafts-Verwaltungshauptamt* (WVHA, Economic-Administrative Main Office), just in the same way as Auschwitz-Birkenau was. This makes Hilberg's thesis even more nonsensical that the alleged extermination camps of *Aktion Reinhardt* were built in the absence of a competent central authority and without a specific budgetary reference.

This also means that the camp had to be equipped with all elementary hygienic systems for the benefit of the SS supervisory force. Among other things, there had to be at least a water supply, a sewage disposal system, one or several washing barracks, toilet facilities, a sick bay, delousing or disinfestation facilities with bath, all the more so if Sobibór really was an extermination camp. The daily arrival of victims in precarious hygienic conditions and the presence of an enormous

724 The respective documentation is kept at WAPL, file ZBL. As far as Auschwitz is concerned, cf. the source given in the preceding footnote.

725 Addressed to all construction groups of SS-*Wirtschafter* attached to the *Höheren SS und Polizeiführern in den besetzten Gebieten, Bauinspektionen, Zentralbauleitungen und Bauleitungen der Waffen-SS und Polizei* (hence including the SS-*Wirtschafter* attached to *Höhere SS- und Polizeiführer im Generalgouvernement*, as well as to the *Bauinspektion der Waffen-SS und Polizei Reich Generalgouvernement* and to the *Bauleitung* at Zamość); WAPL, ZBL, 268, pp. 94-97.

number of corpses in a very limited area would otherwise have increased the risk of spreading infectious diseases enormously.

Jan Piwonski, who worked at the Sobibór railway station, declared on several occasions to Claude Lanzmann that in late March and early April of 1942 barrack elements arrived at Sobibór by rail:[726]

> *"And a little bit later, train cars came from time to time with parts for the barracks.* […] *And the Jews unloaded the cars and brought the material for the barracks over there by the camp."*

Sobibór was therefore probably equipped with standard types of barracks found in all concentration camps, for example the "*Pferdestallbaracke"* type 260/9 (which measured 40,76m×9,36m), type IV/3 (19,95m×8,14m), type 501/34 (42,30m×12,50m), the "*Schweizerbaracke*" (28,20m×6,20m), the Baracke type VII/5 (33,15m×8,14m), type RAD IV/3 (59,55m×8,14m) etc. This also suggests that the construction of Sobibór was, first of all, Kammler's responsibility.

In the following chapter we will examine the conclusions which may be drawn from this state of affairs.

8.3.3. Construction of the Alleged Gas Chambers: General Problems

According to the official theses the alleged gas chambers at Sobibór were built on the model of those at Bełżec, and the latter were modelled on those of the euthanasia institutions. This alleged sequence has no backing in reality, though.

First of all there is no *documentary* evidence that the euthanasia institutions were equipped with *gas chambers operating with carbon monoxide* nor that *carbon monoxide cylinders* were ever used for homicidal purposes in the euthanasia centers.

There is furthermore no solid proof that the first alleged gassing building at Bełżec contained three gas chambers. In the course of his archeological investigations of that camp between 1997 and 1999, Prof. Andrzej Kola found traces neither of the first nor of the second alleged gassing building.[727]

In his statements made on 14 October 1945 mentioned above, the witness Stanisław Kozak expressed himself as follows on the subject of the alleged first extermination site of Bełżec:[728]

[727] C. Mattogno, *op. cit.* (note 10, Engl. ed.), pp. 93-96.
[728] ZStL, 252/59, Vol. I, pp. 1129f. (Translation from Polish text); published in: Y. Arad,

> *"In each of the three sections of this barrack there were water pipes at a level 10 cm above the floor. In addition, on the western side of each part of this barrack, water pipes branched off to a level of 1 m above the floor, ending in an opening directed towards the center of the barrack. The elbow pipes were connected to those running along the walls of the barrack beneath the floor. In each of the three parts of the barrack we mounted ovens each one weighing some 250 kg. It is to be assumed that the elbowed pipes were later connected to the ovens. The ovens had a height of 1 m 10 cm, a width of 55 cm, and a length of 55 cm. Out of curiosity I looked into the inside of one of the ovens. I could not detect any hearths. The inside – as far as I could make out – was lined with refractory bricks. I could not detect any other openings. The oven door was oval, with a diameter of some 25 cm at a height of some 50 cm from the floor."* (Emph. added)

Mainstream historiography asserts that "the stoves described were used to heat the shed's rooms, thus allowing the bottled gas and Zyklon B used in the early stage of the camp's killing activities to work more efficiently in cold weather."[729] The source for this claim is the following passage from an article by Michael Tregenza:[730]

> *"The first attempts at mass murder by gas were conducted by Wirth in the small gassing barrack in February of 1942. This test gassing liquidated the 150 Jewish workers who had been deported to Bełżec for the construction of the camp. They were gassed by means of Zyklon B."*

Tregenza refers to the interrogation of Josef Oberhauser of 12 December 1960,[731] a reference which would later be taken up by Robin O'Neil with a corrected date (13 Dec.):[732]

> *"The first experimental killing with Zyklon B was carried out by Wirth on a group of about 150 Jews who had been brought to the camp from the nearby town of Lubycza-Królewska to complete construction of the camp and fell trees."*

"Die 'Aktion Reinhard,'" in: E. Kogon, H. Langbein, A. Rückerl *et al.* (eds.), *op. cit.* (note 40), pp. 152f.

730 M. Tregenza, "Bełżec – Das vergessene Lager des Holocaust," in: I. Wojak, P. Hayes (ed.), *"Arisierung" im Nationalsozialismus, Volksgemeinschaft, Raub und Gedächtnis*, Campus Verlag, Frankfurt/New York 2000, pp. 248f.

731 *Ibid.*, note 34 on p. 263.

732 R. O'Neil, *Bełżec: Stepping Stone to Genocide; Hitler's answer to the Jewish Question*, Chapter 8, in: www.jewishgen.org/Yizkor/Belzec1/bel081.html#33.

However, Oberhauser's interrogation of 12 December 1960, a transcript of 5 pages, does not deal with alleged gassings in Bełżec at all, whereas the one dated 13 December, a transcript of 11 pages, does not even mention Zyklon B. The defendant had in fact declared:[733]

> *"While bottled gas* [Flaschengas] *was used in the first test series and for the first transports of the second series of tests, the Jews from the later transports were killed with the exhaust gas from a tank engine or a truck engine which Hackenholt operated."*

In this deposition, "bottled" gas obviously refers to carbon monoxide and not to Zyklon B, which was packaged in cans. In the passage following the one just quoted Tregenza himself actually asserts that "for the ensuing experiments" the gassings were carried out "with carbon monoxide gas from steel cylinders." The expression "bottled gas and Zyklon B" is therefore erroneous on two counts, because Oberhauser never mentioned Zyklon B at all and because he referred no doubt to carbon monoxide in cylinders.[734]

Jules Schelvis proposes a different explanation:[735]

> *"The intention was thus evidently not to use engine exhaust fumes to cause death, but carbon monoxide gas produced when coal is not completely burnt. Whether the first victims in fact died from carbon monoxide poisoning has not been conclusively established. Possibly the gas Zyklon-B was used earlier, but it is more likely to have been carbon monoxide stored in steel canisters, as used in the* Euthanasieanstalten*."*

This hypothesis is nonsensical because the ovens were inside the rooms and so the control of the combustion[736] would have had to be done by the victims themselves![737] The idea of passing the gases produced by the ovens through narrow *water* pipes is no less absurd, as such a thing could only have been accomplished by means of powerful blowers.

---

733 Interrogation of Josef Oberhauser on 12 December 1962. ZStL, 208 AR-Z 252/59, Vol. IX, p. 1685.

734 For an in-depth treatment of the question, cf. C. Mattogno, "Postilla sull'articolo di Thomas Kues 'Le presunte gasazioni sperimentali di Bełżec,'" in: www.andreacarancini.it/2009/03/una-messaa-punto-di-carlo-mattogno/, 30 March 2009.

735 J. Schelvis, *op. cit.* (note 61), p. 98.

736 The reaction of incomplete combustion of carbon is: $C + ½ O_2 = CO + heat$.

737 An incomplete combustion is basically a normal combustion run in such a way that the whole mass of the coal on the grate catches fire. When this has taken place, an incomplete combustion with generation of CO (carbon monoxide) can occur when the amount of combustion air is suitably reduced.

Moreover, if the ovens for the generation of carbon monoxide were already in the chambers, what was the use of the water pipes?

Kozak's ovens are also incompatible with an alleged gassing by means of "carbon monoxide gas from steel cylinders."

The Holocaust axiom that the alleged gas chambers at Bełżec and those of Sobibór were identical in number and dimensions is in contradiction with an important witness: If we are to believe Gitta Sereny, Franz Stangl, first commander of Sobibór, is said to have declared:[738]

> *"It was about ten or even fifteen minutes' walk away from the railway station where we were building the main camp. It was a new brick building with three rooms, three metres by four. The moment I saw it I knew what Michel meant: it looked exactly like the gas chamber at Schloss Hartheim."*

We would thus have three gas chambers, each 3 by 4 meters or 12 square meters for a total of 36 square meters. However, the alleged gas chambers at Bełżec measured 8 by 4 meters or 32 square meters each for a total of 96 square meters.

Stangl's reference to Hartheim castle is worth a closer look. Hans Maršálek writes the following about the layout of the alleged Hartheim gas chambers:[739]

> *"Then the victims were led into the gas chamber. It consisted of a room measuring 6.60 by 4.20 meters. The floor originally consisted of wooden boards, was then given a layer of concrete, and finally lined with red tiles. There were tiles as well up the walls to a level of 1.70 meters. In the center of the ceiling there was a water pipe with three shower heads. Alongside three of the walls there was a tube (15 mm in diameter) with many perforations. This is where the poison gas came from; a physician in the room next door always supervised its feed from a steel bottle."*

The number of victims put to death in this alleged gas chamber of 6.60m×4.20m = 27.72 square meters is said to have been 18,269.[740] At Sobibór, on the other hand, for the gassing of hundreds of thousands of Jews, three gas chambers of a total of 36 square meters are alleged to have been planned!

---

738 G. Sereny, *op. cit.* (note 224), p. 109.

739 Hans Maršálek, *Die Vergasungsaktionen im Konzentrationslager Mauthausen. Dokumentation*, Wien 1988, p. 26.

740 Willi Dressen, "Euthanasie," in: E. Kogon, H. Langbein, A. Rückerl *et al.* (eds.), *op. cit.* (note 40), p. 62.

As far as the gassing technology is concerned, the descendance of those at Bełżec and at Sobibór from the gas chambers of the euthanasia institutions is furthermore inconsistent, because for the latter carbon monoxide gas in cylinders is reported to have been used, whereas for the former there allegedly was a switch to exhaust gas from an engine, Diesel at Bełżec, gasoline at Sobibór. Who decreed when, where, and why such an essential departure from the original way of operation?

For the first gas chambers at Bełżec this new gassing technology is not documented; to be more precise, no kind of technology is documented here at all. As far as Sobibór is concerned, mainstream Holocaust historiography suddenly brings in an engine for the gassings, based more on an act of faith that the local gas chambers were identical to those of Bełżec than on anything else. But instead of positing the use of a Diesel engine as at Bełżec, a gasoline engine is postulated. This is probably based on the statement by defendant Erich Fuchs quoted earlier (see p. 525).

According to the Holocaust historiography, at Bełżec "during the first 'trial,'[741] a Diesel engine of 250 HP was mounted outside in order to produce the carbon monoxide and feed it into the pipes,"[742] and a Diesel engine was later ascribed also to the alleged gas chambers of Treblinka.[743]

In his study "The Diesel Gas Chambers: Ideal for Torture – Absurd for Murder"[744] Friedrich Paul Berg has established that a Diesel engine produces at most 0.4% of CO, whereas a gasoline engine with a suitable setting of the carburator can produce up to 12% of the lethal gas. The "chemist" who allegedly had already carried out experiments and measurements at Bełżec cannot have been unaware of this. It is therefore incomprehensible why a Diesel engine should have been left in place at Bełżec and a similar engine was allegedly also set up in Treblinka after this purported Sobibór experiments. We must not forget that the gas generators using wood or coal which were widely installed and used during the war in all kinds of vehicles of the Axis powers (*Generatorgaswagen*) produced a gas that was extremely rich in CO, between 18

---

741 But according to J. Oberhauser, as we have seen above, the first series of experiments was done by means of *Flaschengas* (bottled gas).

742 I. Gutman et al., (note 14), Vol. I, entry "Bełżec," p. 176.

743 *Ibid.*, Vol. III, entry "Treblinka," p. 1428.

744 *Op. cit.* (note 32); this is an updated version of the article "The Diesel Gas Chambers – Myth Within a Myth," *The Journal of Historical Review*, 5(1) (1984), pp. 15-46.

and 35%,[745] but for some strange reason there is no mention in the testimonies that the SS ever thought of using this widely available source for the generation of carbon monoxide, in spite of the fact that the toxicity of the gas produced by these generators was clearly indicated for safety reasons on all such generators.

What is even more mysterious is the alleged use of CO in the camps in the east and of HCN (hydrocyanic acid)[746] at Auschwitz. Kurt Gerstein's reports on his "mission" are at the heart of this dichotomy. Here Yitzak Arad has this to say:[747]

> *"The gassing system that had been developed and introduced by Wirth in the Operation Reinhard death camps proved only partially satisfactory. The frequent engine breakdowns caused disturbances and delays in the entire extermination process. Globocnik was aware of these shortcomings and, in coordination with the higher authorities of the SS, decided to look into the possibility of introducing an alternative gassing system. The prevailing opinion among the higher SS authorities in charge of the extermination of Jews was that Zyklon B was more suitable for this task.*
>
> Obersturmführer *Kurt Gerstein, the chief disinfection officer in the Main Hygienic Office of the Waffen SS, and SS* Obersturmbannführer *Wilhelm Pfannenstiel, professor and director of the Hygienic Institute at the University of Marburg/Lahn, who had also served as hygienic adviser of the Waffen SS, were sent to Lublin in the middle of August 1942. Gerstein's main mission was to check the possibility of introducing the gas Zyklon B into the gas chambers. Zyklon B had already been successfully used in Auschwitz instead of the engines that were still supplying the monoxide gas in the death camps of Operation Reinhard."*

As we have seen elsewhere,[748] Gerstein's "mission" is a chain of absurdities which ends with an even greater absurdity: although he had been ordered by the RSHA to change the alleged gas chambers running on Diesel engine-exhaust gases into chambers operating with hydrocyanic acid and having gone to Bełżec for this purpose with 45 *bottles* of HCN (which is nonsense, as there never was such a thing as bottled HCN), he then went back to Berlin without having done anything,

748 C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), "The 'Mission' of Kurt Gerstein," pp. 126-133.

without having caused any changes, without reporting to anyone, and without being asked anything by anyone about his trip!

This absurdity was noticed by the French investigating judge Mattei in his interrogation of Gerstein:[749]

> *"Q: To whom did you report about the results of your mission?*
> *A: When I returned to Berlin after a trip which took about two weeks, I did not talk to anyone about the outcome of my mission. Nobody asked me anything.* […]
> *Q: As you said so yourself, you were given an important task by Berlin in your technical function; this mission was so secret which you had to execute as a state secret; you went to three camps, you were received there by a general who, in view of your mission, believed that he should tell you what two top Nazi leaders had said.*[750] *How can you expect us to believe:*
> *1) that you did not accomplish your mission,*
> *2) that you did not report about it to anyone,*
> *3) that no one has questioned you about it in any way."*

Schelvis devotes more than five pages to Gerstein;[751] he tries to avoid one of the grossest absurdities of his witness – the presence of "700-800 [Jews] on an area of 25m^2 and in a volume of 45m^3," and writes:[752]

> *"Gerstein was mistaken. The 700 to 800 he mentions must have been the total number of victims in the six chambers combined."*

Gerstein, however, did mean 700-800 persons in a single gas chamber and underlined it explicitly:[753]

> *"up to that moment all the people in the four rooms, already filled, they are alive; four times 750 people in a space of four times 45 cubic metres, still alive!"*

The development of the alleged extermination camps of *Aktion Reinhardt* inevitably collides with the unanswered questions raised by Hilberg.

Wolfgang Scheffler asserts that "Sobibór, on the other hand, was considerably less convenient as far as rail transport is concerned. It was constructed when it became apparent that Bełżec could not cope with

---

749 G. Wellers, "Encore sur le Témoignage Gerstein," in: *Le Monde Juif*, Jan.-Mar. 1980, No. 97, p. 29, 32.
750 Hitler and Himmler are said by Gerstein to have visited the eastern camps on 16 August 1942. This is historically false.
751 J. Schelvis, *op. cit.* (note 61), pp. 106-110.
752 *Ibid.*, p. 115, note 45.
753 *Ibid.*, p. 108.

the assassination program,"[754] and the same reasoning should obviously be applied to the construction of Treblinka as well.

As we have seen above, the *Enzyklopädie des Holocaust* wants to make us believe that the SS had to envisage "the killing of the 2,284,000 Jews then living in the five districts of the General Government" as part of *Aktion Reinhardt*. To realize this objective, the SS planners are said to have built a single extermination camp – Bełżec – with a gassing installation absolutely ridiculous in view of its task: three gas chambers having a total of 96 square meters, which, according to Uwe Dietrich Adam, could accommodate at most 600 persons (or, if we follow the Bełżec trial sentence, 100 to 150 persons; cf. Subchapter 9.2). This means that the SS expected to conduct (2,284,000÷600=) 3,806 gassing operations!

At Sobibór, which was built to overcome the deficiencies of Bełżec, the SS likewise set up three gas chambers, but they were even smaller, 36 square meters altogether, or, if we follow the sentence of the Sobibór trial at Hagen,[755] three chambers each 4 by 4 meters, or 48 square meters altogether!

Only slowly and painfully the SS is said to have realized that "the gas chambers turned out to be too small, the 'output' of the Sobibór Camp was too low,"[756] and hence they ostensibly decided to build another three chambers of the same size, 4 by 4 meters,[757] to reach a total of 96 square meters.

At Bełżec the old gas chambers are alleged to have been torn down and substituted by six new ones, each 4 by 5 m[758] for a total of 120 square meters.

At Treblinka, the last of the claimed eastern extermination camps to be set up and said to have been built on the experience gained at Bełżec and Sobibór, the same mistake was made again: once again three small gas chambers are claimed, 4 by 4 meters[759] = 16 square meters each, with altogether 48 square meters, exactly like those at Sobibór, which had turned out to be too small! And, as at Bełżec, the first gas chambers

---

754 Wolfgang Scheffler, "Chełmno, Sobibór, Bełżec und Majdanek," in: E. Jäckel, J. Rohwer (eds.), *op. cit.* (note 642), p. 149.
755 A. Rückerl (ed.), *op. cit.* (note 34), p. 163.
756 *Ibid.*, p. 172.
757 *Ibid.*, p. 173.
758 *Ibid.*, p. 133.
759 *Ibid.*, p. 203.

were replaced by 6 or 10 (!) new chambers, 8 by 4 meters each.[760] Furthermore, to make things even more absurd, the old gas chambers at Bełżec were torn down instead of being left intact or repaired in order to ensure a higher extermination capacity.

In one of his(?) reports written at Rottweil on 4 May 1945, Gerstein alleged that Globocnik had given the "maximum output per day" for the eastern extermination camps as follows on 17 August 1942:

– Bełżec: 15,000 persons
– Sobibór: 20,000 persons
– Treblinka: 25,000 persons.[761]

If this had been so, 38 days would have sufficed to gas the alleged 2,284,000 victims.

Uwe Dietrich Adam summarizes in a table the respective data on the *Aktion Reinhardt* camps, see Table 4.[762] One can immediately see the madness in the planning of these camps (we have up-dated this table on the basis of the data available today).

Table 4: Alleged Operation Data of *Aktion Reinhardt* Camps

CAMP:	BEŁŻEC	SOBIBÓR	TREBLINKA
1st period from	17 March 1942	3 May 1942	23 July 1942
# of gas chambers	3	3	3
chamber size [m]	8×4 or 3×4	4×4	4×4
2nd period from	mid-July 1942	September 1942	September 1942
# of gas chambers	6	6	6 or 10
chamber size [m]	4×5	4×4	8×4

Hence SS *Obersturmführer* Richard Thomalla who is said to have built all three alleged extermination camps of *Aktion Reinhardt* one after another[763] would have been a perfect fool, if one were to follow mainstream Holocaust historiography, and even more so Wirth and Globocnik, who had ordered him to do the work. Actually, it is mainstream Holocaust history which is wearing the fool's cap.

760 *Ibid.*, p. 204.

763 J. Schelvis, *op. cit.* (note 60), pp. 35f., 48f.

8.4. Euthanasia and *Aktion Reinhardt*

Yitzhak Arad summarizes the Holocaust story of euthanasia in the following words:[764]

> *"At the beginning of World War II, Hitler signed the following order: 'Reichsleiter Bouhler and Dr.* [Karl] *Brandt* [Hitler's personal physician] *are charged with the responsibility for expanding the authority of individual physicians, with a view to enable them, after the most critical examination in the realm of human knowledge, to administer to incurably sick persons a mercy death.'*
>
> *The man directly in charge of the euthanasia operations was Viktor Brack, a high official in the Chancellery of the* Führer *and subordinate to Bouhler. The T4*[765] *organisation established several institutions throughout Germany. The mentally ill destined for elimination were placed in hermetically sealed rooms, into which carbon monoxide was introduced; they died within a short time. Some victims were killed by injections of poison. All bodily remains were cremated.*
>
> *A request from Himmler to Bouhler in the summer of 1940 enlarged the euthanasia program to encompass sick concentration camp detainees from the camps inside Germany under SS supervision. Some of the detainees were Jews. They were removed from their camps to the euthanasia centers and were murdered there. The code name for this operation was 14F13. As a result of internal pressure within Nazi Germany, Hitler ordered the termination of the euthanasia program at the end of August 1941. However, sporadic killings of small groups of 'incurable victims' continued in some euthanasia institutions after this date."*

A short while laster Arad notes:[766]

> *"The most important group of Operation Reinhard came from the euthanasia program. They brought with them knowledge and experience in setting up and operating gassing institutions for mass murder. They filled the key posts involved with the extermination methods, the planning and construction of three death camps – Bełżec, Sobibór, and Treblinka – and the command over these camps. Viktor*

---

764 Y. Arad, *op. cit.* (note 43), p. 9, quoting PS-630.

765 Acronym deriving from Berlin address – Tiergartenstraße 4 – of the headquarters of this program.

766 *Ibid.*, p. 17.

> *Brack gave evidence in his trial after the war about the transfer of the euthanasia personnel to Operation Reinhard: 'In 1941, I received an oral order to discontinue the euthanasia program. In order to retain the personnel that had been relieved of these duties and in order to be able to start a new euthanasia program after the war, Bouhler asked me – I think after a conference with Himmler – to send this personnel to Lublin and place it at the disposal of SS Brigadeführer Globocnik.'*
>
> *The first group of euthanasia personnel, numbering a few dozen men, arrived at Lublin between the end of October and the end of December 1941. Among them was Kriminalkommissar of Police Christian Wirth, the highest-ranking officier from the euthanasia program assigned to Operation Reinhard, and Oberscharführer Josef Oberhauser. Additional people from the euthanasia program arrived in Lublin during the first months of 1942. Viktor Brack visited Lublin at the beginning of May 1942 and discussed with Globocnik the contribution of the euthanasia organization to the task of exterminating Jews."*

As for the deployment of euthanasia personnel at the "*Aktion Reinhardt*" camps, the following documentary evidence may be brought fourth. On 23 June 1942 the organizer of the euthanasia program, *SS-Oberführer* Viktor Brack, sent a letter to Himmler in which he stated:[767]

> *"In accordance with my orders from Reichsleiter Bouhler I have long ago put at Brigadeführer Globocnik's disposal part of my manpower to aid him in carrying out his special mission. Upon his renewed request I have now transferred to him additional personnel."*

Later in the same letter Globocnik's "special mission" is identified as "the action against the Jews". This can only mean that Brack had part of his euthanasia staff transferred to "*Aktion Reinhardt*." We furthermore have documentary proof that two individual members of the euthanasia staff were present in the Reinhardt camps. The physician Dr. Irmfried Eberl served as the medical director of the euthanasia institutes in Brandenburg and Bernburg. In the summer of 1942 he was transferred to Treblinka II, where he served as the first commandant of the camp.

Both the involvement in the euthanasia program and the transfer to Treblinka is confirmed by Eberl's preserved personal correspondence, part of which has been published by his biographer Michael Grabher.[768]

---

767 *IMT* Document NO-205; quoted in Y. Arad, *op. cit.* (note 43), p. 17.

768 Michael Grabher, *Irmfried Eberl. 'Euthanasie'-Arzt und Kommandant von Treblinka*,

Secondly, Christian Wirth is mentioned as belonging to the *Dienststelle* of Brack in a letter of recommendation dated 21 August 1941.[769] In another letter addressed to Kuno Ther and dated 13 April 1943, *Polizeimajor* Christian Wirth is identified as the "responsible inspector" (*verantwortlicher Inspektor*) of the Reinhardt camps.[770] He is again mentioned prominently in the letter sent by Globocnik to von Herff on 13 April 1943 concerning Himmler's visit to "installations of 'Aktion Reinhard'" (cf. Subchapter 2.5).

Thus there is no doubt that euthanasia staff members were indeed transferred to the Reinhardt camps. This fact is supposed to prove that these camps were extermination camps for Jews. These men are said to have built homicidal gas chambers there, similar in design to those allegedly used under the T4 program, and to have merely replaced the carbon monoxide cylinders by the exhaust gases from a Diesel engine.

From this point of view one cannot understand the fact that these men, whose specialty and training were to kill innocent people, were sent to the Russian front in the winter of 1942 in order to save the lives of wounded German soldiers. On 12 January 1942 the physician Dr. Fritz Mennecke wrote to his wife:[771]

> *"Since the day before yesterday a large delegation from our organisation, headed by Herr Brack, is on the battlefields of the East to help in saving our wounded in the ice and snow. They include doctors, clerks, nurses, and male nurses from Hadamar and Sonnenstein, a whole detachment of 20-30 persons. This is a top secret. Only those persons who could not be spared were excluded."*

Heinrich Gley, for example, was transferred from Sonnenstein to Minsk[772] in January of 1942 together with male and female nurses from other institutions. They were employed up to March and April 1942 "for the transportation of the wounded and of soldiers who were suffering from chillblains," after which they were all sent back to their original stations.[773] Karl Schluch, too, was sent to the eastern front in the

---

Peter Lang / Europäischer Verlag der Wissenschaft, Frankfurt am Main 2006. None of the letters sent by Eberl from Treblinka contains any mention of gassings of Jews.

773 Interrogation of Henrich Gley on 8 May 1961. ZStL, 208 AR-Z 252/59, Vol. IX, pp. 1281-1282.

winter of 1941 and stayed there until some time in February or March of 1942. He had to "help bring wounded soldiers back."[774] The same applies to Werner Karl Dubois, who stayed at this job until April of 1942.[775]

From the Holocaust perspective it cannot be explained why the euthanasia personnel were sent out to build gas chambers for *Aktion Reinhardt* but not at Auschwitz. After all, the so-called "*Sonderbehandlung 14f13*," i.e. the extension of the euthanasia program to the concentration camps, should have entailed such a move, all the more so as Reitlinger tells us that the Jewish detainees were included "merely for being Jews."[776] According to Danuta Czech's *Kalendarium*, Dr. Horst Schumann, the head of the Hadamar euthanasia institution, arrived at Auschwitz on 28 July 1941, leading a *Sonderkommission* which had the task of selecting "all invalids, cripples, and chronically ill" who were then sent to Sonnenstein to be gassed. This happened on Himmler's orders.[777]

Brack, however, declared that the order to transfer the euthanasia personnel to Lublin and to put it at Globocnik's disposition could have come "only from Himmler."[778] Yet if Himmler was indeed running all at once *Aktion Reinhardt*, *Sonderbehandlung 14f13*, and the alleged extermination program at Auschwitz, which he is said to have explained to Rudolf Höss in June of 1941,[779] then it is all the more inconceivable that the road leading to homicidal gas chambers at this camp should have been an entirely different one, without the euthanasia program being the least bit involved. The same reasoning applies to Chełmno.

Still, this point is not the only questionable one in the Holocaust thesis. Along the chain of events tying the euthanasia program to the alleged extermination of the Jews in the camps of *Aktion Reinhardt* exists a fundamental link: the plan to exterminate the Jews apt to work in the East. During the trial of the physicians in Nuremberg after the war this argument was set out in the following words:[780]

779 *Affidavit* of R. Höss on 5 April 1946, PS-3868.

780 Trials of War Criminals Before the Nuernberg Military Tribunals under Control Council

> *"In October 1941, Brack, the administrative head of the Euthanasia Program, forwarded plans whereby Jews who were unable to work should be exterminated by gas. He declared his readiness to send some of his assistants and especially his chemist, Kallmeyer, to the East, where the necessary gassing apparatus could be easily manufactured.*
>
> *Eichmann, whom Hitler had charged with the extermination of the Jews, was in agreement with these plans. Consequently, there were 'no objections to doing away with those Jews who are unable to work, by means of the Brack remedy.'*[781] *Kallmeyer, who was charged with the manufacture of the gassing apparatus and equipment, had been trained for this task in the Euthanasia Program. Previously he had been responsible for the proper operation of the gas chambers of the different euthanasia institutions."*

The foregoing is a summary of the draft of a letter, allegedly drawn up by *Amtsgerichtsrat* E. Wetzel, *Sonderdezernent für Rassenpolitik* (special secretary for racial policy) in the Ministry of the East, addressed to Hinrich Lohse, *Reichskommissar für das Ostland*. The letter dated 25 October 1941 deals with the "solution of the Jewish question." The policy of deportation to the East is clearly confirmed:

> *"According to Sturmbannführer Eichmann, camps for Jews are to be set up at Riga and Minsk, with Jews from the Altreich possibly being sent there as well. At the moment Jews from the Altreich are being evacuated to Litzmannstadt, but they may also be moved to other camps, later on to be employed for work in the East to the extent that they are physically apt."*

The novelty consisted in the plan to kill the unfit Jews in camps yet to be set up at Riga and at Minsk. The killing was to be carried out by means of "gassing equipment" (the "Brack remedy" mentioned above). However, "as Brack thinks that the manufacture of the equipment in the Reich is much more difficult than on site, Brack suggests to detach his staff, in particular his chemist Dr. Kallmeyer, to Riga to take care of the necessary arrangements."[782]

Law No. 10, "The Medical Case," Vol. I, U.S. Government Printing Office, Washington 1950, p. 804.

781 "keine Bedenken, wenn diejenigen Juden, die nicht arbeitsfähig sind, mit den Brackschen Hilfsmitteln beseitigt werden"

782 NO-365.

But what kind of "gassing equipment" are we dealing with? At the trial of the physicians, Brack described it as follows:[783]

> *"Then the patients were led to a gas chamber and were there killed by the doctors with carbon monoxide gas (CO).*
> *Q. Where was that carbon monoxide obtained, by what process?*
> *A. It was in a compressed gas container, like a steel oxygen container, such as is used for welding – a hollow steel container.*
> *Q. And these people were placed in this chamber in groups, I suppose, and then the monoxide was turned into the chambers?* […].
> *A. No special gas chamber was built. A room suitable in the hospital was used, a room of necessity attached to the reception ward and to the room where the insane persons were kept. This room was made into a gas chamber. It was sealed, given special doors and windows, and then a few meters of gas piping were laid, or some kind of piping with holes in it. Outside this room there was a container, a compressed gas container with the necessary apparatus, that is a pressure gauge, etc."*

Hence we are essentially dealing with carbon monoxide cylinders. But why would it have been easier to find them in Riga or Minsk rather than at home in the Reich? It would rather seem to be the other way around.

In this document, the date – 25 October 1941 – is crucial, because it has devastating consequences for the Holocaust theory. First of all, as we have seen above, the alleged *Führerbefehl*, which Himmler allegedly transmitted to Höss in June of 1941, concerned "*all* Jews whom we can seize… *without exception*," i.e. also those *fit for work*. We must therefore ask: Who ruled that those fit for work should be spared, and why and when was this done?

Secondly, the execution of the alleged extermination plan for the East, sketched out in Wetzel's letter, was not carried out. On this point Y. Arad says:[784]

> *"But the proposal of Dr. Wetzel and of Brack was not implemented in Ostland. The unemployed 'euthanasia' personnel were assigned to another and bigger task – the erection of camps with gassing facilities, where the annihilation of the Jews in the Nazi-occupied territories of Poland would be carried out."*

Schelvis, on the other hand, tells us that "it is certain that on 13 October 1941 Hitler ordered the Bełżec extermination camp to be built…," i.e.

---

783 "The Medical Case," *op. cit.* (note 780), pp. 876, 881.
784 Y. Arad, *op. cit.* (note 43), p. 11.

just before the date of Wetzel's letter, and anyway the construction of this camp began "with certainty" on 1st November. Therefore, within the span of six days (i.e. between 25 October and 1st November, 1941) it was decided to abandon the idea of killing only the Jews *unfit for work* and to implement the general extermination of all Jews, including those *fit for work*, in the General Government – who took the decision, when, and why?

On the other hand, the western Jews quietly continued to be deported to Riga and Minsk (cf. Chapter 9) without those unfit for work being assassinated. The "Summary report for 16 October 1941 to 31 January 1942" of *Einsatzgruppe A* states that, as far as Riga and Minsk were concerned, by the final date of the report 20,000 Jews had been taken to Riga and 7,000 to Minsk and housed in reception camps. Some 70-80% were women, children, and old people, but still there were no mass executions; only "in individual cases Jews having a contagious disease were […] selected and executed."[785]

But the Holocaust thesis contains further complications: The chemist Helmut Kallmeyer mentioned by Wetzel in his letter was described at the trial of the physicians as "the technical expert on operation of the gas chambers in the euthanasia station."[786] Nevertheless, he took no part in the planning or the construction of the alleged gas chambers of *Aktion Reinhardt*, although all the prerequisites for such a participation apparently existed. On 6 September 1941 he was transferred to the euthanasia headquarters at Tiergartenstrasse in Berlin and remained there "unemployed" through January of 1942. In January or February of 1942 he was ordered to go to Lublin, where he presented himself to an office of the police or the SS, but was not given any specific assignment. After a week he was sent back to Berlin to do analytical work on drinking water.[787]

The task of planning and building the alleged gas chambers is claimed to have instead been entrusted to SS-*Scharführer* (staff sergeant) Lorenz Hackenholt for Bełżec, to him and SS-*Unterscharführer* (sergeant) Erwin Lambert for Treblinka, and to the same pair for the enlargement of the "gassing station" at Sobibór.[788] They are reported to

have been helped by a mysterious chemist named Blaurock or Blaubacke.[789]

And Brack's "gassing equipment"? How, when, why, and on whose orders was it replaced by an engine? Nobody seems to know…

Let us make a final remark on these alleged experts in gas chambers. In his annotated book on euthanasia Henry Friedländer dedicates only a couple of lines to Hackenholt:[790]

> *"In the fall of 1939, Dubois was recruited by T4, together with his friend Lorenz Hackenholt, who would later operate the diesel engine at the Bełżec gas chambers."*

However, his involvement in the alleged gas chambers at Bełżec is mentioned only in the "Gerstein report"! About Lambert, on the other hand, Friedländer has more to tell. He makes him "master mason and building trades foreman"[791] and asserts that "he served as T4 'expert for the construction of gas chambers,'"[792] and that therefore "Lambert's testimony that he only erected room dividers and installed doors is simply not believable."[792]

Within the Holocaust debate, though, it is Friedländer's assertion which is not believable.

Brack declared during his interrogation:[793]

> *"Q. How large were these gas chambers?*
>
> *A. They were of different sizes. It was simply an adjoining room. I can't remember whether they were 4 × 5 meters, or 5 × 6 meters. Simply normal sized rooms, but I can't tell you the exact size. It was too long ago. I can't remember.*
>
> *Q. Were they as large as this courtroom?*
>
> *A. No. They were just normal rooms.*
>
> *Q. Well, a man of your intelligence must have some idea about the size of these rooms. The assertion 'normal size' doesn't mean anything in particular.*
>
> *A. By that I mean the size of the normal room in a normal house. I didn't mean an assembly room or a cell either. I meant a room, but I can't tell you the exact size because I really don't know it. It might*

have been 4 × 5 meters, or 5 × 6 meters, or 3½ × 4½, but I really don't know. I didn't pay much attention to it."

We have already underlined above his statement to the effect that in the euthanasia institutions "no special gas chamber was built" and that the patients were "killed by the doctors with carbon monoxide gas," which means that the latter were operating the "gassing devices." In this context Lambert's job could have merely been that of a simple bricklayer, someone setting up partitions and putting in doors, as he had always maintained. It thus makes no sense to say that this bricklayer was an "expert for the construction of gas chambers."

We must also consider the fact that, if the order to build Bełżec was given on 13 October 1941 as Schelvis asserts, the only extermination system available at the time were the "gassing devices." Wetzel's letter (cf. above) says in this regard:[794]

"Head of department Brack indicates that the process in question is not without risk and that special protective measures are required."

For that very reason Kallmeyer's trip to Riga had been requested. How can it be, then, that the construction of the alleged gas chambers at Bełżec was entrusted to two simpletons, Hackenholt and Lambert?

Any transformation or adaptation of those "gassing devices" supposedly used in the *Aktion Reinhardt* camps should instead have been the task of the two alleged experts in homicidal gas chambers: Kallmeyer and Widmann.

But Kallmeyer has declared that he had never had anything to do with gas chambers while working on the T4 project, never to have travelled to Riga nor to any other alleged extermination camp,[795] and no one has ever disputed this. Not even Albert Widmann who headed the section V D 2 (Chemistry and Biology) at *Kriminaltechnisches Institut* (KTI, institute for forensic techniques) within the RSHA played a role in this project, although he said that he had discussed with Brack "the technical details of the implementation" of the gassing of mental patients with carbon monoxide.[796] But then, who was in charge? Two nincompoops promoted by mainstream Holocaust historiography to the rank of "experts" just because there was nobody else around?

---

794 NO-365.

795 Interrogation of H. Kallmeyer at Kiel on 20 July 1961, cit. pp. 97-99.

796 Interrogation of A. Widmann at Düsseldorf on 11 January 1960. ZStL 202 AR-Z 152/59, Vol. 1, p. 51.

Actually, as we have already mentioned, there is no *documentary* proof that the euthanasia institutions were equipped with homicidal gas chambers.[797] Therefore there is no basis for the official thesis that the alleged gas chambers of the *Aktion Reinhardt* camps were built by T4 staff along the lines of those of the euthanasia institutions.

What is even less valid is the alleged proof of the secrecy surrounding all this. In this respect M. Novitch wrote:[798]

> *"Euthanasia was treated as a state secret, and all its participants were sworn to silence. Operation Reinhard was also a state secret; he who had not taken a vow of silence in Berlin had to do so in Trawniki. They signed the following proclamation: 'Any member belonging to the team of the death camps swears that he has been instructed by Sturmbannführer Hoefle, commander of the head office of Operation Reinhard, not to reveal any information, oral or written, on the resettlement of Jews.' It was stressed that anyone divulging a secret would be severely punished; it was also forbidden to take photographs of the camp."*

Leaving aside the straightforward lie regarding the "death camps,"[799] the obligation to secrecy concerned everybody, including the firms working in the concentration camps. These companies had to sign a "*Verpflichtungserklärung zur Geheimhaltung*" (declaration of commitment to secrecy) which covered leakage of information and the taking of photographs and threatened any such acts with the punishments for high treason.[800]

---

797 This was asserted only by witnesses after the war. One of the most important of these witnesses, Viktor Hermann Brack, in his sworn statement of 14 October 1946 (NO-426), cited by Y. Arad in the passage quoted above, declared that in 1941 it was an "open secret" that the German authorities wanted to exterminate all Jews. Holding this to be "unwürdig" (below their dignity), he and his collaborators looked for "a different solution of the Jewish problem" and found one: the deportation of the Jews to the island of Madagascar, which they had thought out and proposed as an alternative to the extermination project already on the books! This will give the reader an idea concerning the trustworthiness of such testimonies.

798 M. Novitch, *op. cit.* (note 36), p. 24.

799 The document cited by M. Novitch states: "Minutes of the engagement of […] as a person specifically entrusted with the execution of work in connection with the implementation of Jewish resettlement within "Einsatz Reinhard" by the Chief of SS and Police in the Lublin district. […] declares: I have been thoroughly instructed and advised by SS-Hauptsturmführer Höfle in his quality as head of the Division "Einsatz Reinhard" under the Chief of SS and Police in the Lublin district: […]" Jüdisches Historisches Institut Warschau (ed.), *op. cit.* (note 101), p. 300.

800 WAPL, ZBL, 7, p. 5.

On the other hand, the Holocaust thesis discussed above is neither the only one nor even the one most compatible with the circumstances. As it is certain that the National-Socialist policy in respect of the Jews did not aim at their extermination but at their deportation to the East, as there is no documentary evidence which would indicate that this deportation policy was ever reversed or interrupted in a manner which might correspond to the elusive *Führerbefehl*, the only reasonable conclusion which mainstream historiography could draw from the transfer of a portion of the T4 staff to the *Aktion Reinhardt* camps would be the extension of the euthanasia program to the Jews who were to be moved to the East.[801]

In such a case, however, the deportees in the camps would not all have been assassinated (except for a handful selected for work), but only a small fraction of them. One could thus no longer speak of pure extermination camps. Bełżec, Sobibór, and Treblinka would thus have had a double function: a principal function as a transit camp for the resettlement to the East, and a secondary function as a euthanasia center for the mentally ill or the incurably sick.

This conclusion would also explain the double chain of command applying to those camps:

– Führer chancellery → Wirth: for euthanasia
– Himmler → Globocnik: for the deportation.

It would also be in agreement with the (low) quantitative material findings at Bełżec and Sobibór (mass graves and ash) which cannot be integrated in any way into the thesis of extermination.

The official thesis discussed above contains, moreover, a fundamental incongruity. The reasoning of the verdict for the Sobibór trial states:[802]

> *"This command had the task of helping the sick and the disabled as well as the children which were not accompanying the women on the*

---

[801] According to mainstream Holocaust historiography, the Poles were subjected to euthanasia from autumn of 1939 *onwards*, but on a very limited scale (a few thousand persons). Stanisław Batavia, "Zagłada chorych psychicznie," in: *Biuletyn Głównej Komisji Badania Zbrodni Niemieckich w Polsce*, III, Poznań 1947, pp. 91-106; Willi Dressen, *op. cit.* (note 740), pp. 62-65. However, the case of the 25,000-30,000 Poles suffering from incurable tuberculosis in the Warthegau raises doubts on this point. On 1st May 1942 (NO-246) Gauleiter Greiser proposed to Himmler to kill them, but on 18 November this problem was still being discussed (NO-249), and in the end these patients were not killed. ("The Medical Case," *op. cit.* (note 780), pp. 759-794, "Project To Kill Tubercular Polish Nationals"), although it would have been easy to send them to Chełmno.

[802] A. Rückerl (ed.), *op. cit.* (note 34), p. 168.

> *normal path to extermination to climb into vehicles. German guards, in an effort to make them or keep them unsuspicious as to the killing plan, explained to these arrivals that they would be taken to the camp 'sickbay.' They were taken to the stretch of woods east of Camp III and were then shot and interred by members of the German and Ukrainian camp personnel near a hollow not far from the camp road."*

This would mean that the people who would have corresponded best to the category of euthanasia victims were not led to the gas chambers in the *Aktion Reinhardt* camps but taken to a fake "sickbay" or rather to the edge of a pit in a wooded area of the camp and shot. There is no sensible motive for such a procedure. From all traditional points of view, these people would have constituted a group of victims whose fate would not even have had to be discussed in any way. The only open question could have possibly been whether they should be given a gas chamber of their own, all the more so as Himmler, who is claimed to have been disgusted by the shooting of the Jews, is said to have ordered Artur Nebe, the head of *Einsatzgruppe C*, in August of 1941 to devise a more humane system of killing. Eventually, this effort is said to have resulted in the invention of the "gas wagons,"[803] alleged gas chambers like those at Sobibór but mobile rather than stationary.

In conclusion we can say that, even if Brack's "gassing devices" were perfectly documented, the detachment of the staff of the euthanasia program to the *Aktion Reinhardt* camps would not necessarily demonstrate that these camps were sites of mass exterminations.

8.5. Himmler's Cremation Order

Mainstream Holocaust historiography postulates another basic order which is, however, no less elusive than the *Führerbefehl*: Himmler's order to disinter and cremate the corpses in the *Aktion Reinhardt* camps. As we have seen in Subchapter 2.5., it is certain that Himmler paid a brief visit to Sobibór on 19 July 1942. He arrived there after a visit to Auschwitz (17 and 18 July), about which Franciszek Piper asserts:[804]

---

[803] M. Beer, "Die Entwicklung der Gaswagen beim Mord an den Juden," in: *Vierteljahrshefte für Zeitgeschichte*, 35(3), 1987, p. 407.

[804] F. Piper, "Gas Chambers and Crematoria," in: Yisrael Gutman, Michael Berenbaum (eds.), *Anatomy of the Auschwitz Death Camp*. Indiana University Press, Blooming-

> *"It cannot be ruled out that his observations resulted in the decision to cremate the bodies instead of burying them. In fact, shortly after Himmler's visit, Standartenführer Paul Blobel of Eichmann's office arrived at Auschwitz with orders to exhume all the buried bodies, burn them, and scatter the ashes to prevent the possible reconstruction of the number of victims."*

At Auschwitz this activity is said to have begun on 21 September 1942,[805] at Sobibór in October 1942, at Bełżec in December 1942, and at Treblinka in March of 1943.[806]

These dates do not prove any general cremation order by Himmler, though – who was, after all, the head of *Aktion Reinhardt*. On the contrary: they disprove such an order, since it is incomprehensible why a specific cremation order would have been issued for each camp separately. It follows that in these camps the cremations were not carried out to hide "the traces of the crime," but probably for specific local reasons.

---

ton/Indianapolis 1994, p. 163.

805 D. Czech, *op. cit.* (note 777), p. 305.

806 On this point Y. Arad has introduced further contradictions by asserting that Himmler issued the cremation order at Treblinka on the occasion of his visit in February-March 1943, which, however, has been shown never to have taken place, cf. C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), pp. 141-143.

9. Sobibór: Propaganda and Reality

9.1. Fake "Baths" or Real Baths? Sobibór as a Transit Camp

As we have seen in Chapter 4, the witnesses have described the alleged gas chambers of Sobibór as fake baths, but faked in such a way that they could have been real: "At first glance, everything looks as a bath should look – faucets for hot and cold water, basins to wash in" (Pechersky, see p. 70); "The bath was arranged as if it were really a place to wash (faucets for the shower, a pleasant environment)" (Feldhendler, see p. 71) and "everyone would be given a piece of soap." (Razgonayev, see note 233).

At the Eichmann trial in Jerualem there was the following exchange of arguments between the presiding judge and the witness Dov Freiberg during the 64th session (5 June 1961):[807]

> *"Presiding Judge: One moment. When did you become aware, when did it become clear to you for the first time, that these were not shower rooms, but gas chambers?*
> *Witness Freiberg: In the first days. There were some doubts, but it was known."* (Emph. added)

But on this point, Y. Arad writes:[808]

> *"The unawareness of what happened to the Jews who were taken to Camp III weighed heavily on the daily life of those selected to work. Days and even weeks passed until the Jewish prisoners who worked in Camp I and Camp II found out that those who had been taken there were gassed. In Sobibór, unlike Bełżec, the extermination area with gas chambers was more isolated from the other parts of the camp, and nothing could be seen."*

He then quotes another statement by Freiberg – in blatant disagreement to the one above – according to which "for two weeks he and those with

---

807 State of Israel, *op. cit.* (note 123), Vol. III, p. 1176; the witness is the same person as Ber Moiseyevich Freiberg mentioned earlier.
808 Y. Arad, *op. cit.* (note 43), p. 79.

him hoped that the people had not been murdered, but had been sent to Ukraine. This in spite of the fact that they worked only a few hundred meters away from the gas chambers."[808] (Emph. added)

What matters here is not so much the contradictions of the witness Freiberg, but the contradiction with the official thesis of mass exterminations – as we can read in the article from the *Polish Fortnightly Review* of 1st July 1942 mentioned earlier (p. 65) that "the fetor of the decomposing bodies in Sobibór is said to be so great that the people of the district, and even cattle, avoid the place."

As the alleged extermination activity at Sobibór began for Arad "toward the end of April 1942" and as Freiberg arrived at the camp on 15 May,[809] the stench of the decomposing corpses should have been even more unbearable in Camps I and II and should have immediately revealed the "truth," i.e. the alleged extermination on the spot.

The detainees, however, did not know anything about this "truth" (cf. Chapter 4): Ada Lichtman tells us about the pep talk *Oberscharführer* Hermann Michel would give, in which he promised to the victims that, once they had taken their bath, they "would be going to the Ukraine to live and work."[810] On this point J. Schelvis writes:[811]

> *"Michel was so full of conviction when he delivered his speech, even as he was pulling the wool over the victims' eyes, that the Arbeitshäftlinge* [inmate workers] *also dubbed him 'the preacher.' Sometimes he would make out that the camp was a transit camp, that the journey to Ukraine was only a matter of time, and that the Jews would even be granted autonomy there. Other times he would tell them they would all be going to Riga. On a number of occasions his speech so roused the audience's enthusiasm – even among the Polish Jews – that they burst out in spontaneous clapping and cheering, completely oblivious of the fact that they would be dead within half an hour"*

A few pages on he asserts that even "the Arbeitshäftlinge of Lager 1 were not exactly sure of what went on in Lager 3," yet on the other hand "the stench of decomposing bodies, and later still the tall flames of the fires […] pointed to the fact that people were being murdered there"[812]

---

809 *Ibid.*, p. 75.
810 *Ibid.*, p. 76.
811 J. Schelvis, *op. cit.* (note 61), pp. 70f.
812 *Ibid.*, p. 68.

But how then could Michel's talk be so convincing as to get the alleged victims to applaud?

The same contradiction also appears in Thomas Blatt's tale:[813]

> *"Deception and camouflage permeated the system, from the physical plan of the camp to the precise procedures followed upon the arrival of the trains.* […] *The first view of Sobibór was innocuous: the paved road from the main gate was lined by nicely painted buildings adorned with well-kept lawns and flowers.* […] *The condition of the transports often revealed the method by which Jews were deceived. Thus, Jews from western European countries (and especially from Holland) sometimes arrived in normal passenger trains with proper medical personnel and with food and condensed milk for the children. Their suspicion was not aroused when they arrived at Sobibór. The personnel continued to treat them carefully up to the moment of their deaths."*

Yet then again it could allegedly not be prevented that the deportees became aware right away of the alleged "truth":[814]

> *"After all, it was not difficult for the prisoners in other compounds to guess what was happening in Lager III. In summer, the high temperatures caused the gasses and body fluids from decomposing bodies to seep from the mass graves. The stench was unbearable, and it spread for many miles.* […] *Later, when the crematorium was built, fire and smoke were clearly visible for many miles, and the camp was often wreathed in foul-smelling smoke."*

On the other had Freiberg himself said about the camp:[815]

> *"There was a sign at the entrance to the camp – actually I did not glance at it then, but subsequently, when I went out to work outside the camp, I saw it – SS Sonderkommando Umsiedlungslager – Camp for Resettlement."*

Franz Stangl spoke of an *Umsiedlungslager* as well.[816]

It is a fact that the first descriptions of the alleged extermination facilities given by the witnesses resemble more closely actual sanitary installations (showers and disinfestation) than homicidal gas chambers.

---

813 T. Blatt, *op. cit.* (note 17), pp. 22, 27.
814 *Ibid.*, p. 17.
815 State of Israel, *op. cit.* (note 123), Vol. III, p. 1167.
816 J. Schelvis, *op. cit.* (note 60), p. 45, note 108.

This goes, above all, for the barrack at Bełżec with its "Öfen" (ovens) and "Wasserleitungsrohre" (water pipes) described by S. Kozak, as we have shown in the preceding chapter.

In the same way the report of 15 November 1942 about an installation wherein people were killed by steam can be brought down to this, once its propagandistic embroideries are removed:[817]

> *"It consists of only three chambers and a steam room. Along the northern wall of this house runs a corridor from which there are doors to the chambers. The outer wall of the chambers have valves* [sic…] *The steam room* […] *is adjacent to the building. Inside the steam room there is a large vat which produces the steam. The hot steam comes into the chambers through pipes installed there, each having a prescribed number of vents. While the machinery of death is in action, the doors and valves are hermetically closed."*

Such a description agrees perfectly with a disinfestation plant using steam. On precisely this basis Jean-Claude Pressac suggested that, "instead of starting with the assumption of a facility for killing people, the hypothesis will have to be accepted that from the end of 1941 until mid-1942 three delousing facilities were established in Bełżec, Sobibór, and Treblinka," the aim of which was prophylactic hygiene and the fight against typhoid fever,[818] something which would have made much sense for a *Durchgangslager* (transit camp) within the *Generalplan Ost*.

As far as Sobibór is concerned, Andrzej Kola identified a furnace located in a small building with a basement 2.5 meters deep within the confines of Camp III. Near it he also discovered a larger coal storage of some 300 to 400 kilograms (see p. 162).

This furnace, which reminds us of those at Bełżec[819] and makes one think – in connection with real baths – of a hot air disinfestations furnace set up in the basement like those built by Topf in the Auschwitz *Zentralsauna* or of the furnace of a hot-water boiler. At Chełmno a disinfestation oven with chimney was supplied to the Sonderkommando as well.[820]

---

817 A translation of this document is found in C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), pp. 52-57.

818 J.-C. Pressac, "Enquête sur les camps de la mort," in: *Historama-Histoire*, special edition No. 34, 1995, p. 121.

819 We remind the reader that, according to J. Schelvis, the first alleged gassing installation at Sobibór was built under the command of Richard Thomalla on the basis of the installation at Bełżec.

820 T-1298.

In the preceding chapter we have noted that the Sobibór Camp could not have lacked a delousing facility with baths, if only to protect the health of the German and Ukrainian personnel. Such a sanitary installation, however, is not found on any map drawn by former detainees or SS men. This gives rise to the supposition that the alleged gassing facility was in reality such a hygienic installation. This hypothesis is also well-founded, because the description of the "gassing building" fits well for an installation of that kind. According to witness testimonies, a hallway ran through the middle of the building, with three chambers each to the left and right of it, all with doors to the outside. A delousing facility always had two strictly separated sides, an "unclean" and a "clean" one; the former was used before the delousing procedure, the latter afterwards. The engine room, which according to witnesses was attached to the gassing building, might have contained the generator providing the facility with electricity.[821] This delousing facility was probably located in the hut labeled *Object E* by Kola, in which toilet articles were found (cf. Subsection 5.4.2.5., p. 165).

Jan Piwonski relates that an SS man addressed the crowd at the camp stating that "now you have arrived at Sobibór, this is a transit station; so now, you are going to pass through a series of high pressure sanitary systems, you will then be directed to areas where you will set yourselves up permanently and work,"[822] which reminds us of an installation for the production of steam used for disinfection and/or disinfestation.

In any case, it is a known fact that real showers and disinfestation facilities were claimed by Holocaust propaganda immediately after the war to have been merely fictitious installations designed to fool the victims. It is hard to believe that Richard David Breitman would write as late as 1991 about the real shower room of Majdanek:[823]

> *"At Majdanek, Globocnik's realm, a large quantity of installations have been saved from destruction. The building which housed the*

gas chambers still exists – with its outside inscription Entrance to baths, and one can see the showers and pipes which were not put in to supply water but to fool the victims."

If a famous historian could have gone as far as that, what can we expect from ordinary deportees?

A similar account of the function of Sobibór was given by Judith Eliazer in her testimony at Rotterdam on 5 February 1946, in which she said:[824]

"On 10 March 1943 we went directly from Westerbork to Sobibór, where we arrived on 13 or 15 March. There we were selected. Thirty girls and 44 men were taken out. The remainder were gassed and burned. (We have seen that the others were moved away in tilting trolleys. They may have been dumped into pits.) Sobibór was not a camp. It was a transit camp." (Emph. added)

The witness was subsequently transferred to Lublin (Majdanek), Mileow, Trawniki, Lublin, Auschwitz, Birkenau, Bergen-Belsen, Buchenwald, Lippstadt bei Hannover, Kaunitz, before finally returning to Holland. At Sobibór she saw neither gas chambers nor cremations, hence only the function of a transit camp agrees with her actual experience.

We know that the extremely few German documents to have survived on the subject of Sobibór designate it precisely as a transit camp. On 5 July 1943 Himmler sent the following letter to SS-WVHA and seven other SS offices:[825]

"1. The Sobibór transit camp in the Lublin district is to be converted into a concentration camp. In the concentration camp a workshop for the defusing of enemy munitions is to be set up.

2. All Higher SS and Police Chiefs are requested to deliver there any enemy munitions to the extent that they are not needed for seized enemy ordnance.

3. Any metals, but most of all the explosive powder, are to be carefully reclaimed.

4. Simultaneously, a production site for our own multiple launchers and/or for other munitions is to be built."

On 15 July Oswald Pohl, head of SS-WVHA, replied with the following letter having the subject heading "Transit Camp Sobibór:"[826]

825 Der Reichsführer SS. Feld-Kommandostelle, den 5. Juli 1943. NO-482.
826 SS-Wirtschafts-Verwaltungshauptamt, Berlin, 15. Juli 1943. NO-482.

> *"Reichsführer!*
> *According to your above instructions, the Sobibór transit camp in the Lublin district is to be converted into a concentration camp.*
> *I have discussed this with SS-Gruppenführer Globocnik. Both of us propose to abandon this conversion, as the purpose intended, viz. to set up at Sobibór an installation for the defusing of enemy munitions, can be realized without such a conversion.*
> *All other points of the above instructions can stay unchanged. I request your approval which is only of importance for Gruppenführer Globoccnik* [sic] *and myself."*

Himmler's personal assistant, Rudolf Brandt, replied on 24 July:[827]

> *"The Reichsführer SS agrees to the proposal* [made] *by you and SS-Gruppenführer Globocnik concerning the maintenance of the Sobibór transit camp in the Lublin district in its present state, as the desired objective can be attained in this manner."*

The importance of this document can be judged by the fact that Christopher R. Browning suppresses it completely, even where he tries to refute the revisionist thesis of a transit camp Sobibór in a text which claims to furnish "Documentary Evidence concerning the Camps of Bełżec, Sobibór, and Treblinka." He states:[828]

> *"If the documents concerning the Einsatzgruppen and the 'special trucks' speak openly about the methods of killing, i.e. shooting and gassing, such is not the case with the documents concerning the camps located in the three tiny villages of Bełżec, Sobibór, and Treblinka, to which most Polish Jews were deported. Nonetheless, the quite scant surviving documentation makes clear that these were neither labor camps nor transit camps, and Jews were sent there simply to be killed.* […]
> *The scant surviving documentary evidence concerning the purpose of Sobibór indicates that the Germans considered it in the same category as Treblinka and Bełżec, but that it was inaccessible due to rail-line repairs during the peak months of the killing campaign of July-October 1942."*

In the absence of *any* documentary proof regarding Treblinka and Bełżec Browning actually declares that these camps therefore were not transit camps but extermination camps and then, by analogy, goes on to

---

827 J. Schelvis, *op. cit.* (note 60), p. 174.
828 C.R. Browning, *op. cit.* (note 69); www.hdot.org/browning/#browning_5_C.

say that Sobibór as well was an extermination camp, disregarding the three documents which speak of it explicitly as a transit camp!

Other "holocaust" historians use the subterfuge of camouflage measures instead. Raul Hilberg for example writes:[829]

> *"A standard concealment measure was verbal camouflage. The most important and possibly most misleading term used for the killing centers collectively was the 'East.' This phrase was employed again and again during the deportations. For camps, there were a variety of headings* […]. *Sobibór was appropriately called a* Durchgangslager *(transit camp). Since it was located near the Bug, on the border of the occupied eastern territories, the designation fitted the myth of the 'eastern migration.' When Himmler proposed one day that the camp be designated a Konzentrationslager, Pohl opposed the change."*

In fact, Himmler did not propose "to *designate* this camp a concentration camp" but ordered the camp to be "*converted* into a concentration camp" – the difference is not irrelevant. Furthermore, it is wrong to say that "Pohl *rejected* this *change of name*," because Pohl replied merely that setting up "at Sobibór an installation for the defusing of enemy munitions, can be realized without such a conversion."

Hence, it was not a question of *designation* or of *name*, but one of organization, as Hilberg himself explained in a different context:[830]

> *"A special enterprise was ordered by Himmler for Sobibór. This camp was set aside for the disassembly of captured ammunition in order to salvage the metals and explosives. The enterprise was not going to be incorporated into the WVHA industry network, inasmuch as it was designated to work for the SS-Führungshauptamt exclusively."* (Emph. added)

These manipulations show Hilberg's obvious embarrassment. How can anyone believe that Himmler and Pohl would have used an alleged "coded language" even in top secret documents? The most reasonable explanation, therefore, continues to be that the "myth of Ostwanderung" was, in fact, not a "myth" at all.

The very document used by Hilberg when he speaks of "eastern migration" (*Ostwanderung*) bears this out irrefutably.

---

829 R. Hilberg, *op. cit.* (note 31), p. 1028.

830 *Ibid.*, p. 986; but, as we have explained in the preceding chapter, the camp was built as part of the chain of command linking *Amtsgruppe C-Bauwesen* of WVHA and the *Bauleitung* at Zamość.

9.2. The *Ostwanderung*

On 15 September 1942 a meeting took place between Reichsminister Albert Speer and SS-*Obergruppenführer* Oswald Pohl, head of SS-WVHA. The following day Pohl wrote a detailed report for Himmler. The discussion had involved four main topics, the first of which was "Enlargement of barrack camp Auschwitz as a consequence of eastern migration." On this point, Pohl wrote:[831]

> *"In this manner Reichsminister Prof. Speer wants to guarantee the deployment at short notice of approximately 50,000 Jews fit for work in existing enclosed factories which have existing possibilities for lodging. We will skim off the labor force necessary for this purpose mainly in Auschwitz from the migration to the east, so that our existing production facilities are not disturbed in their output and their structure. The able-bodied Jews destined for migration to the east will therefore have to interrupt their journey and perform armament work."*

The *Ostwanderung* (eastern migration) was the deportation of Jews to the East. In this context the last sentence signifies that the physically unfit Jews within *Ostwanderung* would not interrupt their journey – and would thus not stop at Auschwitz – but continue their "journey" to the East.[832]

This move corresponded to the initial purpose of the deportations of western Jews to Auschwitz, which was essentially to provide slave labor; the problem of the unfit Jews was, therefore, still marginal. The first documented Jewish transports to arrive at Auschwitz came from Slovakia and France.

Slovakia carried out the deportation of the country's Jews in response to a proposal by the Reich. On 16 February 1942 Martin Luther, head of the *Germany Department* of the ministry of Foreign Affairs, sent a telex to the German embassy at Bratislava (Pressburg), in which he stated that the Reich government, "as part of the measures for the final solution of the Jewish question in Europe," stood ready to transfer

831 Pohl Report to Himmler of 16 September 1942 on the subject: a) Armament work. b) Bomb damage. BAK, NS 19/14, pp. 131-133.

832 For a more detailed treatment of this question cf. Carlo Mattogno, *Special Treatment in Auschwitz. Origin and Meaning of a Term*, Theses & Dissertations Press, Chicago 2004, pp. 52-56.

"20,000 young and healthy Jews" to the East where there was a "demand for work assignment."[833]

Referring to this telex, Luther wrote in his report to the Foreign minister dated August 1942:[834]

> *"The number of the Jews deported to the east in this manner was not sufficient to cover the need for labor. For this reason, the Reich Security Main Office, at the instruction of the Reichsführer SS, approached the Foreign Office to ask the Slovakian government to make available 20,000 young, sturdy Slovakian Jews from Slovakia for deportation to the east. The legation in Bratislava reported to D III 1002 that the Slovakian government took up the proposal with zeal, the preliminary tasks could be initiated."*

The initial concept for the Jewish transports was drawn up on 13 March 1942 and specified the dispatch of 10 trains to Auschwitz and another 10 to Lublin between 25 March and 21 April 1942. Each transport was to be made up of 1,000 persons.[835]

On 24 March SS-*Obersturmbannführer* Arthur Liebehenschel, head of *Amt D I* (*Zentralamt*) of SS-WVHA, sent a telex to the commander of the PoW camp at Lublin, SS-*Standartenführer* Koch, on the subject "Jews from Slovakia" in which he said:[836]

> *"As already stated, the 10,000 (ten thousand) Jews from Slovakia destined for the camp there* [Lublin] *will be moved in with special trains as of 27 March 27 1942. Every special train carries 1,000 (one thousand) inmates. All trains will be routed via the border train station of Zwardon (Upper Silesia), where they will each arrive at 6:09 a.m. and, over a two-hour break, will be channeled on to their destination by Security Police escorts and under supervision by the Kattowitz division of the State Police."*

On 27 March a certain Woltersdorf, an employee of state police office Kattowitz, addressed to *Amtsgruppe D* of SS-WVHA and two other offices a report concerning the first transport of Jews to Lublin headed "labor deployment of 20000 Jews from Slovakia," in which he wrote:[837]

835 *Ibid.*, pp. 38f.

836 *Fernschreiben* from Liebehenschel No. 903 dated 24 March 1942 to the commander of K.G.L. Lublin. Photocopy of the document in: Zofia Leszczyńska, "Transporty więźnów do obózu na Majdanku," in: *Zeszyty Majdanka*, IV, Lublin 1969, p. 182.

837 Photocopy of the document in: Stanisław Duszak (ed.), *Majdanek*, Krajowa Agencja Wydawnicza, Lublin 1985, photograph No. 38.

"Arrival on 27 March 1942 at 6:52 of the 2nd train in Zwardon with 1,000 Jews from Slovakia fit for labor. A Jewish doctor was with the transport, so that the total number is 1,001 men."

On 29 April the German embassy at Bratislava sent a *note verbale* to the Slovak government, in which we can read:[838]

"The Jews from the territory of Slovakia who have been transported and are still to be transported into the territory of the Reich will be arriving, after preparation and retraining, for labor deployment in the General Government and in the occupied eastern territories. The accommodation, boarding, clothing, and retraining of the Jews, including their relatives, will cause expenses, which for the time being cannot be covered out of the initially only small labor output of the Jews, since the retraining have [sic] *an effect only after some time and since only a portion of the Jews deported and still to be deported is fit for labor."*

To cover these expenses, the Reich asked the Slovak government for the reimbursement of 500 Reichsmark per person.

On 11 May SS-*Hauptsturmführer* Wisliceny, Eichmann's representative in Slovakia, wrote the following letter to the Slovak ministry of the Interior:[839]

"As the Berlin Reich Security Main Office informed me by telegram on 9 May 1942, the possibility exists of accelerating the deportation of the Jews from Slovakia, in that still additional transports can be sent to Auschwitz. However, these transports are permitted to contain only Jews and Jewesses fit for labor, no children. It would then be possible to increase the transport rate by 5 trains per month. For the practical execution I venture to make the following proposal: during evacuation from the cities, Jews who can be pronounced fit to work will be selected out and passed into the two camps Sillein and Poprad."

The proposal was not accepted, because the 19 transports of Jews that left Slovakia in May were all sent to the Lublin district with destinations Lubartów, Luków, Międzyrzecz Podlaski, Chełm, Dęblin, Puławy, Nałęczów, Rejowiec, and Izbica.

In its edition of 25 April 1942 the newspaper *Lemberger Zeitung* wrote in this respect:[840]

---

838 *Riešenie židovskiej otázky na Slovensku (1939-1945).* Dokumenty, 2. Časť, Edícia Judaica Slovaca, Bratislava 1994, p. 105.

839 *Ibid.*, pp. 108f.

> *"First, single and physically fit Jews and Jewesses are deported. The immediate consequence of this measure was that a large part of the able-bodied Jews suddenly became 'unfit for work,' for a variety of reasons, and inundated the hospitals, so that soon enough the really sick Aryans could not be treated."*

The transports from France also enter into this context. On 10 March 1942 Theodor Dannecker, SS-*Hauptsturmführer* and co-ordinator of Jewish affairs in France, reporting on a meeting held in the offices of department IV B 4 of RSHA, stated that negotiations could now be initiated with the French authorities "concerning the removal of some 5,000 Jews to the East." The document specifies that "initially, it is only a matter concerning male Jews fit for labor, not over 55 years of age."[841]

On 15 June 1942 Dannecker wrote a note concerning the future deportation of Jews from France in which he stated that military reasons stood in the way of a deportation of Jews from the Reich into the eastern operational zone, because the Führer had ordered to move to the Auschwitz Camp "for the purpose of productive labor" a large number of Jews from southeastern Europe (Romania) or the occupied territories in the West. For this the deportees of both sexes had to be between 16 and 40 years old; together with them it was possible to deport 10% of Jews unfit for work.[842] However, in a secret memo dated 26 June 1942 which dealt with the Jewish deportation Dannecker stressed that this concerned only physically fit Jews of both sexes aged between 16 and 45.[843]

The mass deportation of Jews residing in France, but also of the Dutch and Belgian Jews, was decided on a week later. On 22 June 1942 Eichmann penned a letter addressed to embassy councillor Fritz Rademacher of the Foreign Ministry on the subject of "Work assignment for Jews from France, Belgium, and the Low countries," specifying:[844]

> *"For the time being it is planned to initially deport to the Auschwitz camp approximately 40,000 Jews from the occupied French regions, 40,000 Jews from the Netherlands, and 10,000 Jews from Belgium in special trains running daily with 1,000 persons each from mid-July*

843 RF-1221.
844 NG-183.

> *or the beginning of August of this year,"* but the deportees were to be only *"Jews fit for work."*

The problem of the deportation of children and physically unfit adults was discussed in July and August. In a memo dated 21 July 1942, referring to a telephone conversation of the previous day, Dannecker wrote:[845]

> *"The question of the deportation of children was discussed with SS-Sturmbannführer Eichmann. He decided that, as soon as transportation into the General Government is again possible, transports of children can get moving. SS-Obersturmführer Nowak promised to make about 6 transports possible to the General Government at the end of August/beginning of September, which can contain Jews of every kind (also Jews unfit for work and old Jews)."*

We must remember that, according to the official German position at that time, Auschwitz was not located in the General Government but was part of the Reich. On the other hand, during these weeks deportations to Auschwitz were continuing without interruption: in fact, 14 transports of Jews reached this camp between 17 and 31 July, with 4 coming from Holland, 2 from Slovakia, 7 from France, and one of unknown origin.[846] Hence, the 6 transports mentioned above, which should have contained children and physically unfit adults, did not have Auschwitz as their destination.

Later on the RSHA decided on a different course. On 13 August 1942, SS-*Sturmbannführer* Rolf Günther sent a cable to the SS authorities in Paris concerning "Deportation of Jews to Auschwitz. Here: removal of Jewish children," in which he advised that the Jewish children held in the camps at Pithiviers and Beaune-la-Rolande could be deported to Auschwitz a few at a time as part of the scheduled transports, but that there were to be no transports involving only children.[847] This had been decreed by the RSHA, obviously for reasons of propaganda. It was therefore decided to mix the Jewish children from the camps at Pithiviers and Beaune-la-Rolande with adults in such a way that "300 to 500 Jewish children will be assigned to 700, but at least 500, adult Jews."[848]

A first transport comprising a certain percentage of children (about 10% of the total)[849] arrived at Auschwitz on 14 August 1942, even

though the plan agreed upon on 28 July 1942 had specified 19 August for the departure of the first train with Jewish children on board (these children had been arrested in Paris on 16 and 17 July), with another three for 21, 24, and 26 August.[850]

These documents demonstrate clearly the initial intention of the SS to move children and old people to the General Government, at first directly to and later via Auschwitz as a transit camp.

Even mainstream Holocaust historians Debórah Dwork and Robert Jan van Pelt admit that Auschwitz "was to serve as a transit point between Germany, Bohemia, and the projected reservation in the East" within the framework of a "policy to deport the German Jews to Russia."[851]

9.3. Jewish Transports into the Lublin District in 1942

In early 1942 the Germans began to concentrate the Jews in the Lublin district and later to move them further east in order to make room for the Jews from the *Altreich*, Austria, Slovakia, and the Protectorate. These resettlements were entrusted to an office attached to the administration of the General Government called Main Department Internal Administration, Department of Population Matters and Welfare,[852] which received reports from *Unterabteilungsleiter* SS-*Hauptsturmführer* Richard Türk and from the local agencies.

On 17 March 1942 Fritz Reuter, an employee in the department of population matters and welfare within the office of the general governor for the Lublin district, wrote a memo on the subject of a discussion, which he had had with *SS-Hauptsturmführer* Hermann Höfle the previous day:[853]

> *"I had arranged a meeting with Hstuf. Höfle for Monday, 16 March 1942, at 17:30 hours. During the discussion Hstuf. Höfle declared:*

---

deportees.

852 *Hauptabteilung innere Verwaltung, Abteilung Bevölkerungswesen und Fürsorge*

853 Jüdisches Historisches Institut Warschau (ed.), *op. cit.* (note 101), pp. 269f.

It would be advisable to separate, at the stations of departure, the Jews coming to the district of Lublin into persons fit for work and those unfit. If such a separation is impossible on departure, one may want to adopt a solution whereby the separation would be carried out in Lublin on the basis of the above.

Jews unfit for work would all be taken to Bełżec, the outermost border station in Zamosc county. Hstuf. Höfle is about to build a large camp in which the Jews fit for work can be classified according to their professions and delegated as necessary.

Piaski will be freed from Polish Jews and will be the collection point for the Jews coming from the Reich. Trawniki will not be used for Jews for the time being.

H. asked at which point of the Dęblin–Trawniki line it would be possible to unload 60,000 Jews. When our present transports had been explained, H. declared that, from the 500 Jews arriving at Susiec, those unfit for work could be separated and taken to Bełżec. According to a government teletype dated 4 March 1942, a Jewish transport from the Protectorate with destination Trawniki is being run. These Jews have not been unloaded at Trawnicki, but have been taken to Izbiza. An inquiry from the Zamosc county chief for the use of 200 Jews from there for work was approved by H.

Finally, he declared that he could receive 4 to 5 transports per day of 1,000 each with destination Bełżec. These Jews would be taken across the border and would never return to the General Government."

This document is of critical importance for two reasons: First of all, Höfle in his quality as commissioner for the resettlement of Jews in the district of Lublin,[854] was the deputy of *SS- und Polizeiführer* for the district of Lublin, i.e. of Globocnik, who was also commissioner for the installation of SS and police agencies in the new eastern region, which means that he, too, operated within the dispositions of the *Generalplan Ost*. The task of the labor camp for able-bodied Jews was probably the supply of manpower for the construction of *Durchgangsstrasse IV* (transit road IV) in nearby Galicia.

Secondly, Bełżec is said to have started its murderous activity on 17 March 1942, immediately after the meeting just mentioned. According to mainstream historiography it was (like Treblinka, Sobibór, and

---

854 *Beauftragter für die Judenumsiedlung im Lubliner Distrikt*

Chełmno) a straightforward extermination camp with no separation between Jews fit and unfit for work taking place there. However, the quoted document states:

1. A separation between Jews fit and those unfit for work was scheduled.
2. Jews fit for work were to be used for work projects.
3. The Jews fit for work would be assembled in a camp where they would be "classified according to their professions and delegated as necessary."
4. Piaski was to become the "collection point for the Jews coming from the Reich." By road Piaski is located 24 km to the southeast of Lublin and 104 km to the northeast of Bełżec. By rail the distance to Bełżec is even greater, some 155 km (from Trawniki to Bełżec via Rejowiec, including the road section Piaski-Trawniki). These data speak against the thesis that Bełżec was a pure extermination camp, for in that case it would have itself constituted the collection point.
5. It was planned to unload 60,000 Jews at a suitable point along the line Dęblin-Trawniki, which was part of the trunk line from Warsaw to Lublin, Rejowiec and Chełm. Dęblin station was located some 70 km to the northwest of Lublin in the direction of Warsaw. Trawniki was 13 km to the east of Piaski, for which it served as a railway station. Just west of Rejowiec a southward line branched off to Bełżec, Rawa Ruska, and Lemberg/Lvov. Again, all this speaks against the assertion that Bełżec was nothing but an extermination camp.

The most important point of the document is the fact that "Jews unfit for work would all be taken to Bełżec." The camp "could receive 4 – 5 transports per day with destination Bełżec," Jews unfit for work, apparently, who would be "taken across the border and would never return to the General Government." That is why Bełżec was referred to as "the outermost border station in Zamosc county." This sentence makes sense only in connection with a deportation of these Jews to the other side of the border, i.e. to the East. In any case, "4 – 5 transports per day of 1,000 Jews each" could not have been taken to Bełżec for reasons of their extermination, because the alleged three gas chambers of 32 square meters each could not have gassed 4,000-5,000 persons in a single day.

This is how Tatiana Berenstein describes one of the first Jewish transports to arrive at Bełżec.[855]

> *"In the afternoon of 16 March, i.e. a couple of hours after the start of the operation,* [the SS] *rounded up men in the ghetto of Lublin to be sent to work. Actually, the transfer operation began only half an hour after midnight.* […] *In the early morning, after checking of the documents, people with a valid work card were released. Out of the people arrested that night, 1,600 were sent by rail to the death camp at Bełżec, the others were temporarily let go, but were not allowed to return home. Actually, at that time, the gas chambers of Bełżec could not yet annihilate more than 1,600 persons in 24 hours."*

The decisions noted in Reuter's above memo are fully corroborated by a report written by SS-*Hauptsturmführer* Türk on 7 April 1942. The report covers the month of March and contains a paragraph entitled "Jewish Resettlement Operation of the SS and Police Chief," in which Türk says:[856]

> *"The possibilities of accommodation, limited to places along the Deblin-Rejowiec-Bełżec railway line, were and are currently being discussed with the representative of the SS and Police Chief. Alternative possibilities were determined.*
>
> *On the basis of my proposal, there is a fundamental understanding that, as Jews from the west are being settled here, local Jews are to be evacuated in like numbers, if possible. The current status of the settlement process is that approximately 6,000 were settled here from the Reich, approximately 7,500 have been evacuated from the district, and 18,000 from the city of Lublin.*
>
> *Individually, 3,400 have been evacuated from Piaski, district of Lublin, and 2,000 Reich Jews have come in so far; 2,000 from Izbica, Krasnystaw district, and 4,000 Reich Jews arriving in it; from Opole and Wawolbnica, Puławy district, 1,950 have been evacuated.* […]
>
> *Jewish resettlement from Mielic, Cracow county:*
>
> *On 13 March 42 Cholm county received about 1,000 Jews; 200 were housed at Sosnowice and 800 at Włodawa.*
>
> *On 14 March 42 Międsyrzecz in Radzyn county received 750 Jews. Hrubieszów county received 1,343 Jews, with 843 being housed at Dubienka and 500 at Belz. Most of them were women and children,*

with able-bodied men a minority. On 16 March 42 Zamosc county received some 500 Jews who were all housed at Cieszanow.
Jewish resettlement Bilgoraj:
On 22 March 42 57 Jewish families, a total of 221 persons, were transferred from Bilgoraj to Tarnograd."

Another report describes the transfer of Jews from Bilgoraj to Tarnogròd, a village 20 km to the south, in the following words:[857]

"An evacuation of 57 Jewish families with a total of 221 persons from Bilgoraj to Tarnogròd took place on 22 March 42. Each family was given a vehicle to enable them to take along the necessary furniture and bedding. Special command and Polish police were used for the arrangements and the surveillance. The operation was carried out as planned without incidents. The evacuees were housed in Tarnogròd the same day."

The arrival of western Jews in the Lublin district began in mid-March. The first transports taken there left the Protectorate on 11 March, the *Altreich* on 13 March, Slovakia on 27 March and Austria on 9 April 1942. The transports comprised mostly persons unfit who were housed together with the able-bodied in the villages of the district.

On 12 April 1942 the Chairman of the Jewish Council in Lublin posted a letter to the Jewish Social Self-Assistance in Krakow, in which the "numbers of those resettled in the individual towns" were named in regard to Mielec:

Bełz	460 persons
Cieszanów	465 persons
Dubienka	787 persons
Sosnowica	210 persons
Międzyrzec	740 persons
Włodawa	770 persons

The letter continues:[858]

"In Izbica two transports arrived from the Protectorate with 1,000 persons.
In Izbica 1,871 arrived from the Rhineland.
In Piaski, Lu., 1,008 persons arrived from the Protectorate.
Moreover, in the last few days further transports arrived whose number varies between 2,500 and 3,000 persons. Yesterday, he[859]

received an inofficial – at any rate so far unconfirmed – piece of news that a passenger train of 19 cars, which allegedly was traveling to Izbica and contained evacuees from Vienna, was supposed to go past Lublin. Officially nothing could be determined yet.
With regard to Lublin itself, an insignificant number of Jews has remained in the city up to now, who are supposed to be resettled from the city into its environs according to inofficial information."

On 16 April 1942 the *Landkommissar* at Lubartòw addressed the following letter to the county chief for *Lublin-Land*:[860]

"Yesterday afternoon at 18:00 hours, without any prior announcement, another transport of approximately 800 Jews arrived. About half were women and children under 14 years of age. There were no men at all in the transport. The Jews were from Slovakia as well. On Monday and Wednesday altogether over 1,600 Jews have arrived, among them hardly any fit for work. 200 Jews were transported onward to Kamionka, 300 to Ostrow, 80 to Firlej."

On 9 May 1942 the *Landkommissar* informed the county chief as follows:[861]

"Re: Evacuation of Jews from Slovakia.
As I already reported by telephone, the Governor of the district, Population and Welfare, informed me last Wednesday that on Thursday 1,000 Jews would be arriving from Slovakia; they would be transported farther in about 14 days. On Thursday the 7th of May the transport arrived here in the late evening; there were 841 persons, older men and women with children, 199 men were kept behind in Lublin. This transport was better equipped with baggage and food than the earlier ones. The direction of the evacuation from Lublin was under the control of SS-Obstf. Pohl, who was also present here on the occasion of the evacuation of the local Jews on April 9. The Jews are at first lodged in the former high school. Whether and when the transport onward is to take place is not yet clear."

Another letter, dated 13 May 1942, states:[862]

"Herr County Chief of Cholm was present here personally yesterday and requested that those of the next transport, who are fit for labor, also be sent to him, since he is in urgent need of a work force. Fu-

862 Józef Kermisz (ed.), *op. cit.* (note 700), p. 49.

thermore, he complained about the fact that food, which is added to the transport trains, is always taken off in Lublin. I am asking that the food be passed on to Cholm as well with the next transports."

A similar complaint was voiced also by the Rejowiec delegation:[862]

"The delegation informed me that on 17 April 42 two transports of evacuees from Slovakia and the Protectorate arrived. The baggage of the evacuees has remained in Lublin, and the delegation requests that the baggage, which for the most part contains bed linens, be released."

In order to create room for the new arrivals, Polish Jews residing in the Lublin district were gradually deported farther east. These evacuations were initiated by the SS- and Police Chief of Lublin in collaboration with the "Sub-Department of Population and Welfare" of the Governor of the district of Lublin, specifically on the proposal of the local authorities. For example, a certain Lenk, a subordinate of the District Chief of Janów-Lubelsk, wrote to the SS- and Police Chief of Lublin:[863]

"I ask you to evacuate Jews from the following locations:

Radomysl	*500*
Zaklikow	*1,500*
Annopol	*500*
Ulanow I	*500*
Modliborzyce	*1,000*
Janów-Lubelski	*400*
Krasnik	*1,000* […]

Only old people, those unfit for labor, women, and children should be included in these evacuation operations, plus such men who are not employed at German agencies. Craftsmen, however, should still remain here for the time being."

On 13 May the county chief at Puławy sent a letter to the governor of the Lublin district, which reads under item 1:[864]

"In the period between 6 and 12 May, both inclusive, 16,822 Jews from Puławy county have been expelled across the Bug river on the instructions of the chief of SS and police."

These Jews are alleged to have been deported to Sobibór and killed there.[865]

863 *Ibid.*, p. 54.
864 Jüdisches Historisches Institut Warschau (ed.), *op. cit.* (note 101), p. 438.
865 *Ibid.*, note 1.

The railway line[866] Chełm-Sobibór-Włodawa, called 584h by the German *Ostbahn*, was a spur of the line 584h, which went from Chełm to Kowel in Ukraine.[867] The line 584h left the territory of the General Government near Włodawa (the border in that area followed the Bug river) and continued into Ukraine towards Brest-Litowsk. Hence, the expression "expelled across the Bug river" must be interpreted literally; it designated an expulsion from the General Government into Ukraine.

On 19 May the county chief of Lublin reported to the department of population matters and welfare:[868]

"Concerning the inquiry circular of the 12th of this month, I recommend, when opportunity arises, that the following Jews be deported, whose evacuation is required first:

Lubartow	*2,737*
Ostrow-Stadt	*3,062*
Piaski	*6,166*
Belzyce	*3,639*
Bychawa	*2,733*
Chodel	*1,398*
	19,735."

The county chief of Hrubieszów noted in a memo on 22 May:[869]

"The number and place of residence of those Jews whose evacuation appears to be necessary first, is as follows:

1) in Hrubieszów	*5,690 Jews*
2) " Uchanie	*2,025 Jews*
3) " Grabowiec	*2,026 Jews*
4) " Dubienka	*2,907 Jews*
5) " Belz	*1,540 Jews."*

There is no doubt at all that these transfers were serving the purpose of creating room for the western Jews deported into the Lublin district. The latter would then also be evacuated later on, again in stages. A report of 5 October 1942 by the county chief in Lublin to the Governor of the Lublin district sets out the following information regarding this:[870]

869 *Ibid.*, p. 55.

870 Jüdisches Historisches Institut Warschau (ed.), *op. cit.* (note 101), p. 336.

> *"Subject: Dispositions of 15 August 1942 and 28 September 1942*
> *With regard to the above dispositions I am reporting that 8,009 Jews from the Reich have been resettled into my district since the 1st of January 1942. 3,692 of these have already been resettled again. Expenditures or cash outlays have not been incurred due to these evacuations; the Piaski community merely put 400 vehicles at their disposal without cost for the transportation of the sick, children, and baggage."*

According to this report, the 8,009 Jews mentioned were housed in the following communities:

– 1,200 Jews from Germany in Belzyce
– 5,466 Jews from Germany in Piaski
– 54 Jews from Germany in Luszawa
– 652 Jews from Germany in Kamionka
– 125 Jews from Slovakia in Firlej
– 512 Jews from Slovakia in Ostrow Lub.

The last transport of Jews from the Reich had left on 15 July 1942, and by 5 October, out of the 8,009 Jews who had arrived only 3,692 had been moved on across the Bug; the remaining 4,317 were still in the Lublin district. This is not really in line with a policy of total extermination, just like the "400 vehicles at their disposal without cost for the transportation of the *sick, children, and baggage.*"

The Polish historian Janina Kiełboń presented a fairly complete picture of the deportations of Jews into the Lublin district between 1939 and 1942 in an article published in 1992.[871] In 1942 there were 72 transports with a total of 69,084 Jews having the following origins:[872]

– 14 transports from Theresienstadt and Prague (2 to Izbica, 4 to Lublino, 1 to Majdanek, 1 to Piaski, 1 to Rejowiec, 1 to Sobibór/Osowa, 1 to Trawniki, 1 to Ujazdów, 2 to Zamość) between 11 March and 13 June: 14,001 deportees;
– 14 transports from Altreich (1 to Bełżyce, 10 to Izbica, 1 to Kraśniczyn, 2 to Trawniki) between 12 March and 15 July 1942: 9,194 deportees;
– 38 transports from Slovakia (2 to Chełm, 2 to Dęblin, 2 to Izbica, 3 to Lubartów, 4 to Lublin, 2 to Łuków, 1 to Międzyrzec Podlaski, 5

871 Janina Kiełboń, "Deportacja Żydów do dystryktu lubelskiego (1939-1945)," in: *Zeszyty Majdanka*, XIV, 1992, pp. 61-91.

872 For a list of the transports see: C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), pp. 242ff.

to Nałęczów, 2 to Puławy, 5 to Rejowiec, 10 to Sobibór) between 27 March and 14 June 1942: 39,889 deportees;
– 6 transports from Vienna (4 to Izbica, 1 to Włodawa, 1 to Sobibór) between 9 April and 14 June 1942: 6,000 deportees.

The transports went to:

Bełżyce: 1; Chełm: 2; Dęblin: 2; Izbica: 17; Kraśniczyn: 1; Lubartów: 3; Lublino-Majdanek: 9; Łuków: 2; Międzyrzec Podlaski: 1; Nałęczów: 5; Piaski: 1; Puławy: 2; Rejowiec: 6; Sobibór: 11; Sobibór/Osowa: 1; Trawniki: 3; Ujazdów: 1; Włodawa: 1; Zamość: 2.

Between 17 March 1942, the day the Bełżec Camp was opened,[873] and 2 May the Lublin district received 29 transports with 26,927 Jews, none of which went to this alleged extermination camp.

In the period between 3 May, the day Sobibór was opened,[874] and 15 July, out of the 41 transports with 40,153 Jews on board which reached the Lublin district only 12 went to Sobibór, carrying 12,021 persons, and none went to Bełżec.

In summarizing we determine that a mere 12 of the total of 70 transports which reached the Lublin district went into the alleged extermination camps, with a load of 12,021 persons out of of 69,084 passengers altogether.

One of the 12 transports going to Sobibór, the one which had left Vienna on 14 June 1942, was originally not supposed to go there at all, but to Izbica, as we know from *Transportführer* Josef Frischmann. When the train left Vienna, SS-*Hauptscharführer* Girzig of the Central Agency for Jewish Emigration was present. After a lay-over at Lublin where SS-*Obersturmführer* Pohl removed "51 able-bodied Jews between 15 and 50 years of age" and ordered "the remainder of 949 Jews to be taken to the labor camp at Sobibór," the train went into "the labor camp next to the station."[875]

Furthermore, the first of the 12 transports (the one with 1,000 Jews on board which reached Sobibór-Osawa[876] on 9 May 1942, coming from Theresienstadt) can obviously not have been gassed in its entirety, as mainstream historiography will have it: at least 101 Jews from this convoy died at Majdanek, and the personal data are known for 90 per-

876 Osowa is a small community located a few kilometers to the southwest of Sobibór.

sons from this latter group,[877] which means that hundreds of these Jews – if not the entire transport – were moved to this camp.

But not even those Jews who had initially been deported into the various communities of the district of Lublin were later "gassed" in the alleged extermination camps at Bełżec and Sobibór. Miroslaw Kryl found that at least 858 Jews who had been moved to the Lublin district from the Theresienstadt ghetto and from Prague died at the Majdanek Camp between May and September 1942.[878] 525 of these had come directly from Lublin and 333 from other communities.[879]

In a study of the death registry of Majdanek Janina Kiełboń published very detailed indications: a total of 4,687 western Jews died in this camp between May and September of 1942, of whom 1,066 were Czech, 2,849 Slovak, and 772 German and Austrian.[880] Among them 735 were between 11 and 20 years of age and 163 over the age of 60; among the latter were 3 Slovak Jews in the 81 to 90 age group.[881]

The number of western Jews who died at Majdanek was still larger, however, as one can deduce from the series of documents "*Totenmeldung für die Effektenkammer*" (death notifications for the chamber of personal effects), which are partially extant. These documents list the deaths of at least 183 western Jews within a period of eight days (20 October, and 29 November through 5 December 1942): 41 Czech, 108 Slovak, and 34 German and Austrian.[882] The deportees from Theresienstadt went primarily to Izbica (11 and 17 March), Trawniki (12 June), and Zamość (20 and 30 June).

Hence, the number of certified deaths of western Jews at Majdanek amounts to 4,870. According to Zofia Leszczyńska, Majdanek received five direct transports of Czech and Slovak Jews (4,813 persons) between April and June of 1942, plus another 16 transport (with some 13,500 persons) who moved there after having resided in the Lublin district,[883] yielding a total of about 18,300 persons. Not included in this

883 Z. Leszczyńska, *op. cit.* (note 836), p. 184

figure are Jews from Germany and Austria who must have numbered around 3,600 persons.[884]

From this we may conclude that at least 21,900 western Jews were registered at Majdanek, almost one third of the total number deported into the Lublin district. There were also French, Belgian, and Dutch Jews who arrived at Majdanek;[885] they were probably moved elsewhere later on. Only one Dutch name appears in the *Totenmeldung* (death record) series: Lewy Trompetter, born in Amsterdam on 27 April 1873 and registered, at age 69 with the ID number 7593; he died on 1st December 1942.[886]

Besides the transports to the Lublin district, between 5 May and 28 November 1942 a full 36 transports of western Jews (over 35,000 persons) were deported into the localities in the eastern territories mentioned previously, bypassing completely the three alleged extermination camps of Bełżec, Sobibór, and Treblinka. The 24 transports which went from Vienna to Minsk between 16 May and 28 November 1942 followed the line Vienna-Lundenburg-Prerau, skirting Auschwitz to the west via Oppeln (Opole) and Tschenstochau (Czestochowa) towards Warsaw, with some of them going on to Wolskowysk-Minsk via Białystok. To do that, they passed through Malkinia, some 4 km from the "extermination camp" at Treblinka. Some other transports proceeded via Siedlce-Czeremcha-Wolkowysk and thus came as close as 80 km to Treblinka and 140 km to Sobibór.

In the "train schedule order No. 40" of the German railway administration located at Minsk we can read:[887]

> *"According to an announcement by RBD* [Reichsbahndirektion, Imperial Rail Administration] *Königsberg, there will be a weekly special train (Zugg* [sic] *30,9) on Friday/Saturday with about 1,000 persons from Vienna via Bialystok-Baranowitsche to Minsk Gbf* [freight station] *having the following schedule:* […]*"*

Schedule order No. 517 of RBD Vienna, dated 18 May 1942, mentions the following routing for the transports from Vienna to Minsk:[888]

---

884 This figure has been inferred from the mortality of the Czech and Slovak Jews of [(4,064÷18,300)×100 =] 22.2% applied to the 806 certified deaths of German and austrian Jews: [(802×(100÷22.2)] = circa 3,600.

888 Deutsche Reichsbahn. Reichsbahndirektion Wien, Fahrplananordnung Nr 517 of 18 May 1942. NARB, 378-1-784.

> *"Wien Aspangbahnhof – Wien Nordbf – Lundenburg – Prerau – Olmütz – Groß Wisternitz – Jägerndorf – Neisse – Oppeln – Tschenstochau – Warschau West Gbf – Siedlce – Platerow – Czeremcha – Wolkowysk – Minsk."*

Why would one want to make a detour of some 300 km around three "extermination camps" with trainloads of Jews destined to be killed? Another event which is inexplicable from the mainstream Holocaust point of view has been noted by Jules Schelvis:[889]

> *"The intriguing question is why, in the spring and summer of 1943, the transports from Western Europe headed for Sobibór rather than Auschwitz/Birkenau, which was in fact closer."*

Schelvis acknowledges both the argument that the German war industry near Auschwitz at the time needed Jewish manpower and that the alleged extermination facilities at Auschwitz-Birkenau would have had sufficient capacity to handle these Dutch Jews.[890] Hence, the reason for the deportations of these people to Sobibór remains mysterious.

The transports from Westerbork ran along the line Breslau (Wrocław) – Oppeln – Czestochowa – Kielce – Radom – Dębin – Lublino – Cholm (Chełm). Going south from Czestochowa, along the line Zawiercie – Szczakowa – Mysłowice, the Auschwitz Camp is only some 100 km away – instead, the transports went east, another 400 km, to reach Sobibór. Schelvis himself then gives us a solid indication for the answer to this apparent riddle:[891]

> *"Mirjam Penha-Blits was on the same train.*[892] *She explained that the transport was apparently supposed to go to Auschwitz; after two days' travelling in passenger wagons that is where it arrived. For unknown reasons it stood stationary there; nothing else happened. No one was allowed to leave the wagons. After a few hours the train departed, and two days later we arrived at Sobibór."*

In the summary of this account, supplied by the Dutch Red Cross, one can read:[893]

> *"Deported by train from Westerbork on 10 March 1943, arrival at Sobibór around 13 March 1943 (via Birkenau – without lay-over – to Sobibór)."*

---

889 J. Schelvis, *op. cit.* (note 60), p. 14.

891 J. Schelvis, *op. cit.* (note 61), p. 73.
892 The train from The Hague which reached Sobibór on 13 March 1943.
893 Het Nederlandsche Roode Kruis, *op. cit.* (note 109), p.16.

The train thus passed through the alleged extermination camp at Birkenau only to continue east for hundreds of kilometers – but why? The answer is found in a general memorandum dated 5 May 1943 and written by SS-*Gruppenführer* Wilhelm Harster, head of security police and SD in Holland:[894]

> *"1) General policy:*
> *The RFSS* [i.e. Himmler] *wishes that throughout this year as many Jews as possible are moved to the East.*
> *2) Forthcoming trains to the east:*
> *As a new Buna-plant is to be built at Auschwitz, the one in the west having been destroyed in air-raids, a maximum number of Jews from the west will be required primarily in the months of May and June. It was agreed to move the Jews already assembled for transport if possible during the first half of the month by combining several trains, i.e. that the Westerbork camp* [in Holland] *will be emptied rapidly. The aim is a figure of 8,000 during the month of May. Arrangement will be made by the BdS,*[895] *Den Haag, in conjunction with the RSHA.*
> *3) The Hertogenbosch camp:*
> *As the RSHA requests another 15,000 Jews, the point must be reached as soon as possible when the detainees of the camp at Hertogenbosch* [in Holland] *can also be made operative."*

In May of 1943 a total of 8,011 Dutch Jews were actually deported, but the respective transports were directed to Sobibór.[896] The most logical explanation of this riddle, which is also in keeping with the documents, is that these convoys were part of the *Ostwanderung* referred to above. The able-bodied were kept at Auschwitz,[897] with the remainder of the deportees moving on to Sobibór.

This, however, is also true for the two Jewish transports which left the camp at Drancy (in France) on 23 and 25 March 1943 (with 994 and 1,008 persons on board, respectively) and went directly to Sobibór instead of Auschwitz.[898]

---

894 T-544.

895 Befehlshaber der Sicherheitspolizei und des SD

896 In the month of June, there were 8,429 deportees, likewise moved to Sobibór. Overall 16,440 Jews were deported in May and June, among them 3,474 male and female children, which means that among the remaining 12,996 adults, the 8,000 able-bodied detainees requested by Auschwitz could be found.

897 In the case in question, the selected detainees were no doubt moved directly to the Monowitz camp without being registered at Birkenau.

898 S. Klarsfeld, *op. cit.* (note 64), chronological table of the deportation trains.

Such a procedure would also explain the extremely low number of able-bodied detainees at Sobibór, which the witnesses mention in connection with the transports from the west, only a few dozen in each convoy. Schelvis relates in fact that some 700 Dutch Jews were moved to the Dorohucza labor camp of the SS as soon as they came to Sobibór.[899] He adds that on 15 June 1942 Dutch, German, and Slovak Jews were working "on a drainage project" at the Ujazdòw labor camp.[900]

Altogether 117 Jewish work camps of various categories were in operation in the district of Lublin between 1939 and 1944:[901]

Table 5: Jewish Labor Camps in Lublin District 1939–1944

SS Enterprises		7
Railroads		5
Other		5

The camps located between Sobibór and Chełm were handling soil improvement tasks (drainage), as was the case for Luta (400 detainees), Osowa (400), Krychów (1,500), Ujazdów (400), Sawin (500), Sajczyce (600), Ruda (1,500), Nowosiółki (400), Dorohusk (300), in the same way as two camps in the west and southwest, Sosnovica (300) and Siedliszcze (2,000).[902]

Schelvis, however, reports also the testimony of an engineer from *Organisation Todt*, Otto Weissbecker, who accompanied a transport of 1,400 Jews from the Lida ghetto to Sobibór presumably on 10 September 1943. On his arrival at the camp he went to see Gomerski:[903]

> *"He said, I might as well send back half of them, as he needed only saddlers, shoemakers, sewers and tailors.* […] *The Jews had to line up in two groups without luggage. Although I had been promised*

899 J. Schelvis, *op. cit.* (note 61), p. 119.
900 *Ibid.*, p. 125.

902 *Ibid.*, pp. 109-121.
903 *Ibid.*, pp. 274f.

> *specialists, I received 630 workers without any experience, among them women. The children remained at Sobibór.* […] *I was ordered to take the Jews at my disposal to Trawniki, where half of them, in fact, remained. The others I took back to Lublin into a camp that was located next to a* [railway?] *stop (Old Airport).”*

Dina Czapnik’s story about the way “she was deported from Minsk to Sobibór in mid-September 1943 and then moved to Trawniki with about 225 specialists”[904] is likewise in disagreement with the thesis of nearly total extermination of the deportees taken to Sobibór and lends credit to the hypothesis that the Polish Jews selected for work were far more numerous than mainstream historiography asserts.

9.4. Evacuations to the East: Höfle Telegram and Korherr Report

In 2001 Peter Witte and Stephen Tyas published the text of a German radio message dated 11 January 1943, which had been decoded by the British during the war.[905] It is a telegram by SS-*Hauptsturmführer* Hermann Höfle addressed to SS-*Obersturmbannführer* Heim, chief of security police at Cracow, and to SS-*Obersturmbannführer* Eichmann of RSHA on the subject of “arrivals” of Jews in the camps of *Einsatz Reinhardt* up to 31 December 1942. The figures are as follows:

Lublin:	24,733
Bełżec:	434,508
Sobibór:	101,370
Treblinka:	713,555 (indicated by mistake to be 71355)
Total:	1,274,166

The report also mentions a “fortnightly report *Einsatz Reinhardt*” for the period of 18-31 December 1942 which show the following deportations:

Lublin:	12,761
Bełżec:	0
Sobibór:	515
Treblinka:	10,335
Total:	23,611

---

904 *Ibid.*, p. 148.
905 P. Witte, S. Tyas, *op. cit.* (note 19), pp. 469f.

The authors state that the total figure of the Höfle report is identical to the one which appears under Item 4, Section V ("The Evacuation of Jews") of the Korherr report of 28 April 1943, which we present here in the general context of the evacuations:[906]

"The evacuation, at least as far as the Reich territory is concerned, replaced the emigration of the Jews. It was prepared on a large scale after the prohibition of Jewish emigration in the autumn of 1941 and largely implemented in the total Reich territory in 1942. In the balance of the Jewish presence it appears as 'migration.'

According to the figures of RSHA, the migrations were as follows up to 1 Jan. 1943:

From the Altreich including Sudetenland:	*100,516 Jews*
from Ostmark	*47,555 Jews*
from the Protectorate	*69,677 Jews*
Total	*217,748 Jews*

These figures comprise also the Jews evacuated to the old-age ghetto at Theresienstadt.

All moves combined, the following figures apply to the Reich territory including the eastern territories, as well as the German sphere of power and influence in Europe for the period between October 1939 and 31 Dec. 1942:

1. Evacuation of Jews from Baden and Palatinate [regions] *to France: 6,504 Jews*

2. Evacuation of Jews from the Reich territory including the Protectorate and Bialystok district to the east: 170,642 Jews

3. Evacuation of Jews from the Reich territory and the Protectorate to Theresienstadt: 87,193 Jews

4. Transport of Jews from the Eastern provinces to the Russian East: 1,449,692 Jews

Processed through the camps in the General Government area: 1,274,166 Jews

Through the camps in the Warthegau: 145,302 Jews.

5. Evacuations of Jews from other countries, viz.:

France (occupied before 10. Nov. 1942): 41,911 Jews

Netherlands: 38,571 Jews

Belgium: 16,886 Jews

Norway: 532 Jews

---

906 NO-5194, pp. 9f.

Slovakia: 56,691 Jews
Croatia: 4,927 Jews
Evacuation, total (incl. Theresienstadt and incl. special treatment): 1,873,549 Jews
without Theresienstadt: 1,786,356 Jews
6. According to information from RSHA, the evacuation of 633,300 Jews from the Russian territories including the former Baltic states since the beginning of the eastern campaign must be taken into account. Not included in the above figures are the detainees in the ghettos and the concentration camps."

Concerning item 4 Witte and Tyas write:[907]

"It should be noted that the seemingly harmless euphemism 'passed through the camps in the General Gouvernment' already carried a sinister meaning for insiders in 1942/43. The phrase derives from the common term 'transit camp.' For example Theresienstadt and Westerbork were officially termed transit camps, whence transportation to the East meant in fact dispatch to death. But there are other examples of transit camps that served exclusively as killing sites. The extermination camps Sobibór and Chełmno were also designated by this term. But the euphemism used by Himmler and Korherr was calculated to make outsiders believe that there really were transports 'to the East.'"

This interpretation ranks with those of R. Hilberg and C. Browning examined above and is just as nonsensical: As the term transit camp appears in Himmler's letter of 5 July 1943 on the specific subject of Sobibór and as the letter is labeled "top secret," why should any *outsiders* be kept in the dark?[908]

Witte and Tyas then discuss the alleged "euphemisms" of the Korherr report:[907]

"To fully understand Höfle's telegram we have to take into account Himmler's criticism of the first, March 23, Korherr report. The Reichsführer-SS rejected several phrases in the sixteen-page paper and had Dr. Brandt, the head of his Personal Office, write Korherr on 14 April [recte: on 10 April] *1943:*
The Reichsführer-SS has received your statistical report on the 'Final Solution of the European Jewish Problem.' He does not wish the

---

907 P. Witte, S. Tyas, *op. cit.* (note 19), p. 477.

908 All members of the SS who had access to this "geheime Reichssache" knew the truth and did not need any euphemisms.

words 'special treatment of Jews' to be used at all. On page 9, point 4, the text must read as follows:
'Transportation of Jews from Eastern Provinces to the Russian East:
Number of those passed
through the camps in the General Gouvernment…
through the camps in Warthegau…
A different formulation must not appear.'[909]
[…] *Korherr's original wording of page 9 point 4 to which Himmler objected is not fully known. Only the corrected version is extant. Korherr must have been too explicit, leaving little doubt that he meant the killing; otherwise Himmler's objections to the widely familiar term Sonderbehandlung in a 'State Secret' document could not be explained. Korherr changed page 9 of the report as requested. When he sent the corrected version back to Himmler's office on 28 April, it apparently escaped the Reichsführer's notice that the objectionable term Sonderbehandlung remained on page 10."*

The supposition proffered by Witte and Tyas does not make sense: If Korherr, on p. 9 item 4 of his report, had really been "too explicit" in his hint at an alleged killing of the Jews, Himmler would have ordered him to modify this wording; instead, he ordered him not to use the words "special treatment of Jews," which means that in connection with the letter of 10 April 1943 mentioned above the expression "special treatment of Jews" did in fact appear on p. 9 item 4 of the report. This is confirmed by the sum total which appears at the end of item 5 of Korherr's report where it is said:[910]

"Evacuation, total (incl. Theresienstadt and incl. special treatment)
1,873,549 Jews"

This figure actually includes the evacuations listed under items 1 (6,504), 2 (170,642), 3 (Theresienstadt: 87,193), 4 (special treatment: 1,449,692) and 5 (159,518), which we will discuss in greater detail later. The "special treatment" cannot refer to the 5 items mentioned except for item 3, because in that case the text would simply say "Evacuations total (incl. Theresienstadt)," as all other "evacuations" would be part of "special treatment."

---

909 NO-5196.
910 NO-5197, p. 10.

We have here a blatant incongruence of the mainstream interpretation. In a study of the Korherr report, which the authors quote,[911] the Jewish French historian Georges Wellers asserted:[912]

> *"Moreover, thanks to Korherr's mistake, we now have a confirmation – if one was needed – coming from the top, that the '*Sonderbehandlung der Juden*' is a term so unmentionable that it has to be hidden by the even more innocuous term 'evacuation' even in an internal SS document. By the same token, we now know that the column 'evacuations' of Korherr's report includes the '*Sonderbehandlung.*'"*

On the subject of the significance of this word, Wellers explains elsewhere:[913]

> *"The coded term* Sonderbehandlung *(special treatment) and its numerous derivatives have a very precise meaning: they stand for execution, killing, murder. It does not indicate the type of execution – hanging, shooting, use of poison gas – nor the kind of people involved, but it applies massively, systematically in all of its shapes, to the case of the Jews."*

In short, if we follow Wellers, "evacuation" would be synonymous with "special treatment," which in turn is synonymous with killing.

Actually, as we have shown above, "special treatment" stands only for "transporting." It follows that according to Wellers' hypothesis only 1,449,692 out of a total of 2,506,849 Jews deported by the Germans had undergone a "special treatment," i.e. only those "passed through" the camps of the General Government and the Warthegau: 1,274,166 allegedly killed in the extermination camps at Bełżec, Sobibór, Treblinka, and Majdanek (for the General Government) and 145,301 at Chełmno (for Warthegau). Therefore, none of the Jews deported to Auschwitz before 31 December 1942 would have received "special treatment," i.e. would have been killed, none of the 633,000 Jews evacuated to the Russian territories, none of the 170,642 evacuated to the East, and not the 6,505 evacuated to France or the 87,193 Jews who went to the Theresienstadt ghetto.

Witte and Tyas go on to say:[914]

---

911 P. Witte, S. Tyas, *op. cit.* (note 19), note 51 on p. 485.

912 G. Wellers, *La Solution Finale et la Mythomanie Néo-Nazie*, Beate and Serge Klarsfeld, Paris, 1979, p. 42.

913 G. Wellers, *Les chambres à gaz ont existé. Des documents, des témoignages, des chiffres*, Gallimard, Paris, 1981, p. 36.

914 P. Witte, S. Tyas, *op. cit.* (note 19), p. 478.

"The authors have not been able to determine whether non-Polish Jews from Germany, Austria, the Protectorate, and Slovakia were included in Höfle's and Korherr's figure. Korherr's statistics are apparently too ambiguous to determine this. On the one hand, his number for Jews deported to Theresienstadt is more than 21,000 smaller than the actual number. This evident reduction in numbers suggests that at least some of the deportees from Theresienstadt to the Lublin district and Warsaw ghetto are probably included in the Höfle-Korherr number of 1,274,166 victims. On the other hand, his number of Jews deported from Slovakia comes near to the sum total of Jews actually deported. At the end of 1942 at least 30,000 to 35,000 of these Slovak Jews had already been murdered in the Reinhardt camps. It follows that they cannot be included in the Höfle-Korherr number; otherwise it would be statistical double-counting. Further research is required to resolve this contradiction."

To elucidate this point, we must establish the exact distribution of evacuations dealt with in the Korherr report. Up to 1st January 1943 it shows the following numbers of Jews having been evacuated from the Reich:

From the *Altreich* and *Sudetenland*:	100,516
From *Ostmark*:	47,555
From the Protectorate:	69,748
Total:	217,748[915]

Altogether 87,193 Jews were evacuated to the Theresienstadt ghetto from the following territories:

From the *Altreich*:	33,249
From *Ostmark*:	14,222
From the Protectorate:	39,722
Total:	87,193[916]

Between 16 October and 4 November 1941, the Łodź/Litzmannstadt ghetto received:

From the *Altreich*:	9,431
From *Ostmark*:	5,002
From the Protectorate (Prague):	5,000
Total:	19,433[917]

915 NO-5194, p. 9.
916 *Ibid.*, p. 10.
917 Aufstellung der Neueingesiedelten. WAPL, PSZ 19, p. 195.

The transports into the Lublin district carried:

From the Altreich (13 March – 15 July 1942):	9,194
From Ostmark (9 April – 14 June 1942):	6,000
From the Protectorate (11 March – 13 June 1942):	14,000
Total:	29,195

Finally, 6,615 Jews were deported to Nisko and other areas in the General Government from *Ostmark* (20 October 1939 – 12 March 1941).[918] Thus we obtain the figures of Table 6:

Table 6: Jews Deported by Origin and Destiny

Origin: / Destiny	*ALTREICH*	*OSTMARK*	PROTECTORATE	TOTAL
Evacuations	100,516	47,555	69,677	217,748
France	6,504	0	0	6,504
Theresienstadt	33,249	14,222	39,722	87,193
Litzmannstadt	9,431	5,002	5,000	19,433
District of Lublin	9,194	12,615[919]	14,001	35,810
Eastern territories	42,138	15,716	10,954	68,808

Thus, out of the 217,748 evacuees, 35,810 went to the district of Lublin and 68,808 to the eastern territories. The latter group arrived in 68 transports at Minsk, Riga, Kaunas, Raasiku, Maly Trostinec, and Baranoviči between 8 November 1941 and 28 November 1942.[628]

In the abridged Korherr report of 19 April 1943[920] the data concerning the evacuation have a somewhat different distribution. In Table 7 we compare them with the report of 28 April.

The figure 170,742 includes the 35,810 deportees to the Lublin district, the 68,808 evacuees who went directly to the eastern territories (Minsk, Riga, Kaunas, Raasiku, Maly Trostinec, Baranoviči) we have already discussed, another (170,642 – 35,810 – 68,808 – 19,433 =) 46,591 Jews from Bialystok district, 8,500 of whom were deported to Auschwitz according to Franciszek Piper,[921] with the remaining 38,091

---

[918] Wolfgang Benz (ed.), *Dimension des Völkermords. Die Zahl der jüdischen Opfer des Nationalsozialismus*, Oldenbourg Verlag, Munich 1991, p. 76.

[919] 6,000 + 6,615 deported to Nisko.

[920] NO-5193.

[921] F. Piper, *op. cit.* (note 380), p. 183. Deportations from Białystok and Grodno. However, the transport from Grodno dated "11.1942" (1,000 deportees) is not shown in D. Czech's *Kalendarium* (*op. cit.*, note 777). On the way to Auschwitz, these transports had to pass through Malkinia, very close to Treblinka, (line Grodno-Bialystok- Małkinia-Warsaw-Cracow-Auschwitz) or through Siedlce, about 80 km south of Treblinka (line Bialystok-

Table 7: Comparison of Korherr's Figures

Origin \ Korherr Report:	19 April	28 April
From *Altreich* (with *Sudetenland*)	100,516	
From *Ostmark*	47,555	
From Protectorate	69,677	
From *Ostgebiete* (with Bialystok)	222,117	
From General Government (with Lemberg)	1,274,166	
From Baden and Palatinate to France		6,504
From Reich territory incl. Protectorate and District of Bialystok to the east		170,742
From Reich territory and Protectorate to Theresienstadt		87,193
From Eastern Provinces to Russia		1,449,692
Total	*1,714,031*	*1,714,031*

deported to the East without transiting through the "extermination camps" at Bełżec, Sobibór, Treblinka, Majdanek, or Chełmno.

The figure 87,193 includes 33,249 deportees from *Altreich*, 14,222 from *Ostmark*, and 39,722 from Protectorate.

The figure 1,449,692 includes 1,274,166 "transited through the camps in the General Government," 145,301 "transited through the Warthegau camps," and (1,449,692 – 1,274,166 – 145,301 =) 30,225 deported "to the Russian East" without passing through anyone of these camps.

From the above two reports we can compile the numbers of Table 8 for the evacuees.

The 35,810[922] Jews who were moved into the Lublin district were part of a group of 69,804 who had been moved there by means of 72 transports between 11 March and 15 July 1942,[923] viz.:

From *Altreich*, *Ostmark*, Protectorate (not counting the 6,615 Jews deported to Nisko):	29,195
from Slovakia:	39,889
Total:	6,084

There is no doubt that at least part of these western Jews were later evacuated to the east. For example, the report by the county chief of Lublin dated 5 October 1942 to the governor of the Lublin district,

Czeremcha-Siedlce-Dęblin-Radom-Cracow-Auschwitz) or even through Sobibór (line Bialystok-Czeremka-Brest/Litowsk-Tomaszowka/Włodawa-Lublin-Cracow-Auschwitz).

922 Except for the 6,651 Jews already deported from *Ostmark* to Nisko and other places.

923 C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), pp. 224ff. (list of the transports).

Table 8: Summary of Deportation Origins and Destinations

ORIGIN	NUMBER	DESTINATION
Altreich	100,516	6,504: France 9,194: District of Lublin 9,431: Litzmannstadt 42,138: Ostgebiete 33,249: Theresienstadt

Protectorate	69,677	14,001: District of Lublin 5,000: Litzmannstadt 10,954: Ostgebiete 39,722: Theresienstadt
Bialystok District	46,591	8,500: Auschwitz 38,091: to the East
Warthegau*	145,301	
Unknown	30,225	
General Government with Lemberg/Lvov	1,274,166	
Total:	1,714,031	

*11,233 from *Altreich*, *Ostmark* and Protectorate coming from ghetto of Łodź/Litzmannstadt

mentioned above, stated that out of the 8,009 Jews who had been resettled into the county territory, 3,692 had already been transferred elsewhere.

But there is no doubt either that these transferred persons were counted twice in Korherr's report. In fact, 23,500 Jews from the *Altreich* and from *Ostmark* who had been deported to the Lublin district[924] were sent to Sobibór according to Schelvis.

Out of the 57,752 Jews deported from Slovakia according to Vlasta Kladivová[925] (Korherr has 56,691), 18,746 went to Auschwitz and the remaining 39,006 into the district of Lublin, a figure practically identical to the one mentioned previously (38,889) given by the Polish historian Janina Kiełboń.[871] As we have seen, Schelvis writes that 28,284 went to Sobibór.

As far as the 69,677 Jews from the Protectorate of Bohemia and Moravia are concerned, 18,004 of the 39,722 who had been evacuated to Theresienstadt were deported to Treblinka between 19 September and

924 But the total number of the deportees came to 21,809.

925 Vlasta Kladivová, "Osudy židovských transportů ze Slovenska v Osvětimi," in: *Tragédia slovenských židov*, Banská Bystrica, 1992, pp. 148f.

22 October 1942[926] and 10,000 of the 14,001 moved into the Lublin district were sent to Sobibór according to Schelvis.

From the 19,433 Jews of the *Altreich*, *Ostmark*, and the Protectorate who initially went to the Łodź ghetto 11,233 were transferred in March, August, and September 1942,[927] hence they are already included in the 145,301 Jews transited through the Warthegau camps.

This is to say that some 90,000 Jews have been counted twice, first as evacuated, later on as transited.

The Korherr report of 28 April counts 1,274,031 Jews as having been "passed through the camps in the General Gouvernment," an expression which leaves open the possibility of non-Polish Jews also having passed through such camps; the report of 19 April instead assigns this number explicitly to "General Gouvernment (incl. Lemberg)." Here it is in fact said that there were 2,000,000 Jews in this territory when it was taken over by the Germans; 427,920 are counted as losses due to emigration and excess of mortality over births as well as 1,274,166 due to evacuation, which means that as of 21 December 1942 only 297,914 remained in the area. The Höfle telegram, however, refers to the total number of Jews who transited through the camps of *Aktion Reinhardt*, not only to the fraction of Polish Jews.

Let us consider item 5 of the report dated 28 April 1943. The Jews listed there were taken to Auschwitz, except for the 39,006 (37,945 for Korherr) sent to the Lublin district. Table 9 lists, next to Korherr's data, the deportations to Auschwitz according to F. Piper,[928] the registrations at Auschwitz given in Danuta Czech's *Kalendarium*,[777] as well as those selected (i.e. taken off the train) at Kosel before arriving at Auschwitz.[929]

These Jews, although they were moved into the alleged extermination camp at Auschwitz, do not show up in the category which was originally labeled "special treatment of Jews." We will see later on how these inconsistencies can be explained and what conclusions can be drawn from them.

Total	159,518	121,428	46,790	7,969	54,759

There is another important question on which Witte and Tyas have foundered without being able to provide a proper answer and which shows instead that their interpretation of the Korherr report and consequently of the Höfle telegram is unfounded. They write:[930]

> *"Now we have a fourth camp – L – obviously the Concentration Camp Lublin, commonly known as Majdanek, listed by Höfle ahead of the other three camps. Bełżec, Sobibór, and Treblinka were extermination camps, so it is reasonable to assume that the numbers given for 'L' are numbers of Jews murdered also: it would not make sense to give the numbers killed for three camps and make Lublin an exception."*

Here we have again an instance of false reasoning "by analogy," like the one for C. Browning we have dealt with above. Here, however, we may also reverse the reasoning: given that Majdanek was not an extermination camp,[664] it would not have made sense to lump it together with three such camps, and hence Bełżec, Sobibór, and Treblinka were not extermination camps.

Witte and Tyas examine the 24,733 Jews mentioned by Höfle which they claim were assassinated in the Majdanek gas chambers:[931]

> *"Globocnik must have been responsible for sending these unknown Jewish victims to the gas chambers of Majdanek, because, according Höfle's telegram, he counted them as Einsatz Reinhardt victims."*

They speak of "unknown Jewish victims," because for some strange reason they are trying – in vain – to identify these alleged victims before even wondering, whether the 24,733 Jews in question were in fact gassed according to the official history of the Lublin-Majdanek Camp.

---

930 P. Witte, S. Tyas, *op. cit.* (note 19), p. 471.
931 *Ibid.*, p. 472.

In this connection they enounce two hypotheses: the alleged victims stemmed "from unknown transports from the Bialystok General District, or, more likely, from small forced labor camps."[932]

We must remember, though, that 12,761 out of these 24,733 Jews are said to have been gassed in the two weeks between 18 and 31 December 1942. According to Tatiana Berenstein and Artur Eisenbach, however, in November/December of 1942 only 5,000 Jews arrived at Majdanek from Poland, 4,000 of whom are said to have been killed immediately ("zgładzono od razu").[933] This will be discussed below. Zofia Leszczyńska, the author of the most detailed analysis of the transports of detainees to Majdanek, asserts that between July and December of 1942 15,000 Jewish detainees arrived at the camp in 13 transports and mentions the more important ones:

– 15 August: a large transport from Warsaw;
– 2 September: 1,000 Jews from the ghetto at Lublin;
– September: Jews from Bełżyc and Piask;
– September: 111 Hitlerjugend youths of Jewish descent;
– October: 1,700 Jewish women from Bełżec(!);
– November: Jews from Izbica.[934]

For the second half of December there is only one Jewish transport mentioned in the corresponding list for the 19th of the month, but neither the number of persons nor their origin are reported.[935]

Further on Witte and Tyas take up the problem of the gassings:[936]

> *"Lublin, however, was a regular concentration camp; from October 1942, three gas chambers were used to murder prisoners after selections of those deemed unable to work. The number culled during selections in Majdanek from October onwards is known: their sum is much lower than the figures given in Höfle's telegram. As the document indicates, the murder of Jews transported to Lublin without being registered at the concentration camp became an integral part of Einsatz Reinhardt from an unspecified date onward. Further research, one hopes, will hopefully permit more precise information."*

Hence, the number of those allegedly gassed between October and December of 1942 is said to be known and to be "much lower than the fig-

934 Z. Leszczyńska, *op. cit.* (note 836), pp. 188f.
935 *Ibid.*, p. 219.
936 P. Witte, S. Tyas, *op. cit.* (note 19), p. 473.

ures given in Höfle's telegram." But then, how could those 12,761 Jews have been gassed? The authors leave the answer to this contradiction to future researchers! Their wording is misleading, because it makes the reader believe that at least part of the 12,761 Jews in question were indeed gassed. Leaving aside the fact that there were no homicidal gas chambers at Majdanek, as has been shown in a study concerning this camp,[664] Witte and Tyas' pronouncements on the number of allegedly gassed prisoners are a bit risky, to say the least. As their sources they refer to a "historical expert opinion by Prof. Dr. Wolfgang Scheffler in the Düsseldorf 'Majdanek Trial,' p. 173 (unpublished)" and to the book by "Józef Marszałek, Majdanek. Konzentrationslager Lublin (Warszawa: Interpress, 1984)."[937]

We know nothing of professor Scheffler's "historical expert opinion," but as far as the alleged gassings at Majdanek are concerned, the verdict of the Düsseldorf trial did not even take it into consideration. No figures are indicated in the section dealing with gas chambers and gassings. Regarding this topic the tribunal declared:[938]

> *"The evidence considered has not yielded precise results concerning the total number of persons killed in the KL Majdanek by gassings, shootings, or some other violent death, through epidemics or lack of food, due to ill-treatment or other privations, or any other causes. The court, however, regards as certain that there were at least 200,000 victims, among them 60,000 Jews."* (Emph. added)

The latter figures are so "certain" that, of late, Tomasz Kranz, historian at the Majdanek Museum, has brought them down to 78,000,[939] a number which includes the 18,000 fictitious dead of the "*Erntefest*"[940] (harvest festival) as well as all of the 24,733 deportees mentioned in Höfle's telegram.

Among its sources (nearly all of them testimonies) the Düsseldorf court also cites "the professional opinion of the expert for contemporary history Prof. Dr. Scheffler."[941]

Józef Marszałek, long-term head of the Majdanek memorial, limits himself to general assertions as well without producing any figures:[942]

---

937 *Ibid.*, note 25 on p. 482.
938 Landgericht Düsseldorf, *op. cit.* (note 510), pp. 89f.
939 Tomasz Kranz, *Zur Erfassung der Häftlingssterblichkeit im Konzentrationslager Lublin*, Państwowe Muzeum na Majdanku, Lublin 2007, p. 62.
940 J. Graf, C. Mattogno, *op. cit.* (note 664), Chapter IX: "Operation 'Harvest Festival,'" pp. 209-230.
941 Landgericht Düsseldorf, *op. cit.* (note 510), p. 96.

> *"After the gas chambers had been opened, gassing became the chief form of immediate extermination of persons unfit for manual work: the sick, the disabled, elderly people, and children.* […]
> *Selections of the new arrivals commenced in the autumn of 1942. These were initially Jews brought from the closed ghettos and labour camps in the Lublin district, and later French and Dutch Jews deported to Majdanek in March 1943."*

Yet at the same time he stresses that "in the period when the gas chambers were operating, from September 1942 till September 1943, no cases of mass execution by shooting are known,"[943] which means that the 12,761 victims of *Einsatz Reinhardt* must have been gassed. But not even in the most important publication on Majdanek is there the slightest trace of these gassings.[944]

Hence, the 12,761 Jewish victims of *Einsatz Reinhardt* would have been gassed and burned and/or buried at Majdanek within 14 days without any witness having mentioned this and without leaving any documentary or material traces: How can anyone honestly believe such a story? It is also obvious that T. Berenstein and A. Eisenbach's assertion concerning the immediate killing of 4,000 Jews at Majdanek in November/December of 1942 has no foundation; hence one cannot even claim that at least part of the above 12,761 Jews were gassed.

Witte and Tyas have also skirted the absurdity of what we have been told about *Einsatz Reinhardt* – the transportation of the 12,761 victims to Majdanek – in the last two weeks of December of 1942. Their alleged extermination would necessarily have taken place in full view of all concerned, as compared to a mere 515 sent to Sobibór with its supersecret Camp III. If the former Jews had had to be killed, why would this not have been done quietly at Sobibór? Just as strange is the fact that during the said two weeks more Jews were sent to Majdanek than to Treblinka: 12,761 as against 10,335. This would mean that the SS, in spite of the availability of two camps for total extermination, would have gassed these 12,761 deportees in a minor camp which had received only 2% of all deportees up to 21 December 1942 (24,733 out of 1,274,166).

---

942 J. Marszałek, *Majdanek. The Concentration Camp in Lublin*, Interpress, Warsaw 1986, p. 136.
943 *Ibid.*, p. 129.
944 Czesław Rajca, "Eksterminacja bezpośrednia," in: Tadeusz Mencel (ed.), *Majdanek 1941-1944*, Wydawnictwo Lubelskie, Lublin 1991.

The most reasonable explanation would thus be that these 12,761 Jews transited through Majdanek before moving on, alive, to the East. This obviously goes for all of the 24,733 Jews mentioned in the Höfle message.

This conclusion also flows out of the Korherr report. Under paragraph VIII "the Jews in the concentration camps" it says:[945]

> *"Not included are the Jews housed in the concentration camps of Auschwitz and Lublin in connection with the evacuation operation."* (Emph. added)

This statement refers to Jews who had been deported to the two camps without having been counted, but who were alive. An analysis of the data furnished by SS statistics confirms this. For the Auschwitz Camp the data specify a total of 5,849 male and female Jews admitted (*eingeliefert*), 1 released (*entlassen*) and 4,436 deceased.[946]

However and as mentioned above, item 5 of the Korherr report lists 159,518 Jews deported only from France, Holland, Belgium, Norway, Slovakia, and Croatia, 121,428 of whom were sent to Auschwitz. 54,759 of these were registered at the camp or selected at Kosel, which means that they could not have been among those assassinated. These Jews were part of the "*Evakuierungsaktion*" (evacuation campaign) which was the same as the "*Ostwanderung*" mentioned above.

For the camp at Lublin-Majdanek, Korherr presents the following data:

Table 10: Korherr's Figures for Majdanek

	Arrivals	Releases	Deaths	Present on 31 Dec. 1942
Lublin/Men	23,409	4,509	14,217	4,683
Lublin/Women	2,849	59	131	2,659
Total	26,258	4,568	14,348	7,342

We know from Höfle's telegram that the evacuation campaign had affected 24,733 Jews up to 31 December 1942, and Korherr tells us that at that time at least part of them were *housed*, alive, at Majdanek. They can thus not all be considered to have been assassinated, as Witte and Tyas will have it. All the more so, as there were 4,568 Jews who were released from Majdanek – a strange "extermination camp" indeed!

Tatiana Berenstein and A. Eisenbach assert that 51,700 Jews were brought to Majdanek in 1942, where 25,200 of them were registered

---

945 NO-5194, p. 11.
946 *Ibid.*, p. 12.

(26,258 according to Korherr) and 26,500 allegedly murdered on the spot.[947] This figure is very close to Höfle's (24,733). It is much more logical for the allegedly gassed persons to have been transited through the Majdanek Camp without having been registered, just like the more than 100,000 Jews who passed through the transit section (*Durchgangslager*) of the Birkenau Camp between May and October of 1944 without registration.[948]

Schelvis tells us what happened to the transport of 1,000 Jews from Prague which left on 10 June 1942, i.e. after Sobibór had gone into operation:[949]

> *"The train stopped briefly at Lublin, where some of the men aged between 13 and 50 were selected for work at the camp, then continued to the Chełm area, where the deportees were put to work on various drainage projects, some at Ujazdów, near Hansk"*

He then claims, however, that "the majority" of the deportees were killed at Sobibór in October of 1942 "after an outbreak of typhoid," whereas "a small group ended up at nearby Krychów, until they too were gassed at Sobibór." Two Jews escaped during the removal from Ujazdow to Sobibór, one of them 12 years old, who would tell the story of this transport.

Hence, male deportees between 13 and 50 years of age were selected at Majdanek and remained there; younger and older deportees (i.e. those unfit for work) and all women,[950] regardless of age, were sent on to Ujazdow in Chełm county. As we have seen above, the local county chief asked on 13 May 1942 "to send along the able-bodied Jews as well with the next transport," which obviously means that at this point in time only the unfit had arrived.

Fritz Reuter's memo of 17 March 1942 cited above states that, if it is not possible to "separate Jews fit for work from those unfit already on departure," this was to be done at Lublin. We have also seen that some local authorities protested because "food, which is added to the

948 Andrzej Strzelecki, *Endphase des KL Auschwitz*, Verlag Staatliches Museum in Oświęcim-Brzezinka, 1995, p. 352.

949 J. Schelvis, *op. cit.* (note 61), p. 209. Ujazdów is located only some kilometers from Sobibór, as noted by Schelvis in the German edition of his study (*op. cit.*, note 60).

950 At Majdanek, a women's sector was opened on 1st October 1942 in Feld V. This is the reason why the Korherr report has only such a small number for the female Jews in this camp.

transport trains," and "the baggage of the evacuees" often remained in Lublin.

If this was normal practice, the unfit detainees who arrived at Majdanek were removed and eventually went to Sobibór or Bełżec; the able-bodied were selected for work and were *housed* at the camp without registration or moved to other camps.

The minutes of a meeting "on the subject of the evacuation of the Jews of the General Government and the removal of the Romanian Jews to the General Government," held in Berlin on 26 and 28 September 1942, create yet more problems for Wittes and Tyas' theses. The document states:[951]

> *"A discussion has been proposed on:*
> *1. The evacuation of 600 000 Jews of the General Government.*
> *2. The deportation of 200 000 Jews from Romania into the General Government.*
> *Concerning item 1.: Urgent transports, proposed by the chief of security police and by the SD, viz.:*
> *2 trains per day from Warsaw to Treblinka,*
> *1 train per day from Radom district to Treblinka,*
> *1 train per day from Cracow district to Bełżec,*
> *1 train per day from Lemberg district to Bełżec*
> *would be implemented by means of 22 G-Wagen* [= freight cars] *which have already been provided for this purpose by the directorate of German railways at Cracow to the extent that this can be done.* […] *After termination of the repair work on the line Lublin-Chełm, probably from 1st November 1942, the other urgent transports can be carried out as well, viz.:*
> *1 train per day from Radom district to Sobibór,*
> *1 train per day from Lublin North district to Bełżec and*
> *1 train per day from Lublin Center district to Sobibór*
> *to the extent possible and provided the required number of G-Wagen are available."*

Thus, after 1st November 1942, i.e. after the alleged homicidal gas chambers at Majdanek are said to have gone into operation (October 1942), the alleged extermination of the Jews in the Lublin district was implemented in its entirety at Bełżec and Sobibór. If the evacuation of the Jews had stood for their extermination and if Majdanek had been

---

951 Heiner Lichtenstein, *Mit Reichsbahn in den Tod*. Bund-Verlag, Collogne 1985, p. 62.

part of *Aktion Reinhardt*, this camp would have been a natural destination for at least part of the Jews in the district of Lublin, yet they were sent to Bełżec and Sobibór instead. This, as we shall see below, renders even more questionable the fact that the Höfle message should have an arrival (*Zugang*) of 12,761 Jews for Majdanek within the last two weeks of December of 1942.

On the other hand, if Majdanek had been part of the *Aktion Reinhardt* camps, why would its homicidal gas chambers[952] have used Zyklon B rather than the exhaust gases from an internal combustion engine? In this context it is absurd to believe that, according to mainstream Holocaust historiography, Bełżec initially experimented with Zyklon B for its killings, but abandoned it later. In the reasoning of the verdict in the trial against Josef Oberhauser in Munich it is in fact said:[953]

> *"Over the first few weeks Zyklon-B-gas was used as the killing medium, later on, for reasons of economy, exhaust gas from a Diesel engine."*

And for what purpose would Jews have been sent from Majdanek to Sobibór, i.e. from one alleged extermination camp to another? Schelvis tells us:[954]

> *"In the autumn of 1942 some 1,600 Jews arrived in their striped suits from Lublin/Majdanek; they were to be murdered the same day."*

According to the witness Joseph Duniec, the transport which left France on 25 March 1943 with 1,008 deportees on board was rerouted "to Majdanek and on to Sobibór, as Majdanek could not accommodate them."[955]

In stark contrast to this we have seen above in Fritz Reuter's memo of 17 March 1942, that "Hstuf. Höfle is about to build a large camp in which the Jews fit for work can be classified according to their professions and delegated as necessary" (see p. 297).

These Jews were certainly excluded from any evacuation beyond the confines of the Government General and were in all likelihood employed in the network of camps in the Lublin district.

---

952 Actually, they were disinfestation chambers as has been documented abundantly in the book already mentioned, *op. cit.* (note 664), chapter VI.2: "Design, Construction and Purpose of the Gas Chambers," pp. 128-138.

953 A. Rückerl (ed.), *op. cit.* (note 34), p. 133.

954 J. Schelvis, *op. cit.* (note 60), p. 109.

955 J. Schelvis, *op. cit.* (note 61), p. 233.

The deportations envisaged at the meeting of 26 and 28 September 1942 were later implemented only partially, because in the section "The Jews in the ghettos" Korherr established the estimate for "the Jews primarily housed in the remaining ghettos of the General Government" as of 31 December 1942 as given in Table 11.[956]

Table 11: Korherr's Ghetto Jews end of 1942

DISTRICT	NUMBER OF JEWS
Cracow	37,000
Radom	29,400
Lublin	20,000 (estimated)
Warsaw	50,000
Lemberg	161,514
Total, General Government	297,914

If there were about 600,000 Jews in the General Government yet to be evacuated at the end of September 1942 and if some 297,900 still remained at the end of December, it follows that between October and December roughly (600,000 – 297,000 =) 302,100 and up to the end of September (1,274,000 – 302,100 =) 971,900 had been evacuated.

But if 12,761 Jews had been gassed at Majdanek within two weeks, the remainder of 20,000 in the entire district could have been gassed in little more than three weeks.

The completion of the first disinfestation facilities at Majdanek, officially labeled "2 delousing barracks with baths," but which mainstream historiography claims to have house the alleged homicidal gas chambers, was announced on 22 October 1942.[957] At that time they were no doubt already in operation. If what mainstream historians claim were true, they would have had an extermination capacity of at least (12,761÷2=) about 6,380 persons per week. But even if the 24,733 Jews mentioned in the Höfle report had been taken to the camp after that date, the alleged gas chambers would have been able to operate for nine weeks, up to the end of December, and could have gassed (6,380×9=) about 57,400 persons, i.e. not only the 24,700 Jews who had arrived at the camp in 1942, but also the 20,000 remaining in the Lublin district at the end of the year, plus another 12,700.

---

956 NO-5194, p. 11.

957 Letter from Zentralbauleitung at Lublin to SS-Wirtschafter Gruppe C-Bauwesen with Höhere SS-und Polizeiführer im Generalgouvernement dated 22 October 1942. WAPL, ZBL, 8, p.22.

The case of the district of Lemberg is stranger still. According to the Katzmann report a total of 254,989 Jews[958] had been "removed and/or resettled" as of 10 November 1942, presumably to Bełżec. On 31 December there were still 161,514 in the district, but in spite of this the Bełżec Camp was shut down on 11 December.[959]

The conclusion we may draw from the analysis of the Korherr report is that the "special treatment of Jews" stood only for the deportation of western Jews (those from the *Altreich* with *Sudetenland*, *Ostmark* and Protectorate) and of the eastern Jews (those from *Ostgebiete* with Bialystok and General Government with Lemberg) to the East, i.e. beyond the confines of the Greater German Reich. The Jews deported within these confines, in particular the roughly (121,428+8,500=) 130,000 Jews sent to Auschwitz, were not subjected to "special treatment."[960] Neither were the 69,084 Jews deported from the *Altreich*, *Ostmark*, Protectorate, and Slovakia to Nisko and the Lublin district *formally* subjected to it. We say *formally*, because they acquired the status of "specially treated" (*sonderbehandelt*) gradually as they were transited from the Polish ghettos through the various camps.[961] This is also true for the 18,004 Jews deported to Theresienstadt and then from that ghetto to Treblinka. In practice there was a double accounting system: one for the Jews evacuated from individual countries, and one for the Jews who were transited through the above camps and who were counted independently of their origin.

Within the scope of *Aktion Reinhardt* the count of the western Jews was, in fact, based on the transport lists of which SS-*Obersturmführer* Helmut Pohl in Lublin received two copies in his quality as Head of Resettlement at Lublin.[962] Here the western Jews in transit were counted again as arrivals (*Zugang*) to, or as transited (*durchgeschleust*) through, the Majdanek or the other camps.

---

958 IMT, Vol. XXXVII, p. 398.

959 Robert O'Neil, "Bełżec: Prototype for the Final Solution. Hitler's answer to the Jewish Question," Chapter 10: "Bełżec's dead: burning of the corpses," in: www.jewishgen.org/yizkor/Bełżec1/bel000.html.

960 At Auschwitz, however, the term "Sonderbehandlung" had an analogous meaning but on a smaller scale; it designated the Jews who, as part of *Ostwanderung*, were transited through the camp on their way to the *Durchgangsghettos* in the eastern territories.

961 The 12,021 Jews sent to Sobibór were part of those evacuated and not of those specially treated (*sonderbehandelt*), therefore they were not quickly transited (*durchgeschleust*) either through this camp, but were probably spread over the whole area, as is suggested by the transport of 9 May 1942 mentioned above for work on *Wasserwirtschaft* and *Entwässerung*. Cf. also Chapter 7.

962 J. Schelvis, *op. cit.* (note 60), p. 237.

9.5. Registration of Deportees in the *Aktion Reinhardt* Camps

The eastern Jews were sent to Sobibór and the other two camps without transport lists, and yet the figures of the Höfle message are extremely precise, down to single units. How can we explain this fact? The Museum at Konin provides us with a significant indication concerning this question, as far as the Chełmno camp is concerned:[963]

> *"South of the grave a round aluminum badge with No. 1280 and a hole for hanging the badge was found. According to the accounts of the employed workers, in the period between 1962-1964 when the cemetery was being tidied, 6 similar badges were found near the 'włocławska' grave. They were later handed over to the Town Council in Dąbie, which further handed them over to a newly-established Museum in Chełmno. Interesting is the fact that the badges have the same diameter, while the numbers on most of them form a sequence: 3276, 3277, 3378, 3280, 3281, 2521. In the Chełmno estate grounds, near the granary, a smaller badge with number 1104 was found. It is unknown which group of prisoners had to wear such badges. Significantly greater quantities (over 300) of such numbered badges made of concrete were found during archeological research in Bełżec; their function, however, has not been explained there either. Perhaps an answer to this question lies in the organization of labor camps for Jews."*

Andrzej Kola has, in fact, published three photographs showing various cement disks with an imprinted number in the middle and a hole near the upper edge.[964] Photograph 117, which also show a metric ruler, allows us to say that the diameter of these disks was about 5 centimeters, and the six disks visible show the following sequence of numbers: 12262, 12816, 12707, 12285, 12099, and 12420. But photograph 115 shows a disk with a number over 66000 (possibly 66977, the lower portion of the disk is missing). Kola tells us that these disks were found in excavation 11e/98, i.e. in an area of 31.5 sqm of Building D.[965] What was the function of such disks?

What comes to mind is a "token" in receipt of clothes that were to be disinfested; cement disks could have been attached to the clothes on

---

963 "Chełmno," in: www.muzeum.com.pl/en/Chełmno.htm.
964 A. Kola, *op. cit.* (note 304), photographs 115-117 on pp. 83f.
965 *Ibid.*, p. 54.

their passage through the disinfestation chamber, even if steam was being used there, so that the goods could be identified as they came out. The detainees would be given a token as a receipt with a corresponding number, as some witnesses have stated. On this point Louis de Jong declared:[966]

> *"The luggage* [of the deportees] *had to be left in the luggage barracks; in exchange the arrivals were generally handed numbered metal tags."*

From the "Holocaust" point of view, which de Jong shares, the "metal tags" could be explained as being fake "receipts" handed out to deceive the victims, but this would not apply to the cement disks as well. And even if they, too, were fake "receipts," why would one have produced over 66,000 of them? Such a high number makes sense only if the disks somehow related to people. Were they dead or alive? From the perspective of mainstream historiography it would have been useless to number the corpses by means of cement tags. If anyone had wanted to count the victims, a simple list would have been enough. The only instance where a similar system of identification is described is the case of the "*Schamotte-Marken*," disks made of refractory material and carrying a number that would be placed into the coffin to enable the identification of the ashes after incineration in civilian crematoria. Initially this method was also in use at Auschwitz.

In a letter dated 3 June 1940 the firm I.A. Topf & Söhne of Erfurt offered to SS-*Neubauleitung* of Auschwitz "500 pcs. refractory tags numbered consecutively 1 – 500" for the sum of 65 Reichsmark.[967] But in the camps of *Aktion Reinhardt* such a procedure would not have made any sense in the eyes of "Holocaust" historians, both because most of those camps didn't have crematories to begin with (Bełżec, Sobibór, Treblinka) and because it would have been absolutely foolish, if not close to impossible, to later on try to identify the remains of corpses in mass graves or incinerated in open pits.

Hence, the only explanation we are left with is that the tags concerned persons that were still alive. They were no doubt a means of identification based on the ID numbers as were used by all concentration camps. At Mauthausen, for example, a detainees would be given cloth tags with numbers, to be sewn on their uniforms, plus "a metal tag

---

966 L. de Jong, *op. cit.* (note 251), pp. 24f.
967 RGVA, 502-1-327, pp. 226f.

with punched numbers'"[968] to be worn like a military ID tag. The cement disks were therefore the ID numbers of the deportees passing through Bełżec and the other *Aktion Reinhardt* camps and, in all likelihood, tied in with a file system. On account of their precision, the numbers cited in Höfle's message speak in favor of such a procedure.

This does not stand in the way of the explanation we have proposed above: If each deportee going through an *Aktion Reinhardt* camp did indeed receive an ID number, then we can also understand why the cement disks accompanying the clothes into the disinfestation chambers show such high figures – over 60,000.

9.6. Prof. Kulischer on the Expulsion of Jews

But where did the Jews who had been evacuated from Greater Germany actually end up? This question was answered at the time of Korherr's report by Professor Eugene M. Kulischer, member of the International Labour Office at Montreal, Canada, in a book entitled *The displacement of population in Europe*[969] published in 1943. For his work the author used the assistance of 24 institutions – Jewish, American, Belgian, Czechoslovak, Finnish, French, Greek, Latvian, Lithuanian, Polish, Turkish, Yugoslav, as well as the International Red Cross.

Each one of these institutions had a dense network of information channels in the various European countries, which meant that Kulischer had at his disposal the best sources of information relative to his project.

The book has a section entitled "The Expulsion and Deportation of Jews," which testifies to the author's profound knowledge of the National Socialist policy towards the Jews. It was a detailed statistical presentation, which constitutes the best comment on Korherr's report. We will quote the major passages:[970]

---

[968] H. Maršálek, *Die Geschichte des Konzentrationslager Mauthausen*. Dokumentation, Österreichische Lagergemeinschaft Mauthausen, Vienna 1980, p.45. We wish to add that metal tags were used in the German army for the identification of soldiers. They were worn with a neck-band and had two sections, each bearing the same ID numbers etc. When a soldier was killed, one half was broken off and sent to the competent military authorities, the other half would be buried along with the body.

[969] E.M. Kulischer, *The Displacement of Population in Europe*, International Labour Office, Montreal 1943.

[970] *Ibid.*, pp. 95-99.

"Until the outbreak of war, emigration was ostensibly encouraged; Chancellor Hitler said that he would willingly give a thousand mark note to every Jew who would leave. In practice, however, less humane and more effective methods of promoting Jewish emigration were adopted. Life in Germany was made impossible for Jews in order to induce them to leave, and when they left they had to abandon almost all their property. At the same time, a moral obligation to receive the Jews was imposed on other nations.

With the extension of German conquests, the aims of Germany's Jewish policy were widened to embrace the 'liberation of all Europe from the Jewish yoke.' Not only the deportation and segregation of the Jews, but their extermination[971] *also was an openly proclaimed objective of German policy. But the main factor which changed the character of the anti-Jewish measures lay in the changed conditions themselves. With the progress of the war, emigration possibilities became more and more restricted. On the other hand, Germany was now able to send Jews to non-German territories under German control, so that as stimulated emigration declined, deportation increased. The Jews were either expelled to 'purge'*[972] *a given country or city of its Jewish element, or they were concentrated in specific regions, cities or parties of cities to 'purge' the rest of the locality.*[973]

It must be emphasised that the wholesale and recurrent removal of Jews is at the same time an effective method of securing their economic extermination. No regard is had to their prospects of earning a livelihood; on the contrary, the transfer is carried out in such a way as to make it impossible for the Jew to reorganize his economic life. His relations not only with the Gentiles but also with his own people are severed; and if he succeeds in establishing new connections they are again broken by a further move. Because of the various methods used to secure the segregation and concentration of Jews, they are uprooted over and over and prevented from striking

---

971 In NS lingo "Vernichtung" or "Ausrottung." The significance of the term will be explained below.

972 In NS lingo: to carry out a "Bereinigung" or to render "judenfrei."

973 This was actually the usual procedure. For example, the counties (Kreise) of Biała Podlaska and Radzin in the Lublin district jointly selected Międzyrzecz "als jüdisches Wohngebiet"; as this community was part of Radzin county, Biala Podlaska county ended up "judenfrei." *Lemberger Zeitung*, no 246, 17 October 1942, p. 5, "Die erste judenfreie Stadt im GG."

fresh roots anywhere. First they are sent to the General Gouvernement. Then the town in which they were settled is 'purged.' In their new place of residence a ghetto is established. But even the ghetto does not give the Jews the security of a permanent residence, and they are again removed further east.

In many cases the immediate motive for expulsion or deportation was to make room for Germans. The first victims of expulsion on a grand scale were the Jews of the incorporated western Polish provinces, who were expelled along with the Polish inhabitants, in both cases to make room for the 'repatriated' Germans. Later, Jews were deported because, according to the official statements, they owned apartments suitable for alien refugees from cities subject to air-raids.[974]

At the same, however, another factor, perceptible since the end of 1940 and now assuming growing importance, is strongly operating in a contrary direction – namely, the needs of the German war economy. As a result, Germany's Jewish policy may be described as a compromise between extermination of the Jews and their utilisation in the war economy.

Early in 1941 a semi-official German article described with satisfaction the exclusion of the Jews working population from economic life. Already in 1938 the Jews had been 'released' from productive work on a wide scale. 'But,' the article continues, 'in consequence of the incipient strain on labour resources and of the necessity of harnessing all the available supply of manpower, a trend in the opposite direction soon became noticeable.' At first the Jews were used for unskilled jobs, but later the 'more efficient' among them were given suitable higher grade work. Jews were not, of course, reinstated in the professional activities from which they had been expelled. They were conscripted as forced labour, at first to 'release German workers for urgent construction work for the Reich,' but later also for direct employment in industries manufacturing army supplies. In a number of cases the Jews were not removed because they were needed as workers; in others, they were deliberately sent to places where they could be put to work. To some extent, therefore, the

974 The "Zusammenhang zwischen dem Wohnraummangel im Reich und den Judendeportationen" (relationship between housing shortage in the Reich and Jewish deportations), also in connection with "Wohnungen für Bombengeschädigte" (housing for victims of bombing), has been illustrated by Peter Witte, *op. cit.* (note 593), pp. 43-46.

character of deportation and even its direction were influenced by labour requirements.

Generally speaking, no other group of people has been subjected to compulsory removal from their homes on so great a scale. This forced transfer had taken the following forms:

- *Mere expulsion from a territory, the Jews being taken to the frontier of the territory they are to leave. This was the procedure adopted in regard of the Jews from Alsace and south-west Germany, who were taken to the French frontier,*[975] *and also at times in regard to the Jews of the Incorporated Provinces, who were taken to the General Gouvernment and there left to their fate.*
- *Mere expulsion from a city without any assignment or destination, as in the case of the Jews expelled from Cracow.*
- *Expulsion from an area which is to be 'purged of Jews' and deportation to a special region (e.g. the Lublin reservation), city or town, or part of such region, city or town. Since 1940 this has been the usual practice adopted in removing Jews from various German-controlled territories and deporting them to the General Government, or, latterly, to the occupied area of the Soviet Union.*
- *Deportation within the limits of the same territory; thus the Jews of the General Government are deported to other cities and towns in the same territory, in which ghettos are set up.*
- *Removal from one part of a city to another, by means of the setting up of ghettos or segregation in specified quarters.*
- *Removal of Jews conscripted for forced labour to special Jewish labour camps.*

It is worth noting that compulsory transfer is tending more and more to become the sole form of Jewish migration. Thus a Decree of 11 December 1939 prohibited the Jews in the General Government from changing their residence without a special permit, and similar measures have been adopted throughout the whole of German-dominated Europe.

Earlier Forms of Expulsion and Deportation.

There were various isolated instances of expulsion even before the outbreak of war. Thus, in November 1938, between 15,000 and 16,000 Polish Jews living in Germany were seized, packed into

975 The Jews deported to France from Baden and Pfalz (Palatinate) in Germany, estimated by Kulischer at 9,000. Korherr has 6,504.

freight cars and taken to the Polish border, many of them to the frontier town of Zbonszyn.

In this case the German authorities could claim that they were foreigners.[976] *But this was not so in another case which attracted much attention because of the exceptional attendant circumstances. After the annexation of Austria, 400 Jewish families living in the province of Burgenland were expelled. Some escaped to Vienna and other to Czechoslovakia, but a group of about 70, who were packed on an old freighter, remained aboard for more than four months in a no-man's land between Germany, Czechoslovakia and Hungary.*

After the outbreak of the war, the expulsion of Jews began at first in a somewhat unorganized fashion, its object being to place the Jews outside the limits of German rule. In September 1939 Polish Jews fled in masses from the invading armies, pushing further and further east in an attempt to escape to Soviet-occupied territory. In this they succeeded, owing to the attitude of the Soviet authorities during the first two months of the Soviet occupation of Poland. The Germans often tried to encourage this flight; many cases were reported of Jews literally driven at the point of guns and bayonets to the demarcation line and into the frontier rivers. Many were openly admitted by the Soviet authorities; many others managed to cross the border secretly. The number of Jews who fled into the eastern Polish provinces (both before they were occupied by the Soviet Union and after) is estimated by the Institute of Jewish Affairs at 200,000 al least.

At the end of November, the Soviet Government closed the frontier. In the meantime the Germans had begun to carry out another plan for the elimination of the Jews, that of deportation to the so-called Lublin 'reservation.' This idea of a special Jewish region, to which Jews from all German-ruled countries would be sent, is attributed to the National Socialist theorist Alfred Rosenberg, who proposed in a lecture on 7 February 1939, developing his scheme for a reservation in contrast with the Zionist idea of a Jewish State. After the occupation of Poland the Lublin district, which according to the census of 1931 had a population of 2,465,000 and numbered 314,000 Jewish inhabitants, was set apart for the execution of this plan. Before the

---

976 As described by Reitlinger who speaks of 17,000 persons expelled in his German book *Die Endlösung. Hitlers Versuch der Ausrottung der Juden Europas 1939-1945*, Colloquium Verlag, Berlin 1992, pp. 10f. In the 1968 English edition, *op. cit.* (note 558), p. 9, he speaks of "15,000 Jews with Polish passports."

middle of 1940, 650,000 Jews were to be settled there. Great publicity was given to the scheme and a press campaign was launched to convince the German people that 'a solution of the Jewish problem in Europe' had finally been found. Deportation started in the second half of October 1939, and during the first months large numbers of Jews, especially from Vienna and the Protectorate and from the Old Reich, were sent to the reservation.[977] *The deportees were given a few hours to leave. They were permitted to take with them up to 50 kilograms (110 lbs.) of luggage and a sum of money equivalent to between $40 and $120. No preparations were made to receive them, and the reservation soon became a hotbed of epidemics which were bound to spread to the German army too. The idea of a special reservation for Jews was accordingly given up for the time being, after some 30,000 Jews had already been sent there."*

This is followed by a detailed statistical analysis of the individual countries, headed "Countries and Territories of Expulsion and Deportation," the results of which are summarized in the final tables set out below.

Kulischer then devotes a major section to the destination of the deported Jews, entitled "Territories of Destination and Methods of Confinement," which brings to mind the territorial final solution envisioned by Heydrich:[978]

"The number of the Jews deported up to December 1942 from all European countries except Poland, i.e. from Germany, France, Belgium, Netherlands, Norway, Slovakia, Romania and Yugoslavia, may be estimated on the basis of the figures given above at about 650,000. Furthermore, 50,000 to 60,000 Jews from Bohemia-Moravia have been confined in a concentration camp within the country itself.[979]

Some of the Jews from Belgium were sent to a neighbouring part of Western Europe for forced labour, but generally speaking the tendency has been to remove the Jews to the east. Many Western European Jews were reported to have been sent to the mines of Silesia. The great majority were sent to the General Government and, in ever growing numbers, to the eastern area, that is, to the territories

977 This was the Nisko plan. As already stated, the deportations from the "Jewish reservation" would begin on 20 October 1939; author's comment.

978 E.M. Kulischer, *op. cit.* (note 969), pp. 107f.

979 The ghetto of Theresienstadt; author's comment.

which had been under Soviet rule since September 1939 and to the other occupied areas of the Soviet Union.
During the early period, deportation meant removal to the General Gouvernment, but since 1940 the deported Jews have tended more and more to be sent exclusively to ghettos and labour camps.

Ghettos.
The first ghettos were set up in Łodź in the winter of 1939-1940. Since spring of 1940 they have been introduced in a number of cities and towns in the Warthegau and the General Gouvernment. In the summer of 1940 the Germans segregated the district of Warsaw inhabited mainly by Jews under the pretext that it was a breeding-place of contagious diseases, and in the autumn of the same year a ghetto was formally established. All Jews living outside its confines were ordered to move into the ghetto and all Poles living inside to leave the ghetto area. Many Jews were also brought there from abroad. In the first half of 1942 about 500,000 persons were crowded into the Warsaw ghetto.
The growth of the ghettos is illustrated by the following estimates. In November 1941 the Institute of Jewish Affairs estimated the number of Jews confined in the ghettos 'at no less than 1,000,000.' In December 1941 figures released by Polish Jewish circles in London showed that about 1,300,000 Jews had been herded into eleven ghettos in various parts of the country. For the early summer of 1942 the Institute of Jewish Affairs gave the number as 1,500,000. On 28 October and 10 November 1942 the Secretary of State for Security in the General Gouvernment issued regulations about Jewish ghettos in the five districts of the General Gouvernment (Warsaw, Lublin, Cracow, Radom and Galicia), providing that from 30 November 1942 all General Gouvernment Jews must live in confined areas. Jews employed in armament and other war industries and living in closed camps are exempted. The confined areas are of two kinds: ghettos inside the larger towns, and purely Jewish towns, cleared of their non-Jewish population. In the whole of the General Gouvernment there are 13 ghettos, the largest being the Warsaw ghetto, and 42 Jewish towns.[980]

980 These are two documents with the same title, "Polizeiverordnung über die Bildung von Judenwohnbezirken in den Distrikten Warschau und Lublin," issued by SS-Obergruppenführer Friedrich Wilhelm Krüger in his quality of Höherer SS- und

Since the invasion of the U.S.S.R., ghettos have been established in Western Byelorussia, Western Ukraine and the Baltic States, and also in occupied Russia.

The primary purpose of the ghettos and special Jewish towns is the segregation of the local Jewish population. This consists of the former inhabitants of the area which was turned into a ghetto or a Jewish town, the inhabitants of the same town who are removed to the ghetto, and Jews removed from other localities of the same country. For the second and third categories segregation in the ghetto meant compulsory removal, and for the third category forced migration also. The number of persons affected by this internal forced migration may have numbered many hundreds of thousands in the General Gouvernment alone.

The ghettos of the General Gouvernment or of the Eastern Territories are also the usual destination of the Jews deported from the west by the German authorities or by authorities of other countries allied to Germany." (Emph. added)

The section which follows treats the *Forced Labour Camps*. After discussing age limits, working hours and types of work, Kulischer writes:[981]

"Up to the summer of 1941, at least 85 Jewish labor camps were known to exist in the General Gouvernment. Of the 35 camps the position of which was known, two-thirds were located on the eastern frontier.

Forced labour for Jews expanded rapidly, having developed from a subsidiary measure into an essential feature of the treatment of Jews. In April 1942, the Gazeta Żydowska reported that 25,000 Jews were engaged in compulsory construction work in the Warsaw district, and on the basis of other data given by the same journal, the Institute of Jewish Affairs estimated the total number of Jews in forced labour camps in Poland in the fall of 1941 at 100,000. During 1942, forced labour became the common fate of the Jewish in Poland and in German-occupied territory. The period for which Jews fit to work are liable for forced labour is no longer limited. Their removal to east was largely motivated by the wish to make use

Polizeiführer in the General Government and of State secretary for security on 28 October and 10 November 1942, respectively. The first set up 12 Judenwohnbezirke, the second 41. Cf. the list in C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), pp. 266f.

981 E.M. Kulischer, *op. cit.* (note 969), pp. 107-111.

of them as forced labour, and as Germany's need of manpower grew, deportation for adults of working age was tantamount to assignment to forced labour.

In contrast with the other inhabitants of German-occupied countries, Jews are not sent to work in the Reich, because Jewish immigration would run counter to the policy of making Germany 'free of Jews.' The needs of the war economy compelled German authorities to deviate from this rule to some extent, and indeed some exceptions have been reported. But, generally speaking, deportation to the east is for the Jews the equivalent of the recruitment for work in the Reich to which the rest of the population of German-controlled Europe is subject, and their removal further and further eastwards is doubtless connected with the need for supplying the army's requirements near the front.

For the Polish ghettos are not the last stage in the forced eastward migration of the Jewish people. On 20 November 1941, the Governor General, Hans Frank, broadcast the information that the Polish Jews would ultimately be transferred further east. Since the summer of 1942 the ghettos and labour camps in the German-occupied Eastern Territories have become the destination of deportees both from Poland and from western and central Europe; in particular, a new large-scale transfer from the Warsaw ghetto has been reported. Many of the deportees have been sent to the labour camps on the Russian front; others to work in the marshes of Pinsk, or to the ghettos of the Baltic countries, Byelorussia and Ukraine. It is hardly possible to distinguish how far the changes in the Jewish population of the General Government are due to deportation and how far they are attributable to 'ordinary' mortality and extermination. Moreover, the number of Jews remaining in the General Government is in any case uncertain."

Finally, Kulischer sets out a statistical summary for the countries of the Jewish deportations, arranged in a way similar to Korherr's report:[982]

"Total number of Uprooted Jews.

On the basis of the data presented above, the numbers of Jews expelled and deported from Germany and countries under German occupation or control since the outbreak of war in September 1939 may be estimated as follows:

---

982 *Ibid.*, pp. 111-113.

– Germany and Austria	*180,000*
– France (excluding Alsace-Lorraine)	*70,000*
– Alsace-Lorraine	*22,000*
– Belgium	*50,000*
– Netherlands	*80,000*
– Luxemburg	*2,000*
– Norway	*1,000*
– Slovakia	*70,000*
– Subcarpathia	*20,000*
– Incorporated Polish Provinces	*400,000*
– Old Romania, Transylvania, Bukovina and Bessarabia	*185,000*
Total	*1,080,000.*

In addition, some tens of thousands have been deported from the Bulgarian controlled parts of Yugoslavia and Greece. This brings the total number of expelled and deported Jews up to some 1,100,000. Of this total, 9,000 Jews from Baden and Palatinate, 22,000 from Alsace-Lorraine, some of the 70,000 from Slovakia, some of the 2,000 from Luxemburg, and the first 300,000 from the Incorporated Provinces of Poland, were expelled; the others have been deported.

Only a few thousand of these deportees were sent to western Europe; all the others went to the General Government, and further east to the German and Romanian-occupied territories of the Soviet Union. It should be noted that some of the Jews of Alsace-Lorraine and Germany may possibly appear twice in the calculation, since the 70,000 Jews deported from France to the east probably include a number of those expelled at an earlier date from Alsace-Lorraine and south-western Germany. In any case, a total of 1,050,000 would make allowance for any double counting.

In order to estimate the total number of uprooted Jews, however, this figure must be increased by the addition of those who were evacuated, fled or emigrated. According to the data given above, these figures are as follows:

– Refugees from Poland to and through Romania, Hungary and Lithuania	*50,000*
– Refugees from the Incorporated Provinces to the General Government	*60,000*
– Refugees from German-occupied Poland to Soviet-	*200,000*

occupied territory	
– Refugees from Bessarabia	*100,000*
– Evacuees from the Baltic States	*30,000*
– Evacuees from Western Byelorussia and Western Ukraine	*500,000*
– Evacuees from the pre-1939 territory of Soviet Union	*1,100,000*
– Emigrants to overseas and neutral European countries	*160,000*
Total	*2,200,000*

This number again includes some refugees who have been counted twice, among the following groups: (1) 50,000 refugees from Poland who went to European countries; many of these emigrated later, while others were afterwards deported; (2) 200,000 Jews who went from German-occupied Poland to Soviet-occupied territory in 1939; some of them were afterwards removed to the east, and therefore figure in the total of 500,000 Jews removed from Western Byelorussia and the Western Ukraine. To avoid the possibility of double counting, half of both these groups may be deducted, thus giving a total of 2,100,000.

Summing up both sets of figures, i.e. figures relating to Jews deported and expelled and to those otherwise displaced, a total of 3,150,000 is obtained.

This figure does not include. (a) the hundreds of thousands of Polish Jews deported eastward from the General Government, and (b) hundreds of thousands of Jews transferred by compulsion within the limits of the same country or territory to be segregated in ghettos and special Jewish towns, in particular in the General Government and in the German-occupied Eastern Territories. Assuming that only a third of the resident Jews who remained in these territories were affected by (a) and (b), nearly 1,000,000 Jews must have been compulsorily removed eastward or from one town to another. Accordingly, the number of Jews compulsorily removed from their homes would be about 2,100,000, or in any case over 2,000,000, and the total of all uprooted Jews 4,150,000, or in any case over 4,000,000."

Table 12: Deported Jews acc. to Kulischer

FROM	#	TO
Germany (incl. Austria)	170,000	General Government
Germany (Baden and Palatinate)	9,000	Unoccupied France
Slovakia	60,000	Eastern Galicia
Slovakia	10,000	Hungary
German occupied Poland	3,000	Hungary
	1,600	Romania
	15,000	Baltic States
	200,000	W. Byelorussia and W. Ukraine
Incorporated Polish Provinces	460,000	General Government
Western Byelorussia and Ukraine (frontiers of '40)	500,000	Eastern U.S.S.R. (113,000 beyond to Iran, India and Africa)
Lithuania	10,000	Eastern U.S.S.R.
Latvia	15,000	Eastern U.S.S.R.
Estonia	5,000	Eastern U.S.S.R.
Norway	1,000	General Government
Netherlands	80,000	German-occupied Soviet Territory
Belgium	1,000	Northern France
	50,000	German-occupied Poland
Alsace-Lorraine	22,000	Unoccupied France
Other parts of France	70,000	Incorporated Polish Provinces and General Government
Old Romania, Transylvania and Dobruja	80,000	Bessarabia and North Bukovina
Bessarabia and North Bukovina	185,000	Romanian-annexed Soviet territory (Transnistria)
Bessarabia and North Bukovina	100,000	Eastern U.S.S.R.

In a table entitled "Movements of non-German Populations" Kulischer summarizes the results of his study. We reproduce in Table 12 the numbers concerning the Jews.[983]

Kulischer appears to be well informed about the National Socialist policy toward the Jews and about the deportations, even though his statistical data at times diverge considerably from those of Korherr.[984] We must, however, remember that he was also well informed about the destination of the deportees. What he writes is in any case confirmed by contemporary documents.[985]

---

983 *Ibid.*, pp. 114f.

984 However, the total number of missing registered Jews is equal to Korherr's figure: 4 million. NO-5194, p. 15.

985 For a more detailed treatment of this topic we refer the reader to chapter VIII.6: "Final Destination of Jews Deported to the East," C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), pp. 253-261.

A number of high-level meetings of German officials in late 1941 dealing with the deportations from the Protectorate to the East and the difficulties encountered at the receiving end have been discussed in detail in Chapter 7.

The *Israelitisches Wochenblatt für die Schweiz* (Israelite weekly for Switzerland) reported the following on 16 October 1942:[986]

> *"For some time there has been a trend toward dissolution of the ghettos in Poland. That was the case with Lublin, then it was Warsaw's turn. It is not known how far the plan has been carried out already. The former residents of the ghetto are going farther to the east into the occupied Russian territory; Jews from Germany were brought into the ghetto to partly take their place.* […] *an eye witness, who was in Riga a short time ago and was able to flee, reports that 32,000 Jews are still in the ghetto of Riga now. Since the occupation, thousands of Jews have been killed. In the morning, the Jews are said to have to line up outside the city for forced labor. They are said to not receive salaries but only permissions for food supply. Compared to the rest of the populace, they are said to receive only severely short rations: they are said to receive only 100 g of bread daily and 2 kg of potatoes per week. Recently, transports of Jews from Belgium and other nations of western Europe were noted in Riga, which, however, immediately traveled on again toward unknown destinations. In the ghetto of Riga, so it is said, there were pogroms on the 30th of November and the 8th of December, to which a great many Jews fell victim."*

What was the fate of these deportees? We will address this question in the next chapter.

---

[986] *Israelitisches Wochenblatt für die Schweiz*, No. 42, 16. Oktober 1942, pp. 10f.

10. The Fate of the Deportees

10.1. The Fate of Jews Deported Directly to the East

As mentioned above, Reichsbahn documents show that at least 66,210 Jews from the *Altreich*, Austria and the Protectorate of Bohemia and Moravia were moved directly into the occupied Eastern Territories between November of 1941 and November of 1942.[987] We can retrace the fate of a certain portion of these people. In his book *The Hoax of the Twentieth Century*, Arthur Butz addresses the case of the German Jewess Jeannette Wolff, a socialist who was taken to Riga in 1942 and who described her experiences after the war.[988] A collective volume contains the reports of seven German Jews, five women and two men, who were likewise transported to Riga in 1941 and/or 1942 and who were later moved from there to the Stutthof concentration camp east of Danzig.[989]

It is of interest in this context to note that, out of the 48,609 Jews who arrived at Stutthof between 29 June and 27 October 1944, more than half of them – 25,043 persons – came from the Baltic states (10,458 from Kaunas in Lithuania and 14,585 from Riga in Latvia). Among them we find hundreds of children, labeled "Knabe" (boy) or "Mädchen" (girl) on the deportation lists. Some of the lists for the transports from Kaunas have survived. We can glean from the corresponding names and other details that the above designations applied to persons born in 1929 or later, i.e. to children not older than 15 at the time. The transport list of 12 July 1944 contains 3,098 names, among them those of 80 boys and girls. The nearly complete list of 19 July has 88 out of 1,095 names which belong to this category. The total number of children must have been far higher because 483 boys and 416 girls were moved on from Stutthof to Auschwitz on 25 July 1944.[990]

---

987 Cf. end of Chapter 7, p. 224.

988 Arthur Butz, *The Hoax of the Twentieth Century*, Theses and Dissertation Press, Chicago 2003, p. 268. Jeannette Wolff's account was published in the collective volume *We Survived*, edited by Eric E. Boehm, Yale University Press, New Haven 1949.

989 Hermann Kuhn, *Stutthof. Ein Konzentrationslager vor den Toren Danzigs*, Edition Temmen, Bremen 1990.

990 Jürgen Graf, Carlo Mattogno, *Concentration Camp Stutthof and its Function in National*

The deportation of German Jews into the eastern territories is mentioned in the official "Holocaust" literature as well. Gerald Reitlinger writes:[991]

> *"A larger number of deportees were taken to Riga.* […] *Jeannette Wolff* […] *mentions eleven transports, including the exceptionally large one by which she, along with 1,350 others, was taken from Dortmund to Riga on 25 January 1942.* […] *In response to this* [i.e. to an objection by the Wehrmacht which appreciated the Jews as workers and secretarial staff] *the Russia Plan was reactivated with some 25,000 Jews from the Greater Reich being taken to Riga, Estonia and the Minsk area."*

The relations between the Wehrmacht and the German Jews working for them seem to have been very good, because on 20 August 1943 they prompted SS-*Obergruppenführer* Richard Hildebrandt, Head of the SS-*Rasse- und Siedlungshauptamt* (SS central office for race and settlement) to prohibit any contacts between Jews and German army personnel beyond the strict minimum necessary for the tasks at hand. He also banned any assignment of Jews to office work or private purposes.[992]

These facts are in disagreement with the official version of history, for we must remember the following:

As mentioned previously, the deportations began in November of 1941.[993] According to mainstream Holocaust literature, a first "extermination camp" went into service at Chełmno (Kulmhof) in December of 1941. As such a camp cannot be set up overnight, the construction of Chełmno must have been in the planning stage for months. If it actually was an extermination camp, then we would have to believe that a plan for the physical liquidation of the Jews already existed at such an early stage. (We remind our readers of the fact that Chełmno, just like the later camps set up at Bełżec, Sobibór and Treblinka, is said to have been a pure annihilation camp in which even the able-bodied Jews were gassed immediately on arrival, unregistered, except for a handful of "working Jews" whose lives were spared for the moment.)

Why then were German, Austrian, and Czech Jews not sent to Chełmno to be gassed, but moved into the eastern territories starting in

---

993 Cf. Subchapter 8.1. and Chapter 9.

November of 1941? Reitlinger confirms that from July and August of 1942 onwards some 25,000 German Jews were moved to Latvia, Estonia, and White Ruthenia, yet not to be gassed but to be used as workers or office staff. If we follow the mainstream Holocaust literature, five "extermination camps" were in operation by July of 1942, with a sixth being added the following month. Why did these Jews bypass these five or six "extermination camps" and go into White Russia or the Baltic states?

Such elementary questions have never been addressed by the court historians, and it is easy to see why this should be so.

10.2. Number of Jews Moved to the East

10.2.1. Via the *Aktion Reinhardt* Camps

Before addressing the question of the fate of the Jews moved into the eastern areas indirectly, i.e. via transit camps, we shall try to determine their total number. For this purpose we shall assume that this population is roughly identical to the persons who "were gassed in the extermination camps without being registered" according to the orthodox literature. We shall not attempt to subdivide this population according to nationalities and shall limit ourselves to a distinction based on only two categories: the Polish and the non-Polish Jews.

Let us first consider the *Aktion Reinhardt* camps. The most important document by far which we can consult for this purpose is the *Korherr Report*, according to which 1,274,166 Jews had transited "through the camps in the General Government" by the end of 1942 (cf. Chapter 9). As far as the figures for 1943 are concerned, the absence of any documents forces us to make an approximation for the number of persons having transited through the four camps. The general situation regarding the individual camps can be described as follows for the year 1943:

– Majdanek: No documents refer to any transfers to the eastern areas originating from Majdanek in 1943.
– Bełżec: This camp was closed down in November of 1942, hence no deportations can have originated there in 1943.
– Sobibór: Jules Schelvis speaks of 68,795 Jews arriving at this camp in 1943. Even though his figure may be slightly on the high side (cf.

Section 2.3.19.), we shall use it in compensation of any possible transfers from Majdanek and round it to 69,000 for the sake of simplicity.

– Treblinka: In the third edition (2003) of his standard work, Hilberg sets the total number of Jews taken to Treblinka at "up to 800,000."[994] Using Hilberg's maximum as a working hypothesis and deducting from it the 713,555 deportees mentioned in the Höfle radio message as having been taken to Treblinka up to the end of 1942 (cf. Subchapter 9.4.), we obtain a maximum figure of 86,445, rounded to 86,000 persons.

On this basis we can estimate the number of Jews moved from the camps of *Aktion Reinhardt* to the eastern areas in 1943 as being (69,000 + 86,000 =) 155,000 persons at the utmost. Together with the deportees of 1942, i.e. 1,274,166 or roughly 1,274,000 persons, we obtain a combined maximum of about 1,429,000 persons.

Now, what was the share of non-Polish deportees within this group? On the subject of Jews deported to the *Aktion Reinhardt* camps from Western and Southern Europe, the only precise indications concern Sobibór and Treblinka:

– Sobibór: If we follow Jules Schelvis, out of the total of about 170,165 (rounded to 170,200) deportees moved to this camp, some 54,550 came from Poland and another 13,700 from *Ostland* (cf. Section 2.3.19). Hence, if Schelvis' figures are correct, about (170,200 – 54,500 – 13,700 =) 102,000 Jews from other countries must have reached Sobibór.

– Treblinka: According to the *Enzyklopädie des Holocaust* the following non-Polish Jews arrived at the Treblinka Camp: 7,000 from Slovakia, 8,000 from Theresienstadt, 4,000 from Greece, 2,800 from Saloniki,[995] as well as 7,000 from Macedonia,[996] yielding a total of 28,800 persons. As the documented number of Jews from Theresienstadt was not 8,000, but 18,004 (rounded off to 18,000 persons),[997] we must raise the grand total by 10,000 to 38,000 altogether.

---

994 R. Hilberg, *op. cit.* (note 31), p. 1320.

995 After the occupation of Greece in 1940, the main part of the country was administratively subordinate to Italy, the north to Bulgaria, and the city of Saloniki, where most of the Greek Jews lived, to Germany. Raul Hilberg, *The Destruction…*, *op. cit*. (note 31), Vol. II, pp. 738ff.

996 I. Gutman et al., (note 14), Vol. I, p. 1430.

997 Miroslav Kárný, *Konečné řešení. Genocida českých židů v německé protektorátní poli-*

– Bełżec and Majdanek: On the subject of Bełżec, the *Enzyklopädie des Holocaust* has this to say:[998]

> *"Some of the transports to Bełżec brought along German, Austrian and Czechoslovak Jews who had previously been deported from their home countries to Polish ghettos."*

The Polish ghettos in question were situated in the Lublin district. It should be remembered that the total number of German, Austrian, Czech, and Slovak Jews moved to this district amounted to 69,084 persons.[871] According to Schelvis, 28,284 (rounded to 28,300) Slovak, some 10,000 Czech, and about 23,500 German and Austrian Jews reached Sobibór, a total of 61,800 persons (cf. Section 2.3.19). For Treblinka the *Enzyklopädie des Holocaust* merely mentioned 7,000 deportees from Slovakia. This brings the total of Jews reported by these two sources to have been moved to Sobibór and Treblinka from the countries mentioned to 69,084 persons.

If we take into account that a certain number of the Jews moved into the Lublin district must have died there, there is no room left for any Jews deported to Sobibór from the countries in question – unless the figures given by the *Enzyklopädie des Holocaust* and by Schelvis for Sobibór and Treblinka are too high and a portion of the deportees did not reach these two camps, but were taken to Bełżec instead. Any German, Austrian, Czech, or Slovak Jews who may possibly have been moved to the eastern areas from Majdanek had likewise spent time in the ghettos or work camps of the Lublin district, and the figures for Sobibór and Treblinka would have been reduced accordingly.

The approximate number of non-Polish Jews who transited to the East via the *Aktion Reinhardt* camps thus amounted to (102,000+ 38,800=) 140,800 persons. In the same way we find a maximum figure of (1,429,000–140,800=) 1,288,200 for the Polish Jews moved to the East via the four camps in question.

10.2.2. Via Chełmno

According to the Korherr report 145,301 Jews "were moved through the camps in the *Warthegau*" (cf. Subchapter 9.4). As there was only one such camp in the *Warthegau*, Chełmno (Kulmhof), Korherr must have

---

tice, Academia, Prague 1991, pp. 115f.

998 I. Gutman et al., (note 14), Vol. I, pp. 179f.

made a mistake in using the plural, apparently because he said "moved through the camps in the General Government" elsewhere in his text.

For Chełmno no gassings are claimed to have taken place in 1943, which means that the figure of 145,301 (rounded to 145,300) must also be the total number of persons having been moved into the eastern areas via Chełmno.[999] Some 11,000 of them came from countries other than Poland,[1000] hence the number of Polish Jews within these deportees amounted to about 132,300 persons.

10.2.3. Via Auschwitz

Table 13: Number of Jews deported to Auschwitz

Origin	Deported	"gassed without registration" (i.e. moved elsewhere)
France	68,921	39,485
Belgium	24,906	15,724
Holland	60,085	38,231
Italy	7,422	5,661
Greece	54,533	41,776
Theresienstadt	42,454	18,396
Germany incl. Austria	23,438	17,165
Yugoslavia	8,000*	7,342
Norway	532	346
Czechoslovakia	21,572	9,082
Other camps	34,000	7,538
Unknown origins	6,016	4,262
Poland	188,000	149,000
Total	531,879	354,008

* hypothetical figure

A considerable portion of the Jews who reached Auschwitz and are said to have been gassed there on the spot without having been registered were Jews from Hungary. The deportations from Hungary, however, did not begin until May of 1944, and hence no Hungarian Jews ever reached the eastern areas, which were rapidly shrinking in size at the time. Only a certain number of Jewesses were moved into the Baltic states and were then sent on to Stutthof[1001] when these regions were

[999] For the summer of 1944, 7,000 gassings have been alleged for Chełmno. As the "gassed victims" (i.e. persons transferred) did, however, not reach the eastern territories, we need not take them into account here. Cf. Carlo Mattogno, *Il campo di Chełmno tra storia e propaganda*, Effepi, Genua 2009; Engl.: *Chelmno: A German Camp in History and Propaganda*, 2nd ed., Castle Hill Publishers, Uckfield 2017.

[1000] Jüdisches Historisches Institut Warschau (ed.), *op. cit.* (note 101), pp. 285f.

[1001] Cf. J. Graf, C. Mattogno, *op. cit.* (note 990), p. 31.

about to be abandoned by the German army. For that reason we do not have to consider Hungary in this respect.

Table 13 indicates the number of Jews sent to Auschwitz from countries other than Hungary as the well as the percentage claimed to have been "gassed without registration" (or moved further east in our opinion):[1002]

Hence, about 354,000 Jews were moved east from Auschwitz, among them some 149,000 Poles and some 205,000 persons from countries other than Poland.

10.2.4. Balance

We can now draw our conclusions regarding the number of Jews deported into the eastern areas:

– Deported via the *Aktion Reinhardt* camps:	~1,429,000
– Deported via Chełmno:	~145,300
– Deported via Auschwitz:	~354,000
– Deported directly w/o any stop-over in a camp:	~66,200
Total:	~1,994,500
– of which Polish Jews: (1,288,200 + 134,300 + 149,000 =)	~1,571,500
– of which non-Polish Jews: (140,800 + 11,000 + 205,000 + 66,200 =)	~423,000

Obviously, one has to deduct from these figures the deportees who died on the way to or at the transit camps. In the case of Sobibór we estimated their number to have amounted to about 10,000 persons, i.e. deportees who either died along the way or were killed in the camps in euthanasia operations – a practice which we believe to be probable although it is not documented (cf. Subchapter 5.7). As the conditions at Bełżec and Treblinka hardly differed from those at Sobibór and in view of the far greater number of people involved, the number of persons who died in these two camps or on the way there must have been much higher than in the case of Sobibór.

Seen in this light, the total of 1,994,500 persons arrived at above for the number of people moved into the eastern areas is necessarily too high. We wish also to stress that we have accepted the numbers quoted for the deportations in several instances in mainstream "Holocaust" lit-

---

[1002] The table was set up by Carlo Mattogno on the basis of his article "Franciszek Piper und die Zahl der Opfer von Auschwitz," *Vierteljahreshefte für freie Geschichtsforschung*, 7(1) (2003), pp. 21-27, and of data in D. Czech, *op. cit.* (note 777).

erature, even if we judge them to be too high (especially in the case of the deportations to Treblinka in 1943). If allowance is made for this, then the actual figure for the Jews who were deported to the eastern areas may be lower by 100,000 than the maximum estimated by us, thus possibly being about 1.9 million at the utmost.

10.3. The Dissolution of Polish Jewry in the USSR

We must now consider the question of what happened to the Jews transferred into the Eastern Territories at the end of the World War II and over the ensuing years – to the extent that they survived the harsh conditions of the wartime. We shall first consider the Polish Jews who constitute the clear majority.

In June 1945 the World Jewish Congress claimed 475,000 to 525,000 Jewish survivors among the Jews formerly residing in Poland prior to Axis control, of which some 80,000 were still residing in Poland at war's end.[1003] At that time repatriation of Polish Jews from the Soviet Union had just begun. The *American Jewish Yearbook* states that by the end of June of 1946, when the repatriations came to an end, some 140,000 Jews had returned to Poland from the Soviet Union.[1004] The same source puts the number of Jews surviving in Poland before the repatriation at some 86,000 persons.[1005]

The order of magnitude of this latter figure could have been correct. On 19 July 1942 Heinrich Himmler had decreed that persons of Jewish origins in the General Government would only be allowed to reside in the "collection camps," (i.e. the ghettos) at Warsaw, Cracow, Czestochowa, Radom, and Lublin.[1006] Over time these ghettos were dissolved and their residents evacuated. In the western Polish regions, integrated into Germany and designated "Warthegau," the Jews were concentrated in the Łodź ghetto to the extent that they had not been transferred to the East. In view of this ghetto's industrial significance, it was dissolved

[1006] NO-5574.

only in the summer of 1944. Considering this general situation, it is quite possible that the only Jews still living in the former General Government or the former *Warthegau* were Jews who had been lucky enough to find refuge among the Aryan population.

We believe the figure of 140,000 Jews who returned to Poland from the USSR, as quoted in the *American Jewish Yearbook*, to be far too low. By 1946 the "Holocaust" lore had already taken shape, and it would therefore have been in the interest of the Zionists to raise the Jewish losses to as high a level as possible.

Could these returnees have been, to a greater or lesser degree, Jews who had taken refuge in the part of Poland which was annexed to the USSR after the German invasion of September of 1939? The number of such refugees was extremely high. E. Kulischer, whose statistics are generally quite reliable, stated that there were 500,000 of them.[1007] The *American Jewish Yearbook* informs us that, in the first half of 1940, these refugees were given the choice of either taking on Soviet citizenship or going back into the German zone. According to the *Yearbook* "many" of the refugees opted for the latter alternative, but Germany refused categorically to let these Jews return. Towards the end of June 1940 the Soviet government ordered them to be deported into the inner regions of the Soviet Union, where the conditions are reported to have been extremely harsh.[1008]

We believe it to be highly improbable that these Jews had the possibility to return to Poland from Central Asia or Siberia in 1945 or 1946. In the same way, the returnees are unlikely to have been Jews who had acquired Soviet citizenship, because Soviet citizens normally were not allowed to emigrate. Thus it is most likely that the returnees were part of the Jews who had been moved to the eastern areas by the Germans three or four years earlier.

In mid-1946 the Soviet government prohibited any further returns of Jews to Poland. Three years later the *American Jewish Yearbook* reported the following developments:[1009]

> *"During the summer of 1949, the Jewish press outside the Soviet Union carried a number of reports about the mass deportation of Jews from the Western border region of the Soviet Union, especially*

[1009] *American Jewish Yearbook*, No. 51 (1950), p. 340.

> *from White Russia, the Ukraine, Eastern Galicia, Bukovina, and Bessarabia. According to one report, the deportation affected mainly the Jewish citizens who had relatives in America or Western Europe; other sources maintain that the whole Jewish population of some territories was deported. The reports described, often in great detail, how the secret police rounded up the Jews, put them on deportation trains, and sent them off to unknown destinations, presumably Siberia or the Arctic regions of European Russia. One report asserted that 30,000 Jews had been deported from Lwów (Lemberg) and other cities of former Polish Eastern Galicia, and that the whole region was now free of Jews. Another dispatch described similar proceedings in an unnamed Ukrainian city. Indirect evidence of the veracity of these reports was seen in the fact that Polish Jews who had maintained correspondence with their relatives in the Ukraine and White Russia ceased to receive answers and their letters were returned with the comment: 'Returned to sender. Addressee has left.'* […] *The American Jewish League against Communism sent a protest to the Secretary General of the U.N. in which it estimated the number of Jews affected by the deportations as 400,000."*

Without the shadow of a doubt we may say that among the deportees there were many Jews who had been moved into the occupied eastern territories by the Germans a few years earlier. Most of them were probably Polish, but western Jews were among them as well.

At that point in time the distinction between ethnic Polish Jews and other Jews in the USSR becomes blurred. The distinction between the two had never been very precise. Up to the end of the First World War they had been subjects of the Tsar.[1010] The Polish state, after its foundation in 1918, profited from the weakness of the young Soviet government and conquered the western regions of Byelorussia and Ukraine. Two decades later, however, these regions returned to the Soviet Union. The local Jews spoke at least one of four closely related Slavic languages – Russian, Belorussian, Ukrainian and Polish – current in the area and usually in addition to Yiddish.

Three waves of deportations had swept a large part, if not the majority, of the ethnic Polish Jews into the inner or eastern regions of the USSR: The refugees coming from the German zone of occupation were deported to the extent that they did not take on Soviet citizenship. After

[1010] Except for those from Galicia; that region was part of the Austrian monarchy until the latter's collapse.

the German invasion of 1941, large portions of the Jewish population in the western regions were evacuated before the Germans arrived.[1011] Finally we have the mass deportations reported in the *American Jewish Yearbook* in 1949. Under these conditions the Polish Jews deported to the East by the German authorities in 1942 and 1943 could have inconspicuously blend into Soviet Jewry in general.

The situation of the non-Polish Jews who found themselves in the occupied eastern territories was entirely different. We shall now present several instances of unassailable evidence to show that the "Migration to the East" was far from being a "myth" for these Jews, as R. Hilberg would have it, but solid reality.

10.4. Western Jews in the Eastern Territories

10.4.1. Steffen Werner's White Ruthenia Hypothesis

In his book *The Second Babylonian Captivity*[1012] Steffen Werner presents a large amount of circumstantial evidence for the deportation of Jews to White Ruthenia. Among them we have utterances by Hitler who justified himself in a small circle of close collaborators for having sent the Jews "into the mud." Werner takes the "mud" to have been the Pripyet swamps in White Ruthenia, which the Jews allegedly were to clear. This hypothesis is supported by other sources. Gerhard Reitlinger says:[1013]

> *"A letter from Rosenberg's office, dated October 25th* [1942]*, shows that it was intended to select the able-bodied to work behind the Eastern front. Later, there were some rumours that Jews had been sent from Łodź to the land reclamation scheme in the Pripet Marshes and to the Jewish agricultural colonies near Krivoi Rog in the Ukraine".*

That such reports were not merely "rumors" is borne out by a letter written on 21 June 1942 by Walter Föhl, who was Head of the Main Department with the Reich commissar for the Consolidation of German

---

[1011] Concerning these deportations cf. primarily Walter Sanning*, The Dissolution of Eastern European Jewry*, Institute for Historical Review, Torrance (CA), 1983.

[1012] Steffen Werner, *Die zweite babylonische Gefangenschaft*, private edition 1990. A second edition was published in 1991 by Grabert-Verlag, Tübingen.

[1013] Gerald Reitlinger, *op. cit.* (note 558), 1968, pp. 90f.

Ethnicity.[1014] The letter was addressed to an unknown member of the SS, a section of which reads:[1015]

> *"Every day now, we have been receiving trains, each with 1,000 Jews from Europe, processing them and housing them in one way or another, and sending them on, right into the swamps of White Ruthenia towards the Arctic Ocean; that is where they will all find themselves when the war is over – if they survive (and the Jews from the Kurfürstendamm or from Vienna or Pressburg surely will not) – not without having built a few motorways. (But we should not talk about that.)"*

Highly significant in this connection is another quote from Werner's book, a text from a book entitled *Sowjetische Partisanen und deutsche Antifaschisten* (Soviet Partisans and German Antifascists), which appeared in communist East Germany in 1976:[1016]

> *"Within the brotherly family of the Belorussian partisans, Czechs and Slovaks, Frenchmen and Yugoslavs, Greeks and Dutchmen, Spaniards and Austrians, Germans and members of other nations fought courageously against fascism. The Communist Party and the Soviet government attached great importance to the heroic fight of these true internationalists. For their antifascist fight alongside the partisan units of Belorussia and for the heroic deeds they accomplished, orders and medals of the USSR were conferred i.a. to 703 Poles, 188 Slovaks, 32 Czechs, 36 Greeks, 25 Germans, 24 Spaniards and 14 Frenchmen."*

The presence of Poles (both Jewish and non-Jewish) in Byelorussia can be explained by the fact that they came from the western regions of Byelorussia which had been part of Poland until September of 1939, but this reasoning does not hold for the members of the other nations mentioned. We cannot explain the presence of Dutchmen, Frenchmen, Yugoslavs, or Greeks among the Byelorussian partisans except by assuming that they were Jews who had been deported to the East from their

[1014] *Reichshauptstellenleiter der Dienststelle Reichskommissar für die Festigung deutschen Volkstums* (RKF)

[1015] Fritz Arlt, *Polen-, Ukrainer-, Juden-Politik*, Wissenschaftlicher Buchdienst Herbert Tage, Lindhorst 1995, p. 22. Fritz Arlt had been part of the Main Department with the Reich commissar for the Consolidation of German Ethnicity in his function as head of the office for Upper Silesia. Arlt obtained the quoted letter from German Holocaust historian Götz Aly, who interprets it as evidence for "blatant extermination intention."

[1016] Heinz Kühnrich (ed.), *In den Wäldern Belorusslands. Erinnerungen sowjetischer Partisanen und deutscher Antifaschisten*, Dietz, East-Berlin 1976, p. 9.

respective countries, although this assumption would not apply to the Spanish fighters.[1017]

Still, in spite of many valuable indications and ideas which can be found in Werner's book, we must not disregard its glaring shortcomings. Werner writes at the very beginning of the book:[1018]

> *"I assert: 1) The final solution of the Jewish question consisted in the Jews being assigned to the eastern parts of White Ruthenia. To this day* [i.e. 1990] *they have been kept there by the Soviet Union in a kind of captivity."*

First of all, it is impossible for *the* (i.e. *all*) deported Jews to have been settled in the eastern part of White Ruthenia, as this was only one of several destinations for these deportees. Furthermore, it is equally impossible that the decrepit Soviet state, which by 1990 had long since discovered *glasnost*, would have been able or even willing to keep hundreds of thousands of people not only "in captivity," but to keep them from establishing any kind of contact with the outside world.

Finally, we cannot accept Werner's hypothesis that the Germans would have let the Jews settle freely in the eastern part of White Ruthenia. Werner tries to prove this assumption by means of maps allegedly showing an inexplicably large increase in the number of localities in this area, but one must assume that the occupying German army would have wanted to exercise strict control over the deportees, something which would only have been possible by means of camps and ghettos.

If the Jews deported to White Ruthenia had really been able to move around freely, they would have rushed to join the partisans – something the Germans had every reason to prevent. Therefore, we must assume that the foreign Jews mentioned above who did join the partisans had escaped from captivity or had even been liberated by these very partisans from their camps or ghettos.

[1017] S. Werner believes that these Spaniards were antifascists who had fled to France after Franco's victory and were then extradited to the Germans by the Vichy government and later transferred to Auschwitz. (S. Werner, *op. cit.* (note 1012), p. 89). As there were only relatively few Jews living in Spain, this would mean that non-Jewish detainees as well were moved from Auschwitz into the astern areas. So far we have not found any evidence for this. We therefore think that these Spaniards were most probably antifascists who had fled to the Soviet Union after Franco's victory in the Spanish Civil War.

[1018] *Ibid.*, p. 5.

10.4.2. *American Jewish Yearbook*

In 1943 the *American Jewish Yearbook* had the following to say on the subject of the developments in Poland in 1942:[1019]

> *"Throughout the year under review* [1942]*, as in previous years, scores of thousands of Jews were forcibly deported from their homes in cities and towns.* […] *Among the more important of these transfers of population was the expulsion of all but 11,000 of the Jews of Cracow, who were deemed 'economically useful' and put into a ghetto; those expelled, over 50,000 in number, were sent to Warsaw, Lublin and other cities. The stay of those sent to Lublin was short, for most of them were sent farther east, those remaining being penned in a ghetto in one of the suburbs of the city. Also sent east were most of the Jews who still remained in the western Polish provinces incorporated into the Reich.* […] *There was also an influx of German, Czech, Dutch and French Jews, forcibly sent into Poland, either to the ghettos or the labor camps."*

These details are highly valuable in several ways and confront the representatives of the orthodox version of history with insurmountable problems:

1. Orthodox "Holocaust" teaching asserts that the alleged gassing of Jews at Auschwitz began in February of 1942. Why were the Jews deported from Cracow in 1942 not sent to this camp which, after all, was only an hour's drive away, but were shipped to Warsaw and Lublin instead?
2. Likewise, the Jews deported to Lublin were not gassed in one of the available *Aktion Reinhardt* camps, but were in their majority "moved further east."
3. "The Jews who still remained in the western Polish provinces incorporated into the Reich" – except for those assigned to the Łodź ghetto – were allegedly murdered in gas trucks at Chełmno, if we are to believe today's official version of history. The *American Jewish Yearbook* does not say anything about this, yet asserts instead that the better part of these Jews was "moved to the East." If they had been deported to Chełmno before being moved on, Chełmno must have been a transit camp – to which the revisionists would agree.
4. Whereas the deportation of a certain number of German and Czech Jews to Polish ghettos has been recognized by mainstream histori-

[1019] *American Jewish Yearbook,* No. 44 (1942-1943), pp. 244f.

ans, this does not apply to Dutch and French Jews: these Jews are said to have been sent to Auschwitz and Sobibór as well as – to a lesser extent – to Majdanek, but not to any ghettos.

In its following edition the *American Jewish Yearbook* speaks of the presence of Dutch and other Western Jews in the occupied territories of the Soviet Union in 1943:[1020]

"There are reports of Jewish deportees from Holland and other Western countries having been sent to the occupied Soviet territories for military work, but their numbers and their fate are still shrouded in darkness."

10.4.3. *Judisk Krönika*

In this context certain information about the fate of the deported Jews during the war is of utmost interest which was proffered by the Jewish periodical *Judisk Krönika* appearing in Stockholm. In September of 1942 this Swedish-Jewish magazine told its readers:[1021]

"Jewish school children of more than 14 years of age are being deported from the Third Reich as well, mainly to Ukraine, where they are deployed in harvest work. The children are informed about their deportation only a few hours earlier and are allowed to take along only the mere necessities."

Mainstream Holocaust literature is oblivious about the deportation of German Jews to Ukraine. The only logical conclusion is that these Jewish school children belong to those Jews who were allegedly "gassed" in extermination camps. We remind our readers in this context that, according to eye witness testimonies, the new arrivals at Sobibór were received by an SS man who indicated that they would soon be continuing their journey to Ukraine.[1022]

In October 1942 *Judisk Krönika* reported:[1023]

"A large number of Jews who had been interned in German concentration camps have been transported to Poland, where they are deployed to drain the swamps of Pinsk. The Dachau camp is now devoid of any Jews. Most Jews from the Rhineland, including those of Cologne, have been transferred to the ghetto of Riga."

[1020] *American Jewish Yearbook, No.* 45 (1943-1944), p. 304.
[1021] *Judisk Krönika*, Vol. 11, No. 7, September 1942, p. 91.
[1022] See Section 2.3.19. (p. 54), Subchapter 4.1. (pp. 79, 80), see also Section 8.2.2. (p. 253).
[1023] *Judisk Krönika*, Vol. 11, No. 8, Oktober 1942, p. 123.

The city of Pinsk did indeed belong to Poland between 1920 and 1939, yet it fell to the Byelorussian Soviet Republic after the division of Poland at the outset of World War II. Other sources confirm that western Jews were assigned to render the swamps of Byelorussia arable (cf. Section 8.2.2., p. 253). This, too, is in contradiction to the mainstream version about the "Holocaust."

In the same edition of *Judisk Krönika* we read:[1023]

> *"The transport of this tremendous large amount of people* [from Western Europe] *to Poland was accompanied by the mass expulsion of Jews from the Warsaw ghetto and from other locations. These people were deported farther east, and since they were more or less unfit for labor due to starvation and diseases, one can imagine what fate awaited them there."*

Starting in August of 1942, the Polish-Jewish underground press reported about mass exterminations in Treblinka, although not a Diesel engine was mentioned as the murder weapon (this version was sanctioned by mainstream historiography only some years after the war), but entirely different methods, like for instance a mobile gas chamber moving along the mass graves, a delayed-action gas conveniently permitting the victims to walk from the gas chamber to the mass graves, where they would faint and fall into the graves, or scalding with hot steam.[1024] These "insights" had apparently not yet percolated into Sweden by October 1942, or else *Judisk Krönika* would not have disseminated the (doubtlessly true) message that the Jews of Warsaw were being deported farther to the east.

In its issue of May/June 1944 this periodical wrote:[1025]

> *"Certain sparse information begin to seep through about the fate of those Jews who have been deported from Western Europe to Eastern Europe. According to a communication from Lithuania, thousands of Jews from Holland, Belgium, and northern France have been deported to Kaunas, where many have been shot to death in the city's fortress. In Vilnius as well a large number of Jews from Western Europe has been executed. Some 20,000 Jews from Western Europe are still in the city's ghetto. The Germans are executing several hundred of them every day, and the Gestapo compiles lists of the next victims. Many Jews managed to escape from the various ghettos and to join partisan groups, and today there is a large number* [of Jews] *from*

[1024] Cf. C. Mattogno, J. Graf, *op. cit.* (note 9, Engl. ed.), Chapter 2.
[1025] *Judisk Krönika*, Vol. 13, No. 5, Mai/Juni 1944, p. 68.

Western Europe who are fighting together with the Lithuanian partisans."

This report is particularly instructive. It shows that only as late as spring of 1944 did "certain sparse information" began "to seep through" to *Judisk Krönika* "about the fate of those Jews who have been deported from Western Europe to Eastern Europe" – and this information did not speak of said Jews being murdered in "gas chambers"!

Whereas a transport of French Jews in May 1944 to the Lithuanian city of Kaunas (as well as to the Estonian city of Tallinn) is confirmed by mainstream historians,[64] they do not mention any deportation of Jews from Holland or Belgium to Lithuania. The inescapable conclusion is therefore that these Jews must be a part of those who mainstream historiography claims to have been "gassed" at Auschwitz or Sobibór.

The claim by *Judisk Krönika* that the German authorities executed the Jews present in the Lithuanian ghettos on a massive scale in late spring of 1944 is implausible. In that case the Soviets would certainly have obtained evidence for this crime after their conquest of Lithuania, which they would have exploited for their propaganda. Instead of fictitious mass gassings they would have accused the Germans of real mass executions and would have presented the corpses of those murdered as a *corpus delicti* for an investigation by international commissions – as the Germans had done in 1943 after discovering the massacres of Katyn[1026] and in 1944 after discovering the massacres of Vinnytsa.[1027]

In February 1945 *Judisk Krönika* wrote that in the summer of 1944 18,000 Jews were still present in camps in the Riga District, among them 15.000 from western Europe. Regarding the Latvian Jews as well the paper claimed implausibly that the Germans killed them all systematically before the Germans' retreat.[1028]

10.4.4. Further Evidence for Western Jews in the East

We will now present a number of additional proofs for the deportation of French, Belgian, and Dutch Jews into the occupied territories in the East. Apart from the above-mentioned transport of French Jews to Tallinn and Kaunas in May of 1944, mainstream historians never mention any transports of Jews from these countries into the East.[64] The irrefuta-

[1027] *Idem*., *Amtliches Material zum Massenmord von Winnitza*, Eher, Berlin 1944.
[1028] *Judisk krönika*, Vol. 14, No. 2, February 1945, p. 27.

ble conclusion is that these deportations concerned a portion of the French, Belgian, and Dutch Jews who, according to mainstream historiography, were allegedly gassed at Auschwitz, Sobibór, and Majdanek. Some of the cases reported here are due to the efforts of two undaunted revisionist researchers: Enrique Aynat[1029] in Spain and the late Jean-Marie Boisdefeu in Belgium.[1030]

1) On 29 June 1942 Valerio Valeri, the papal ambassador in France, wrote from Vichy to Cardinal Luigi Malone:[1031]
   "Towards the 20th of this month the occupational administrations, using the French police, have arrested some 12,000 Jews. […] *The majority of them are non-Aryans of foreign origin, primarily Poles, Czechs etc., who are destined to be deported to the Ukraine."*
2) A report of the Polish resistance, the date of which is unknown but which undoubtedly stems from the second half of 1942, states:[1032]
   "Recently, a certain number of Jews from Belgium has been transferred to Grodno [in White Ruthenia]*."*
3) On 16 October 1942, the *Israelitisches Wochenblatt für die Schweiz* (the Israelite Weekly for Switzerland) carried the following item:
   "Of late, transports of Jews from Belgium and other western European countries were observed in Riga, but they moved on immediately to other destinations."
   Up to March of 1943 the destination of all Jews deported from Belgium was Auschwitz,[1033] which means that these Jews necessarily came to Riga via this camp.
4) The Jewish author Reuben Ainsztein mentions the presence of Belgian and Dutch Jews in the camp of Janow, near Lvov (Lemberg).[1034] It is highly likely that these Jews had been deported to that Ukrainian city via Bełżec, situated some 70 km to the northwest of Lemberg, in spite of the fact that mainstream historiography does not mention the arrival of Belgian or Dutch Jews at Bełżec.

[1033] S. Klarsfeld, M. Steinberg, *op. cit.* (note 929), pp. 42 ff.
[1034] Reuben Ainsztein, op. cit. (note), p. 708.

5) On 15 June 1943 the *New York Times* reported a communiqué of the Belgian government in exile, according to which most of the Belgian Jews had been sent to concentration camps in Germany, Poland, and in the occupied Russian territories.
6) The communist French underground newspaper *Notre Voix* wrote in April of 1944:[1035]

   "Thank you! A news item that will delight all Jews of France was broadcast by Radio Moscow. Which of us does not have a brother, a sister, or relatives among those deported from Paris? And who will not feel profound joy when he thinks about the fact that 8,000 Parisian Jews have been rescued from death by the glorious Red Army! One of them told Radio Moscow how he had been saved from death, and likewise 8,000 other Parisian Jews. They were all in the Ukraine when the last Soviet offensive began, and the SS bandits wanted to shoot them before they left the country. But since they knew what fate was in store for them and since they had learned that the Soviet troops were no longer far away, the deported Jews decided to escape. They were immediately welcomed by the Red Army and are presently all in the Soviet Union. The heroic Red Army has thus once again earned a claim on the gratitude of the Jewish community of France."

   It may be argued that this is a document written by French communists who used a radio broadcast of Radio Moscow and that both the French communists and Radio Moscow could be suspected right away of spreading propaganda. However, it is difficult to see in what way the presence of French Jews in Ukraine could have lent itself to propaganda. Moreover, one cannot see any reason why Radio Moscow or the French underground newspaper should have invented such a story. (What seems to be cooked up in this instance, on the other hand, is the tale that the SS wanted to shoot the Parisian Jews, but that the Jews could all escape and find refuge with the Red Army.)
7) In December of 1945 Friedrich Jeckeln, the former head of SS and police *Ostland*, but at that time in Soviet captivity, stated that Jews from Germany, France, Belgium, Holland, Czechoslovakia, and other countries had been held in the camp of Salaspils in Latvia.[1036]

[1036] Gerald Fleming, *Hitler and the Final Solution*, University of California Press, Berkeley-

This is consistent with the article by *Judisk Krönika* already mentioned, according to which some 18,000 Jews were still in camps in the Riga region in summer 1944, among them 15,000 from western Europe.

8) In the June 1943 issue of *Contemporary Jewish Record* we read that "over 14,000 Jews from Belgium and Holland" had arrived in the Ukrainian town of Ochakov by April 29 that year.[1037] At this point in time, according to mainstream historiography, thousands of Dutch Jews were being gassed in Sobibór.

10.4.5. The Diary of Herman Kruk

During the German wartime occupation of Lithuania the Jewish librarian Herman Kruk wrote a diary of about 700 pages. After the dissolution of the Vilnius ghetto in September 1943 Kruk was deported to the labor camp Lagedi in Estonia, where he was reportedly killed on 18 September 1944. The Yiddish original of his diary was published in 1961 under the title *Hurbn Vilne* (The Destruction of Vilnius). An English translation followed in 2002.[1038] We will now quote several passages which are of particular importance to our topic.

16 April 1943 (p. 518):

"I learned that for the past two weeks two trains have been halted in Vilna, each with 25 cars of objects, apparently from the Dutch Jews. […] *Today a rumor is circulating that there are about 19,000 Dutch Jews in* [the small Lithuanian town of] *Vievis."*

Since there is no reason whatsoever why Kruk – or anybody else – should have invented this story, we regard this passage as strong evidence for the deportation of reportedly "gassed" Dutch Jews to the occupied Eastern territories. Between 2 March and 6 April 1943 six transports with altogether 7,699 Dutch Jews left Westerbork for Sobibór.[1039] (A seventh transport which departed from Westerbork on 13 April could not yet have reached Lithuania by 16 April, the date of the respective entry in Kruk's diary.) In view of these facts nothing is more logical than the assumption that these Jews were sent to Lithuania via Sobibór.

Los Angeles 1994, p. 96.

[1037] *Contemporary Jewish Record*, 6(3), June 1943, p. 300; during the war the district of Ochakov (Oceacov) was part of the Romanian-occupied region of Transnistria.

[1038] Herman Kruk, *The last days of the Jerusalem of Lithuania. Chronicles from the Vilna Ghetto and the camps 1939-1944,* Yale University Press, New Haven/London 2002.

[1039] J. Schelvis, *op. cit.* (note 62), p. 246.

There are two possible explanations why Kruk mentioned the presence of 19,000 Dutch Jews in Vievis instead of just some seven to eight thousand. First it may be that the information Kruk relied upon was incorrect regarding the number of Jewish deportees from the Netherlands. However, there is another and more probable explanation: In addition to Dutch Jews deported to Vievis via Sobibór there may have been others who had arrived earlier via Auschwitz. Between 17 July 1942 and 25 February 1943 altogether 42,533 Dutch Jews were sent to Auschwitz. According to mainstream Holocaust historians, 30,413 of them were "gassed upon arrival"[1040] – which means that they were probably deported east. If the destination of a part of them had been Vievis, it is perfectly possible that the number of Dutch Jews living in that Lithuanian town on 16 April 1943 amounted to 19,000.

On the same date Kruk wrote the following under the heading "More about the Dutch Jews" (p. 519):

> *"Just now I succeeded in getting a Jewish sign and a copy of the order of the Reichskommissar for the Occupied Netherlands about Jewish property (attached)."*

The editor follows this with a remark that "The order is missing." With "Jewish sign" is no doubt meant the cloth Star of David forcibly worn by Western Jews. In the Netherlands these emblems bore the inscription *Jood* (Dutch for Jew). This passage shows that Kruk had a good reason to believe the rumor about Vievis, since he himself was in possession of items belonging to one or more Dutch Jews.

Several reports exist about the labor camp of Vievis, a town situated between Kovno and Vilnius. A former inmate of the ghetto of Kovno, Avraham Tory, wrote in his diary on 2 July 1943:[1041]

> *"The conditions in the Vievis labor camp are harder than in the ghetto* [in Kovno]. […] *Once in a while, patients from the Vievis camp are admitted to our ghetto hospital. The camp inmates also come here quite often to ask for help over some problem or other. We, for our part, extend them whatever assistance we can."*

In a collective volume of "memoirs of Holocaust survivors" published in 2007 we learn the following about a certain "Marie" from the ghetto of Vilnius:[1042]

[1040] D. Czech, *op. cit.* (note 777), No deportations of Dutch Jews to Auschwitz took place in March and April 1943.

[1041] Avraham Tory, *Surviving the Holocaust. The Kovno Ghetto Diary*, Harvard University Press, Cambridge/London 1990. p. 407.

[1042] Joseph Rebhuhn, *"Why me?" Memoirs of Holocaust Survivors*, Wildside Press, Rock-

> *"When they saw that the last days of the ghetto were approaching,*[1043] *Adam* [Marie's brother] *succeeded to be transferred to the camp Zezmarai, working for the German engineering organization TODT. He was working there as a camp physician, while Marie remained in the ghetto. Just before the great action her brother arrived with friendly members of the TODT organization and saved her. She was right now in the camp Vievis. After about a month, she was transferred to Milejgany and from there to the Zezmarai camp."*

This clearly shows that Vievis served not only as a labor camp, but as a transit camp as well.

On 19 April 1943 Kruk confided to his diary (p. 519):

> *"Europe will be purged of Jews. The Jews of Warsaw are being taken to be killed in Malkinia, near Lwów or near Zamosc.*[1044] *The Jews from Western Europe are being taken east, their wandering goes on."*

The last sentence involuntarily reflects a formulation used twice by Oswald Pohl in his report for Himmler from 15 September 1942 where Pohl spoke of "Jews destined for migration to the east" (cf. Subchapter 9.2., p. 291).

On 30 April 1943 Kruk again mentioned the Dutch Jews (p. 525):

> *"We have already written about the packing up of 130,000 Jews from Holland and their transport to the East. We have also mentioned that carloads filled with goods from the Dutch Jews are in the Vilna railroad station. Now an issue that clears all up – beautiful old furniture has been brought here, to our joiner's workshops, to be repaired. In the drawers people find Dutch documents, including documents from December 1942, which means that ostensibly the Dutch were not taken to the East before January of February. Thus the Jews did not know they were going to be exterminated. The rich Dutch Jews even brought bridge tables with them in case, God forbid, such things wouldn't be found among the backward Ostjuden. Now it is clear that they were slaughtered.* […] *In our area dozens of railroad cars are scattered filled with Jewish junk, remnants of the former Dutch Jewry"*

Kruk does not mention why he is convinced that the Dutch Jews were "slaughtered." The fact that the local population found Dutch docu-

---

ville (MD) 2007, p. 173.

1043 The ghetto was dissolved in September 1943.

1044 Malkinia was situated near the alleged "extermination camp" of Treblinka.

ments in the drawers of the furniture removes the last doubts about the origin of these deportees, because the Yiddish-speaking inhabitants of the ghetto could most certainly tell Dutch from German.

On 23 June 1943 Kruk wrote in his diary (p. 570):

> *"In the Minsk ghetto 3,000 – 4,000 Jews now live. Next to the ghetto is another ghetto. In the first ghetto are Jews from Minsk, Slutsk, Baranovitsh etc. In the second, there are altogether 1,500 German and Czech Jews."*

This information is not devoid of interest either. It confirms the deportation of German and Czech Jews to the occupied Soviet territories (a fact not contested by official historiography) and proves that these Jews were by no means exterminated.

Ironically Kruk's diary was enthusiastically lauded by two renowned Jewish mainstream Holocaust historians. For Yehuda Bauer it is "a unique and extremely valuable diary,"[1045] and Saul Friedländer states:[1045]

> *"Hermann Kruk's diary is one of the major sources that we have about the life and death of the Jews of Wilna during the Holocaust."*

Either the two illustrious historians have never read the book they praised so warmly, or they simply did not foresee that Kruk's diary, which deals a devastating blow to the official version of the events, would ever be read by critical observers.

On the other hand, there can be no doubt whatsoever that an even more famous Jewish Holocaust historian, Yitzhak Arad (who incidentally was a partisan in the Vilnius area in spring 1943),[1046] has indeed read Kruk's diary. In his 1980 book *Ghetto in Flames* Arad quotes the Yiddish original *Hurbn Vilne* twice as a sources.[1047] As the passages about the presence of Dutch Jews in Lithuania cannot possibly have escaped Arad's attention, he must have known the real destination of these Jews by 1980 at the latest – which did not prevent this august scholar from rehashing the gas chamber lie in his "standard work" about Bełżec, Sobibór, and Treblinka published in 1987.[43]

[1045] H. Kruk, *op. cit.* (note 1038), back cover.

10.5. The Fate of Western Jews – a Hypothesis

Whereas Polish Jews present on Soviet territory could easily blend in after the war, the situation was entirely different for Jews from Western Europe who found themselves on Soviet territory after war's end. The presence of a large number of Jews from countries like Holland, France, or Greece would necessarily be highly noticeable and could not remain undetected abroad to the extent that these Jews were present in the border regions of Western Russia.

The mortality among the deportees was undoubtedly very high during the war due to the overly harsh conditions, but the number of those who returned to their countries of origin is so low that it cannot be explained exclusively by the high mortality caused by disease or malnutrition, etc.

For the 105,000 Jews deported from Holland the official statistics report only 4.86% of returnees. Individually, the allocation by camp is as follows:

Camp	Deportees	Returnees
Auschwitz:	60,185	1,052
Theresienstadt:	4,771	1,980
Bergen-Belsen:	3,742	2,050
Sobibór:	34,313	18[1048]

As far as the 75,721 Jews deported from France are concerned, only 2,560 returned according to the official count. There were only two returnees[1049] out of the 3,500[1050] persons deported to Sobibór.

Several explanations present themselves for the small number of returnees. They are not mutually exclusive and may well all apply, each to a greater or lesser degree:

1. Many of these Jews remained in the Soviet Union voluntarily.
2. Many of the Jews later emigrated to Palestine, the U.S., or other countries, either directly or indirectly after a brief stay in their countries of origin.
3. The countries of origin grossly falsified the statistics in order to massively pile blame on the Germans.

[1048] J. Schelvis, *op. cit.* (note 61), p. 199.
[1049] J. Schelvis, *op. cit.* (note 61), p. 198.
[1050] This is the figure given by J. Schelvis, *op. cit.* (note 61), p. 218. According to S. Klarsfeld, 2,001 Jews from France were deported to Sobibór (*op. cit.*, note 64).

4. The Germans liquidated the Jews concerned before retreating.
5. The Jews concerned were retained in the USSR against their will after the war.

Let us briefly examine the individual arguments:

1) The number of Jews from Western Europe who would have voluntarily chosen to remain in the USSR was probably very small. It is unlikely that Jews from Germany, Holland, or France would have wanted to remain in a totalitarian country devastated by the war – unless they had very personal reasons, such as a marriage with a local partner.

2) This hypothesis is much more convincing than the preceding one, especially in the case of France. Only 22,691 Jews from the 67,693 deported from the Drancy camp actually had French citizenship. The remainder consisted of foreign Jews (German, Polish, Russian, Romanian) who had emigrated to France[64] and had lived there more or less legally. These people probably did not have strong emotional ties to France.

On the other hand, it is impossible that the 8,000 Parisian Jews mentioned above, who had taken refuge with the Red Army, should have belonged exclusively or even largely to this group and then emigrated overseas without exception. There is no mention anywhere in the French literature on this subject concerning the return of even one such French Jew from the USSR, which is at least an indication that there were no (or only very few) such returnees.

Hypothesis 2 breaks down completely when we consider the Jews deported from Holland. They were for the most part Dutch citizens, formed one of the most strongly assimilated groups of Jews in Europe, did not have marked Zionist tendencies, and had not suffered from anti-Semitism in their country before the war. Moreover, Holland had not sustained serious material damage during the conflict and promised to become rapidly the wealthy country it had been before the war. Hence, most Dutch Jews had neither an ideological nor an economic incentive to emigrate.

3) There are no indications in the sense that official western European agencies would have consciously falsified their statistics.

4) We may also exclude the idea that the Germans massacred the Jews before retreating. As A. Butz has rightly remarked, such crimes would not have gone unnoticed, and the victorious powers could have presented at Nuremberg hard evidence for mass murder rather than rely-

ing on the nonsensical tale of the "gas chambers."[1051] (We can obviously not exclude excesses by desperate German soldiers under the circumstances they faced.)

5) We believe that this explanation is very convincing for the following reason:

Soon after the end of the war, the legend of the disappearance of the European Jewry in annihilation camps was declared an official truth. The alleged extermination of the Jews was one of the central pillars of the Nuremberg trial. It is obvious that this legend was extremely useful for the victors: the worse the atrocities that could be laid at the feet of the Third Reich, the more convincing the claim of the Allies of having saved Europe from the claws of Satan.

The governments of the USA and Great-Britain, faced with accusations by right-wingers of having given up half of Europe to Soviet totalitarianism, could easily counter this with the argument that communism certainly was the lesser of two evils by invoking the death camps, the gas chambers, and six million Jewish victims. Furthermore and by so doing, they were easily able to hide their own crimes, especially the carpet bombing of German cities and the massive ethnic cleansing going on in Eastern Europe at that time, behind the smoke-screen of the far more horrible deeds allegedly committed by the vanquished.

What is even more significant in this regard is the fact that the "Holocaust" provided the ideological backing for the justification of the foundation of Israel. In 1948 the United Nations pronounced themselves with 33 votes (against 13) in favor of the partition of Palestine. In line with the USA, the USSR also voted for partition and for the foundation of a Jewish state, cherishing no doubt the (unfounded) hope that such a state would become a bridgehead for the Soviets in the Near East, in view of the sympathies of many Jews for the communist idea.[1052]

The partition of Palestine infringed in an unbelievably brutal way on the rights of the local population. This could be justified by invoking the "Nazi genocide of the Jews" and its "six million victims": a people that had undergone such indescribable suffering needed a state of its

---

[1051] A. Butz, *op. cit.* (note 988), p. 271.

[1052] This point of view is confirmed by historian Geoffrey Robert who writes: "After the war a de facto alliance developed between the Soviet Union and the nascent Israeli state. […] The Soviets did not trust Arab nationalism […] and they saw Zionism as a useful counter to Western influence in the Middle East." G. Roberts, *Stalin's Wars: From World War to Cold War*, Yale University Press, New Haven/London 2006, p. 339.

own, even if the rights of another people had to be trampled upon in the process.

If the tale of the gassing of the Jews in "extermination camps" was to be believed world-wide, the deported German, French, Belgian, Greek, and other Jews could not be allowed to return home in droves and tell others about their lives as forced laborers or ghetto inmates in the East. Our hypothesis hence reads as follows:

Stalin's government saw to it that the western Jews who had been deported into the eastern areas and had survived the hardships of wartime were removed without a trace and were unable to communicate with friends or relatives. This meant, first of all, that they had to be moved from the western regions of the USSR into eastern areas of the country which were essentially hidden from the outside world. Such a migration could easily be accomplished within the mass deportations of 1949 described by the *American Jewish Yearbook*. We do not believe that these Jews were killed, but we assume that they disappeared in camps they would never leave.

Such a step allowed Stalin to consolidate the myth of the extermination of Jews in "gas chambers." It thus killed two birds with one stone: Stalin was able to take on the role of a savior who had freed half of Europe from a monstrous dictatorship, while at the same time enabling the foundation of Israel which he – erroneously – regarded as a Soviet outpost in the Near East.[1053]

If this hypothesis were correct, did the leaders of the Zionist movement know about what was happening in the USSR? The only possible answer is "yes," because this organization had enough informants all over the world to be kept abreast of what was going on locally. It would be naïve to argue that the Zionists would surely have decried such an inhumane policy of the Soviets. For these people, the main objective, which dominated all other considerations, was the foundation of a Jewish state in the Near East, and in order to reach that goal they were unhesitatingly prepared to sacrifice tens or hundreds of thousands of their own brethren.

[1053] In his book *Fälschung, Dichtung und Wahrheit über Hitler und Stalin* (Olzog, Munich 2004, p. 339), the late German historian Prof. Dr. Werner Maser expressed a similar hypothesis: "It was no topic for many of them [Stalin's propagandists] that Stalin represented the up to two million[!] Jews, who after the war could no longer return to their places of origin from the USSR because they had lost their lifelihood there, as victims of the National Socialist regime contrary to the truth." Editor's remark.

We remind our readers of the fact that the Zionists fired up the anti-Jewish atmosphere in Germany after Hitler's ascent to power by preaching a boycott of German products, in spite of the obvious repercussions such an attitude would have for the Jews in Germany. The Jewish writer Josef Gideon Burg has described the Zionist policy in the following words:[1054]

> *"This appears to me like a situation in a circus where a few pranksters would be throwing stones at a lion between whose teeth his tamer has just placed his head. They are quite safe, because there is, after all, an ocean or a cage between them and the danger."*

Burg was right: The Zionist leadership always considered their Jewish foot-soldiers to be expendable.

We believe that our hypothesis is the only one to explain the facts in a convincing way. A decision on its validity, however, will have to wait for the opening of the Russian archives – if that should ever occur. For the time being, though, it seems that this will not take place in the near future.

11. The Demjanjuk Case

11.1. Hunting Down Old Men

The peace agreements signed in Westphalia in 1648 ended the most frightful war Europe had lived through up to that time. Among the conditions the former warring powers had agreed on was a complete amnesty for any and all violent crimes committed during the conflict. Article 2 of the Osnabrück Agreement of 24 October 1648 read as follows:[1055]

> *"That there shall be on the one side and the other a perpetual Oblivion, Amnesty, or Pardon of all that has been committed since the beginning of these Troubles, in what place, or what manner soever the Hostilitys have been practis'd, in such a manner, that no body, under any pretext whatsoever, shall practice any Acts of Hostility, entertain any Enmity, or cause any Trouble to each other; neither as to Persons, Effects and Securitys, neither of themselves or by others, neither privately nor openly, neither directly nor indirectly, neither under the colour of Right, nor by the way of Deed, either within or without the extent of the Empire, notwithstanding all Covenants made before to the contrary: That they shall not act, or permit to be acted, any wrong or injury to any whatsoever; but that all that has pass'd on the one side, and the other, as well before as during the War, in Words, Writings, and Outrageous Actions, in Violences, Hostilitys, Damages and Expences, without any respect to Persons or Things, shall be entirely abolish'd in such a manner that all that might be demanded of, or pretended to, by each other on that behalf, shall be bury'd in eternal Oblivion."*

The signatories to the peace treaty of Osnabrück thus did not want to perpetuate the wounds caused during the war, but to heal them. That was a wise thing to do.

When Napoleon had been beaten by a great European coalition, he was not tried and hanged as an "aggressor" or "war criminal," but simp-

[1055] See http://avalon.law.yale.edu/17th_century/westphal.asp

ly banished to Elba. After he had succeeded in leaving the island and in collecting once again a large army which then lost the decisive battle of Waterloo, he was, once again, not condemned and hanged but merely banished once more – this time, though, to the remote island of St. Helena which made any return impossible. In doing so, the victors made sure that Napoleon could never again constitute a danger – his honor remained untouched. At that time the Occident valued highly such things as chivalry and the respect for a courageous enemy.

All the more so, no one would have dreamed of pursuing a subject of the French emperor for "war crimes" and certainly not decades after the act – be it real or imagined. The thought that a French officer, ninety years of age, could have had to appear before a court in 1874 for having shot Spanish *guerrilleros* in 1809, when he was twenty-five years old, would certainly have been viewed as something completely absurd to a European citizen of the 19th century.

With the triumph of "democracy" and "human rights" in 1945, however, all this changed completely. The sinister farce mounted at Nuremberg, in which the victors who themselves had committed heinous crimes against humanity, hypocritically took on the role of judges over the vanquished, sending the latter to the gallows or behind prison walls on the basis of laws decreed *ex post facto*, amounted to the refusal of any idea of chivalry. We may believe, though, that at the time, in the immediate post war years, few people would have supposed that such trials of men who had unfortunately been on the losing side would still be held over five dozen years later.

John Demjanjuk's martyrium is unfortunately not an exception. For 11 years now Erich Priebke, born in 1913, has been under house arrest in Italy, because 65 years ago he had to shoot two hostages close to Rome. In March 1944, after a terrorist attack by communist guerillas had claimed the lives of 33 German policemen (plus several Italian civilians), Adolf Hitler personally ordered to shoot ten hostages for every policeman killed. The reprisal was carried out the day after the attack. The victims were for the most part men who were already in prison for underground activities. Women or children were not among them.

Sixty men had to take part in the reprisal shootings, among them seven officers. One of them was Erich Priebke. If he had refused to obey, he himself would have been shot:[1056]

[1056] Erich Priebke, Paolo Giachini, *Vae victis. Autobiografia*, Associazione Uomo e Liberta, Rome 2003, p. 125.

> *"*[Chief of execution SS captain] *Schuetz gathered the entire squad and warned: 'If anyone believes he doesn't have to shoot, then he can join the hostages straight away, because he will then be shot as well.'"*

His wife and children would have faced misery. So he did what he was asked to do. We must remember that at the time such reprisals were a common practice and as such condoned by the then rules of warfare, and they were practiced by the Italian army as well.[1057]

In 1948 a trial was held over the officers involved in the reprisal (NCOs and enlisted men had not even been prosecuted by the Italian authorities!). All defendants were acquitted, except for police chief Herbert Kappler who was sentenced for having caused another 10 hostages to be shot after the death of a 34th German policeman. This was considered to have been an excess on his part. At that time Erich Priebke, who had escaped from British captivity some months before, lived in the mountains of Southern Tyrol, unknown to the judicial authorities. This was unfortunate, as it should turn out, because he would otherwise have been acquitted just like his officer comrades, which would have saved himself the tragedy that ensued decades later.

After the war Priebke emigrated with his family to Argentina, where a Jewish journalist hunted him down in 1994. He was extradited to Italy a year later and tried in 1996, but acquitted because of the statute of limitations. A band of mostly Jewish hooligans then occupied the premises and took the judges hostage. After "hectic negotiations with the Jewish community,"[1058] "justice" minister Flick ordered a retrial. In 1998, after a series of appeals, the 85-year-old defendant was sentenced to life imprisonment, in keeping with the demands of the Jewish organizations. Magnanimously he was allowed to serve his time in house arrest. Ever since he has been living in the house of his lawyer and friend Paolo Giacchini and lacks nothing but his freedom. When he goes for a walk, the man, now 96 years old, is always accompanied by two *Carabinieri*.[1059]

[1057] For this see the legal expert report by Karl Siegert, "Reprisals and Orders from Higher Up," in: G. Rudolf (ed.), *op. cit.* (note 32), pp. 530-550.

[1058] *Il Messagero*, 2 August 1996.

[1059] For this see E. Priebke, P. Giachini, *op. cit.* (note 1056); German: *ibid.*, 2005; Pierangelo Maurizio, Via Rasella, *Cinquant' anni di menzogne*, Maurizio Editione, Roma 1996; Mario Spataro, *Repressaglia*, edizione Settimo Sigillo, Roma 1996; Gernot Gysecke, *Der Fall Priebke*, Verlagsgesellschaft Berg, Berg am Starnberger See 1997.

Anyone fighting and killing on the victors' side during the Second World War had nothing to fear, even if he had killed not just two but more than one hundred thousand people. Paul Tibbets, the Hiroshima bomber pilot who killed some 70,000 Japanese civilians by pressing a button – tens of thousands would die later after painful sufferings caused by radioactivity – received any number of medals and continued his career, ending it as a brigadier general.[1060] Just like Erich Priebke, Tibbets had acted under orders, but unlike Priebke he would not have risked his life by refusing to obey the order given to him. He merely would have risked being demoted and a dishonorable discharge from the army. As opposed to Priebke, he never uttered a word of regret for his victims.

The vertiginous moral and civilizing progress assured to the western world by the victory of democracy in 1945 manifests itself in Germany today through the hunt for old men, which continues merrily on its way. To illustrate this, a news item from November 2009 may be quoted:[1061]

> *"A 90-year-old former member of an elite Waffen SS unit has been charged with killing 58 Hungarian Jews who were forced to kneel beside an open pit before being shot and tumbling into their mass grave.*
>
> *The man, named in the German press as Adolf Storms, becomes the latest pensioner to be prosecuted for alleged Nazi war crimes as courts rush to secure convictions before the defendants become too infirm and the witness testimony too unreliable.*
>
> *Mr. Storms was found by accident last year, as part of a research project by Andreas Forster, a 28-year-old student at the University of Vienna.*
>
> *The case against him was led by Ulrich Maass who is also the prosecutor in the trial of Heinrich Boere, 88, who is accused of shooting three Dutch resistance fighters.* […]
>
> *Mr. Storms was a member of the 5th Panzer Wiking Division which fought on the Eastern Front, moving through Ukraine into the Caucasus, taking part in a bloody fight for Grozny and the tank battles of Kharkov and Kursk before wheeling back through Eastern Europe. By most accounts it left a trail of bodies behind.*

[1060] http://en.wikipedia.org/wiki/Paul_Tibbets

[1061] "Ex-SS trooper Adolf Storms charged over mass shooting of Jews," *The Times*, 18 November 2009 (www.timesonline.co.uk/tol/news/world/europe/article6920433.ece).

By the spring of 1945 the unit was heading to Austria with the intention of surrendering to the Americans rather than to the Red Army. But first the Wiking Division, led in the early days by General Felix Steiner, who is still revered among neo-Nazis, decided to clean up the evidence against it and eliminate the slave labourers who had dug its fortifications and defensive lines.
According to a statement issued by the regional court in Duisburg, where Mr. Storms has spent most of his retirement, 57 of the 58 victims were killed near the Austrian village of Deutsch Schuetzen. The mass grave there was excavated in 1995 by the Austrian Jewish association and the bodies given proper funerals."

For comparison: Winston Churchill, the main responsible for the bombardment of Dresden, which turned a city overflowing with masses of refugees into a sea of flames, was presented the Karl prize of the city of Aachen ten years later!

11.2. The OSI

Jimmy Carter, president of the United States of America from January 1977 through January 1981, stressed again and again that his major goal was the establishment of human rights. We will not deny that Carter, while in office as well as later on, has many achievements to his credit. He also bears the responsibility, however, for a political decision which was to have horrible consequences for many innocent people. In 1979 he approved the establishment of the Office of Special Investigations, which had been requested a year earlier by Elizabeth Holtzman, a Jewish congresswoman. The task of this office, operating within the U.S. Ministry of Justice, was the detection of "Nazi criminals" on American soil.

The German edition of the internet encyclopedia *Wikipedia* describes the OSI in the following terms:[1062]

"The OSI was attributed greater authority than any other department. Its agents could carry out themselves any necessary steps – from the initial investigations up to an eventual trial in court – they were allowed to negotiate directly with foreign governments and request the support of other U.S. agencies."

[1062] http://de.wikipedia.org/wiki/Office_of_Special_Investigations

Since its founding this agency has focused on revoking the U.S. citizenship of immigrants of German or east European origin for alleged "Nazi crimes," although more often than not these crimes are freely invented and even though these immigrants have lived in the U.S. for decades as peaceful and law-abiding citizens. Once these people are no longer U.S. citizens, they can be expelled at will or be extradited to states which want to prosecute them.

It is interesting to note that the OSI seems to be solidly in Jewish hands: ever since 1995, it has been headed by Eli Rosenbaum of Jewish faith, his deputy is Ronnie L. Edelman,[1063] of Jewish faith as well. Rosenbaum's predecessor was Neal Sher,[1064] likewise a Jew, as was the OSI chief investigator Edwards Stutman who died in 2005 and who had managed to have Demjanjuk stripped once again of his U.S. citizenship after the latter's acquittal in Israel and return to the United States.[1065] In other words: a revengeful minority within the U.S. government is allowed to further its own political agenda at free will.

The U.S. revisionist Andrew Allen has compiled an impressive documentation on the procedures of the OSI, how the agency fabricates incriminating evidence and suppresses exonerating material, using as an example the case of Martin Bartesch, a German-American.[1066] The most prominent victim of this sinister organization, however, is the Ukrainian-American John (Ivan) Demjanjuk.

11.3. Demjanjuk's Extradition to Israel and His Trial

First of all we shall offer the reader a few facts concerning Demjanjuk's biography. For the most part they have been taken from Hans Peter Rullmann's excellent documentation *Der Fall Demjanjuk* (The Demjanjuk Case).[1067] Born Ivan Demjanjuk in Ukraine in 1920, he joined the Soviet Red Army and was taken prisoner by the Germans in 1942. He

[1064] http://en.wikipedia.org/wiki/Neal_Sher

[1065] Obituaries: "Edward Stutman, Prosecuted Nazis in US," *Washington Post*, 30 September 2005. "His identity as an American Jew was also extremely important."

[1066] Andrew Allen, "Die US-Nazijäger vom OSI und der Holocaust-Mythos," *Vierteljahreshefte für freie Geschichtsforschung*, 5(4) (2001), pp. 428ff.; Engl.: "The Office of Special Investigations and the Holocaust Myth," https://codoh.com/library/document/the-office-of-special-investigations-and-the/.

[1067] Hans Peter Rullmann, *Der Fall Demjanjuk. Unschuldiger oder Massenmörder?,* Verlag für ganzheitliche Forschung und Kultur, Viöl 1987.

was initially assigned to railroad repair work and was later moved to the PoW camp at Chełm in eastern Poland. After the war he lived in Germany for a few years, married a Ukrainian woman, and emigrated to the U.S. in 1952, where he found employment in the automobile industry and was naturalized in 1958.

The fact that Demjanjuk, together with other exiles, became active in an anti-communist Ukrainian movement in his new home state of Ohio would lead to his doom. A certain Emil Hanusiak who worked for the pro-Soviet newspaper *News from Ukraine* habitually published articles in which the Ukrainian exiles were blackened as "Nazi collaborators." In 1975 Demjanjuk became a target for Hanusiak's aims. He saw himself accused of having been a guard at the Sobibór Camp during the war.

Concerning the background of the campaign against the automobile worker, the Israeli lawyer Yoram Sheftel, who would later prevent Demjanjuk from ending up on the gallows in Jerusalem, had this to say:[1068]

> *"Since 1987, when it became widely known that I had joined Demjanjuk's defense team, I have been asked often what it was that could possibly have motivated the Soviet Union to malign this man, who in 1976 had been a blue-collar laborer at the Ford plant in Cleveland, and, to all intents and purposes, a perfectly nondescript sort of man. My answer has always been that the objective was not the specific man, John Demjanjuk. The Soviet objective, as far as I was concerned, was to cause a rift between the Jewish and the Ukrainian communities in North America. Because, despite the many difficult and painful memories of strained relations between the Jews and the Ukrainians, these two communities were beginning to cooperate in anti-Soviet activity. And it was causing considerable concern to the Soviet leaders in the Kremlin and their agents in North America, especially a certain Michael Hanusiak* […]. *The Soviets, therefore, decided to nip the Jewish-Ukrainian 'conspiracy' in the bud. The Soviet success with the Demjanjuk plot was complete. From the very beginning, Demjanjuk had cried out that he had never been a guard in any extermination camp, that all the Soviet accusations were no more than a vicious lie. As a result, much of the Ukrainian community in North America closed ranks around him.*

[1068] Yoram Sheftel, *Defending 'Ivan the Terrible.' The Conspiracy to convict John Demjanjuk*, Regnery Publishing, Washington 1996, pp. ix, x.

> *Not surprisingly, the Jewish community stood firmly on the other side – Demjanjuk's plea of innocence were seen as just another anti-Semitic Ukrainian lie. Inevitably, a deep rift between the two communities developed, to the obvious glee of the Soviets."*

This is a most convincing explanation. In 1976, the U.S. Immigration Service started investigating the Demjanjuk case. Gitta Sereny tells us:[1069]

> *"In Demjanjuk's case, the U.S. immigration authorities questioned the 12 survivors of the Sobibór Camp, then still living in the U.S., but not one of them was able to identify Demjanjuk. In April of 1976, the authorities sent 17 photos to Israel, including the photo for his 1951 entry visa.* […] *While none of the survivors there could identify Demjanjuk, it came as a surprise that several survivors of Treblinka felt that he was Ivan the Terrible, the gas-chamber guard of their nightmares. A few months later, in August of 1976, the Soviet authorities again became involved in the case. A Ukrainian newspaper* [the *News from Ukraine* already mentioned] *published a testimony, by then 30 years old, of a former Sobibór guard named Ignat Danilchenko which he had given in a Soviet war crimes trial. At the time, Danilchenko had said in court, the man in Sobibór he knew best had been a guard by the name of Ivan Demjanjuk who later served, like himself, as a guard in the concentration camp at Flossenbürg."*

Hanusiak's proof was an alleged service ID card issued to Demjanjuk in the Trawniki training camp where Ukrainian and other east European volunteers had been trained as concentration camp guards. The document states that Demjanjuk was assigned to Sobibór on 27 March 1943. It did not say anything about Demjanuk's alleged assignment to Treblinka. This "original document" was put at the disposal of the Israeli judiciary by the Soviets as late as December 1986, when Demjanjuk had already spent 9 months in a Jerusalem jail.

In an extensive study Dieter Lehner has advanced a number of arguments in favor of a thesis that this document is a gross falsification.[2] We will limit ourselves to the most important points:

1) The ID card contains obvious technical irregularities for this kind of document:[1070]

[1069] Gitta, Sereny, "Die falsche Schuld," *Die Zeit*, No. 44, 1992, www.zeit.de/1992/44/Die-falsche-Schuld

[1070] D. Lehner, *op. cit.* (note 2), pp. 16f.

"1. A combination of different fonts showing diverse characteristics. 2. Missing umlauts and umlauts of the letter 'ü' that have obviously been replaced in some other way. 3. The lines, especially those on the first page, are not parallel. 4. The special characters for 'Schutzstaffel' – SS – have different shapes and sizes. 5) The spelling of the word 'Grösse' has 'ss' instead of the correct 'ß.'"

2) According to the ID card, Demjanjuk was assigned to the L.G. (farm) at Okzow on 22nd Sept. 1942 and on 27th March 1943 to Sobibór. Lehner stresses that these indications do not show the termination of any of these assignments. A third assignment, either between or after the other two, cannot be found either.

   Lehner concludes:[1071]

   "Thus, it is left to the discretion of the observer, whether the holder of this ID card went directly from Okzow to Sobibór or whether he returned to Trawniki in between. If that was the case, we must ask when the guard came back from Okzow, who included the mention of 'Sobibór,' and why there is no mention of an assignment to 'Treblinka.' If eye witnesses allege to have seen him there, a corresponding entry should show up in the 'assignments' section of the ID card."

In other words, the ID card was, first of all, an obvious falsification and it would, secondly, not have provided any indication for a stay of the holder at Treblinka.

We do not know why the KGB – which certainly had at its disposal a host of experienced forgers – produced such an amateurish falsification, and there is no other suspect than the KGB in this case. We can of course exclude any involvement of the Israelis in this connection, because they would have been sure to produce a document in line with the statements of the witnesses to the effect that Demjanjuk had indeed been stationed at Treblinka rather than at Sobibór.

Although the U.S. judicial authorities at the time had at their disposal only a facsimile and although the ID card, as we have seen, did not prove Demjanjuk's presence at Treblinka, they decided to recognize its validity.

After Demjanjuk had been stripped of his American citizenship in 1981, he was extradited to Israel in February of 1986 – a country which did not even exist at the operational time of Treblinka Camp.

[1071] *Ibid.*, p. 83.

The only two prominent U.S. citizens who mustered up enough courage for Demjanjuk's defense were Patrick Buchanan – who compared the Demjanjuk case to the Dreyfus affair[1072] – and the House member James Traficant. The active support Traficant showed for the persecuted man, plus his critical opinion towards the Jewish lobby in the United States, were probably the reasons why Traficant had to go to prison for seven years in 2002 on maybe trumped-up charges of corruption and tax evasion.[1073] Right after his release from prison in 2009, he announced that he wanted to appear as a witness for the defense during the pending trial against Demjanjuk in Germany.[1074]

The trial started in February of 1987, one year after Demjanjuk's extradition. It was originally planned to use a football stadium for this purpose, but in the end the Israeli authorities opted for a movie theater. The media lost no time to fan a general hysteria, and the Israeli schools were compelled to deal with the trial.

It is obvious that the Israelis, just like the Soviets before them, were not interested in Demjanjuk as a person. The trial was primarily meant to feed the persecution psychosis of the Jews both in Israel and abroad and to align them unhesitatingly behind the state of Israel as the only bulwark of the Jews against any renewal of the "Holocaust." It also served as a useful tool for diverting the world's attention from the ruthless Israeli policy towards the Palestinians. Aside from that, the ensuing show trial was an ideal means of fomenting hatred against the Ukrainian people with which, according to Dov Ben-Meir, the Speaker of the Knesseth at the time, the Jews have a long open account to settle.

The account he referred to dates back to the 17th century. At that time the Cossacks under Bogdan Chmelnitzki revolted against Polish domination in western Ukraine and defeated the Poles in two major battles (1648 and 1649). There were also anti-Jewish pogroms during the revolt, primarily because the Polish masters had entrusted the collection of taxes from the local population to Jewish collectors, who subsequently had come to be hated by the Ukrainians. The revisionist Arnulf Neumaier notes:[1075]

> *"The circumstance that the Monster of Treblinka had to be a Ukrainian probably has historical roots in the time when the Cos-*

sacks liberated the western part of the Ukraine from Jewish oppressors and tax-collectors. Oaths of vengeance and instinctive hatred à la the Old Testament survive for centuries."

Neumaier's view seems to be correct, for when the president of the organization "Americans for Human Rights in Ukraine," Bozhena Olzhaniwsky, in a courteous letter to the Knesseth president dated 18 September 1986 expressed her unease about the way the Israeli legal authorities had been handling the Demjanjuk case, she received the following reply a few weeks later:[1076]

"At first I did not want at all to reply, because since the days of Bogdan Chmelnitzky, the Jewish people has a long score to settle with the Ukrainian people. […] *However, on second thought I reached the conclusion that an application such as yours, coming from an American citizen (even though of Ukrainian origin), must not remain without a response.* […] *To you and your friends, I suggest that you go to church not only on Sunday but also every day of the week, and that you kneel there until bleeding at the knees in asking forgiveness for what your people has done to ours."*

In defense of Israel we must state, however, that not all of its citizens approved Ben-Meir's primitive racial slurs. The writer Avraham Shifrin, for example, had some very harsh words to say to the Knesseth president.[1077]

During the trial, former detainees from Treblinka took the witness stand and recited the most sickening horror stories.[1078] The witness Eliyahu Rosenberg stated under oath:[1079]

"I saw him especially when I was working on the ramp every day, whenever consignments of Jews arrived for extermination. I saw him when he stood next to the gas chambers at the entrance to the corridor with a destructive instrument in his possession, such as a small short iron pipe, and a whip. He also wore a belt with his pistol. This shouldn't be so, all the destructive instruments together… I also saw that he had a dagger, I saw him with these destructive instruments, and how he would strike, lash, cut… these victims at the entrance to the gas chambers…. […] *They knew how to strike, to strike. We were already there, at that place, and we got used to the beatings.*

[1076] H.P. Rullmann, *op. cit.* (note 1067), pp. 202f.
[1077] *Ibid.*, pp. 206 ff.
[1078] Cf. the introduction to the present book.
[1079] Criminal Case No. 373/86, State of Israel vs. Ivan (John) Demjanjuk, Verdict, pp. 184ff.

> *But not to the tortures. God almighty, why tortures? Why cut living flesh from people? Nobody ordered them to do so, no one, he did it alone, on his own initiative. I never heard any German telling him to do that…* […]
> *I was there on the ramp. We had removed the bodies from the gas chambers, Ivan came out of his cabin, he saw how I was standing there, the place was full of corpses, he said to me… lower your trousers… lay down on them… I saw this incident, and in a second I understood: this was it, I was finished, either by the pipe in his hand or in another manner. Lefler (one of the German SS men) was standing there. He was standing and looking. I ran to him, I stood to attention and said to him (in German): Ivan wants me to have sexual relations with a dead woman. So then he went up to him and reprimanded him. Ivan only said to me (in Russian), I'll give it to you. He gave it to me and he found the opportunity."*

Eliyahu Rosenberg had a problem, however: it turned out that he had stated in writing in 1947 while in Vienna:[1080]

> *"The second of August 1943 was set as the day of the revolt.* […] *About three-thirty in the afternoon everything was prepared for the revolt.* […] *Then one of the water-carriers right then dashed into the barracks and yelled: 'Revolution in Berlin.' This was the signal.* […] *Thereupon some people rushed into the barracks of the Ukrainian guard detachment, where among others also the Ukrainian Ivan was sleeping, and killed the Ukrainians with shovels."*

As had been generally expected, the Israeli court pronounced the death sentence in April of 1988, yet it would not be a carried out. Even at such an early time too many inconvenient incidents had occurred, and Demjanjuk's lawyer Y. Sheftel used them as much as he could. (A gangster had poured acid into Sheftel's face in late 1988, a few days after another lawyer of the defense, Dov Eitan, had fallen from a sky scraper and died from the consequences of this tragic accident.) Sheftel eventually claimed to have identified the true "Ivan the Terrible," a certain Ivan Marchenko who had somehow disappeared.

The name Marchenko had originally been furnished by a former prostitute from the hamlet of Treblinka, near the camp, who had counted several of the Ukrainian guards among her clients during the war, Marchenko being one of them, but Sheftel found more evidence in the

---

[1080] A photocopy of Rosenberg's statement is given by H.P. Rullmann, *op. cit.* (note 1067), pp. 133ff.

USRR. According to Soviet legal records, a Ukrainian by the name of Nikolai Shelayev – who had been sentenced to death and shot in 1952 for alleged crimes committed at Treblinka – had allegedly identified Marchenko as "the operator of the gas chambers at Treblinka." Shelayev's statements were confirmed by other former Treblinka guards, and an identity card for Marchenko came to light as well.

Under these circumstances the Israeli authorities would have been completely unable to justify Demjanjuk's execution. While they did attempt to prosecute him for crimes committed at Sobibór and Flossenbürg, there were no witnesses for such acts. Moreover, according to the U.S.-Israel extradition agreement, Demjanjuk could not even be prosecuted in these matters, as his extradition had been granted solely in connection with his alleged crimes at Treblinka. The incriminating ID card from Sobibór was not even mentioned in the sentence. In the end, John Demjanjuk was acquitted on appeal and was able to return to the U.S. in September of 1993. His citizenship was restored.[1081]

The juicy part of the story was that ever since 1979 the OSI had known of Demjanjuk's innocence. The German *Spiegel* journalist Carlos Widmann wrote in 1993:[1082]

> *"America's official Nazi hunters owe the fact that they did not burden their conscience with a judicial murder to two groups of people: to the Ukrainian associations which collected millions for Demjanjuk's defense and to Israel's supreme court which, in the end, used common sense. This debt will not be repaid.* […] *Since 1976 the Nazi hunters within the U.S. Department of Justice, who had been trying to sell Demjanjuk to the Israelis as a sadistic mass murderer, apparently knew all the time what was going on. As early as 1979 they had evidence from the USSR which demonstrated clearly that Ivan Demjanjuk was in no way 'Ivan the Terrible.' This evidence had been withheld by the agency from all parties concerned: from the U.S. court which stripped Demjanjuk of his American citizenship, from the Israeli court which sentenced him to death, and, quite naturally, also from the defense lawyers."*

[1081] For our description of the trial we relied upon Y. Sheftel, *op. cit.* (note 1068).

[1082] Carlos Widman, "Das Schreckliche an Iwan" (The terrible about Ivan), *Der Spiegel*, no 39/1993.

11.4. Demjanjuk's Extradition to Germany

It goes without saying that the OSI was unhappy with its defeat and was soon to start out again to have Demjanjuk, by now nearly 80 years old, once more removed from U.S. soil. The Internet encyclopedia Wikipedia summarizes the events as follows:[1083]

> *"Demjanjuk was put on trial again in 2001, and on February 21, 2002, Matia ruled that Demjanjuk had not produced any credible evidence of his whereabouts during the war and that the Justice Department had proved its case against him.*
>
> *On April 30, 2004, a three-judge panel of the 6th U.S. Circuit Court of Appeals ruled that Demjanjuk could be again stripped of his U.S. citizenship because the Justice Department had presented 'clear, unequivocal, and convincing evidence' of Demjanjuk's service in Nazi death camps. The United States Supreme Court declined to hear his appeal in November 2004."*

In his 2002 decision judge Paul Matia had written:[1084]

> *"In serving at Sobibór, the defendant contributed to the process by which thousands of Jews were murdered by asphyxiation with carbon monoxide."*

We cannot decide whether Demjanjuk did serve at Sobibór or other NS camps. What can be said, though, is that in 1948, when demanding his recognition as a political refugee in Germany, and again during the interrogations preceding his extradition from the U.S. to Israel, he made certain unbelievable and contradictory statements. When he applied in 1948 for the status of a political refugee, he declared to have worked from 1937 (!) until January of 1943 as a farmer in "Sobibór, Chełm, Poland" and to have later been employed as a worker at Pillau, Danzig, and Munich until the end of the war.[1084] As there was indeed a farm near Sobibór, it is theoretically possible for Demjanjuk to have worked there (although certainly not from 1937), but it does not strike us as very likely. If, however, he was indeed assigned to the camp at Sobibór as a guard, this is a strong argument against the view of this camp as an "extermination centre," for in that case Demjanjuk would certainly have been bright enough not to mention this place in his application at all.

[1083] http://en.wikipedia.org/wiki/John_Demjanjuk

[1084] Judge Paul Matia, United States District Court, Northern District of Ohio, Eastern Division, US of America versus John Demjanjuk. "Findings of Fact" (2002).

In his sentence of 2002, judge Matia claimed to possess documentary evidence proving that Demjanjuk had been stationed not only at Sobibór, but at Majdanek and Flossenbürg as well.[1084] Regarding Sobibór, as far as we know, there is no evidence other than the forged ID card issued at the Trawniki training camp. Judge Matia claims that documentary evidence was found in a Lithuanian archive proving Demjanjuk's presence as a guard at Majdanek in January of 1943. He is said to have been punished at the time for having left the camp to go shopping without being authorized to do so and in spite of a camp closure. Even though incriminating evidence from Soviet sources must *a priori* be viewed critically, we cannot exclude that Demjanjuk was actually at Majdanek. His stay at Flossenbürg, according to judge Matia, is confirmed by a German document from that camp.

To the extent that these documents are indeed authentic – something we are not in a position to judge, except for the Trawniki ID card shown decades ago as having been forged – Demjanjuk would indeed have misinformed the U.S. agencies before his emigration by hiding his activity as a guard. If he had owned up to this, not only would his application for a U.S. visa have been rejected, but he would also have run the risk of being extradited to the Soviet Union, which would have been tantamount to a death sentence. It is quite possible that Demjanjuk did not tell the truth during his interrogations by the American judicial authorities in 1976. Who would want to blame him for that? We must not forget that he was still running the risk of being extradited to the Soviet Union. That this fear was not at all unfounded is shown by the case of another Ukrainian, Fyodor Fedorenko, who was also accused by the Soviets of having served as a guard at Treblinka. Fedorenko was extradited to the USSR by the USA in 1984, sentenced to death in 1986, and executed by shooting a year later.[1085]

Once he had been stripped of his U.S. citizenship one more time, the U.S. authorities decided in 2005 that he was to be deported to Ukraine, to Poland, or to Germany. While both the Ukrainian and the Polish authorities refused to receive him (a sure indication that they did not have the slightest evidence to prosecute him for any crimes committed during the war!), Germany demanded his extradition in 2008, which was eventually accepted.

[1085] http://en.wikipedia.org/wiki/Fyodor_Fedorenko

11.5. The Run-Up to the Munich Trial

The trial of John Demjanjuk opened in Munich at the end of November 2009. In the weeks before it began, some sobering remarks were made in Germany. A press release of 17 November by the *Südwestrundfunk* said:[1086]

> *"Experts doubt* […] *that Demjanjuk will be convicted. The Dutch jurist Christiaan Rüter* […] *does not believe in a conviction. For years Germany has not prosecuted low-ranking camp guards like Demjanjuk, and if there were trials, they resulted in acquittals. If that has been legal practice for years, the Munich court could not suddenly diverge from it.* […] *For its 50th anniversary the Central Agency* [for the prosecution of NS crimes] *needed something special, a famous name for it to occupy center stage once again – that was his* [Rüter's] *provocative thesis. According to this not legal but political arguments would have brought about the investigation and the trial against Demjanjuk."*

How true!

Whether the Munich court will bring itself to pronouncing an acquittal in uncertain. Considering the enormous political pressure exerted on the court, we fear that this will not be the case. Before the trial started, it became known that "close to 40 joint plaintiffs have been accepted, all of them family members of people murdered at Sobibór."[1087] There is no better proof for our thesis that the real purpose of the trial is the promotion of the "Holocaust" hysteria and the further cementation of the legally prescribed view of history, because not a single one of the 40 joint plaintiffs can contribute anything to the questions the court must answer: firstly whether Demjanjuk was ever stationed at Sobibór at all, and more importantly whether he committed any crimes there.

12. Conclusions

12.1. The Moral Responsibility of the Camp Personnel

Our conclusions are absolutely clear: Sobibór was not an extermination camp; it had no "gassing building" and hence no homicidal gas chambers. Some 10,000 people may have died there; such a figure would amount to one twenty-fifth of the figure of 250,000 victims widely quoted in the literature, or to one seventeenth of the figure of 170,000 given by J. Schelvis in the revised edition of his book, or to one fifteenth of the "minimum number" of 150,000 victims assumed by the Hagen court in 1966.

If our thesis is correct – and we are convinced that it is – and if Sobibór was a transit camp for Jews being moved into areas further east, we must obviously reassess the moral responsibility of the camp personnel, from the commanding officer on down to the Ukrainian guards who constituted the lowest echelon of the chain of command. It goes without saying that even in such a case the personnel involved did execute orders that constituted a gross violation of human rights, for no-one can argue against the fact that the deportation and expropriation of people on the sole basis of them being members of an ethnic or religious group and not for any individual wrongdoing is indeed a most serious transgression against human rights. On the other hand, these people were acting under orders, the execution of which they could not refuse without possibly endangering their own lives. It was not up to them to decide whether such orders were lawful or not, but the manner in which they executed them certainly was. Thus, the moral responsibility of the camp personnel hinges on the question as to whether or not they treated the detainees – during their short stay in the camp – as humanely as was possible under the prevailing circumstances, or whether they humiliated them; whether they made things bearable for the working Jews, or whether they did their part to create a little hell of their own for these people.

We cannot answer these questions in an unequivocal manner, as there is no documentary evidence describing the conditions in the Sobibór Camp. Witness testimony is totally unreliable; the witnesses have, without exception, lied with respect to the main point of the charges – the alleged mass killing of Jews (by means of a "black fluid," "chlorine," or engine-exhaust gases) – and we thus have no reason to believe their statements on the subject of any sadistic behavior of the camp personnel.

On the other hand, there are accounts whose veracity can hardly be disputed. Leon Feldhendler, who was interned at Sobibór from early 1943 until the uprising on 14 October of the same year,[1088] describes the living conditions of the Jewish artisans in the following words:[1089]

> *"In Camp I, Jewish tradesmen worked for the Germans – joiners, tailors, cobblers. They had their own barracks for sleeping in. There were 30 Germans and 180 Ukrainians. The tradesmen were living very nicely, in their workshops, they had comfortable quarters.* […] *Their daily rations consisted of half a kilogram of bread, soup, horsemeat, groats (from the transports) twice a week.* […] *Work: from 6.a.m. through 12 noon, an hour for lunch and then again work until 5 p.m.* […] *Time off between 5 and 10 p.m., at their discretion."*

It is a bit difficult to believe that the Jewish inmate Feldhendler would in any way have embellished conditions at Sobibór in order to whitewash the National Socialist system.

In view of these considerations we decide as follows: The camp personnel is to be acquitted of the main point of the indictment – the systematic murder of Jews – for manifest innocence, as well as of the secondary point – of willful ill-treatment of detainees – for lack of evidence.

We assume that euthanasia was practiced at Sobibór on a number of detainees (the feeble-minded or those having contagious diseases). In that case the SS men concerned would be guilty. Any alleged difficulties in providing sufficient food for the bulk of the population could be regarded as mitigating circumstances, but not as a justification. On the other hand, if euthanasia of the feeble-minded is presently considered in Western countries as "Nazi barbarism," we wish to call this a blatant and repulsive hypocrisy in view of the fact that these same countries al-

low the piercing, the dismemberment, and the cauterization of an untold number of healthy babies in their mother's womb (some 25% of all pregnancies in the U.S. end with an abortion[1090]) and that in the U.S. many hundreds of abortions occur every year during the third trimester of pregnancy, when the baby is fully viable.[1091] People who live in glass houses should not throw stones.

12.2. "I am a Portion of that Force…"

Goethe has Mephistopheles say "I am a portion of that force which ever wills Evil and always creates Good." This also applies to those who, in 2000, entrusted Andrzej Kola, professor of archeology at the University of Torun, with soundings and diggings on the grounds of the Sobibór Camp. Professor Kola was obviously aware of the explosive power of whatever he would or would not find. He knew precisely what was expected of him. He consequently paid the required lip service to the Holocaust creed. Irrespective of the enormous pressure exercised upon him, he retained the necessary minimum of professional ethics preventing him from making use of falsifications. Even though he does not say so in so many words, his findings do not leave the least doubt in respect of the fact that the "gassing building" described by the "witnesses" did not exist – and if there was no such building, the whole matter is resolved.

Professor Kola also did not open any mass graves and did not assess the amount of any human remains. This, again, speaks for itself, as does the fact that he carefully avoided to compare the results of his investigations with any witness testimonies. The enormous T-shaped barrack (Object E) with its longitudinal dimension of 60 to 80 meters as well as Object A, a building equipped with a furnace, confront the mainstream "Holocaust"-historians with insurmountable problems and strengthen the revisionist thesis of Sobibór the transit camp.

Up to the year 2001 revisionists were limited to maintaining that the official Sobibór version was absolutely unbelievable. The orthodox thesis involved a load of contradictions which it was unable to resolve: the lack of any documentary evidence in respect of an extermination policy, the absurdities in the witnesses' accounts, the fact that after the liquida-

---

[1090] In the 1980s, it was as high as some 35%, but the percentage has been shrinking ever since; see https://en.wikipedia.org/wiki/Abortion_statistics_in_the_United_States.

[1091] See www.lifeandlibertyforwomen.org/issues/issues_partial_birth_abortions.html.

tion of the camp the surrounding forests showed no significant decrease in area (where did the fuel for the cremation of the alleged 150,000 to 250,000 corpses come from?).

Ever since the publication of professor Kola's results, however, the story of the gassing of Jews at Sobibór has moved from the realm of the unlikely into the realm of the impossible. Even if professor Kola may not have set out to accomplish this voluntarily, he has earned our gratitude.

12.3. The Emperor's New Clothes

For a naïve observe it would be possible to argue as follows: The Hagen court has accepted a figure of "at least 150,000" for the number of victims at Sobibór, the leading specialist on the camp, Jules Schelvis, opted for 170,000 victims. This figure of 150,000 to 170,000 amounts to a mere 2.5 to 3% of the infamous figure of "six million" and is not really needed to maintain the thesis of the Holocaust. Could not the orthodox historians under the circumstances give up the claim of the Sobibór gas chambers and concede this point to the revisionists?

They cannot. First of all, the existence of gas chambers at Sobibór has been "proved" at three trials in Germany – Berlin in 1950, Frankfurt upon Main in 1950, and Hagen in 1965/66 – and is thus judicially notorious. At these trials, eight men were condemned to prison terms ranging from three years to life imprisonment. Of the latter, one (Erich Bauer) died in prison after 31 years, another (Hubert Gomerski) spent 22 years behind bars before he was pardoned, and the third (Karl Frenzel) remained in prison for 16 years. If the German judiciary were to admit that blatant miscarriage of justice had taken place at all three Sobibór trials, all other cases of such "Nazi crimes" would be up for review, because all trials of camp personnel had followed the same route as these trials: "We have sworn witness testimonies, why do we need forensic or documentary proof?"

Let us take this a step further: If the judiciary and the historians have "made a mistake" on Sobibór, what reason is there to believe the claims made in connection with the other camps of *Aktion Reinhardt*? If Sobibór falls, then so does Bełżec, where professor Kola has also carried out investigations leading to the same conclusions. Who will then believe the claims for Treblinka?

The Majdanek Camp – which was attributed 1.5 million victims at Nuremberg[1092] – can no longer be called an "extermination camp": the head of the history department of the Majdanek Museum, Tomasz Kranz, brought the number of victims down to 78,000 in 2005[1093] – a figure which is still too high by at least 28,000.[1094]

The smallest and least well known of the six "extermination camps," Chełmno, where 150,000 Jews were allegedly killed in "gas vans," cannot in any way fill the void caused by the loss of the "Reinhardt camps." Thus, only Auschwitz remains, the flagship of Holocaust propaganda and its weakest point, its Achilles heel, if there ever was one. In the face of the wide-ranging investigations of the revisionists, which have demonstrated time and again the complete lack of credibility of the official Auschwitz story, these "Holocaust" historians would in any kind of open debate find themselves beating a dead horse.

No, Sobibór cannot be given up, because that would cause a chain reaction bringing down the whole mendacious structure of the Holocaust like a house of cards. Hence, these historians cannot but close their eyes to the results of the archeological diggings and soundings and act like the crowd that praised the emperor's new clothes in Hans Christian Andersen's fairy tale, even though everyone who was able to see saw that his Majesty was naked.

12.4. The Moloch

"Who can stand firm under the pressure and in the face of powerful Jewish organizations and their campaigns? Practically, no one. These institutions' hold on to the media, their perpetual moaning and recriminations, their systematic recourse to blackmail, their practice of telling lies designed to throw others off the track, the fear that they inspire (metus Judaeorum), their frenzy (be it real or make-believe) and their contempt of those who do not belong to the chosen people end up sweeping aside all obstacles. In order, suddenly, for such organizations not to be strictly obeyed it takes some exception-

al historical circumstances. Then the humiliated, maligned, duped or colonized goyim take the risk of holding up their heads and, sometimes, go so far as to rebel against their tyrants. The hoax or religion of the 'Holocaust' has progressively built itself up since its beginning with rabbinical lies born in Central Europe; thereafter, with the aid of war propaganda, these inventions were exported to Western Europe (including the neutral countries, the Vatican and bodies like the International Red Cross). Once in place, they spread throughout the United States, where they benefitted from the staging provided by Hollywood and the rest of the media. They came back with all the more force from 1945 onwards to pour into the heart of Europe. They strongly contributed to the creation of the State of Israel, a source of conflicts to come. They poisoned the post war world. The ferment of hatred that an imposture of these dimensions leaves in people's minds infects our society still nowadays. Prodigious financial extortions, grounded in intimidation or blackmail, have for half a century been feeding the trade, the business, the industry of the Shoah. One would almost say that the heads of these Jewish groups had done their best to strengthen, for the anti-Semites' satisfaction, all the stereotypes of the Jew as a liar, a crook, alternately whining and arrogant, crying out for vengeance till the end of time and everywhere demanding his pound of flesh. These Jews have resurrected Shylock." — Robert Faurisson[1095]

The foundation of the state of Israel in 1948 was an anachronism. Great-Britain had just granted independence to India; dozens of Asian and African territories were attempting ever harder to shed the white man's rule. Yet at that very moment of de-colonization, the Jews in Palestine were permitted to launch a colonial venture of their own – with the blessings of both the USA and the Soviet Union. The reason given was the allegedly incomparable suffering of the Jewish people during the Second World War.

When the reputation of the Zionist state had reached a low point in the 1980s because of the terror exercised in Lebanon by the Israeli invaders and their local henchmen, Israel was careful to have its fifth column in the USA stir up the case of John Demjanjuk who was labeled "Ivan the Terrible" and "The super-devil of Treblinka." He was subsequently extradited to Israel where a carefully orchestrated show trial

[1095] Robert Faurisson, *Pope Pius XII's Revisionism*, Historical Review Press, Uckfield 2006, pp. 49f.

was staged against him. The result was that the world media now spoke of the "Treblinka gassings" rather than about the massacres against Palestinians. Although the trial resulted eventually in Demjanjuk's acquittal – thanks mainly to the courageous efforts of Yoram Sheftel, his Israeli lawyer – this did not in any way impair the picture of "Treblinka, the extermination camp" that had been implanted in the mind of the public.

When the bloodthirsty terror of the Israeli army in the Gaza strip had caused world-wide disgust in late 2008 and early 2009, John Demjanjuk, now 89 years old, had to be dragged once again onto the propaganda stage. His trial in Germany, which is taking place while this book is prepared for publication, will bring the Holocaust into the limelight one more time.

The zeal of the German authorities to bring an old man to trial, although nothing concrete is there to justify this, cannot be explained solely by the proverbial servility of the German puppet state towards Israel and Zionist organizations. The German ruling class needs the Holocaust more than anything else for its own survival. It needs it to nip in the bud any kind of resurgence of German self-esteem, to block the rise of any national forces and ideas, and hence to remain in power.

In order to demonstrate over and over again to the German people as a whole and to young Germans in particular the abject character of the National Socialist system, the "freest state in German history" has required, ever since it came into being, a never-ending stream of Nazi monsters as proof of the abominable state of mind of the German generation of WWII.

We will give a striking example of this policy: In 1984 the German magazine *Stern* arranged for a disgusting farce by setting up a meeting between Toivi Blatt and the former SS-*Oberscharführer* Karl Frenzel. The latter, born in 1911, had been arrested in 1962 and sentenced to life imprisonment at the Hagen Sobibór trial of 1966 for his complicity in the murder of at least 150,000 Jews. He had been released from prison in 1976, arrested again in 1980, but released once more after an appeal in 1981. Appeal proceedings had begun in 1982, had gone on for three years, and had ended with the confirmation of the previous sentence. In view of his advanced age and his poor health, Frenzel did not have to return to prison. He died in 1996.[1096]

[1096] J. Schelvis, *op. cit.* (note 61), pp. 253f.

In its edition of 22 March 1984, *Stern* published the verbatim account of the conversation between Frenzel and Blatt.[1097] Here are a few excerpts:

> *"Blatt: I see you sitting there, drinking your beer. You have a slight smile on your face. You could be anyone's neighbor, anyone's pal from the local sports club. But you are not just anyone. You are Karl Frenzel, SS-Oberscharführer. You were number three in the chain of command of Sobibór, the extermination camp. You were in charge of Lager I. Do you remember me?*
> *Frenzel: Not really well. You were a little boy at the time.*
> *Blatt: I was 15 years old. And I survived because you had me polish your shoes, no one else survived, not my father, not my mother, not my brother, none of the 2000 Jews from my home town of Izbica survived.*
> *Frenzel: That is terrible, really terrible.*
> *Blatt: At least a quarter of a million Jews were murdered at Sobibór. I survived. Why are you ready to talk to me?*
> *Frenzel: I wish to beg your pardon.* […]
> *Blatt: Philip Bialowitz testified that you caught a 15-year-old friend of his stealing a can of sardines. You took him to Lager III, to the crematorium, and shot him.*
> *Frenzel: That wasn't me.*
> *Blatt: It wasn't you? And what happened to the Dutch Jews?*
> *Frenzel: A Polish kapo told me that some Dutch Jews were organizing a revolt and I reported this to Niemann, the deputy camp commander. He ordered to execute all 72 of them.*
> *Blatt: And you took them to the gas chamber…*
> *Frenzel: No, I didn't.* […]
> *Blatt: Sobibór – the annihilation of 250,000 Jews – was that your duty?*
> *Frenzel: We had to do our duty. I am sorry about what happened there, but I cannot undo it."*

Let us stop for a moment to imagine the scene: After 16 years in prison Frenzel is a broken man who wants only one thing – not to go to prison again, to spend his remaining years as a free man. If there was one way of ruining his chances to have his sentence reduced or to be paroled, it would have been the denial of mass exterminations at Sobibór and to

[1097] Ulrich Völklein, "Der Mörder und sein Zeuge" (*The murderer and his witness*), *stern*, No. 13, 22 March 1984.

insist that there had been no gas chambers in that camp. What would have been the use of such stubbornness? Not one out of a hundred readers of *Stern* would have believed him. Forty years of brainwashing had done their work.

So, Frenzel does what countless other defendants have done in so many trials of "NS criminals." He does not deny the accusation as such, the organized mass murder of the Jews, but claims a state of emergency for himself, "we had to do our duty," denying his own involvement in specific crimes, like the shooting of the 15-year-old boy or the gassing of the 72 Dutch working Jews who had plotted a revolt. He is successful, like so many other "Nazi criminals" – the judges, while confirming the original sentence, grant him parole.

We are sure that hundreds, nay thousands of German schools have dealt with this conversation between Frenzel and Blatt in their history or German language classes. It is an ideal example for implanting the image of the despicable German Nazi who does whatever he is ordered to do, unhesitatingly, regardless of what it is and then, coward at heart, either denies everything or places the responsibility on someone else.

This is the way in which the soul of the young generation of Germans has been poisoned – and an end is not in sight.

"Nazi monsters" becoming an increasingly rare species – for biological reasons – the show trial against John Demjanjuk may be the last chance to present such an ogre to the German public. The fact that this monster is not a German himself but a Ukrainian may be a slight blemish, but even this aspect can be used to advantage: the abject character of the German Nazis was such that these people did not hesitate to make use of the most evil scum of other European nations for the realization of their own murderous aims!

The "Holocaust" Moloch must be fed – with the Ukrainians who faced the execution squads after the arch liar Alexander Aronovitch Pechersky "convicted" them through his testimony, with the former SS men Erich Bauer, Hubert Gomerski, and Karl Frenzel who withered behind bars for a total of 69 years; with Hermann Julius Höfle who was driven into suicide in a Vienna prison – or, which is much more likely, was simply liquidated; with Hermine Braunsteiner-Ryan who spent 17 years in jail for allegedly having selected Jewish children for the gas chambers at Majdanek, which, according to the findings of the Berlin court in 1950, never existed in the first place; with Gustav Wagner, who was knifed to death by a Jewish squad of killers after he had given him-

self up voluntarily to the Brazilian police; with 89-year-old John Demjanjuk who spent seven years in Israeli prisons and now finds himself again behind bars for freely invented crimes – the Moloch is insatiable.

His victims also include those who rise against the Big Lie. Wolfgang Fröhlich was sentenced in Austria to six years imprisonment, Gerd Honsik to five. In the "freest state in German history" Germar Rudolf spent 44 months behind bars, Ernst Zündel had been in prison since February of 2003, first in the U.S., then in Canada, finally in Germany. He was released on 1 March 2010. Sylvia Stolz, the revisionist lawyer, was sentenced to three years and three months imprisonment by the German Inquisition – nothing to write home about, really, if we compare this verdict to the term of 13 years brought down on the defense lawyer Horst Mahler in the same country.

In August of 2009 Horst Mahler's Polish wife Ełżbieta sent the following message to one of us (JG):

> *"I agree with you. I, too, admire my husband for his courage, but also for his generosity and his intelligence, which cannot be compared to that of anyone else I have met so far in my life. For myself and for my children who love him as they would their own father, his absence is a great loss. I do hope that he will not be kept in prison the whole time. That would come to thirteen years! That is a punishment fit for a murderer, but not for a man like my husband. I go to see Horst once a month; I cannot do it more often for lack of funds."*

The "Holocaust" rampart of lies cannot be brought down with one stroke. Its occupants are too strong. They control the governments, the judiciary, the media. Their financial means are virtually unlimited. All the revisionists can do is make dents in the walls of this rampart. If our book manages to make yet another breach, it has done its job.

13. Supplement

The archaeological excavations on the grounds of the former Sobibór Camp were far from complete when the present study was completed in 2010. It was not until the end of 2018 that the decision to finalize the archaeological research and convert the area into a museum complex appeared to have been made. Between spring 2011 and 2017, the responsible Polish and Israeli researchers repeatedly published summaries of their research results.[1098] The most-interesting of these is probably that of autumn 2014, in which the lead archeologists involved in the project reported that remains of the wall of the former gas-chamber building of the Sobibor Camp had been found. Here is what the Polish archaeologist Wojciech Mazurek, who was involved in the excavation, reported about it in autumn 2014 (English as in the original):[1099]

> *"During the September 2014 the excavation works in the area of the asphalt square with the stone tower and monument covered an area of about 10 ares. First, the square was cleaned from the sand layer, onto which a surface of cement slabs was built, covered with a layer of asphalt. Between the existing tower, symbolizing the location of the gas chambers, and the monument, numerous relicts of the first commemoration of the victims of Sobibor from 1965 were found. The tower and the monument at the current location were erected in the early 1980s. Between the tower and the monument, which was removed on 1 September 2014 but without the concrete base, a row of the square foundations of the crushed bricks bonded with cement mortar with dimensions of 60 x 60 cm was found, running from south to north at a distance of about 3 meters from one another, the last in the north at a distance of 4 m. In the area to the east of the monument, whose base has not yet been removed, the relics of the*

[1098] Once published online at http://sobibor.info.pl/?page_id=1248, but after the archeological research was wrapped up, this information page was removed; see Marek Bem, Wojciech Mazurek, *Sobibór: Archaeological Research Conducted on the Site of the Former German Extermination Centre in Sobibór 2000-2011*, Foundation for "Polish-German Reconciliation", Warsaw/Włodawa 2012.

[1099] Wojciech Mazurek, "Preliminary report from the pre-investment archeological excavation works at the former German-Nazi extermination camp in Sobibor conducted in the summer and autumn 2014," pp. 2f.; now at https://codoh.com/library/document/preliminary-report-from-the-pre-investment/.

> *brick foundations with a width of about 30 cm (two bricks longitudinally or one brick crosswise) were found. They form the outline of a set of 4 rooms with dimensions of 5 m on the east-west* [recte: north-south] *axis and 7 meters on the east-west axis. From the eastern side the rooms were closed with the semicircular formed foundation bench with a width of about 30 cm; a similar semicircle closes the room at the southern end. In the space of about 3 m, a row of pole holes (spaced at a distance of 2 to 3 m) is running. This is probably the area of the corridor separating two groups of rooms of alleged gas chambers, which is closed at the south with a wider* [smaller] *room measuring 5 x 3 m, where a petrol engine was probably located, whose exhaust fumes killed hundreds of thousands of people."*

A summary of previous research results written two years later describes the foundations of the brick foundations in somewhat more detail:[1100]

> *"In the area of the asphalt square the foundation outlines of 8 rooms used as the foundation for the older walls of the gas chambers. Three rooms on the south* [west of the "corridor"] *have dimensions of 4,00 x 5,30, the extreme northern room had the dimensions of 4,00 x 3,40 m. In the area east of the monument 4 outlines of brick foundations have been uncovered (dimensions: 5,05 m on the axis north-south and 6,80 m on the axis east-west). From the eastern side the rooms were closed with the semicircular formed foundation benches with a width of about 30 cm, similar semicircle closes the extreme southern room. Between the relics of western and eastern there was a space of about 3 meters* [wide]*, a row of pole holes (spaced at a distance of 2 to 3 m) is running North from this corridor adjusted a wider space with dimensions of 5,05 x 3,50 m, where probably a petrol engine was located, whose exhaust fumes killed hundreds of thousands people. From the south to the corridor separating older and younger gas chambers a room measuring approximately 3,00 x 1,00 m is adjacent. Probably it is a kind of staircase, through which Jews went on the way to the rooms where they waited for death."*

[1100] Teresa Mazurek, Wojciech Mazurek, Rafał Ratajczak, "The Results of the Pre-Investment Complementary Archeological Excavation Research Conducted on the Site of the Former Nazi-German Extermination Camp in Sobibór in the Autumn 2015," Chełm 2016, p. 29; now at https://codoh.com/library/document/the-results-of-the-pre-investment-complementary/. I reproduce the original English text, warts and all, including decimal commas instead of periods.

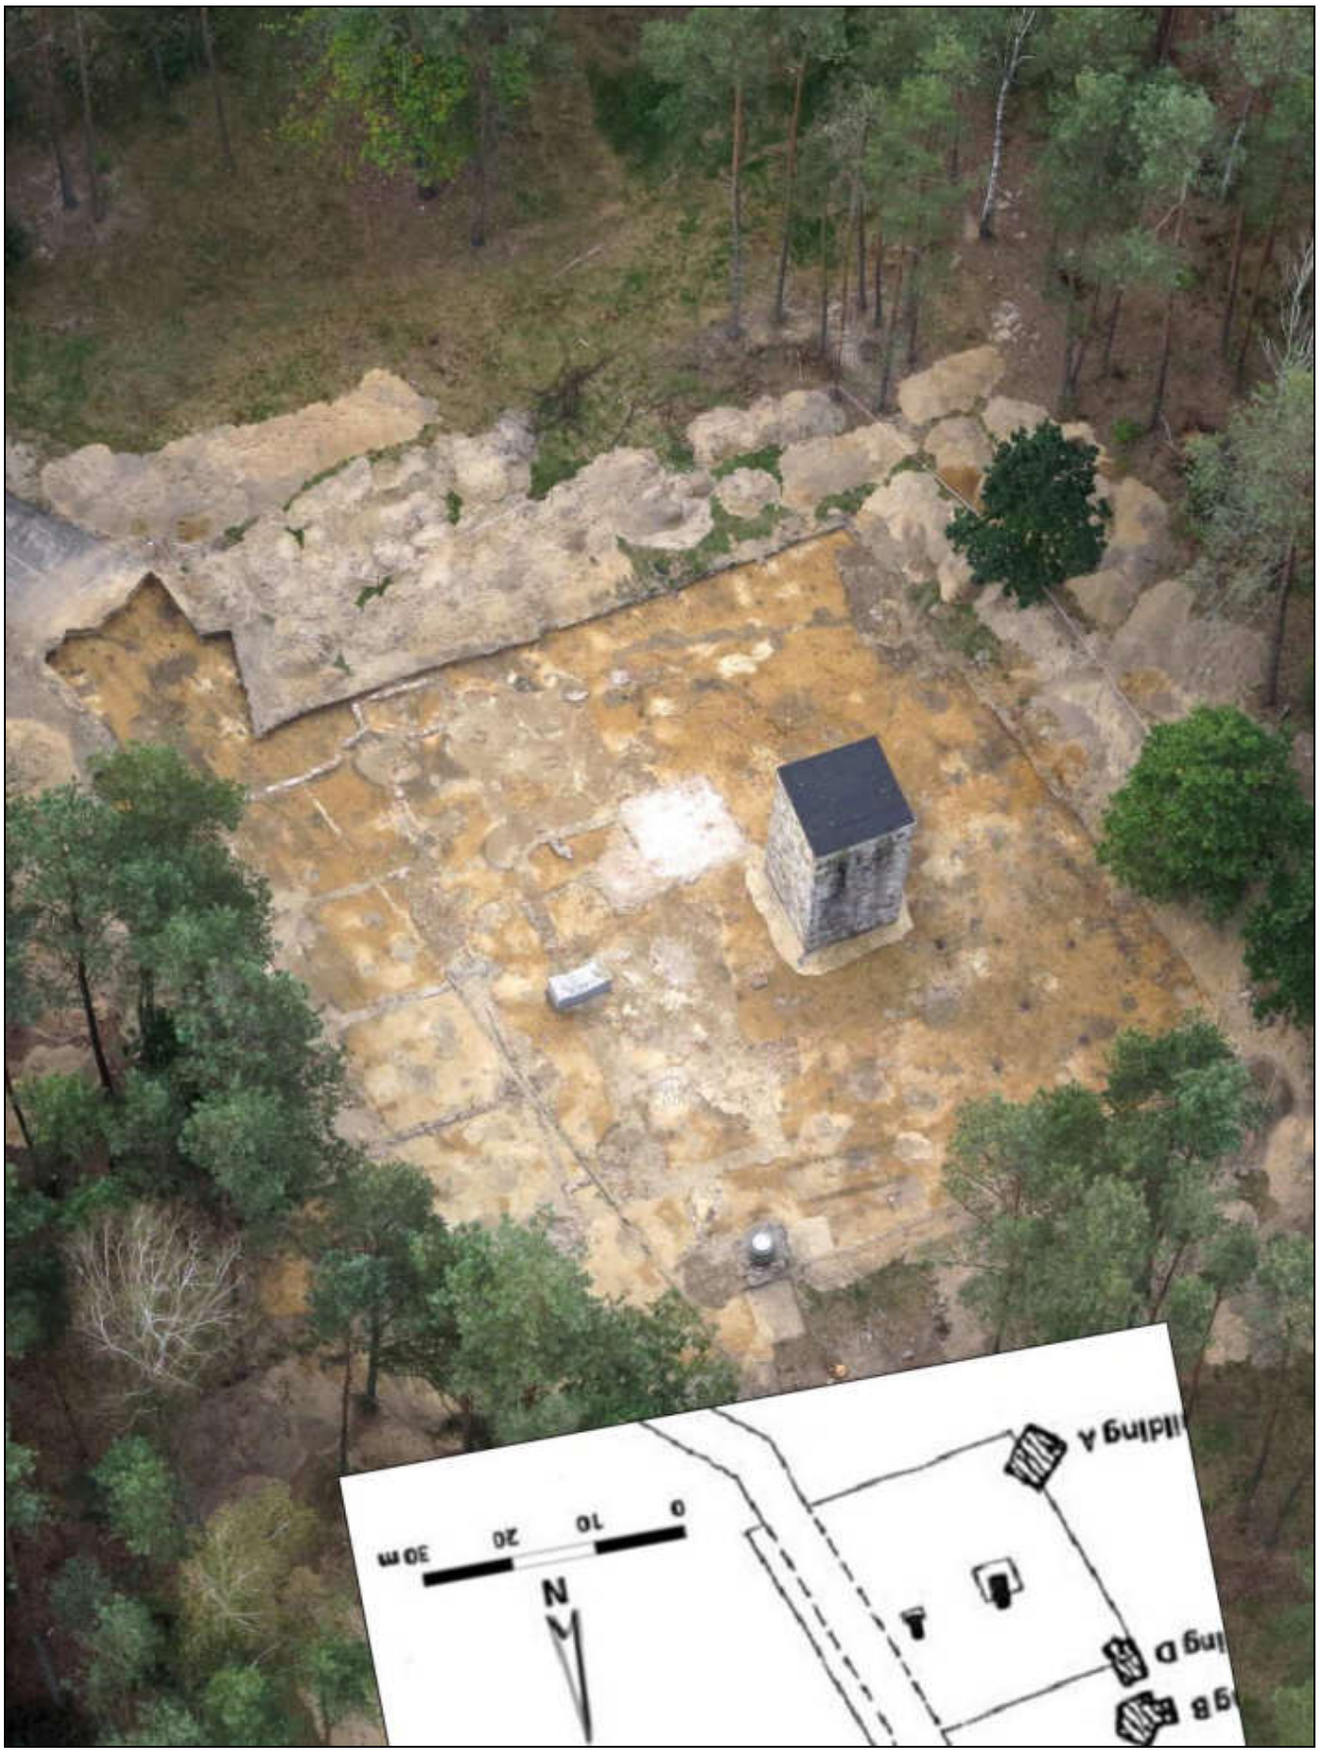

Illustration 1: *Aerial photo from 2014 of excavations around the old monument in the area of the former Sobibor Camp.*

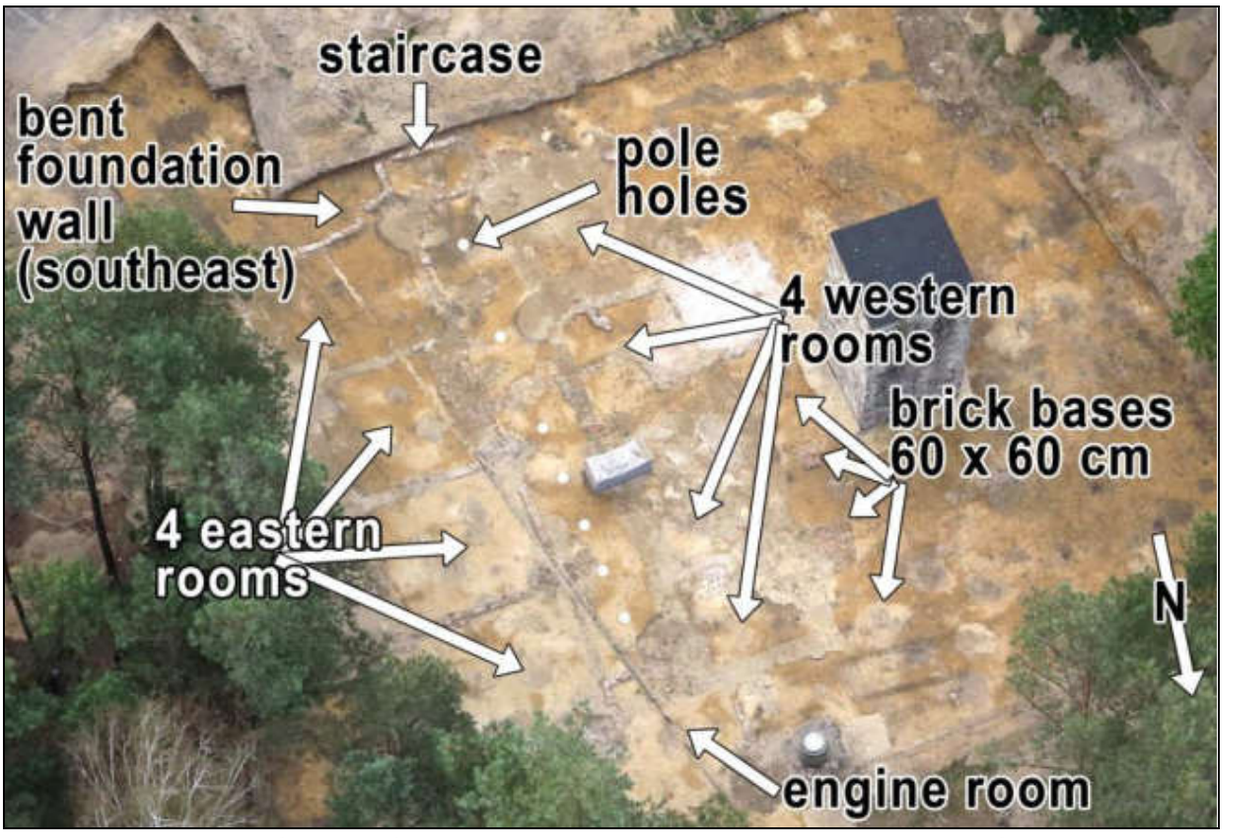

Illustration 2: *Section from Ill. 1 with added arrows and names of the objects mentioned in the quotations of the text.*

The article is accompanied by a high-resolution aerial photograph, of which I reproduce the relevant section in Illustration 1.

I inserted a section of the map reproduced as Document 2 in the Appendix (see p. 408). This shows where in the area of the former camp this site is located and how it is oriented. Illustration 2 shows with arrows and labels the objects mentioned in the quoted text.

The curved eastern foundations of the eastern rooms mentioned in both quotes are not recognizable in the aerial photo, but on some photos taken at n ground level they can be seen (Illustrations 3 and 4). However, what can be seen in Illustration 1 is the curved south-eastern foundation wall adjacent to the "staircase", on the top-left in Ill. 2.

If one assumes that these foundation walls actually belonged to the building that witnesses described as a gas-chamber building, we can surmise from the fact that the western rooms have different dimensions than the eastern rooms, that they were probably not constructed simultaneously or that they did not serve the same purpose. This would indicate that the western rooms are the "old gas chambers" that stood on a brick foundation. These chambers – or at least their foundations – were apparently not torn down later, but reused or continued to be used, and

that they were supplemented by four additional, somewhat larger chambers to the east.

The crucial question here is, of course, whether, and if so, how the archaeologists involved can possibly discern that the remnants of these walls are the remains of execution gas chambers? Apparently because witnesses said so, but many of these witnesses also claimed that, after the murder, the floors opened downward to dump the bodies, which is contradicted by the archaeological finds (see Subchapter 4.4. and Section 5.4.1. in the present book).

Illustration 3 & 4: *Ground-level photos of the remains of brick foundations of a building in the area of the former Sobibór Camp. Note the curved foundation wall in the foreground*

Mazurek's reports do not indicate whether he found any indications as to the purpose of this building. However, the curved eastern foundations of the eastern rooms should give orthodox historians a headache. Why would anyone equip rooms with such round walls, or at least wall foundations?

The long-standing excavations in Sobibór undisputedly revealed a number of graves. However, no attempt was made to excavate the areas that may have served as mass graves in order to determine exactly how large these graves were and what amounts of remains can be found in them. The reports made available to date give no data about the quantity, size and contents of the areas in which burned remains of corpses were found. It is therefore impossible to make an even approximate es-

timate as to the order of magnitude of the processes that would have had to be involved in order to produce these artifacts.

The reason for this lacuna may simply be that the excavations carried out were not intended to prove anything historically, but rather "were deemed necessary in order to reconstruct the map of the camp and also to integrate finds discovered in excavations into displays that will be part of the new center."[1101]

Accordingly, in 2017, they started to cover the area where human remains had been found with a massive layer of gray gravel followed by a layer of white marble gravel, see Illustration 5.[1102] After all, this project is ultimately about creating a sacred Memorial, not about clarifying historical details…

The Editor, May 6, 2018

Illustration 5: *View from the southwest of the area of the former Sobibór Camp where human remains were found. With wheelbarrows, white marble gravel is applied on top of a layer of gray gravel. In the foreground, one area was temporarily left free for the burial of human remains that might later be found in other areas.*

Foreword

By now, the study of the camps of "Operation Reinhardt" by Carlo Mattogno and his colleagues Jürgen Graf and Thomas Kues has a history of its own, which deserves to be explained before delving into the present study.

Strictly speaking, this history started in 1998, when the first German edition of Jürgen Graf's and Carlo Mattogno's monograph on the labor camp at Majdanek appeared, which was a trail-blazing study based primarily on a plethora of original German wartime documents never before systematically analyzed by any historian (Graf/Mattogno).

Although the Majdanek Camp is generally not considered one of the "Operation Reinhardt" Camps, it is nonetheless true that many original German wartime documents clearly indicate that this camp was deeply involved in the activities of the so-called Operation Reinhardt (as was the Auschwitz Camp).

In a narrower sense, only three camps are usually referred to as *the* Operation Reinhardt Camps: Treblinka, Sobibór and Bełżec. All three are said to have served exclusively for the purpose of mass-murdering Jews. They were pure extermination camps, or so the orthodoxy claims.

After several years of research and writing, Carlo Mattogno and Jürgen Graf submitted their text for a book on the first of these camps, Treblinka, to this editor in early June 2002. The book appeared a little more than two months later in German, and in January 2004 also in an English translation (Mattogno/Graf).

When Carlo Mattogno was done writing this book, he turned his attention to another of the three Operation Reinhardt Camps: Bełżec. Since much less primary source material exists about this camp, and because many observations about Treblinka also apply to Bełżec, Mattogno initially only planned to publish a lengthy journal article on that camp, which would have referred to his study on Treblinka many times. However, the project became too lengthy for a mere article after all, so it ended up being a proper, albeit slender book, which refers frequently to the Treblinka book in order to avoid repeating many things the author had already written before. He submitted the Italian typescript of this work in January of 2004. This time, our translator for the English edition was faster than the translator for the German edition, so the English edition already appeared in June of 2004, while the German edition only came out six months later in December (see Mattogno 2016).

During the next several years, Mattogno focused his razor-sharp mind on writing several studies on the Auschwitz Camp. When the focus returned to the Operation Reinhardt Camps in order to tackle the last of the three – Sobibór –

Mattogno was joined by Jürgen Graf and Swedish researcher Thomas Kues. Since there were many more primary sources available on that camp, and also because new insights had been gained in general about all matters concerning the "Final Solution to the Jewish Question" as pursued by the Third Reich in general and Operation Reinhardt in particular, we decided to bring all the issues involved up to the current state of knowledge, which meant repeating many of the things already written in the 2002 Treblinka monograph, but then integrating all the new findings into that framework. Handling three authors using three different languages turned out to be a challenge. Eventually, the English edition appeared in May of 2010, followed by the German edition in December of that same year (Graf/Kues/Mattogno).

All three studies of these camps, written more-or-less-independently from each other, had not been planned originally to be parts of a whole, let alone a series, so they inevitably contain duplications. Yet they all ended up as entries to our prestigious series *Holocaust Handbooks* (Vols. 8, 9 and 19).

The three studies eventually became the focus of a major attempt at refutation by mainstream scholars, which in turn triggered a massive response by Mattogno, Kues and Graf with their 1,400-page-work on *The "Extermination Camps" of "Aktion Reinhardt"* – clearly an overkill for most readers, in particular since that two-volume work does not develop its own self-contained story line, but for the most part is a point-by-point response and rebuttal of the attempted mainstream refutation (Mattogno/Kues/Graf). Fully comprehending that rebuttal requires first or concurrently reading the 700-plus-page mainstream "refutation", which is yet another challenge for the reader. Yet still, considering that this massive tome is an astounding demonstration of the full-spectrum dominance of revisionism over its opponents with regard to knowledge and mastery of the source material, that it is a sort of handbook featuring detailed answers to many objections against Holocaust revisionism, and because it contains major updates and upgrades to all three monographs on the Operation Reinhardt Camps, we decided to integrate it into the series *Holocaust Handbooks* anyway (as Vol. 28), albeit with some disquietude.

One advantage of this massive two-volume tome was that it reported about ongoing archeological digging on the grounds of the former Sobibór Camp. However, the book project was wrapped up in 2013, while the research at Sobibór was still going on. In fact, it reached its pinnacle (or climax, if you will), only in 2014 with the (re-)discovery of bricks in the soil alleged to be the remnants of the claimed "gas chambers." The researchers involved in the Sobibór digs kept reporting about their results until 2017, when the project was finally concluded. For Mattogno, this meant that more research needed to be discussed, and more revisions to be made. Would his new book comprise 2,500 pages this time?

Well, the good news is, no. Instead of revising the initial three monographs, which was deemed too much of a challenge, as a revision would mean that they all three had to be closely realigned, and instead of revising the two-vol-

ume-1,400-page doorstop, which has not exactly been any reader's favorite judging by sales figures, Mattogno decided to write a new book which would discuss the current, updated state of knowledge about all three camps, reduced down to the very essentials. This book with its systematically built, self-contained story line, which you are holding in your hands, is now the new Volume 28 of the *Holocaust Handbooks*. The former Volume 28 will be reissued as a slightly revised stand-alone work sometime in the future.

This raises the question: what exactly *is* essential about those three camps? First of all, a general discussion of the "Final Solution to the Jewish Question" in general and Operation Reinhardt in particular is not included in this book. This has been covered *ad nauseam* in the books on Treblinka, on Sobibór and in the two-volume doorstop. Furthermore, the present study has its focus only on witness testimony recorded during the war and in the immediate post-war era for two reasons. First, this is when the myth was created, and this is where its true origin can be found. And second, the nature of the human memory dictates that recollections older than several years are simply too unreliable, and when it comes to events that are highly publicized, and where there are strong expectations by the general public as to what has to be remembered – at times even at gunpoint – witness testimony tends to get increasingly contaminated by second-hand "knowledge" as time goes on.

Hence, in the first part of this study – in particular in the chapter about Sobibór and even more-so in the one focusing on Treblinka – the reader will find numerous early witness testimonies about the claimed extermination activities of the Reinhardt Camps, many of which have not been quoted, let alone discussed, in earlier revisionist works on this topic.

The second part of this book brings us all up to speed with the various archeological efforts made by mainstream scholars in their attempt to figure out what exactly happened at those camps – or rather, their attempt to prove that the myth based on wartime and post-war testimonies is true.

The third part compares the findings of the second part with what we ought to expect, and reveals the chasm that exists between archeologically proven facts and mythological requirements.

Some of what the reader will encounter in this book has already been said in one of the earlier four books on these camps. In fact, when I translated the present book from the Italian, I sometimes copied considerable parts from one of the three individual camp monographs, in particular when it comes to witness testimonies, because some of them have been quoted before. We tried to keep repetitions like this to a minimum, but since we all want to read the present book as a self-contained unit without having to constantly grab another book in order to understand, laying out the basics was a must.

I think the present book is a more-accessible replacement for the two-volume doorstop as Volume 28 of our series *Holocaust Handbooks*, and also one that we can easily update in the future, should the need arise.

I hope you can enjoy the read at least as much as I enjoyed the translating and editing of it.

Germar Rudolf
Red Lion, June 17, 2021

Introduction

The study of the sources dating back to the period of the Second World War shows unequivocally that the history of the alleged National-Socialist extermination camps, especially regarding the killing system that is said to have been used in them, developed over the years from evidently unfounded rumors through various intermediate stages to the "historical" version currently considered "true," and legally enforced as such in twenty or more countries.

When it comes to the genesis of the regnant historical account about the "gas chambers" purportedly located at the alleged "Operation Reinhardt" extermination camps – Bełżec, Sobibór and Treblinka –, the same literary process occurred as I have described regarding the creation of the officially authorized account about the alleged "gas chambers" of Auschwitz (see Mattogno 2021). The preconditions are identical, and so is the starting point. This is explicitly recognized by orthodox Holocaust historiography, which nevertheless stubbornly insists on attributing probative value to these fables.

Pierre Vidal-Naquet wrote that "[i]n the flow of information coming from the occupied territories were to be found the true, the less-true, and the false." This less-true and false information consisted of inaccuracies of all kinds as well as of fantasies and myths which, however, "did not exist in isolation, like some creation suo generis or 'rumor,' a hoax hatched by a specific milieu, such as the New York Zionists. They existed as the shadow projected by—or prolonging—reality" (Vidal-Naquet, pp. 83f.).

In the specific case, this presupposes that there was actually a well-defined "reality" – here the extermination of Jews in the aforementioned camps perpetrated in gas chambers using exhaust gas of a motor – that could cast "fantasies and myths" like shadows.

But it is a fact that this alleged reality, due to the total lack of documents and material traces, is exclusively based on testimonies, that is to say, precisely on pieces of literature. In practice, therefore, this "reality" consists of nothing other than the choices made by the courts and historians from among the various propaganda versions that circulated during the war. Hence, the judges and the historians decided that the extermination must have occurred in the aforementioned manner rather than by any other means claimed by the wartime sources, for example, by electrocution, steam chambers or chlorine chambers. And this did not happen because it was ascertained after the war on the basis of any kind of irrefutable evidence that this one version had been the reality, and

all the other claims were only "shadows," precisely because such evidence did not exist. There were no orders to establish extermination camps, original plans of the camps, documents on their construction, administration or operation, aerial photographs taken during their activity, and so on – nothing.

And here the fundamental problem arises: how did the "fantasies and myths" arise? At this point, only two answers seem possible. Either these fantasies and myths were inventions of the Jewish and Polish black propaganda, and for this reason already, they could not, in principle, reflect any kind of "reality", even if deformed. Or they came from "eyewitnesses", but if that was so, how is it possible that these testimonies had been twisted into delusional tales?

The problem is even more serious, because each of these (rejected) "fantasies and myths" had their own claimed "eyewitnesses", meaning direct witnesses of the actual crime – rather than just indirect witnesses. Hence, rejecting the electrocution, steam-chamber, and chlorine-gas-chamber narratives characterizes the corresponding "eyewitnesses" to these myths as premeditated liars – and this not only from the revisionist perspective, but also from that of today's orthodox Holocaust narrative.

From this it follows that the usual subdivision between direct witnesses, indirect witnesses and perpetrators is a schematic simplification that may be useful for categorizing the various statements, but it absolutely cannot solve the underlying problem.

For eyewitnesses, the conflict mentioned earlier remains intact. Indirect witnesses, since they have not witnessed the crime itself but only some aspects which they "interpreted", at best could have seen and/or heard mere external aspects from a distance, for example the arrival of transports, mass graves, the stench of corpses, the smoke of fires, etc. But what specifically would turn these camps into extermination camps is not the mere presence of these elements, but their order of magnitude, and no indirect witness, a mere temporary observer from a distance, could establish that these elements concerned hundreds of thousands rather than only hundreds, thousands or even tens of thousands of dead people.

The claimed perpetrators, meaning the SS men and their auxiliaries working at the Reinhardt Camps, testified, if at all, only at a point in time when the literary reality created by courts and historians had already been declared a "self-evident fact" that could no longer be challenged in court. Hence, the fact that many of these alleged perpetrators confirmed this "reality" with their statements ex post facto does not make this "reality" less literary in nature.

Considering the flood of claims that have been circulated since 1942, the elements that happen to end up conforming to the eventually agreed-upon version – the killing by gas, with more-or-less-fanciful add-ons – must therefore not be considered as partial truths that were somehow percolated out of the camps. In fact, the claims that eventually "stuck" were nothing but stereotypes which had been lavishly and indiscriminately attributed to anything in sight.

For example, A "toxic gas" was even invoked with regard to the alleged "extermination camp" of Trawniki!

In the reports under discussion, the Polish term "gaz" is extremely generic, somewhat as in English. The gas was also frequently correlated with "cylinders" and "tanks", and we must not forget that even "vapor chambers" were called "gas chambers."[1] Commonly used in the plural, the term did not reveal anything about the nature of the gas –the killing gases alleged also included chlorine, "chloride," ether, and Zyklon B.

It is easily explained where the idea of asphyxiating gases came from. The First World War saw extensive deployment of aggressive chemical weapons on all fronts by all belligerents. Between 1914 and 1918, 250,000 tons were manufactured. 1,000,000 soldiers were affected by this, 78,000 of whom died (Izzo, p. 7). In the summer of 1917, on a front of 10 kilometers between Neuilly and the left bank of the Meuse, more than 400,000 gas projectiles were launched, thousands more in August and October 1917 at Verdun, and in December 1917 along the Russian front (*ibid*., p. 31). In 1918, the German artillery depots contained 50% gas shells. In the first major offensive of 1918, 200,000 mustard-gas shells were fired by the Germans on a single day (*ibid*., p. 32).

Unlike the Germans, the French used hydrogen cyanide on the battlefield in the form of Vincennite, a mixture of 50% hydrogen cyanide, 30% arsenic trichloride, 15% tin tetrachloride and 5% chloroform, of which they prepared about 4,000 tons (*ibid*., p. 66).

In Germany, research for chemical warfare was conducted by the *Kaiser-Wilhelm-Institut für physikalische Chemie und Elektrochemie* (Kaiser-Wilhelm Institute for Physical Chemistry and Electrochemistry), directed by Prof. Fritz Haber, in whose field of research of "combat gases" (*Gaskampfmittel*) the chemist Bruno Tesch worked from October 1915, who later became the owner of the Hamburg Tesch & Stabenow Company (Kalthoff/Werner, p. 11).

British black propaganda famously exploited this theme as well. In 1916, *The Daily Telegraph* published an article headlined "Atrocities in Serbia," allegedly transmitted by its Rome correspondent, which reported that two Italian prisoners of war had escaped from Austria through Serbia and had taken refuge in Romania. They had reported that the Austrians and Bulgarians had killed 700,000 people, claiming that women, children and old men had been locked up in churches and had been stabbed to death with bayonets or "suffocated by means of asphyxiating gas," and in this way 3,000 people had also been murdered in a church in Belgrade. "Serbian refugees," the article continues, "not on oath, have stated that they were present at a distribution of bombs and machines for producing asphyxiating gas to the Bulgarians by the Germans and Austrians, who instructed the former how to utilize these instruments to exter-

[1] See Subchapter 3.4. For example, in the "Tremblinki" report, published in 1944 by Rabbi Abraham Silberschein, the "steam chambers" were called "gassing installation," and the water vapor was called "gas."

minate the Serbian population. The Bulgarians used this method in Nish, Pirot, Prizrend and Negotin, the inhabitants of which places died of suffocation. Similar means were employed by the Austrians in several parts of Montenegro."

After the end of the war, although the Geneva Gas Protocol of 1925 forbade the use of aggressive chemicals in warfare, they continued to be studied – especially from a tactical point of view – in all the countries that had been involved in the conflict, giving rise to instructions and government manuals[2] as well as to a rich technical literature summarizing the studies and experiences made during the war.[3]

By the beginning of World War II, all belligerents had entire arsenals of chemical weapons.

On April 20, 1942, the British War Cabinet received a detailed report dated April 13 from the Secretary of State for Dominion Affairs on possible future chemical warfare that was feared, with a precise description of the British chemical arsenal, including 95,000 phosgene-loaded bombs. The report drew attention to the fact that:

> *"the Russian may be tempted to accuse the Germans of having used gas against them, without their having done so, in order to bring our counter-measures into play. We shall have no check whether the story is true or false."*[4]

Such a situation arose when the Polish propaganda explicitly accused the Germans of having used war gases against Russian PoWs, which had happened already half a year earlier, on October 24, 1941, when the Information and Propaganda Office of the *Armia Krajowa* (National Army) of the Polish Government-in-Exile received the following message ("Obóz…", p. 11):

> *"At Oświęcim* [Auschwitz], *in early October, 850 Soviet officers and noncoms (POWs) who had been taken there were killed by gas as a test of a new type of combat gas, which is to be used on the eastern front* [*jako próbe być użyty na froncie wschodnim*]*."*

As is well-known, subsequently Jews were identified as the primary victims of the use of poison gas.

In several other studies, I have already outlined the storylines invented and spread by the Polish-Jewish black propaganda since 1942 for all three camps of Operation Reinhardt.[5] Ever since these studies were published, I have acquired a considerable number of additional documents. Since this is a fundamental subject, I deemed it appropriate to devote a specific in-depth study to

---

2 Already in 1937, the British government published the 100-page manual *Air Raid Precautions Handbook No. 1*.

3 In addition to the already cited Izzo, see the works by Sartori, Prentiss as well as Flury/Zernik. Prof. Flury was a researcher at the *Kaiser-Wilhelm-Institut*, and together with Dr. Albrecht Hase he had invented Zyklon A.

how these propaganda stories emerged and developed, which constitutes Part One of the present study.

Jürgen Graf, Thomas Kues and I have already dealt with archaeological research and material evidence about these three camps in greater depth in another study (Mattogno/Kues/Graf). However, when this study was published, archaeological investigations at Sobibór and Treblinka were still in progress. Some of their results have been made accessible since then. Together with the additional documents acquired in the meantime, this not only allows me to come to a final conclusion on the matter, but also to revise previous tentative conclusions regarding mass graves and cremations. These issues constitute the subject matter of Parts Two and Three of this study.

Part One:

Black Propaganda

The Literary Genesis of the "Extermination Camps"

1. Bełżec

1.1. The Impossible Ignorance of "Reality"

The case of the alleged Bełżec Extermination Camp illustrates in an emblematic way the instrumental and mendacious character of the propaganda stories created and spread by Polish-Jewish black propaganda that I outlined in the Introduction. In this camp, everything took place in the light of day, so that the legendary narratives I will expound in this chapter cannot constitute a "shadow projected by—or prolonging—reality" at all.

Michael Tregenza, one of the foremost experts on the history of Bełżec, noted (Tregenza, pp. 241f.):

> *"Whereas Sobibór and Treblinka lay hidden and isolated and were removed from public view, this extermination camp lay right next to the heavily traveled rail and road links between Lublin and Lemberg, directly next to the village of Bełżec. Fences and watchtowers were clearly visible to the traffic passing through, as well as to the villagers. Thus, it is not surprising that both the camp and what happened inside were known to the local population from the beginning. After all, a group of workers was charged with the construction, which included the first gas chambers."*

This camp was in fact adjacent to a major road (today's State Road 17) and to the railway line connecting Lublin to Rava Russkaja and continuing on to Lviv, which the Germans call Lemberg and the Poles Lwów. Since the camp was located on the side of a small hill, and the allegedly homicidal gas chambers of the second phase, as well as the mass graves, are said to have been located in the upper part, the 3-meter-high fence, even if pine and fir branches were woven into it as claimed by some,[6] would not have prevented anyone from observing all the phases of the alleged extermination from a certain distance. Therefore, the "terrible secret" of Bełżec would have been on full display from the outset.

During the camp's period of existence, passenger trains continued to pass through Bełżec Station, and some testimonies come from their passengers. The bulletin *Oneg Szabat* of July 18, 1942 contains the following statement (Bańkowska/Epsztein, p. 255):

---

6 Interrogation of S. Kozak dated October 14, 1945. Libionka, p. 147.

> *"Eyewitnesses* [*naoczni świadkowie*] *say that, when passing by train through Bełżec Station, conductors ordered the windows of the cars to be closed for six minutes to prevent the stench of the rotting corpses of murdered Jews from fouling the air in the cars."*

A collection of notes dated August 31, 1942 with the general headline "Observations on the 'resettlement['] of the Jews in the General Government" ("*Beobachtung über die 'Umsiedlung*['] *der Juden in General-Gouvernement*") is attributed to a certain Wilhelm Cornides. However, the original typescript lacks any indication of the author.[7] It was published by Hans Rothfels only in 1959, claiming without evidence that Cornides was the author (Rothfels 1959).

According to one of the short notes, the author was at the Rawa-Ruska [Rava Russkaja] railway station on August 31, 1942, where a train had stopped. He learned from a policeman that such trains had been transiting for three weeks.[8]

> *"I asked: 'How far will they still go?' He then: 'To Belcec.' 'And then?' 'Poison.' I asked: 'Gas?' He shrugged. Then he also said: 'In the beginning, I think they have always shot them.'"*

Then the scene shifts to a passenger train which the author had boarded at Rawa-Ruska:[9]

> *"We drove past the Belcec Camp. Before that, we drove through a forest of tall pine trees for a longer period of time. When the woman called out 'now it's coming', all you could see was a high hedge of pine trees. A strong, sweet smell was clearly noticeable. 'They are stinking already,' said the woman. 'Oh nonsense, that's the gas,' laughed the railway policeman. In the meantime – we had driven about 200 meters – the sweet smell had turned into a pungent smell of burning. 'This is from the crematorium,' said the policeman. Shortly afterwards, the fence ended. A guardhouse with SS posts in front of it could be seen. A double railroad track led into the camp. One track was a branch from the main line, the other led via a turntable out of the camp to a row of sheds about 250 meters away. A freight car was currently parked on the turntable. Several Jews were busy turning the turntable. SS guards, rifle under their arms, stood next to it. One of the sheds was open; one could clearly see that it was filled to the ceiling with bundles of clothes. As we drove on, I looked back at the camp. The fence was too high to see anything. The woman said that sometimes smoke could be seen coming out of the camp when driving by, but I could not see anything like that. My estimate is that the camp measures about 800 by 400 meters."*

Another source claimed the following for as late as April 1943:

---

7 YVA, O.33-1784.
8 *Ibid.*, p. 1.
9 *Ibid.*, p. 2.

> *"Travelers on the railway line Zawada-Rawa Ruska close the windows, for this awful stench penetrates into the compartments and causes the people to vomit."* (Silberschein 1944b, p. 21; see the next subchapter)

Regarding Bełżec's "terrible secret," M. Tregenza, who also interviewed the local population, is even more explicit (Tregenza, pp. 246f):

> *"From the very beginning, every single villager knew what was going on in the camp. This resulted from the fraternization between the camp staff and the Ukrainian village population, many of whom entertained members of the SS and 'Trawniki men' in their homes and were well paid for their 'hospitality'. This apparently included prostitution as well. Some young women – according to statements by local people – were said to have done so with the 'Trawniki men' for jewelry and other valuables. Furthermore, prostitutes from other towns came to Bełżec. In the files of the Polish People's Police there are indications concerning a number of villagers who served in various departments of the camp SS. In particular, three sisters of the J. family worked in the SS staff kitchen and in the SS laundry which belonged to the B. family. The village bakery, owned by the Ukrainian N. family, provided the daily supply of several hundred loaves of bread for the SS staff, the 'Trawniki men,' and the thousand or so Jews working in the camp. A number of villagers took the bread by farm cart to the camp gate. One of them was the Jew Mojzesz Hellman, who lived clandestinely in Bełżec under the name of Ligowski. The wages consisted of valuables and cognac.*
>
> *Four men were employed within the camp proper, among them Dmitri N., who checked and repaired the showers and baths of the 'Trawniki men.' Mieczyslaw K. and Waclaw O. worked as mechanics in the garage of the SS or as electricians. The electrician Michał K. installed cables and lighting in the second gas building, the so-called 'Stiftung Hackenholt'* [Hackenholt Foundation] *and is said to have occasionally assisted in the gassings. To the knowledge of the author, this is the only case of a Pole directly* [involved] *– voluntarily and with pay – in the mass murder of Jews in an extermination camp. It is also worth mentioning that the villagers Eustachy U. and Wojciech I. were not only allowed to own cameras but were even allowed, nay, encouraged, to take pictures of the guards of the extermination camp. Some of the photographs were even taken within the camp. The SS men and the 'Trawniki men' would also take pictures of one another and give the films to Wojciech I. for development and printing."*

Tregenza adds that the 20 men who were allegedly forced by the SS to build the first gas chamber at Bełżec – were in fact paid voluntary employees (*ibid.*, pp. 247f.)

> *"These workers were not forced to build the camp, rather, they were recommended by the village administration and were well paid."*

To this image we can add what Patrick Desbois wrote in 2007 (Desbois, p. 45):

> *"In Bełżec I meet the baker who brought bread to the camp staff, the bricklayer who built the gas chambers, and the daughter of the town's mayor. Her father*

> *had been chosen by the commandant of the death camp to temporarily run the municipality. Decisions were made in the presence of the camp commandant. One time he had to provide barbed wire, another time he had to provide workers, yet another time he had to provide horses. When the SS stables were bombed, the camp commandant ordered the mayor to gather forty horses in the central square of the town. A German vet inspected them and chose the best eighteen. Each of the owners was given a receipt. I met the son of one of these farmers. As time passed, his father began to worry, so eventually he decided to go to the camp in order to retrieve the requisitioned horse. He told of having seen threshing machines in operation inside. The Nazis used them to sift through the ashes and find tooth gold."*

These circumstances show, on the one hand, that everyone in Bełżec knew everything, so that the legends put into circulation already in early April 1942 had no reason to exist except, precisely, as propaganda legends. On the other hand, they demonstrate that the SS in Bełżec had no "terrible secret" to hide, and most certainly did not feel at all involved in anything even remotely similar to such a monstrous crime as mass extermination, because they allowed Polish civilians and peasants access to the camp and even allowed themselves to be photographed by them!

1.2. Extermination by Electricity

In the stream of information on the Bełżec Camp which emerged during the Second World War, the alleged system of murder later to be embraced by the official historians – gas chambers using the exhaust gas from a Diesel engine – does not appear at all. Instead, we find all manner of methods, not only diverse in nature, but in part quite fantastic. The only specific reference to a killing with gas – and a very unusual one to boot – is found in a note published under the title "A policeman tells a tale in the town-hall basement of Cholm on September 1, 1942", which is one of the stories attributed to W. Cornides:[10]

> *"When asked how the Jews were being killed, the policeman replied: 'They are told that they have to be deloused, and then they have to take off their clothes, and then they come into a room where a heat wave is first let in, and there is already a small dose of the gas in it. That is enough for anesthesia. The rest follows then afterwards. And then they are burned straight away.'"*

The first news about Bełżec spread as early as April 8, 1942, hence a few weeks after the camp had opened. Zygmunt Klukowski noted in his diary on this date:[11]

---

10 *Ibid.*, p. 3.

11 Klukowski, p. 254, entry for April 8, 1942. Extracts from Klukowski's diary were published three years earlier with the title "Niedola i zagłada Żydów w Szczebrzeszynie" ("The Misfortune and Extermination of the Jews in Szczebrzeszyn"), where the quoted passage can be found on p. 223.

> *"Among the Jews terrible desperation. We now know that every day there is a train arriving at Bełżec from Lublin and one from Lvov, each with twenty cars. The Jews must get off, are taken behind a barbed-wire fence and murdered by an electric current* [*prądem elektrycznym*] *or poisoned with gas* [*gazami*]*, and then the corpses are burnt* [*zwłoki palą*]*."*

A report of the *Delegatura* (the clandestine representation in Poland of the Polish Government-in-Exile in London), which I translate in full, also dates from April 1942 (Caban/Mańkowski, pp. 34f.):

> *"Bełżec Camp. As far as the Jews are concerned, terror has been imposed for many weeks. Cases of beatings and shootings of Jews are the order of the day. Among them is observed the fear of being taken to Bełżec Camp. The camp was completely finished a few days before March 17, 1942. From that day on, the transportation of Jews by trains from Lwów and Warsaw began. On the first day, five transports arrived, and then they came from one of the two areas. One transport entered Bełżec Station below the camp.*[12] *After an unloading of half an hour, the train comes back empty. The train crew is German and* [there is] *only one Pole, the fireman,* [who] *gets off at the station before entering the siding. The observations of the population (the camp is within visual and auditory range of the inhabitants of the railway buildings) all lead to one conclusion, that the Jews are killed en masse at the camp. The following facts support this:*
> *1) 52 transports arrived at the camp between March 17 and April 13 (one transport* [has] *18-35 freight cars* [with] *an average of 1,500 people).*
> *2) No Jews are brought out of the camp – neither during the day nor at night.*
> *3) No provisions are delivered to the camp (bread and other foodstuffs were provided for the Jews who previously worked on the construction* [of the camp]*).*
> *4) Lime is brought to the camp.*
> *5) Transports arrived at the camp at every hour. Prior to the arrival of a transport, no Jews are observed at the camp.*
> *6) Approximately 2 railway cars of clothing are taken from the camp after each transport, which are deposited in the railroad warehouses (clothing is looted by the Selbstschutz* [self-protection: Ukrainians on duty at the camp].
> *7) In the camp area, Jews were seen in underwear.*
> *8) There are 3 barracks in the camp area, in which not even a tenth of the Jews is accommodated.*
> *9) On the hottest days, one can smell a strong stench in the camp area.*
> *10) For vodka, which the Selbstschutzes drink in large quantities, they pay any amount requested, often with watches and precious objects.*
> *11)* […] *It is not known by which kind of death the Jews perish in the camp. There are three hypotheses: 1) with electricity* [*elektrycznością*]*, 2) with gases* [*gazami,* plural]*, 3) with rarefied air* [vacuum] *with the help of a suction pump. Regarding 1) – lack of an efficient source of electricity, regarding 2) – neither the delivery of gases* [*gazów,* plural] *was observed, nor the action of gas resi-*

12 Meaning the camp was located on a hill above the station.

> *dues* [*gazu*, singular] *after ventilation, regarding 3) – this hypothesis has no elements that can refute it. Instead, there is confirmation that the walls and floor of one of the barracks were covered with thick sheet metal during their construction (apparently on purpose).*
> *In the camp area large excavations were carried out in the fall. At that time, it was assumed that there would be underground warehouses. Today the purpose of these works was explained. From the airtight barracks into which the undressed Jews are forced, presumably for disinfection, a narrow-gauge railroad track leads to these excavations. It was seen that the Jews carried their 'disinfected' co-religionists to a mass grave on this track.*
> *In Bełżec, the term 'Totenlager'* [camp of the dead] *was heard in regard to the Jewish camp. The camp is run by 12 SS (kom*[mandant] *hauptmann* [captain] *Wirth), who have 40 Selbstschutz as aides."*

I will not dwell on this hearsay description,[13] but point out that the report's resistance authors would have done better to ask for first-hand information from the inhabitants of Bełżec who had access to the camp and allegedly even built the claimed "gas chambers" for pay! This confirms precisely that, from these sources, they knew or could have known everything from the very beginning, but instead they intentionally put out a grim story of black propaganda. The aforementioned hearsay description itself is the result of such propaganda, because the story of the trains entering the Bełżec Camp full of people but always leaving the camp empty, even at night – which implies a very improbable system of careful surveillance by the civilian population, with lookouts watching the camp around the clock – was the prerequisite for creating the story of an "extermination camp," but then there was still the crucial issue of the killing system, which was "solved" not with any demonstrable facts but with a lot of imagination.

In June 1942, Emanuel Ringelblum, Hersz Wasser and Eliahu Gutkowski prepared a report for the *Oneg Szabat* underground archives of the Warsaw Ghetto titled "The Purgatory of Polish Jews under the Nazi Occupation," where we read:[14]

> *"From mid-March 1942 to the present day, the extermination of the Jews of the Lublin District of Bełżec continues, where, according to the information provided, they kill by means of electricity* [*przy pomocy prądu elektrycznego*] *and then cremate in installed furnaces* [*w zainstalowanych piecach*]*."*

On July 10, 1942, the Polish Government-in-Exile in London received the following report:[15]

---

13 For a discussion of these kinds of claims I refer the reader to Mattogno 2016 and Mattogno/Kues/Graf.

14 "Gehenna Żydów polskich pod okupacją hitlerowską," in: Bańkowska/Epsztein, p. 326.

15 *Meldunek nadzwyczajny z miejsca tracenia w Bełżcu z 10.VII.42r.* SPP, Jcha 15, poz. 81. The report was later included as "Annex 3" in a long report (Sprawozdanie Nr. 6/42) written in London on December 23, 1942 by the Minister of the Interior, St. Mikołajczyk, of the Polish Government-in-Exile. HILA, Stanford University, Box 3, pp. 63f.

> *"According to information from a German who is employed there, the place of execution is located in Bełżec, near the railway station, and is fenced off with barbed-wire fences. Inside and outside the barbed-wire fences, the Ukrainian guard detail stands sentinel. The execution takes place in the following manner: The train of Jews, after arriving at Bełżec Station, approaches on a siding the wire fences surrounding the place of execution, where the train personnel get replaced. From the fences* [onward], *the train is driven by German engineers to the unloading point, where the tracks end. After being unloaded, the men go to a barracks on the right, the women to a barracks located on the left, where they undress, purportedly for a bath. After undressing, both groups enter the third barracks, with an electric plate* [*z płytą elektryczną*], *where the execution takes place. Then the corpses are taken by rail to the pit, about 30 meters deep, which is located outside the fences. This pit was dug by Jews, all of whom were executed. The Ukrainian guard personnel serving there must be killed after the end of the operation. The Ukrainians on guard duty are overloaded with stolen coins and jewelry: they pay 400 złoty for a liter of vodka, and 2,000 złoty and also jewelry for having an affair with a woman."*

On July 25, Wehrmacht Captain Wilm Hosenfeld described in his diary the Jewish-Polish black-propaganda tales circulating at the time (Roth, p. 228):

> *"This week already 30000 Jews are to be led out of the ghetto, somewhere to the east. What will be done with them is already known, despite all secrecy. Somewhere, not far from Lublin, there are buildings with electrically heated rooms, which are heated by high-voltage current, similar to a crematorium. The unfortunate people are herded into these heating chambers and then burned alive. Thousands can be killed this way in one day."*

These fables later developed into a wide range of mutually contradictory fantasies.

In a report compiled after August 22, 1942 and titled "The Liquidation of the Jews in Warsaw" we read that in Bełżec

> *"within a month (March-April 1942) 80,000 people were killed with electricity."* (Tyszkowa, p. 53)

On November 15, 1942, Dr. Ignacy Schwarzbart, a member of the National Council of the Polish Republic, made a statement in which he paraphrased the July 10 report (Apenszlak *et al*., p. 131):

> *"The methods applied in this mass extermination are, apart from* [individual] *executions, firing squads, electrocution and lethal-gas chambers. An electrocution station is installed at Belzec Camp. Transports of settlers arrive at a siding, on the spot where the execution is to take place. The camp is policed by Ukrainians. The victims are ordered to strip naked ostensibly to have a bath and are then led to a barracks with a metal plate for floor. The door is then locked, electric current passes through the victims and their death is almost instantaneous. The bodies are loaded on the wagons and taken to a mass grave some distance from the camp."*

The July 10, 1942 report reappeared on December 1 in an English-language Polish magazine under the title "Extraordinary Report from the Jew-Extermination Camp at Bełżec."[16]

Dr. Schwarzbart's statement was picked up ten days later by the Jewish Telegraphic Agency's *Daily News Bulletin* in an article titled "250000 Warsaw Jews led to mass execution: electrocuting introduced as new method of mass killing of Jews."

On December 5, 1942, Schwarzbart sent a telegram to the Jewish Congress in New York stating:[17]

> *"Special official envoy gentile escaped and arrived here left capital this October saw Warsaw ghetto on last August and September witnessed mass murder of one transport six thousand Jews at Belzec spoke to him yesterday 3 hours confirm all most horrible mass atrocities still living all remnants of Jews facing death."*

This envoy was Jan Karski, whom I discuss at length in Subchapter 1.3.

On December 20, 1942, *The New York Times* published an article headlined "Allies Describe Outrages on Jews" on the alleged extermination of the Jews in German-occupied Poland in which we read, among other things:

> *"Actual data concerning the fate of the deportees is not at hand, but the news is available – irrefutable news – that places of execution have been organized at Chelm and Belzec where those who survive shootings are murdered en masse by means of electrocution and lethal gas."*

In 1944, the story of the electrocution installation at Bełżec was embellished with new and fantastic details. On February 12, the *New York Times* wrote once more about the camp, publishing a more-detailed report headlined "Nazi Execution Mill Reported in Poland: Fugitive Tells of Mass Killings in Electrically Charged Vats":

> *"Stockholm, Sweden. Feb. 11 (AP). A young Polish Jew who escaped from a mass execution in Poland with the aid of false identification papers repeated today a story that the Germans operated an 'execution factory' in old Russian fortifications in eastern Poland.*
>
> *The Jews were forced naked onto a metal platform operated as a hydraulic elevator which lowered them into a huge vat filled with water up the victims' necks, he said. They were electrocuted by current through the water. The elevator then lifted the bodies to a crematorium above, the youth said.*
>
> *The youth said he personally had seen trainloads of Jews leave Rawna Luska* [Rawa Ruska] *in eastern Poland in the morning for the crematorium at near-by Beljec* [Bełżec] *and return empty in the evening. He was told the rest of the story, he said, by individuals who escaped after actually being taken inside the factory. The fortifications, he added, were built by the Russians after they had occupied eastern Poland."*

---

16 *Polish Fortnightly Review*, December 1, 1942, p. 4.

17 TNA, FO 371-30924, p. 29.

In 1944, Dr. Abraham Silberschein, a member of the Polish parliament and delegate of the World Jewish Congress, published a series of mimeographed brochures titled *Die Judenausrottung in Polen* (*The Extermination of Jews in Poland*), in which he included even more-horrifying propaganda stories. From these, I shall present two reports on Bełżec Camp in their entirety. The first one has the title "*Die Hölle von Belzec*" ("The Bełżec Hell"; Silberschein 1944b, pp. 21f.):

> *"Jews deported to Belzec were ordered to undress, as if they were going to take a bath. They were, indeed, taken to a bathing establishment able to contain several hundreds of people. However, they were executed en masse by means of an electric current. A boy who managed to escape from such an establishment told me what happened after the electrocution: The fat from the corpses was drained in order to – make soap from it.*
>
> *The remnants of the corpses were then thrown into anti-tank ditches which had been laid out along the Russian border by the arch-henchman Major Dollf. Burial of the slaughtered had to be done by the strongest of the Jews, selected from among the doomed. It often happened that these people had to bury their own relatives. Not much later, these Jews, too, who had been assigned the task of burying their dead brethren – a task which they did against their will and by being forced – were killed in the same way. The Jews buried at Belzec came mainly from Lublin, Lemberg* [Lvov]*, and other towns in Eastern Galicia. Some 300,000 Jews were interred there.*
>
> *Far too many corpses having been thrown into these mass graves, it was impossible to cover them with a sufficiently thick layer of earth. This caused a stench of rotting flesh to spread over the whole area. This smell is still perceptible (i.e., in April, at the time of writing of this eyewitness report). Travelers on the railway line Zawada-Rawa Ruska close the windows, for this awful stench penetrates into the compartments and causes the people to vomit. I myself had to travel along this line on several occasions and have thus been able to convince myself of this state of affairs. As late as April 10, 1943, I passed through there one last time. The Christian population of Belzec has left this place for the sole reason of this stench.*
>
> *The men of the Gestapo and the Ukrainians who commit these murders have magnificently enriched themselves by taking the gold and the jewelry which some Jews had sewn into their clothes. Those butchers had so much money that they were able to pay 20 gold dollars to the farmers for a bottle of vodka."*

The second report published by A. Silberschein was called "*Hinrichtungs- und Vernichtungslager Belzec*" ("Execution and Extermination Camp Bełżec") and mentioned an undefined "electric furnace" as the means of execution (Silberschein 1944a, pp. 41-44):

> *"<u>The Victims.</u>*
>
> *Starting in 1942, so-called actions took place in all Polish cities and towns. Based on a well-defined plan, they were repeated at almost regular intervals and became the horror of the Jewish population. In general, such actions con-*

sisted of a number of local Jews being rounded up and deported. The number was often specified in advance, and the local Jewish council was compelled to provide this number. Special commando units were organized for this purpose. They traveled from one town to the next to carry out their hounding of the Jews. The Jews caught in this way were normally taken to the Belzec extermination camp. Without exception, this was the fate of all Jews caught in Eastern Galicia.
Belzec is a little town, formerly a border crossing between Galicia and Poland, situated on the railway line from Lemberg [Lvov] *to Lublin. The camp that existed here was a most extraordinary one. While all other camps were officially designated as prison camps, concentration camps, or work camps, this camp was a pure extermination camp. Jews were sent there for this purpose only. It would not be wrong to say that all Jews from Galicia, certainly all who came from Eastern Galicia, died there with the exception of the few who were able to save themselves. However, not only were transports of Polish Jews from Galicia taken there, Belzec was also the destination for many convoys of foreign Jews, in particular Jews from Holland and from Germany.*

Installations.
Belzec and its surroundings have become a fortress of the Inquisition as never before seen in the history of mankind.
Special buildings for gassing experiments were built here, special factories for the production of soap and shoe polish from Jewish fat, hospitals were built for the purpose of a prior withdrawing of blood transfusions of Jewish children [sic]. *Special types of equipment for hanging were devised. Even soldiers of the Wehrmacht would not believe it, but still, those installations were observed by reliable eyewitnesses.*

Murder Procedure.
Not a single one of all the hundreds of thousands brought to Belzec ever managed to escape. We are, therefore, unable to know the details of what was going on inside the camp.
According to a German employed there, the camp is protected by a barbed-wire fence and is situated in the immediate vicinity of the station. Within the barbed wire, Ukrainians are on guard duty.
The executions take place as follows: On arrival, the train with the Jews is taken to a siding right next to the wire fence. Then the crew is changed. After unloading, the men are directed to the right, the women into the barracks on the left. They were ordered to undress and to prepare for an end. They then must enter a third barracks, which contains an electric oven. The executions take place in this barracks. After that, the corpses are taken by train to a ditch beyond the barbed-wire fence. The ditch has a depth of some 30 meters. It was dug by Jews.
Travelers and tourists who have passed through Belzec have confirmed that the fields all around have become mass graves. At every step one notices traces of lime and gore. The fields are strewn with skeletons in various stages of decom-

position. The air reeks with a pestilential stench. Therefore, the farmers in the area have fled from their villages. The town itself is deserted and ghost-like. There is only the occasional SS policeman loitering about, yawning.
On the basis of the number of Jews caught during the actions, who were all taken – as previously mentioned – to Belzec, it can be assumed that no fewer than six hundred thousand Jews from Galicia died as martyrs there. Adding the other transports, one can safely say that the number is much higher still, perhaps twice as high."

The paragraph relating the method of execution appears nearly word-for-word in another book, also published in 1944. However, instead of the term "furnace" ("*Ofen*") we have here "stove" ("*Herd*"; *Soll ich*…, p. 56):

"Then they move on into a third barracks with an electric stove where the execution takes place."

In a book published in Stockholm in 1944 and translated into English and German a year later, Stefan Szende gives the following account of Bełżec camp:[18]

"Belzec was a little place to the north of Rawa-Ruska, just on the 1939 Russo-German frontier. Immediately this frontier line had been agreed on, the Russians had begun to erect fortifications on a big scale. When the German troops crossed the frontier in June, 1941, the fortifications were still incomplete.
It was from these half-finished Russian fortifications that the Nazis made their slaughter-house in which millions of Jews were exterminated.
To exterminate 5 million people is an enormous task, and even in our age of technical perfection it needs a lot of preparing and organizing, and there are many problems to be faced by those planning to carry it out. Tens of thousands, even hundreds of thousands, of Jews had been taken to 'Pjaski.' Further tens of thousands, even hundreds of thousands had died as a result of ill-treatment, starvation and disease. But there were still millions left and they all had to be killed in accordance with the orders of the Fuehrer.
Even the effective killing of bed-bugs or lice on a large scale demands a certain technique. However, no one can doubt that the Germans are a highly talented people in all technical matters. Amongst them there were highly efficient engineers of death. These men were given their instructions by the Gestapo, and they set to work to solve the technical problems to which the mass slaughter of millions of defenseless men, women and children gives rise. They solved the problem. They solved it brilliantly. Their Fuehrer, Adolf Hitler, and Himmler, the head of the Gestapo, must be well satisfied with them and their work.
Months of planning and building operations were necessary, but the Germans are a patient people and the objective was worth the time spent on achieving it. The extermination of millions of Jews with the very latest modern technical means -what an enticing aim! Hundreds of thousands of labor hours were expended. Tens of thousands of tons of valuable materials were used in the pro-

[18] Szende 1944, pp. 263-265; 1945, pp. 290-292; Szende/Folkmann, pp. 159-161.

cess. But at last, in the spring of 1942, the scientific slaughter-house at Belzec was ready.

The mass-killing installation at Belzec occupies an area almost five miles across. This area is surrounded by barbed wire and every other modern device for keeping prisoners in and others out. No one is permitted to come near the place except properly authorized persons or those who will never leave the place alive. But despite all these precautions there were one or two people who saw the inside of Belzec and nevertheless succeeded in escaping. Despair and desperation make a man ingenious.

Specially chosen S.S. men guard the Belzec killing plant. They are men without nerves. There is much to do in a slaughterhouse and it gives sadists great pleasure to compel their victims, to do as much of it as possible. For instance, the clothes and the belongings of the millions of victims had to be collected and sorted out. For this purpose, the S.S. chose certain Jews out of each transport that arrived. These Jews were not spared, of course. It was merely that their execution was postponed. Two such Jews actually succeeded in making their escape. They escaped into the Ghetto which still existed in Rawa-Ruska at the time. In Rawa-Ruska they reported the details of the technically perfected slaughter going on in Belzec.

As far as I know, no Jew ever succeeded in escaping from Belzec and reaching neutral or Allied territory. The two Jews who made their escape from Belzec to Rawa-Ruska in the summer of 1942 were probably killed subsequently when the Ghetto there was liquidated, but a number of people who heard the evidence of these two fugitives from Belzec did escape. The following description of the Belzec slaughterhouse comes from them.

The trains coming into Belzec loaded with Jews were driven into a tunnel in the underground premises of the execution building. There the Jews were unloaded and ordered to divest themselves of all their things. In 1942 Jews arriving at Belzec came dressed and carrying all sorts of belongings with them. Fully loaded trains from Germany, Austria, Czechoslovakia, Belgium, Holland, France and the Balkan States arrived in Belzec, and they were all treated in the same way. These Jews were told to take all their things with them, as they were going to be 'settled' in the East. Thus, tens of thousands of Jews arrived, bringing all sorts of property with them, typewriters, sewing machines, crockery, silver and so on.

Everything was taken away from them. The goods seized in this way were carefully sorted out, listed and ticketed and subsequently used for the benefit of the master race. It was to spare the staff at Belzec this tremendous task, which, of course, hindered them in their real job, that later on all Jews were sent to Belzec naked.

When trainloads of naked Jews arrived, they were herded into a great hall capable of holding several thousand people. This hall had no windows and its flooring was of metal. Once the Jews were all inside, the floor of this hall sank like a lift into a great tank of water which lay below it until the Jews were up to

their waists in water. Then a powerful electric current was sent into the metal flooring and within a few seconds all the Jews, thousands at a time, were dead.
The metal flooring then rose again and the water drained away. The corpses of the slaughtered Jews were now heaped all over the floor. A different current was then switched on and the metal flooring rapidly became red hot, so that the corpses were incinerated as in a crematorium and only ash was left.
The floor was then tipped up and the ashes slid out into prepared receptacles. The smoke of the process was carried away by great factory chimneys.
That was the whole procedure. As soon as it was completed, it could start up again. New batches of Jews were constantly being driven into the tunnels. The individual trains brought between 3,000 and 5,000 Jews at a time, and there were days on which the Belzec line saw between twenty and thirty such trains arrive.
Modern industrial and engineering technique in Nazi hands triumphed over all difficulties. The problem of how to slaughter millions of people rapidly and effectively was solved.
The underground slaughter-house spread a terrible stench around the neighborhood, and sometimes whole districts were covered with the foul-smelling smoke from the burning human bodies."

A variant of the underground extermination was published in the infamous *Black Book* of the well-known Soviet propaganda writers Ilya Ehrenburg and Vasily Grossman, compiled in 1945 and 1946. A certain corporal (*Obergefreiter*) Erik Heubaum, a German prisoner of war, is said to have declared in a statement, about which no particulars are given, not even a date (Ehrenburg/ Grossman, p. 542):

"In addition, I saw peaceful residents exterminated with gas. I would drive telephone operators to a small station located twenty kilometers from the city of Rava Russkaya. An underground barracks had been built at this station in the woods. Once when I was at the station a group of Jews was brought in. The traincars were closed and the people, with their hands stretched out the windows, pleaded for some water, but no one was allowed to go near them. In the evening these people were herded into the woods. All the strangers were forced into the station. The woods were surrounded by S.D. units.
There these people, regardless of sex and age, men and women, the elderly and the children, were stripped naked and herded into the underground barracks. Three quarters of an hour later men from another group were sent in there to carry out the corpses. Then the next group was herded into the barracks… This is the way three hundred people were exterminated every evening.
I saw this go on for eight days. That people were being gassed there I learned from an SS man, Carl Horst from Saxony. He took part in it. The executions were supervised by Sturmbannführer (SS Major) Herbst, from the city of Breslau."

But even the story of the descending or collapsible floor took on further variations. The files of the Soviet commission of inquiry for the Sokal Territory,

dated October 7, 1944, contain the statement of a certain Rozalja Schelewna Schier:[19]

> *"My husband, who was working at Bełżec Station at the time, told me the following:*
> *At Bełżec Station two transports consisting of fifty to sixty cars arrive every day. Each car holds 100-120 persons. The train is taken to a siding in the forest, about one kilometer away. There a movable shed has been placed on the rails. It is marked 'Baths for Jews.' The people who have arrived are ordered to undress and enter the baths; they are promised work afterwards. When the bath house is completely full with 100-120 people, gas and high-voltage electric current are fed into it. Within 5 minutes, all the people in the bath house were dead. Inside the shed, the floor folds automatically, and the corpses fall into a previously dug trench where the victims are doused with a flammable liquid and burnt."*

A year later, the extraordinary collapsible floor at Bełżec has changed again. On October 16, 1945, the witness Jan Głąb declared to the investigative judge of Zamość:[20]

> *"The naked Jews were urged into an alleged bath, i.e., the gas chamber, where they were killed with gas* [*gazem*]*. The killing lasted about 15 minutes. It is difficult to determine what the Jews were asphyxiated with in the gas chamber. At the time when the Jews were urged into the gas chamber, a large engine of 250 HP was running in the camp area. It was said that the Jews were killed with combustion gases. It is not true that the Jews were killed with electricity in the extermination camp. The voltage of the current was too weak for the mass killing of people. During the period of operation of the death camp, the blacks* [Soviet PoWs] *manufactured 48 pairs of special hinges in my railway workshop and bent a large number of narrow-gauge railway rails on the turntable. From this I gather that the hinges were used for the floor of the gas chamber, which, after the killing of the Jews, was opened and the corpses fell down, from where they were taken to mass graves in wagons."*

In 1945, Dr. Jérome Guérin, a former French PoW, reported on an encounter he had had three years before in the ghetto of Rawa Ruska with a member of the German Security Police during a round-up of Jews (Guérin, p. 148):

> *"He then pulled out a map and pointed to the name of a village: Belsetz* [sic]*. The means of extermination: electrocution. Women, old people, and children were taken on foot, naked, into a hall with metal plates in the floor. When a certain number of people had been assembled, a high-voltage current passed through the plates. The name of Belsetz was confirmed on two occasions by other Germans but none of those we approached was able to confirm that he had personally witnessed such executions. Others held that the executions took*

20 Minutes of the interrogation of J. Głąb on October 16, 1945. Libionka, p. 175.

place in gas chambers, but here, too, the exact place could not be ascertained."

In 1945, Stefan Tadeusz Norwind wrote (Norwind, pp. 102f.):

"Major corpse factories existed at Belzec, at Sobibor, at Majdanek, and also, it is said, at Palmyry in the region of Warsaw. […]
The factories had two types of installations. Some of them were electrical, i.e., naked people were pushed onto a steel plate and then killed by a high-voltage current (this took place e.g. at Belzec). Others consisted of hermetically sealed gas chambers where, again, naked people were killed by means of steam or gas (this took place at Tremblinka [sic]*)."*

The story of extermination by means of electricity also appears, with other fanciful details, in the above-mentioned *Black Book* (Ehrenburg/Grossman, p. 117):

"Belzec was a terrible extermination spot for the Jews, and the Germans kept it top secret. The railroad personnel who worked on the trains carrying the doomed victims, however, told their friends and relatives of how the Jews were being massacred in Belzec.
Jews were led into an enormous hall which held up to one thousand persons. The floors and walls of the hall were electrically wired and without insulation. As soon as the hall was filled with naked people, the Germans switched on a strong electrical current. This was an enormous electric chair[21] *– something that no criminal imagination could ever have invented."*

The electrocution story even appears in the "Chronicle of Auschwitz by an unknown author," which was allegedly unearthed in that camp in 1953 ("Kronika oświęcimska…," p. 307):

"Sadism in the years 1940-1941.
In Bełżec, near the Soviet border, there was a camp that surpassed Auschwitz in sadism. For example, every day Jews were taken and forced to dig a deep, narrow pit, then they were thrown into it one at a time. Then each prisoner was forced to relieve himself inside the pit, on the victim's head. Those who refused received 25 strokes. In this way, the prisoners' needs were performed on him throughout the day until he was finally suffocated by the stench.
The Soviet sentry, on the other hand, begged the Jews to take advantage of every possible moment to cross the border into the Russian zone. Whoever took advantage of a moment of the SS's inattention succeeded: in fact, when the SS realized it, they could no longer shoot, because the bullet would have ended up on the other side of the border. Therefore, the SS used to lurk next to the fences and shoot the hand or the protruding foot of those who crawled, at which point the Soviet sentry would protest again. But the SS would shout, 'The hand or leg is still on our territory!'
At that time, the job was to dig a long, deep, continuous trench as a border line. Later, when the Germans had penetrated deeply into Russia, eight large

21 This fable was also repeated about Treblinka; see Subchapter 3.3.

> *barracks were built in the forest, in which they installed tables and benches; there, the Jews from Lublin, Lvov and other districts were crammed in together and electrocuted* [*elektryzowano*]*."*

1.3. From Electrocution to the "Trains of Death": Jan Karski's Impostures

Another story about Bełżec, widely circulated during the Second World War, concerned the "trains of death." It was most successfully disseminated by Jan Karski (his real name was Kozielewski), a courier with the Polish government in exile in London, who reworked with powerful imagination the rumors circulating at that time about quicklime or chlorinated lime sprinkled on the floor of deportation cars, another popular propaganda theme. Walter Laqueur writes that

> *"Karski lived underground in Warsaw in 1941-2, engaged in 'black propaganda' among German soldiers, printing and distributing leaflets in German."* (Laqueur, p. 230)

In fact, the story told by Karski is a rather crude form of "black propaganda." It was the final product of a literary development which can readily be sourced in the surviving documents. The first version of this story, dating back to November 1942 – of which Karski was the bearer (but also the accomplice), as I shall make clear below – did mention the death trains, but only as an instrument of torture taking the Jews from the Warsaw Ghetto "to special camps at Treblinka, Bełżec and Sobibor," where they would be killed. With respect to the camp at Bełżec, Karski not only did not yet pretend to have visited it but ascribed to it the method of extermination in vogue at the time – electrocution. However, by December 1942, Karski had invented the story of his phantom visit – disguised as a Polish policeman – to a "sorting camp" fifty kilometers from Bełżec, rehashing 'the trains of death' motif, the trains having now become a means of extermination in themselves, although he was still assigning to Bełżec the processes of murder by poison gas and electric current. In the final elaboration of his story, Karski transformed the "sorting camp" into the camp at Bełżec, which he now pretended to have visited disguised as an Estonian guard!

Karski arrived in London illegally on November 25, 1942, and for this reason he was detained and interrogated at the Royal Patriotic School until November 28, when he was released due to the intervention of the Polish Government-in-Exile. This had a long diplomatic aftermath.[22] On November 26, the day of his arrest, Richard Law, British Under Secretary of State for Foreign Affairs, wrote in a file memo that on that morning two British Jews, Mr. [Syd-

[22] The pertinent documentation can be found in: TNA, FO 371-32231.

ney] Silverman and Mr. [Alexander] Easterman, had asked him for an audience to talk "about the extermination of Jews in Europe," and the latter had handed him a document "which was handed to him last night by a member of the Polish Government,"[23] no doubt Karski, who had evidently met with them before his arrest.

The report in question was a two-page typescript titled "News is reaching the Polish Government in London about the liquidation of the Jewish ghetto in Warsaw," the full text of which I quote:[24]

> *"The persecution of the Jews in Poland, which has been in progress from the very first day of the German occupation, has taken on extremely acute forms since March 1942, when Himmler ordered the extermination of 50% of the Jewish population in the Government General, to be carried out by end of 1942.*
>
> *Though the German assassins had started this work with extraordinary gusto, the results apparently did not satisfy Himmler for during his visit to the General Gouvernement in July 1942 he ordered new decrees personally, aiming at the total destruction of Polish Jewry.*
>
> *The persecution in Warsaw started on 21st July 1942, when German police cars suddenly drove into the ghettos. The soldiers immediately started rushing into houses, shooting the inhabitants at sight, without any explanation. The first victims belonged mostly to the educated classes. On that day almost all the members of the Jewish Municipal Council were arrested and held as hostages.*
>
> *On 22nd July 1942 the Jewish Council was ordered to proclaim the decree of the German authorities dealing with the re-settlement of all the Warsaw Jews, regardless of sex or age, in the eastern part of Poland, with the sole exception of persons working in German factories or members of the Jewish militia. The daily quota of people to be re-settled was fixed at 6,000 and members of the Jewish Municipal Council were ordered to carry out the order under pain of death.*
>
> *By the next day, however, on 23nd July, the German police again appeared in the Jewish Municipal Council and demanded to see the chairman, Mr. Czerniakow. After the police had left, Czerniakow committed suicide. From a note left for his wife, it became clear that he had received orders to deliver 10,000 people the next day and 7,000 daily on the following days, in spite of the fact that the quota had been fixed originally at 6,000. The victims to be delivered to the Germans are either dragged out of their homes or seized in the streets. As the zeal of the Jewish police to perform these duties against their own people was slight and did not give a guarantee of efficiency, the Germans have mobilised temporary security battalions for the man-hunts, consisting of Ukrainians, Latvians, and Lithuanians. These battalions, under the command of SS men, are characterised by their utter ruthlessness, cruelty and inhumanity.*

24 TNA, FO, 371/30923, pp. 74f. (original typed text) and 76-79 (two transcripts).

The Jews, when caught, are driven to a square. Old people and cripples are then singled out, taken to the cemetery and there shot. The remaining people are loaded into goods trucks, at the rate of 150 people to a truck with space for 40. The floor of the truck is covered with a thick layer of lime and chlorine sprinkled with water. The doors of the trucks are locked. Sometimes the train starts immediately on being loaded, sometimes it remains on a siding for a day, two days or even longer. The people are packed so tightly that those who die of suffocation remain in the crowd side by side with the still living and with those slowly dying from the fumes of lime and chlorine, from lack of air, water and food. Wherever the trains arrive half the people are dead. Those surviving are sent to special camps at Treblinka, Belzec and Sobibor. Once there, the so-called 'settlers' are mass murdered.

Only young and relatively strong people are left alive, for they are valuable slave labour for the Germans. However, the percentage of these is extremely small, for out of a total of about 250,000 're-settled' only 4,000 have been sent to auxiliary work on the battlefronts.

Neither children nor babies are spared. The orphans from asylums and day-nurseries are evacuated as well. The director of the biggest Jewish orphanage in Warsaw and well known writer Janusz Korczak, whom the Germans had given permission to remain in the ghetto, preferred to follow his charges to death.

Thus under the guise of re-settlement in the east, a mass murder of the Jewish population is taking place. Started on 22nd July 1942, it has been in progress ever since. By the end of September 1942 250,000 Jews had been eliminated. The extent of this action is best characterised by a few figures: In the Warsaw ghetto there lived, according the official German statistics of March 1942, about 433,000 people. In spite of the extremely high mortality caused by bad hygienic conditions, epidemics, starvation, executions etc., the number of Jews in the ghetto remained more or less stable, for to replace the dead, Jews from other parts of Europe, Germany, Austria, Holland, were sent to Warsaw. According to information leaking from the Arbeitsamt [Labor Office], *only 40,000 people are to remain in the Warsaw ghetto, only highly skilled workers, to be employed in German war industry. The most convincing proof of the dwindling numbers in the ghetto lies in the fact that for September 1942 120,000 ration cards were printed. For October the number issued was only 40,000.*

Simultaneously with the extermination of Jews in the Warsaw ghetto, ghettos in the provinces, at Falenica, Rembertow, Nowy Dwor, Kaluszyn and Minsk Mazowiecki are being liquidated. In the district of Wilno only one Jewish community has remained, in the city itself, numbering only 12,000 people. According to news which reached London some time ago the Germans have murdered 60,000 Jews in Wilno, 14,000 in Kowno and 50% of the Jewish population of Lwow; similar news reaches us from cities in S. Eastern Poland, such as Stanislawo, Tarnopol, Stryj.

The methods applied in this mass extermination are, apart from executions by firing squads, electrocution and lethal gas-chambers.

> *An electrocution station is installed at Belzec camp. Transports of 'settlers' arrive at a siding, on the spot where the execution is to take place. The camp is policed by Ukrainians. The victims are ordered to strip naked, – to have a bath, ostensibly – and are then led to a barracks with a metal plate for floor. The door is then locked, electric current passes through the victims and their death is almost instantaneous. The bodies are loaded on the waggons and taken to a mass grave some distance from the camp.*
>
> *A large digging machine has been installed recently at Treblinka. It works ceaselessly digging ditches – mass graves for Jews who are to meet their death there. The Ukrainian guards, witnesses of the mass murders, are allowed to keep the money and jewellery robbed from the victims. These bestial murders sometimes take place in the presence of the local non-Jewish population, who are helpless and overcome with horror at the sight of such inhuman violence. What the Poles' reactions to these unspeakable crimes are, is best proved by a pamphlet by the 'Front for the Liberation of Poland', containing a strongly worded protest against the terrible extermination of the Jews. According to the pamphlet, the total number of Jews murdered in Poland since September 1939 exceeds one million."*

The text of the report on Bełżec is identical to the one by Ignacy Schwarzbart mentioned above, which, however, dates from November 15, 1942, and therefore precedes it by ten days.

Another portion, the section dealing with the transports of the Jews, appeared with some modifications and with the inevitable reference to the electrocutions in the report of the Polish Government-in-Exile at London of December 10, 1942:[25]

> *"The floor* [*sic*] *of the trucks were covered with quicklime and chlorine. As far as is known, the trains were dispatched to three localities, Tremblinka* [sic]*, Belzec and Sobibor, to what the reports describe as 'extermination camps.' The very method of transport was deliberately calculated to cause the largest possible number of casualties among the condemned Jews. It is reported that on arrival in camp the survivors were stripped naked and killed by various means, including poison gas and electrocution."*

This shows that Jan Karski's "mission" was in fact a "black-propaganda" operation carried out in grand style and orchestrated from London. Sure enough, the story of the trains of death, attributed to a "courier who reached London in December 1942," surfaced in London that December (Apenszlak *et al*., pp. 135-138).

In March of 1943, the periodical *Voice of the Unconquered* published the report in question under the title "Eye-Witness Report of a Secret Courier Fresh from Poland." It also referred to a courier who "reached London at the beginning of December, 1942" ("Eye-Witness Report…," p. 5). This courier, just like the other one, had brought back "a personal eye-witness account"

---

(*ibid.*), which was published in that periodical. The part on Bełżec is set forth below, with subtitles added by the periodical's editors (*ibid*., p. 8):

"Roads Paved With Dead

I want to return to the question of 'deportations': I saw in Warsaw the first part of this act and later on the outskirts of Belzec the second and last part. From Warsaw the Jews are driven to the tracks on the outskirts of the city where a long train of cattle cars is already waiting for them. Before they reach the tracks, however, many are shot for one reason or another. Particularly those who lag behind. The whole route is literally strewn with corpses. When they finally reach their destination they are robbed of all their possessions (officially the deportees are urged to take along their most valuable possessions). Then they are loaded in cars, a hundred people in a car, and the first lap of the journey which lasts from two to eight days begins. Not once during the journey are the doors of the cars opened with the result that many die before they reach the 'sorting point' (Obóz Rozdzielczy) which is located about fifty kilometers from the city of Belzec. Nevertheless the first stage of this journey is mild, almost human, in comparison with what awaits them at the second stage.

Belzec the Slaughter House

In the uniform of a Polish policeman I visited the sorting point near Belzec. It is a huge barracks only about half of which is covered with a roof. When I was there about 5,000 men and women were in the camp. However, every few hours new transports of Jews, men and women, young and old, would arrive for the last journey towards death.

It is humanly impossible to convey the impression that these 5,000 people made upon me: they are no longer in the image of men. Skeletons with eyes dead with resignation. Naked, frightened, they are in constant motion with convulsive, nervous movements. A child is lying with his face towards the roof. It is in the last agony of death. But no one pays any attention to it. I spot amidst this indistinguishable mass an old man completely nude. He was probably stripped of his rags. No one looks at him. He makes no impression upon the people that surround him. The guards keep on shooting at the throng. Corpses are scattered everywhere. Men, in their convulsive moving about, step over them. They hardly notice the dead. Every few minutes the guards pick a number of men to clear the dead which are piled up alongside the fence. This, too, is done without any emotion, without a single expression, in their faces as though they are completely oblivious of what they are doing. These are no longer normal beings but one large convulsive mass breathing its last.

The people are kept in this camp for several days. By the time they start on the last leg of their death-journey most of them have had nothing to eat for days since they are not given any food and have to subsist on whatever they manage to bring along with them.

The second and the most gruesome stage of their journey commences. Accompanied by the lashing of whips and the shooting of guns the 'deportees' are suddenly, without any warning, beginning to be driven to the railroad tracks which are several dozen meters from the camp. A wild stampede of human be-

ings begins. In the meantime, the Germans have made all the preparations to intensify their torture.

The route from the camp to the tracks is a specially constructed narrow passage lined by a weak fence of boards. On both sides of the fence are stationed armed guards. From behind the people are driven by guards who lash out mercilessly with their whips. Everything is designed to create a panic and stampede. But at the same time 'order' is demanded and no one dare touch the fence. Anyone who as much as touches the fence is shot by the guards who are lined alongside of it. The shooting, the blood and the groans and shrieks of those who have been hit only increases the stampede and this gives the guards additional reason for shooting. In this manner, hundreds are killed on a stretch of several meters. But these are the lucky ones. An even more horrible death awaits the survivors.

The narrow passage leads to an open door of a cattle car. These are the famous cars designed for '40 people or 8 horses.' We have measured these cars and found that if human beings were to be loaded there tightly pressed together and completely nude they could hold only 90. Yet 140 people are loaded in these cars. On both sides of the entrance are stationed special S.S. men with guns and whips. It is their job to force the people into the cars.

In Area of 50 Kilometers Corpses of Jews Are Being Burned Day and Night

In panic and fear the emaciated skeletons perform acrobatic feats. A moment comes when the last inch of a car is loaded to capacity. But human beings are still being driven into it: einsteigen, einsteigen! [German in original] *People begin to climb over the heads of their neighbors holding on by the hands, feet or hair of those who are already inside. Thus fifty more manage to get into the car which is then locked. Soon another takes its place…*

A long train thus packed with several thousand men, women, and children is switched to a side line where it remains from two to eight days. The doors are never opened. Those inside suffer inhuman agony. They have to perform natural functions over the heads of the others. Many cars are painted with lime which begins to burn from the dampness of the urine and increases the tortures of the barefooted and nude.

Because there are not enough cars to kill the Jews in this relatively inexpensive manner many of them are taken to nearby Belzec where they are murdered by poison gases or by the application of electric currents. The corpses are burned near Belzec. Thus within an area of fifty kilometers huge stakes are burning Jewish corpses day and night."

On August 9, 1943, Karski, in his capacity as "the Delegate of the Polish Government to the Underground in Poland," met in New York with members of the World Jewish Congress. On this occasion, he gave a speech that was recorded in the minutes:[26]

---

[26] "Minutes of meeting of representation of Polish Jewry held in office of World Jewish Congress August 9, 1943 – on occasion of the visit of Mr. Jan Karski – the Delegate of the Polish Government to the Underground in Poland," in: Friedlander/Milton 1990, Document 79, pp. 287-294.

"Mr. Karski then took the floor, and after having thanked Dr. [Aryeh] *Tartakower for his warm welcome, gave the following report:*
'I have come here as a delegate of the people of Poland. Until February 1943, I was in Poland where I was in close contact with the leaders of the Jewish Underground movement. Prior to my departure from the country, they entrusted to me a number documents and reports which I have since handed over to the competent Jewish bodies in London.
During the time I was in Poland, I visited the Warsaw Ghetto twice – the first time in October 1942 and the second, in January 1943. I also had occasion to be in the Concentration Camp for Jews 12 miles outside of Belzec near Lublin. It was there that the Germans, in one single day, murdered 5,000 Jews in cold blood.
I have given a report of the Jewish situation in Poland to leaders of the British Government as well as the British Labor Movement. I gave them a complete and comprehensive report. They can make no pretense of ignorance of the true state of affairs.
I have been asked by the leaders of Polish Jewry to tell you of Jewish suffering and to inform public opinion of plight of the Jews in Poland – so that at some later date, no-one may arise and claim that the world was unaware of the tragedy of Polish Jewry.
I can give you my personal guarantee that everything I report to you now is authentic and true. I speak from personal knowledge as well as from well authenticated reports given to me. I am ready to testify to the veracity of all I tell, under oath.
A special and vicious system has been implemented by the Germans in their plan to exterminate both Jews and Poles. […]
In a death camp 12 kilometres outside of Belzec (near Lublin) I myself witnessed the following horrible scenes: about 5,000 Jews had been brought there. About one fourth of them were quartered in very primitive barracks, the rest had to remain outdoors under the open sky. They had been permitted to bring along with them 15 kilograms of baggage (food, clothing and valuables). […] *I was able to be a witness to all this because I was there as a Latvian policeman."*

The Jews were then forced into train cars via a footbridge, as in the previous story:

"Each of these freight-cars is ordinarily intended to accommodate either 8 horses or forty persons. But the Jews were driven in, tightly packed ranks and as many as 130-140 people were pushed into one car, although the utmost capacity could not possibly have been more for than 100 people. The last car was filled first. When it was filled to the bursting limit, the next group (for the car ahead) were literally forced to clamber over the heads of the Jews in the previous car to reach their own. There were some 50 or 60 of these cars. About 300 Jews were shot or choked to death then and there. The floors of the car had been covered with a layer of quick-lime and chloride. As the packed mass of humanity performed its normal physical needs, the lime and chloride reacted

chemically and the fumes from the floor ultimately asphyxiated the Jews. In this way, the Germans rapidly 'liquidated' the 6,000 Jews whom they had deported from the Warsaw Ghetto. Dante's Inferno is as nothing to the hell which prevailed there. The cars reechoed with shrieks and wild cries. This lasted for about 8 hours. The trains were dispatched to some point 'North' – where, I do not know. After a journey of several days, the cars were shunted off somewhere in a field and eventually their human freight perished. I have heard that the Germans utilized those bodies for the manufacture of fertilizer."

Karski also provided mind-boggling statistical figures:

"1,800,000 Jews have perished in Poland at the hands of the Nazis – 1,500,000 bloodily (sic) massacrated and 300,000 due to sickness and starvation. There are about 500,000 Polish Jews in Russia. A number of them have managed to escape abroad. More than 500,000 Jews have been deported to Poland from other European countries. In February [1943], *scattered over 55 towns and villages, there were still close to 3,000,000 Jews in Poland."*

And here's another unique piece of news:

"Letters have arrived from Jews deported to the East. Some were written under German pressure. The arrival of these letters can be ascribed to the desire of the Nazis to create the impression that nothing is amiss. One must admit, that such letters do serve in a measure to allay the dread of the Jews in the ghettoes."

During this meeting of August 9, 1943, Karski lied to the members of the World Jewish Congress by stating that he had remained in Poland until February 1943 and that in January he had made his second visit to the Warsaw Ghetto.

In 1943, a booklet was published in London whose three authors were given as Alexei Tolstoy, Thomas Mann and a "Polish Underground Worker" who was undoubtedly Jan Karski. Karski's account, which I reproduce below, is written in the first person (Tolstoy *et al.*, pp. 9-11):

"The Jewish Mass Executions. Account by an Eye-Witness.
I was a member of the Polish Underground Movement. It was my duty to keep in touch with all underground parties, including the 'Bund' – the Jewish Social Democratic Organisation in Poland, and I left Warsaw in October, 1942, on a mission from the Underground Front to the Polish Government in London.
Among my other duties, I collected matter on the Jewish mass-exterminations carried out by the occupying power. I should perhaps explain why we paid special attention to the Jewish questions. I am not a Jew myself, and before the war I had very little contact with Jews; in fact, I knew practically nothing about them. But, at present, the extermination of the Jews has a special significance. The sufferings of my own Polish compatriots are terrible, and they are, of course, nearer to my heart; but the methods employed by the enemy against Poles and against Jews are different.

Us, the Poles, they try to reduce to a mediaeval race of serfs. They want to deprive us of our cultural standards, of our traditions, of our education, and reduce us to a nation of robots. But the policy towards the Jews is different. It is not a policy of subjugation and oppression, but of cold and systematic extermination. It is the first example in modern history that a whole nation (not 10, 20 or 30, but 100 per cent of them) are meant to disappear from this earth.

The methods of this process are known to a certain extent, but the details are not. The method is, as you know, to collect the Jews from all over Europe, to dispatch them to the Ghettos of Warsaw, Lwew [sic] *and Soon* [sic]*, where they stay for a certain time. From the ghettos they are 'taken East' as the official term goes, that is, to the extermination camps, at Belzec, Treblinka and Sobibor. In these camps, they are killed in batches of 1,000 to 6,000, by various methods, including gas, burning by steam, mass electrocution, and finally, by the method of the so-called 'death train'.*

In the course of my investigation I succeeded in witnessing a mass-execution in the camp of Belzec. With the help of our underground organisation, I gained access to that camp in the disguise of a Latvian policeman. I was, in fact, one of the executioners. I believe that my course of action was justified. I had no means of preventing the event, but by becoming a witness, I was able to carry a first hand account into the civilised world.

I arrived at the camp on a certain day in July, 1942. The camp, at that moment, contained roughly 6,000 Jews of both sexes and all ages. They had arrived a few days previously from the Ghetto of Warsaw. They did not know what fate was awaiting them. They had been told, like all detachments sent away from the Ghetto, that they were to be employed on field work and to dig trenches. On arrival at the camp, they had been encouraged to write letters to their friends left behind in the Warsaw Ghetto – letters stating that they were being treated correctly, and that deportation was not at all as bad as they had feared. This is part of the German technique to reassure the victims and keep them in ignorance until the last possible moment, thus avoiding unnecessary fuss.

Had these people known with certainly what was awaiting them, the Germans would have to use much bigger forces to deal with them. Later, when all these manoeuvres proved of no avail, and the fate of those 'going East' became known in the Ghetto of Warsaw, the Ghetto revolted. This happened in the Spring of 1943, and the Germans lost about 1,000 killed before they finally overcame and massacred the last survivors.

But the events I am speaking of took place almost a whole year earlier, and, as I say, the Jews in the camp did not know what fate was awaiting them. The executions took place on the day after my arrival.

The camp of Belzec is situated about 15 kilometres south of the town of that name. It is bounded by an enclosure which runs parallel to the railway track at a distance of some 30 yards. A narrow corridor about two yards in width, formed by a wooden palisade on either side, leads from the gate of the camp to a point on the railway track where the trains halt. At about 10 o'clock in the morning, a freight train halted alongside the camp. At the same moment, the

guards at the farther side of the camp started shooting into the air, and yelling at the Jews to get into the trucks. They thus created a deliberate panic in order to prevent any hesitation or resistance among the prisoners.

They were driven in a frantic hurry through the wooden palisade into the first truck which had halted opposite the gate. It was the standard army truck, marked for 'six horses or 36 men.' The floor of the truck was covered with chloride of lime about two inches thick, but the Jews had no time to realize what this meant. When about 100 had been driven into the truck, they could only stand packed like sardines. It seemed physically impossible to press more people into the truck, but at this moment, the guards, aided by the prisoners themselves who were half crazed with fear of the shots fired at their backs, began lifting those next to the truck and throwing them in bodily. Thirty individuals (men and women) were thrown in on top of the heads of those already inside. Some of the standing women had their necks broken, and the horror of the scene can be left to the imagination.

I counted 130 people thrown into the truck – the truck marked 'for 36 men.' Then the sliding doors were closed and bolted. The next truck was shunted into its place, and the same procedure carried out again. Altogether I counted 51 trucks, which absorbed the whole 6,000 people in the camp, with the exception of about 20 or 30, who had been shot dead during the rush.

When the camp was empty and the trucks all filled, the train moved on. The end of this story I learned from my 'comrades', that is, the executioners in the camp, who had done this sort of thing for several months, dispatching one or two trains each week. The train moves on for about 25 miles and then halts in an open field. There it remains standing, hermetically closed, for six to seven days. When, at length, its doors are opened by the grave-diggers' squad, the people inside are all dead, and their bodies in an advanced state of decomposition.

The details of how they die are simple and revolting: the chloride of lime on the floor has the property of developing chlorine gas when coming into contact with humidity. The people jammed into the trucks for many hours are compelled, at some time, to urinate, and this (on the lime), instantaneously produces a chemical reaction. Death must in the end be welcome, for whilst they are dying by the chlorine gas their feet are being burned to the bone by the chemically active chloride. As I said, the number executed in one death train is about 6,000 at a time.

I do not want to add any comments to what I have seen and described. I, myself, have not witnessed the other methods of mass-killing, such as electrocution, steaming, and so on, but I have heard first-hand eye-witness accounts, which describe them as equally horrible. The latest estimate of the number of Jews executed by these methods, in the systematic carrying out of Himmler's orders, is in the region of two million."

The story was published by the "National Committee for Rescue from Nazi Terror," which included British politicians, clergymen and intellectuals, under the title "News-talk on European Service of the British Broadcasting Corpora-

tion." The source was undoubtedly Karski, but what statement was he referring to? The text was written after the uprising of the Warsaw Ghetto, which began on April 19, 1943 and ended on May 16. Karski embarked from Scotland for New York on June 10 and arrived there on the 16th (Wood/Jankowski 1994, p. 182). The declaration would therefore have been made in London between the last ten days of April and the first ten days of June, but nothing is known about it.

In 1944, a book of memoirs by Karski titled *Story of a Secret State* was published. He relates that in early October of 1942 he slipped into the ghetto of Warsaw and established contact with the local Bund, the union of socialist Jews. The head of this organization informed him about the deportation of "over three hundred thousand" Jews into "execution camps" (Karski 1944a, p. 324).

The story goes as follows (Karski 1944a, pp. 339-351):

> *"A few days after my second visit to the Warsaw ghetto, the Bund leader was to arrange an opportunity for me to see the Jewish death camp. The camp was located near the town of Belzec about one hundred miles east of Warsaw and was well-known all over Poland from the tales of horror that were circulated about it. The common report was that every Jew who reached it, without exception, was doomed to death. The Bund leader had never been in it but had the most detailed information on its operations. I was to go on a day when executions were scheduled. The information was easy to obtain because many of the Estonian, Latvian, and Ukrainian attendants who worked there under Gestapo supervision were in service of Jewish organisations. Not from any humane or political consideration, but for money. I was to wear the uniform of one of the Estonians who would stay home while I went in with his papers.* […] *Early in the morning of the day we had selected, I left Warsaw in the company of a Jew who worked outside the ghetto in the Jewish underground movement. We arrived in Belzec shortly after midday and went directly to the place where the Estonian was supposed to be waiting to give me his uniform."*

Karski's story is quite verbose, so I will only quote the essential points. Accompanied by an (actual) Estonian guard, he approaches the camp:

> *"As we approached to within a few hundred yards of the camp, the shouts, cries, and shots cut off further conversation.* […] *We passed through a small grove of decrepit-looking trees and emerged directly in front of the loud, sobbing, reeking camp of death. It was on a large, flat plain and occupied about a square mile. It was surrounded on all sides by a formidable barbed-wire fence, nearly two yards in height and in good repair. Inside the fence, at intervals of about fifteen yards, guards were standing, holding rifles with fixed bayonets ready for use. Around the outside of the fence militia men circulated on constant patrol. The camp itself contained a few small sheds or barracks. The rest of the area was completely covered by a dense, pulsating, throbbing, noisy human mass."*

Karski then dwells on the description of the crowd, repeating and enlarging on themes already dealt with in his paper of December 1942, but with an important addition: "They were all former inhabitants of the Warsaw ghetto." As in the preceding report about the "sorting camp" located at 50 km from Bełżec, Karski mentions the trains of death and the narrow passages the Germans had set up to funnel the crowd into the cars, and then continues:

> *"And now came the most horrible episode of them all. The Bund leader had warned me that if I lived to be a hundred I would never forget some of the things I saw. He did not exaggerate. The military rules stipulate that a freight car may carry eight horses or forty soldiers. Without any baggage at all, a maximum of a hundred passengers standing close together and pressing against each other could be crowded into a car. The Germans had simply issued orders to the effect that 120 to 130 Jews had to enter each car."*

After another digression describing the loading of the victims into the cars, Karski writes emphatically:

> *"I know that many people will not believe me, will not be able to believe me, will think I exaggerate or invent. But I saw it and it is not exaggerated or invented. I have no other proofs, no photographs. All I can say is that I saw it and that it is the truth. The floor of the car had been covered with a thick, white powder. It was quicklime. Quicklime is simply unslaked lime or calcium oxide that has been dehydrated. Anyone who has seen cement being mixed knows what occurs when water is poured on lime. The mixture bubbles and steams as the powder combines with the water, generating a large amount of heat. Here the lime served a double purpose in the Nazi economy of brutality. The moist flesh coming in contact with the lime is rapidly dehydrated and burned. The occupants of the cars would be literally burned to death before long, the flesh eaten from their bones. Thus, the Jews would 'die in agony', fulfilling the promise Himmler had issued 'in accord with the will of the Fuehrer', in Warsaw, in 1942.*[27] *Secondly, the lime would prevent decomposing bodies from spreading disease. It was efficient and inexpensive – a perfectly chosen agent for their purposes. It took three hours to fill up the entire train by repetitions of this procedure. It was twilight when the forty-six (I counted them) cars were packed."*

After three hours, the train started to move. Karski continues:

> *"My informants had minutely described the entire journey. The train would travel about eighty miles and finally come to a halt in an empty, barren field. Then nothing at all would happen. The train would stand stock-still, patiently waiting while death penetrated into every corner of its interior. This would take from two to four days. When quicklime, asphyxiation, and injuries had silenced every outcry, a group of men would appear.*
>
> *They would be young, strong Jews, assigned to the task of cleaning out these cars until their own turn to be in them should arrive. Under a strong guard*

27 This promise was another one of Jan Karski's puerile inventions.

> *they would unseal the cars and expel the heaps of decomposing bodies. The mounds of flesh that they piled up would then be burned and the remnants buried in a single huge hole. The cleaning, burning and burial would consume one or two full days. The entire process of disposal would take, then, from three to six days. During this period the camp would have recruited new victims. The train would return and the whole cycle would be repeated from the beginning."*

On October 14, 1944, Karski presented in *Collier's Weekly* magazine, under the title "Polish Death Camps", a teaser for his book, whose publication was announced as imminent (end of October 1944). This text presents some additions and some variations with respect to the printed version. Karski laid out the background of his mission as follows (Karski 1944b, pp. 18f., 60f.):

> *"As a member of the underground, I was ordered to leave Warsaw and report to the Polish government and the Allied authorities about conditions in Poland. My orders came from the delegate of the Polish government acting somewhere in Poland and from the commander in chief of the underground army. Jewish leaders confided to me their written report but they insisted in order to be able to tell the truth I should see with my own eyes what actually happened to the Jews in Poland. They arranged for me to visit one of the Jewish death camps.*
> *The camp was near to the town of Belzec, about 100 miles east of Warsaw, and was well known all over Poland because of the tales of horror that were circulated about it.* […]
> *Early in the morning I left Warsaw in the company of a Jew who worked outside the ghetto in the Jewish underground movement. We arrived in Belzec shortly after midday and went directly to the place where the Estonian was supposed to be waiting."*

Karski confirmed that the camp "was on a large, flat plain and occupied about a square mile," or some 2.6 square kilometers, and that the Jews deported to Bełżec "were all former inhabitants of the Warsaw ghetto" (*ibid.*, p. 19).

Here the train stopped "about eight miles" away from the camp (*ibid*., p. 61), while in his book, this happened "about eighty miles" away (Karski 1944a, p. 350).

The literary development of Jan Karski's impostures is another typical example of how anti-German black propaganda was orchestrated.

At first, he "knew", by hearsay, that Bełżec was an extermination center using electrocution. Then he invented the fable of a visit, first to a "sorting camp" which was located 50 kilometers from Bełżec, then to the Bełżec Camp itself, which according to him was located 12 miles/12 kilometers/15 kilometers (!) south of the town, finally to the Bełżec Camp without further specification. He secretly entered the camp disguised as a Polish, a Latvian and then as an Estonian policeman. This occurred "shortly after midday," but he nevertheless witnessed the arrival of a train at "about 10 o'clock in the morning." There were either 5,000 or 6,000 victims; one car was arranged for 8 horses and 40 persons, but also for 6 horses and 36 persons, and had a capacity of 90 and 100 persons, but were loaded with either 130-140 or 120-130 people. During the

loading of the railway cars alone, some 300 people died, or maybe only "20 or 30." The cars were painted with lime and at the same time had their floors covered either with quicklime and chlorine/chloride/chloride of lime, or with quicklime only.

The train had either between 50-60 cars, or exactly 51 cars, or exactly 46 cars. The victims in the cars died mainly either from asphyxiation by "chlorine gas" or from burns caused by quicklime.

As for the destination of the "death trains", the contradictions are even more-glaring:

> *"A long train thus packed with several thousand men, women, and children is switched to a side line where it remains from two to eight days."*
> *"The trains were dispatched to some point 'North' – where, I do not know. After a journey of several days, the cars were shunted off somewhere in a field and eventually their human freight perished."*
> *"The train moves on for about 25 miles and then halts in an open field. There it remains standing, hermetically closed, for six to seven days."*
> *"My informants had minutely described the entire journey. The train would travel about eighty miles and finally come to a halt in an empty, barren field. Then nothing at all would happen. The train would stand stock-still, patiently waiting while death penetrated into every corner of its interior. This would take from two to four days."*

Even if Karski's account, in its various literary iterations, is a simple fabrication, someone tried to improve on it, arguing that Karski had simply been wrong, that instead of visiting Bełżec he had gone to Izbica, a place some sixty kilometers farther north (Wood/Jankowski 1994, pp. 128f.). That could be true with respect to the "sorting camp" of December 1942, but in 1944, as we have seen, Karski spoke specifically of Bełżec Camp:

> *"The camp was near to the town of Belzec*, […]. *We arrived in Belzec shortly after midday* […]*."*
> *"A few days after my second visit to the Warsaw ghetto, the Bund leader was to arrange an opportunity for me to see the Jewish death camp. The camp was located near the town of Belzec about one hundred miles east of Warsaw* […]*."*

This is so clear that the book was advertised in the United States with a poster by William Sharp containing four drawings summarizing its contents; the fourth bore the following caption:[28]

> *"He visited notorious Jewish death camp, disguised as Estonian guard."*

During a 1987 interview with Macjei Kozłowski, a journalist of the Polish weekly newspaper *Tygodnik Powszechny* (*Universal Weekly*), Karski confirmed that he had entered Bełżec Camp:[29]

---

28 Reproduced in Wood/Jankowski 1996, unpaginated appendix of documents.
29 "Niespełona misja," no page number shown in the photocopy in my possession.

> *"We went together* [with a guide] *to Lublin, then changed trains and finally arrived in Bełżec. It was the middle of October* [1942]*."*

At this time, Karski added a further lie to the earlier narrative:

> *"I thought, then, that Bełżec was a transit camp. It was only after the war that I convinced myself that Bełżec was the final point of extermination."*

In his 1944 description he inevitably made serious errors, due to the fact that he had never actually seen Bełżec Camp. For example, that camp is not "on a large, flat plain," but on the side of a hill, and no Estonian or Latvian guards were ever on duty there. Furthermore, the very basis of the story – that the camp guards could be bribed – is in flagrant contradiction to their being described, in the report of July 10, 1942, and others, as having been "overloaded with stolen coins and jewelry" and being able to pay 20 gold dollars for a bottle of vodka.

That the whole account has been completely invented is also evident from its basic premises. In October 1942, in order to investigate how the deportees from the Warsaw Ghetto were allegedly exterminated, Karski allegedly went – on the specific instructions of the head of the *Bund* – not to Treblinka but to Bełżec! And at a point in time at which the first wave of deportations had been over for a month, he "saw" crowds of Jews from the Warsaw Ghetto there! Thus, for Karski's fable to be plausible, it would be necessary for the Jews from the Warsaw Ghetto to have been deported to Bełżec via Izbica! With total disregard for the intelligence of the victims of his impostures, Karski had not even bothered to check the geographical whereabouts of Bełżec. He places it at a distance some 160 km east of Warsaw, whereas in reality it is nearly 300 km to the south-east of the Polish capital.[30]

In its August 1, 1943 issue, the clandestine French newspaper *Notre Voix* published a free adaptation of Jan Karski's "testimony" titled "The Horrible Massacre of 6,000 Jews in the Belcek [sic] Extermination Camp" which begins as follows:[31]

> *"It was in Belcek. 6,000 Jews of both sexes and all ages had arrived from the Warsaw Ghetto."*

Apart from these isolated historiographical paroxysms, the story invented by Jan Karski has fallen into total disrepute among orthodox historians, but not the man himself, who enjoyed high regard among them until his death in July 2000.[32] As Theodore O'Keefe correctly stated,

> *"few alleged eyewitnesses to the Nazi 'extermination' camps have been as influential, and as honored, as Jan Karski."* (O'Keefe, p. 1)

---

30 This information is also in error for Treblinka, which is located some 80 km northeast of Warsaw (by rail).

31 Courtois/Rayski, pp. 203-205.

32 During a visit to the United States between September 9 and 15, 2002, Polish Foreign Minister Wlodzimierz Cimoszewicz unveiled a monument to Jan Karski at Georgetown University (*Yearbook…*, p. 219). In 1999, Karski's book was published in Polish (Karski 1999).

Thus, although the *Enzyklopädie des Holocaust* has an entry on Karski, it puts in doubt the reliability of his testimony:[33]

> *"It is not quite clear whether Karski, disguised as a guard, actually did view the mass murder in the Bełżec extermination camp, as he later wrote."*

In Western countries, on the other hand, he was always careful, enjoying the purloined fame of being an 'eye-witness' of the 'extermination camp' at Bełżec, to give support to the official story by his presence or his signature, without, however, detailing his 'testimony.' With the tacit complicity of official circles, he surreptitiously became the guarantor of the alleged exterminations in the gas chambers of Bełżec allegedly operating with Diesel-exhaust gases. In this role he appeared, for example, in an Italian TV broadcast.[34] In Claude Lanzmann's famous documentary *Shoah*, Karski elaborates about his various "missions" during the war, but without ever mentioning Bełżec Camp (Lanzmann, pp. 183-196).

In October 1978, the French-Jewish filmmaker had conducted a lengthy interview with Karski, the transcript of which has 73 pages. In it, Karski elaborated in detail about his alleged visit to Bełżec, with the usual preamble: In the Warsaw Ghetto, he had met two Jewish leaders who had proposed the fateful mission to him; this took place "at the beginning of October" or "possibly the end of September" of 1942.[35]

But then he was forced to postpone the alleged visit to the end of October or even November (p. 35). In fact, Lanzmann alluded to Rudolf Reder, another shameless impostor (see Mattogno 2021a), yet without explicitly mentioning him, and emphasized:

> *"When you went to Belzec, he was there. He escaped in November."*

The dialogue continued as follows (pp. 28f.):

> *"Karski – Well, a few days later contact was made – with some Jews whom I did not know, of course. We took a train to Belzec.*
> *Claude Lanzmann – From Warsaw?*
> *K. – From Warsaw. It's quite a long trip. About 4 hours, as far as I remember.*
> *C.L. – Belzec is 150 km south of Lublin.*
> *K. – Yes, so Sobibor is north of Belzec, which will enter the scene. So, we went to Belzec."*

Therefore, Karski confirmed once more that he had visited Bełżec Camp. Lanzmann then asked him whether he had any idea what he would see there, to which he replied:

---

33 Gutman *et al*., Vol. II, p. 741; the earlier English edition of this encyclopedia does not mention Bełżec in its entry on Karski at all: Gutman, Vol. II, p. 787.

34 The "Speciale-Mixer" of Giovanni Minoli, broadcast for the first time by RAI 2 on June 21, 1989, at 8:30 PM. Cf. in this respect my comments in Mattogno 1991, pp. 208-219.

35 United States Holocaust Memorial Museum, RG 60-5006, Interview with J. Karski, transcript, p. 8. All subsequent page numbers from there unless indicated otherwise.

> *"No. Well, I had heard* [talk] *about Belzec; I knew there was a camp there. However, what I heard at the time, even from some Jews, was that it was what was then called a 'transit' camp. As I understood after the war, at that time they* [the Germans] *were liquidating the camp as such. By November, there was no longer a camp. I don't know the reason, whatever it was, but apparently the last transport of Jews was taken out of Belzec and was sent to Sobibor, which became an extermination camp; or Jews who had been taken out of Warsaw or other ghettos were sent to Belzec for a short time and then again went somewhere else."*

Karski's claim that prior to his trip to Bełżec he had assumed that Bełżec was a 'transit camp' was a transparent lie, because in the report he brought to London at the end of November 1942, he explicitly stated:

> *"An electrocution station is installed at Belzec camp. Transports of settlers arrive at a siding, on the spot where the execution is to take place. The camp is policed by Ukrainians. The victims are ordered to strip naked ostensibly to have a bath and are then led to a barracks with a metal plate for floor. The door is then locked, electric current passes through the victims and their death is almost instantaneous. The bodies are loaded on the wagons and taken to a mass grave some distance from the camp."*

And in his book, he had recounted just as explicitly:

> *"A few days after my second visit to the Warsaw ghetto, the Bund leader was to arrange an opportunity for me to see the Jewish death camp. The camp was located near the town of Belzec about one hundred miles east of Warsaw and was well-known all over Poland from the tales of horror that were circulated about it. The common report was that every Jew who reached it, without exception, was doomed to death."*

Why would the *Bund* leadership have sent Karski on a mission to a transit camp instead of an extermination camp?

Lanzmann did not object and merely pointed out to Karski that Bełżec was initially intended for the Jews of the Lwów and Krakow area, and that the Jews of Warsaw were not deported to this camp, but to Treblinka. Karski answered evasively (p. 29):

> *"I wasn't aware of all these details at that time."*

This gross nonsense alone is enough to invalidate the fable invented by Karski. As I will document in Chapter 3, self-proclaimed escapees from the Treblinka Camp had returned to Warsaw as early as the end of August 1942, and had written reports about the "Treblinka Extermination Camp" there, so it is utterly demented to claim that the *Bund* leadership would have sent Karski to investigate *in Bełżec* the fate of the Jews he knew had been deported from Warsaw *to Treblinka*.

Lanzmann also noted that Bełżec is said to have become operational as a death camp already in March 1942. Karski was therefore forced to emphasize the "transit camp" thesis (p. 30):

> *"Yes, apparently, only at the time I visited it really became a transit* [camp]*, meaning that the Jews were sent somewhere else. The Germans announced that they* [the Jews] *would be deployed at forced labor, they would have good conditions…"*

Karski reiterated that he had entered Bełżec Camp disguised as an Estonian militiaman, and Lanzmann commented (*ibid*.):

> *"Because the camps were guarded by Ukrainians."*

Karski's response was:

> *"Ukrainian, Lithuanian, Estonian and Polish policemen and regular German Gestapo, SS etc."*

With this broad sweep of including everyone, he perhaps wanted to blunt the contradictions of his earlier statements on the subject.

The visit, Karski recounted, had been organized by the Jewish Resistance. He entered the camp with a "Jewish guide," about whom he clarified (p. 31):

> *"I had some kind of identification papers. And so I followed him* [the guide]*, he goes his way, I go his way, so I only followed him, and he led me to an officer, and I simply showed him* [the documents]*… he got in as a civilian. Only I was in disguise."*

Later, however, he completely forgot about this guide (p. 35):

> *"I entered the camp in the company of an Estonian militiaman, who wore the uniform of an Estonian militiaman and had a kind of 'Ausweis'* [ID] *that allowed me to enter the camp and leave the camp after showing the Ausweis."*

With his "eyewitness account," Karski tried to follow the plot of his book, with some confusion (the ordinary freight car was designed for 16 horses instead of 8; p. 33) and further contradictions. The number of train cars equals the number given in the book (p. 37):

> *"At the gate, in front of it, was a cattle train. I counted 46 cars."*

But the time he spent at the camp was "probably no more than 20, 25 minutes" (p. 32), "20 minutes, half an hour" (p. 39); in the book, however, Karski had written:

> *"It took three hours to fill up the entire train by repetitions of this procedure. It was twilight when the forty-six (I counted them) cars were packed."*

The cars were filled with 120 or 130 people each, and here as well the floors had been previously covered with quicklime, but Karski changed the fate of these Jews once again (p. 34):

> *"K. – What I understood was that the train was going somewhere and that they* [the Jews] *really died in these cars. Some of them were taken to Sobibor, as I later learned. And in Sobibor they were finished off.*
> *C.L. – They were gassed.*

> *K.– Yes. For what reason they were not gassed in Belzec, I do not know. Because they did it first in Belzec for months. Before that, they really gassed the Jews.*
> *C.L. – In Belzec there were six gas chambers.*
> *K. – Yes. Now, the date is important. When trying back then to investigate how it was, the camp was liquidated altogether apparently at the end of October or in November. The last remaining Jews were sent to Sobibor, and secondly, in the final phase, Jews from other ghettos passed through Belzec to be sent elsewhere."*

Karski had stated in the book that his alleged visit to Bełżec took place "a few days after" his second visit to the Warsaw Ghetto, which was at the beginning of October 1942 ("it was now the beginning of October, 1942"; Karski 1944a, p. 324), thus in the first ten days of October.

In order to avoid having to deal with the "gas chambers", and in particular with Rudolf Reder's testimony, who reported nothing about "death trains", Karski first of all introduced another self-contradiction by postponing the date of his alleged camp visit to the end of October or November 1942, suggesting that it had taken place after Reder's escape. However, Reder claimed to have escaped from the camp at the end of November 1942,[36] but Karski arrived in London on November 25, following this route: from Bełżec he went to Warsaw, then to Berlin (!), then to Brussels, then to Paris, to Lyon, to Perpignan, crossed the Pyrenees, went to Barcelona, to Gibraltar and from there embarked for London (Karski 1944a, pp. 352-378). In practice, Reder remained in Bełżec even after Karski's alleged visit.

Karski (or his "handlers" – he had become a "hot property") next invented the fable that the camp was being liquidated at the time of his visit, and in this context, the story of the "transit camp" was also introduced. In practice, he claimed that Bełżec had previously functioned regularly as an extermination camp using "gas chambers," but in the final phase had become a "transit camp." Here, too, Karski was forced to provide nonsensical explanations. The Jews he had seen during his alleged visit were the last remaining contingent at the camp; they were either sent to Sobibór, which "became an extermination camp"; or they came from the Warsaw Ghetto (in November 1942!) or other ghettos, and were temporarily transported to Bełżec in order to be transferred elsewhere shortly thereafter. Karski then claimed that the Jews he had seen (as he claims to have learned later) were sent to Sobibór, and that other Jews passed through Bełżec in the final phase of the camp's existence, which he evidently had learned later as well (one learns *so much* "later").

There is no need to emphasize that the fable of the "death trains" contradicts both hypotheses.

The procacity of these explanations is perfectly worthy of the character. According to Robert Kuwałek, 51,559 Jews are said to have been gassed in

---

[36] Reder 1946, p. 63; see Mattogno 2021a, Part 1.

Bełżec in October 1942, and in November between 49,234 and 53,232 (Kuwałek, p. 170).

Lanzmann's interview therefore confirms that Karski was a conscious and intentional impostor, which is further reaffirmed in exemplary fashion by another fact. In 1997, J. Karski wrote the foreword to the new, 1999 edition of a translation of Rudolf Reder's book about Bełżec, which had first appeared in 1946, needless to say without giving the slightest hint of his alleged visit to that camp.[37] With his "authority," he therefore endorsed a testimony that radically contradicted his own. Thus, the imposture was also a hoax!

Before the World Jewish Congress, Karski had declared:

> *"Prior to my departure from the country, they entrusted to me a number documents and reports which I have since handed over to the competent Jewish bodies in London."*

One of these documents was precisely the report "News is reaching the Polish Government in London about the liquidation of the Jewish ghetto in Warsaw", which mentioned only the killing method by electricity with regard to Bełżec ("An electrocution station is installed at Belzec camp").

Assuming that Karski had actually visited the Bełżec Camp and had actually seen the "death trains," this would imply that he endorsed the report in question even though he knew it to be false. It follows that he was an impostor in any case, even if, absurdly, he had told the truth at some point. As such he was treated more or less explicitly by some Holocaust scholars. For instance, Raul Hilberg, in the chapter dedicated to the "Messengers" in his 1992 book *Perpetrators, Victims, Bystanders*, Hilberg first outlines Karski's testimony, and then states the following about it (Hilberg 1992, pp. 223):

> *"In fact, Jewish transports from Warsaw were routed to Treblinka, not Bełżec. No transport left Warsaw in October. The guards in Belzec were mainly Ukrainian, although a few Baltic nationals may have been among them. The same composition applies to the guard force in Treblinka. Above all, trains did not leave Belzec or Treblinka so that the passengers could die in the cars. Belzec and Treblinka were death camps with gas chambers, and these facilities were not mentioned in Karski's account."*

Consistent with this critique, he did not mention Karski at all in his 2003 monumental work *The Destruction of the European Jews*.

Michael Tregenza was very critical of Karski in an unpublished typescript of 2006 titled "Only the dead. Christian Wirth and SS-Sonderkommando Belzec," where he pointed out the many contradictions in Karski's various statements, but apparently believed that Karski had actually visited a real "sorting camp", namely the one in Izbica.[38] I have already mentioned earlier that in

---

37 Reder 1999, pp. 5, 77; Karski's foreword (*przedmowa*) is dated Washington, July 4, 1997.

38 The Wiener Library, MS 183/98237. The typescript is marked with: "Presented to The Wiener Library Institute of Contemporary History by Gerald Fleming 2006."

such a case Karski's mission would have been senseless, because from the very beginning that mission was about visiting a "death camp."

The position of Polish historiography is deliberately ambiguous; it was expressed by its top Bełżec expert, Robert Kuwałek, in the following terms (Kuwałek, p. 199):

> *"For many years, the opinion persisted that Karski had been an eyewitness to what happened at the Bełżec Death Camp. He himself was convinced of this. On the other hand, when Jan Karski had already arrived in London, he said about the place he actually visited and where he saw the brutal preparation of a transport that it was a 'sorting camp' located in the vicinity of Bełżec, 12 miles from the village. Only in 1944 did he begin identifying it with Bełżec itself. Years later, it was established that in fact Jan Karski had been in Izbica Lubelska, where he witnessed the moment when a rail transport was put together and sent off to the nearby extermination camp. At that time, a transit ghetto existed in Izbica, where thousands of Polish and foreign Jews arrived who were kept there by the Germans only to be deported later to the Bełżec and Sobibór extermination camps. We do not know why Karski later claimed that he actually was at* [had gone to] *Bełżec. It is certain that he was informed about the local extermination camp, and that he passed on similar news to London as the Polish and Jewish agents. It may be that he wanted to further substantiate the information he had communicated from the country* [Poland], *since in the 'Extraordinary Communication' this information was relatively vague, and as a rule, news that had a general circulation was hectographed. It may also be that later the 'sorting camp' became confused in his memory with the Bełżec Extermination Camp."*

Without going into details, even this explanation is completely nonsensical on the whole, because – as pointed out earlier – it implies that the *Bund* leadership would have instructed Karski to investigate the alleged extermination at Treblinka of the Jews deported there from the Warsaw Ghetto by sending him *to Izbica*! And one cannot seriously believe that Karski had visited the Izbica *Ghetto* believing it to be the Bełżec *Camp*, especially since these two locations are 66 km apart.

In conclusion, Karski's testimony is absolutely untenable. It is simply a convolution of silly lies.

1.4. The "Soap Factory Using Human Fat" at Bełżec

Even before the Second World War had ended, the legend of a factory established at Bełżec for the manufacture of soap from the corpses of the allegedly exterminated Jews was being circulated.

A report sent on August 30, 1942 by the Geneva Office of the Jewish Agency for Palestine to the US government and forwarded by the latter to the

Holy See on September 26, 1942, contains the first germs of this legend (*Foreign Relations…*, p. 775):

> *"Liquidation of the Warsaw Ghetto is taking place. Without any distinction all Jews, irrespective of age or sex, are being removed from the Ghetto in groups and shot. Their corpses are utilized for making fats and their bones for the manufacture of fertilizer. Corpses are even being exhumed for these purposes. These mass executions take place, not in Warsaw, but in especially prepared camps for the purpose, one of which is stated to be in Belzek* [sic[39]]*."*

The legend then resurfaced in a report by the messenger Jerzy Salski dated April 18, 1943:

> *"d. Stage 4: Transport to Belzec. I have not been there myself, but people from the district said that there is a stench of corpses in the air. Rumors circulate that the Germans make soap from the fat of the corpses."* (Rudorff, Document 66, p. 255)

As we saw in Subchapter 1.2., by 1944 the legend of a factory for human soap at Bełżec had already started to take shape, and was disseminated in its initial form by A. Silberschein. In fact, the reports on Bełżec mentioned above state that in this camp "[t]he fat from the corpses was drained in order to – make soap from it" and that the Germans had set up "special factories for the production of soap and shoe polish from Jewish fat."

This juicy story then appeared in the *Black Book* in the following form (Ehrenburg/Grossman, p. 117):

> *"In a different area of the Belzec camp was a soap works. The Germans selected the plumpest individuals, killed them, and boiled them down for soap. 'Jewish soap' was printed on the labels. Izraelevich Rozenstrauch, a bank clerk from Lvov, actually held a bar in his hands, and he was one of the witnesses who provided us with this testimony."*

However, the most enthusiastic storyteller and spreader of this legend of human was none other than Simon Wiesenthal. In 1946 he wrote an article titled "RIF," which opened with these words (1946a):

> *"In the last week of March, the Rumanian press published a unique piece of news: In the little Rumanian town of Folteceni, twenty boxes of soap were laid to rest in the Jewish cemetery with all the traditional pomp and circumstance of a funeral. The soap had recently been found in a former German army depot. The boxes were clearly labeled 'RIF – Rein jüdisches Fett'* [RIF – pure Jewish fat]. *The boxes were destined for the Waffen SS, and on the wrappers it said with full and cynical objectivity that the soap had been made from Jewish bodies."*

---

[39] The text received by the Vatican has the spelling "*Belick*" (*Actes et documents…*, p. 52). This is the only mention of Bełżec Camp in the whole book; clearly it has been confused here with the Treblinka Camp.

In reality, the acronym RIF stands for "*Reichsstelle für industrielle Fettversorgung*" (National office for industrial fat supply) and has nothing to do with human fat, much less Jewish fat, a fable which "most historians do not believe" anymore.[40] Still, Simon Wiesenthal recounts profusely the fantastic story of the alleged manufacture of soap from human fat:

> *"Toward the end of 1942, the terrible words 'transport for soap' were uttered for the first time! It was in the Government General, and the factory was in Galicia, at Belsetz*[sic]. *In this plant, between April of 1942 and May of 1943, 900,000 Jews had been used as raw material. The Jews were brought from two districts: Lublin and Galicia."*

The clothes and shoes of the victims – continues Wiesenthal – were sent to Germany, the hair to a factory in Brandenburg and

> *"certain solids* [of the corpses] *were separated and sent to northern Germany, and there, a special oil for U-boat engines was produced. The human bones went into the Lemberg bone mill, and there they were turned into fertilizer. Golden teeth were sent to the SS Economic and Administrative Main Office, Office Group D, Berlin-Oranienburg.*
>
> *What was left, the residual fat, was needed for soap production. In parallel with the human transports, other substances such as soda, colophony, and sand were transported as secondary raw materials. The Belsetz plant had a daughter company at Danzig; a portion of the intermediates were sent there. Belsetz was a model plant. Therefore, transports to this location had priority with the Ostbahn* [Eastern Railroad]. *The plant needed raw materials … and wheels turned for victory!* […]
>
> *Since 1942, the General Government knew exactly what RIF soap meant. For the cultural world, the pleasure may be incomprehensible with which the Nazis and their women in the General Government looked upon this soap. In every piece of soap, they saw a Jew magically turned into soap who thus was prevented from growing up to become a second Freud, Ehrlich or Einstein.*
>
> *This soap was perhaps meant to help clean off the stains of murder and blood. But it was unable to wash away that stain. It remained and lingered. This soap should actually be sent to Nuremberg, so that the dead may appear on trial as witnesses…* […] *And before the world tribunal, a small piece of soap appears and – bemoans these millions!"* (Wiesenthal 1946a)

In the next issue, the same magazine published another article by Wiesenthal titled "*Seifenfabrik Belsetz*" ("The Belsetz Soap Factory"), about which he explained (Wiesenthal 1946b):

> *"The great feedback to my article 'RIF' prompts me to provide further details of the events in the Generalgouvernement."*

The title only served to attract readers' attention, because he said nothing about the alleged human soap. In fact, in this article he outlined an imaginary history

---

40 Shermer/Grobman 2002a, p. 115. In the Italian translation (2002b, p. 162), the term "most historians" is translated as "molti storici" – "many historians."

of Bełżec Camp that is riddled with historical falsehoods. In January 1942, Wiesenthal claims, the Bełżec area was inspected by a commission of top SS officials, among them Adolf Eichmann, whom Wiesenthal promotes to the rank of "SS General" for the occasion! The commission decided to make "the existing installations the starting point for the erection of a place of extermination." For this purpose, "a site of 3 square kilometers" (300 hectares, or about 750 acres) was fenced in. In reality, the camp's area was about six hectares (some 15 acres), hence just 6% of a square kilometer, or only 2% of what Wiesenthal claimed.

Wiesenthal also claimed that trains of 40-50 wagons departed from Lemberg (Lwów) Station, each loaded with 110-140 people were, initially dressed, but since August 1942 half-naked. Needless to say, the floors of the railway cars were allegedly covered with "quicklime" ("*mit ungelöschtem Kalk*").

And here is the description of the alleged extermination plant:

> *"The people, squeezed together, hounded by the SS, the Latvians and Ukrainians, ran into the 'bath' through the open gate. It could hold 500 persons at a time. The floor of the 'bathhouse' was made of metal, and showers hung down from the ceiling. When the room was full, the SS delivered a 5,000-volt current to the metal plate. At the same time, the showers spewed out water. A brief scream, and the execution was over. An SS head physician by the name of Dr. Schmidt ascertained the death of the victims by looking through a peephole, the second door was opened, the 'corpse commando' arrived and quickly removed the dead. – There was now room for the next load of five hundred."*

A good half of the article fictionalizes events as described by Rudolf Reder, spelled "Rechter" by Wiesenthal, who states that Reder arrived at "Belsetz" in August 1942 and escaped to Lemberg on an unspecified date. In retaliation for this escape, the SS allegedly shot 150 adult Jews and 45 children! "Rechter" drafted a report that circulated clandestinely, then was sent to Warsaw with false documents. "He fell during the Warsaw Uprising in 1943" (Wiesenthal 1946b, p. 14). In fact, Reder died in Toronto in 1968.

1.5. The Witnesses

The only known eyewitnesses who have left written reports or whose testimonies were recorded are are Rudolf Reder, Kurt Gerstein and Chaim Hirszman. Stanisław Kozak would technically be included in this list, but his is a separate case which I will discuss later. Mieczysław Garfinkiel, on the other hand, is the most-important of the indirect witnesses who reported the accounts of alleged eyewitnesses.

I have written a specific study about Reder and Gerstein, in which I reproduce and critically analyze their statements, showing their internal contradictions, absurdities and blatant lies – in Gerstein's case also delusional rantings –

and highlighting the contradictions of the two testimonies, the most insurmountable of which concerns the alleged killing system (Mattogno 2021a).

Kurt Gerstein's account is well-known. He spoke of a Diesel engine whose exhaust gases presumably asphyxiated the victims (Diesel exhaust, for all its odor, is relatively non-toxic). Rudolf Reder, on the other hand, described a fictitious "machine" in his various declarations that included a gasoline engine with a compressor, gas cylinders, spoked wheels and glass tubes, whose exhaust gases, however, did *not* asphyxiate the victims.

In the interrogation of December 29, 1945, he declared:

> *"On the opposite side of the building, that is, behind the wall in front of which the corridor ended, there was a small room in which the machines* [*maszyny*] *were located. I personally saw that in this small room there was a gasoline-powered engine which seemed very complicated. I remember it had a drive wheel* [*koło napędowe*]*, but I didn't observe any other structural or technical details."* (*ibid.*, pp. 24f.)
>
> *"I am unable to say what the chemical aspect* [*chemizm*] *of the mechanism of killing people in the Bełżec chambers consisted of. I only know one thing, that from the engine room a pipe of one inch in diameter went into each of the gas chambers* [*z komór gazowych*]*. The outlets of these pipes ended in the individual chambers. I don't know whether any gas was released through these pipes into the chambers, whether the air in the chambers was compressed* [*zgęszczano*] *or whether the air was pumped out of the chambers. I was often on the ramp when the doors were opened. However, I never smelled any odors, and entering the rooms immediately after opening the door never had any harmful effects on my health. The corpses found in the chamber did not show an unnatural color at all* [*żadnego nienaturalnego zabarwienia*]*. They all looked like living people, mostly their eyes were open. Only in a few cases did it happen that the corpses were stained with blood. The air in the rooms, after their opening, was clean, transparent and odorless* [*szyste, przeźroczyste i bezwonne*]*. In particular, no smoke or combustion gases from the engine could be perceived. These gases were discharged by the engine directly to the outside and not into the chambers* [*Gazy te były odprowadzane z motoru wprost na dwór a nie do komór*]*."* (*ibid.*, p. 26)

Chaim Hirszman was interrogated in Lublin on March 19, 1946 by members of the local District Commission for Jewish History. He was deported to Bełżec in September 1942 from the village of Zaklików, about 75 km southwest of Lublin, and remained at the camp until its liquidation. He escaped from a transport of the last inmates who were being transferred to Sobibór in May 1943. Hirszman was killed on the day of his deposition by a group of anti-communists and anti-Semites.

Despite his having stayed in Bełżec for eight months, Hirszman's deposition is very terse. I reproduce the part that refers specifically to his stay at the camp:[41]

> *"We were loaded onto a train and transported to Bełżec. The train entered a grove. Then all the train personnel were changed. Instead of the trainmen, SS men from the death camp took over. At that time, we were still unaware of the situation. The train arrived at the camp itself. Other SS men took us out of the train. They led us all together into a barracks – women, men and children. They told us that we were going to the bathroom, and ordered us to undress. I understood immediately what this meant. After undressing, we were ordered to line up, on one side the men, on the other side the women with the children. There was an SS man with a whip, and by striking them with it, he indicated to the men whether they should go to the right or to the left, to death* [or] *to work. I was chosen for the death side,* [but] *at that time I did not know it yet. After all, I believed that one side or the other meant the same thing: death. However, when I leapt in the direction indicated, an SS man called me and said: 'Du bist ein Militärmensch, dich können wir brauchen'* [*'You are a military man, we can make use of you'*]*. We who had been chosen for the job were ordered to dress. I and some other men were designated to lead the people to the furnaces* [*do pieca*]*. I was assigned to the women. At the entrance to the gas chamber* [*do komory gazowej*] *was the Ukrainian volksdeutsch Schmidt, who struck with his whip every woman who entered. Before the door was closed, he fired a few times with the pistol, then the door closed automatically* [*automatycznie*]*, and after 40 minutes we went in and took the corpses away to a special* [*illegible word*] *and cut the hair off the corpses, and the Germans took them away* [*Niemcy je zabierali*]*. The children were thrown into the chamber* [*do komory*] *directly over the heads of the women. In one of these 'transports' from the gas chamber* [*z komory gazowej*]*, there was the corpse of my wife; I had to cut her hair. The corpses were not buried immediately, but were held to accumulate a larger batch. Therefore, we did not bury them that day. As I saw, there were many people in the camp, only Jews. There were so-called 'clean' barracks and 'dirty' barracks. I was directed to a 'clean' one. The block leader* [*blokowy*] *assigned me a cot."*

Hirszman spoke of only one "gas chamber" (instead of the six canonical ones), and because the investigators took the gas chambers' existence and their own knowledge about it already for granted, they abstained from having Hirszman as a self-proclaimed eyewitness describe this chamber himself, so he said nothing about it, not even what sort of gas was used in it. The account contains other elements that are in conflict with Reder's account, but also with the current orthodox narrative: the door of the "gas chamber" closed "automatically", the gassing lasted 40 minutes (for Reder exactly 20 minutes by the clock), and the Jewish slave-labor inmates cut the victims' hair after the gassing instead of prior to it (Reder, Gerstein). Hirszman's claims regarding the burial of the

---

41 Minutes of the interrogation of Chaim Hirszman dated March 19, 1946. Libionka, pp. 93-95.

corpses is not very clear; apparently, he meant to say that sufficient corpses had to pile up before they were buried in mass graves. He mentions "furnaces," although there never were any at Bełżec, but he says nothing about the exhumation and cremation of these corpses, which he would have been forced to participate in, or at least to have witnessed, if he really had remained at the camp until May 1943.

More information about this, along with much other information, comes from the deposition of his wife or rather widow, Pola Hirszman, which she made in April 1946. Since he claims to have cut the hair off his wife's corpse, it must be assumed that he had remarried in the meantime. The other alternative – that his wife also survived Bełżec, and that Chaim Hirszman lied about her death by gassing, and his cutting her hair afterwards – is a little too far-fetched to be considered seriously.

Pola testified as to what her husband had told her. Hence, it is a hearsay account of low value. Still, it is much more-detailed than Chaim's recorded testimony. In particular she mentioned the burning of the corpses, but it is not explained why Chaim himself had not mentioned it during his deposition. Her account is even more-clearly influenced by the rumors circulating at the time, including ridiculous stories such as the one about a deportation transport of children up to three years of age who were buried alive in a pit! Pola also hinted at gassings and "the gas chamber," but she knew as little about it as her husband, meaning nothing. The only reference to this is as follows:[42]

> *"The camp was like a city. There were wooden barracks, except for one barracks, in which the gas chamber* [*komora gazowa*] *was located."*

Hence, these two testimonies merely echo the black propaganda described earlier.

Other stories presumably told by alleged eyewitnesses who are said to have escaped from Bełżec were related by the hearsay witness Mieczysław Garfinkiel, who had chaired the Zamość Jewish Council in 1942, in his interrogation on October 5, 1945.[43] In the camp area were "a few wooden barracks," on which the first story centers:

> *"However, at the end of March* [*pod koniec marca*] *of 1942, 2-3 unknown Jews approached me who stated that, together with others, they had been brought to Bełżec the day before from Lublin, and had escaped from there, miraculously avoiding death, since, according to their account, all Jews who are brought to Bełżec are killed there by gassing in the aforementioned barracks."*

The second story is better articulated. A Jewish council member named Wolsztajn had a 17-year-old daughter and a 13-year-old son who was deported to Bełżec. Garfinkiel stated:[44]

---

42 Minutes of the interrogation of Pola Hirszman of April 1946; *ibid.*, pp. 96-99.

43 Minutes of the interrogation of Mieczysław Garfinkiel dated October 5, 1945; i*bid.*, pp. 116-120.

44 *Ibid.*, p. 117.

> *"This young man came to me early in the morning on Monday, April 13, 1942; he seemed noticeably fatigued and frightened, and related that on Sunday morning he had been taken to Bełżec. There, after the unloading of the cars, an SS officer had told the people gathered on the spot that, since they had to go East to work, they all had to go through disinfection and bathing, and for that they had to undress without delay and go to the barracks in front of them. In the meantime, he managed to hide in a cesspool that was nearby, where he stayed until late at night. He saw and heard that naked people were being beaten and pushed into the barracks, from where no one came out, but he saw that on the other side of the barracks, after a while, naked corpses were being taken out on carts. Such a procedure took place a few times during that entire Sunday, with other transports arriving in the meantime. During the night, he crawled under the fence and regained his freedom, and with the help of Gypsies who lived not far away he went to Zamość. This was the first real and reliable report that we received from the Bełżec Death Camp."*

Garfinkiel asserted that the camp was located in a "heavily guarded area, surrounded by several rows of barbed wire." Nevertheless, by the end of March, about ten days after the camp had opened, two to three deportees had already escaped from the camp, and another one in mid-April – and these were only those who returned to Zamość. It is not clear, then, why the outlandish rumors I have outlined earlier immediately arose about Bełżec. The story of young Wolsztajn is obviously ficticious.

According to all the maps drawn by witnesses after the war, there was no cesspool anywhere in the Bełżec Camp. Any such cesspool had to be in the vicinity of the latrines, but, if we are to believe the camp map of May 1942 as published by the "Aktion Reinhard Camps" website,[45] the only latrine of the camp was in the sector reserved for Jewish service personnel, which makes perfect sense, but this was far away from the alleged gassing barracks. On the other hand, if this cesspool was used for the excreta of hundreds of people working at that camp, such a pool must have been several meters deep, and it is not explained how the boy could see what was happening around him while submerged therein. It is not even clear whether the alleged gassing took place in one or more barracks, because the text uses both the plural and the singular. In other words, Garfinkiel invented the "cesspool" for this occasion, so this alleged deportee could hide in it near the claimed killing site. The young man, who is said to have been just 13 years old, escaped late Sunday night by evading the very tight security and overcoming several rows of barbed wire, yet on Monday "early morning," he was already in Zamość, which is 42 km north of Bełżec via the main road (which was no doubt guarded by the Germans). When he arrived in town, he did not go to his father's house, which any normal 13-year-old boy would have done, but to Garfinkiel's! However, as a reaction to the boy's mind-boggling revelations, Garfinkiel – despite his official func-

[45] Online at http://www.deathcamps.org/belzec/pic/bmap18.jpg.

tion in the local Jewish council – did not alert anyone, and he did not see to it that the young man's terrible story was recorded in any way and made accessible to others, because it remained unknown to all until Garfinkiel mentioned it in his 1945 deposition. Precisely because he had invented it then.

1.6. The Contest between Electric Current and Exhaust Gas

On the eve of the Nuremberg International Military Tribunal, the version of extermination at Bełżec by electric current had vanquished the other versions and had been officially adopted by the Polish and Soviet authorities.

In 1945, Dr. Litawski, officer in charge of the Polish War Crimes Office, drafted a report on the alleged German extermination camps in Poland for the coming trial, in which he wrote:[46]

> *"The camp of Bełżec was situated in the neighbourhood of the railway station and was linked with it by a special track on which the trains carrying arrested Jews were brought close to the barbed wire of the camp. In the beginning only smaller transports of Jews amounting to several hundreds of people were sent to this camp. But early in April 1941 a bigger group arrived, about 5,000 Jews picked up in a street chase in the ghetto of Warsaw.*
> *Early in 1942 the first reports have been leacked* [sic] *out that special electric installations were used in this camp for a quick mass killing of Jews. On the pretext of bathing, completely undressed Jews were brought to a special building called 'baths,' whose floor consists of slabs through which flows electric current of high voltage. In this way big masses of Jews were killed; their corpses were cremated or buried in huge common graves."*

The Polish government, in their official report on German crimes in Poland, presented by the Soviets as Document USSR-93 at the Nuremberg IMT, wrote the following about the camp at Bełżec:[47]

> *"The camp at Belzec was set up in 1940 to take in deportees, mostly Jewish deportees. By and by, however, it was converted to other ends and used for the execution of countless Jews. In the early months of 1942, reports came in that in this camp, special installations for the mass execution of Jews were being built. Under the pretext that they were being taken to a bath they were undressed completely and pushed into the building. A strong electric current passed through the floor of this building. Thousands of human beings were killed here. The guards plundered and robbed the inmates while they were still alive; after they had been killed, they took anything that the Jews had left behind."*

---

46 AGK, MSW Londyn, 89, pp. 3f.

47 "Die Republik Polen in der Sache gegen: 1. Deutsche Kriegsverbrecher; 2. deren Körperschaften und Organisationen bezeichnet unter Anklage Nr. 1 vor dem Internationalen Kriegsgericht," p. 42; IMT Document USSR-93, pp. 41f.

The following passage from the official report of the Polish government, Document USSR-93, was quoted at Nuremberg by Soviet Prosecutor L.N. Smirnov during the session of February 19, 1946 (IMT, Vol. 7, pp. 576f.):

> *"I end my quotation here, and I call the attention of the Tribunal to Page 136, on the reverse side, of the document book; this is from a report of the Polish Government, which shows that the Camp Sobibur*[48] *was founded during the first and second liquidation of the Jewish ghetto. But the extermination on a large scale in this camp really started at the beginning of 1943. In this same report, in the last paragraph on Page 136 of the document book, we may read that Camp Belsen*[49] *was founded in 1940; but it was in 1942 that the special electrical appliances were installed for mass extermination of people. Under the pretext that the people were being led to the bath-house, the doomed were undressed and then driven to the building where the floor was electrified in a special way; there they were killed."*

On the other hand, the investigations conducted toward the end of 1945 and in early 1946 by Regional Investigative Judge Czesław Godzieszewksi of the court at Lublin and by the prosecutor of the Zamość Court, Jan Grzybowsky, who interrogated dozens of witnesses, not only failed to determine what the alleged method of extermination had been, but managed to create total confusion in this regard. In fact, the indirect witnesses who reported hearsay mentioned a jumble of various methods of execution without, however, being able to state which one was the actual or the prevailing one. For example, on October 14, 1945, the Pole Eugeniusz Goch declared:[50]

> *"Out of fear for my life, I did not ask the blacks employed in the Bełżec Death Camp how the Jews were killed. Some people said that the Jews in Bełżec were killed in the camp with gas, others with electricity, still others that they were killed in a chamber from which air was pumped out, and in this way, they died of asphyxiation."*

On March 20, 1946, another Polish witness, Edward Ferens, testified as follows:[51]

> *"They* [the Ukrainians serving in the camp] *told me that Jews were crammed by the hundreds into a barracks where they were killed with an electric current, and that their corpses were then taken to a pit by a small train."*

However, the final blow to the determination of the presumed methods of extermination came from the only person who claimed to have been an eyewitness: Rudolf Reder.

On April 11, 1946, the Zamość prosecutor issued a report with the title "Report on the results of the investigation in the matter of the extermination

---

48 Phonetic transliteration of Sobibór.

49 The German version has here more correctly "Beldjitze" for Russian "Белжец," which is an approximate transliteration of the Polish name Bełżec; IMG, Vol. 7, pp. 633f.

50 Interrogation of Eugeniusz Goch dated October 14, 1945; Libionka, p. 153.

51 Interrogation of Edward Ferens dated March 20, 1946; *ibid.*, p. 231.

camp at Bełżec," in which he summarized the results of his investigation. On murder method, he wrote:[52]

> *"It was not possible to ascertain how people were killed in the gas chambers. In particular, it was not ascertained whether the pipes that connected the engine to the gas chambers served to introduce any gas into the chambers, to compress the air in the chambers, or to pump air out of the chambers. The witness Rudolf Reder, who worked at the camp during the time of the killing of the Jews, stated that he was on the ramp* [next to the gas chambers] *at the moment of the opening of the doors immediately after the killing of the people who were in the chamber, but he never smelled anything. The corpses that were in the chamber did not show any unnatural discoloration. They had the appearance of living people, usually these corpses had their eyes open. The air in the chambers, on opening, was pure, clear and without odor. In particular, there was no smoke or combustion gases from an engine."*

As pointed out earlier, Reder categorically ruled out the gassing of the victims in the death chambers, because he explicitly stated that the exhaust fumes from the gasoline engine did *not* enter the chambers, but were vented outside. The Polish investigative judge thus ended up with an extremely prolix eyewitness, but without the murder weapon.

In 1947, *the Główna Komisja Badania Zbrodni Niemieckich w Polsce* (Central Commission for the Investigation of German Crimes in Poland) tried to fraudulently remedy this serious shortcoming. In the article "*The Bełżec extermination camp*" that appeared in the official bulletin of the commission, Eugeniusz Szrojt wrote (Szrojt, p. 36):

> *"It has not been possible to ascertain for how long the execution chambers, in the construction of which the witness Kozak was employed, functioned. However, there is no doubt that the chambers in the new building mentioned by witness Reder were functioning in August of 1942. Nonetheless, within a span of two months, during which the camp did not operate – the period between the middle of May and the middle of July – the new building was put up, a more solid and more spacious building for mass murder of the victims in order to be ready for the major operation of the liquidation of the Jews in the Government General, which had been scheduled for the autumn."*

Szrojt was referring to two items from the evidence given by Stanislaw Kozak and Rudolf Reder, whom he called "the two most authoritative witnesses in this respect." (*ibid.*, p. 35). Neither item in evidence explained what had been the alleged method of extermination. The second testimony is Reder's already-quoted statement before Judge Jan Sehn on December 29, 1945.

Despite this, Szrojt adds a few pages later (*ibid.*, p. 41):

> *"All of the witnesses who have testified on this point – except one – agree that the Germans killed by means of the exhaust gases from an engine set up in the*

---

52 *Ibid.*, p. 234.

> *execution building. The gases from the engine were fed into the chambers through special pipes with outlets in the chambers."*

This was a lie on several counts. First of all because, as we have seen, none of the witnesses had named this method of murder as the only or even the prevailing method. Second, because Szrojt equates self-styled eye-witnesses and witnesses who had never set foot into the camp and who provided only hearsay. Third, because "the two most authoritative witnesses in this respect," Kozak and Reder, in fact had not mentioned this method, and fourth, because Reder had categorically ruled it out.

The Polish judiciary's choice was dictated partly by judicial and partly by literary concerns. On the one hand, they could not openly admit that they were ignorant of the "weapon of crime," and on the other hand, its article on Treblinka, which had declared the engine-exhaust method as true, had already been published in 1946 (see Chapter 3). For the sake of literary coherence, this method therefore had to be attributed also to Bełżec (and Sobibór).

In 1948, in a subsequent official publication of the Polish government (which had given official sanction to high-voltage current as the murder method three years earlier), asphyxiation with carbon monoxide produced by the exhaust gas of an engine became "history" (*Polish Charges…*, p. 226):

> *"With the victims in the gas-chambers, the final stage of the liquidation process commenced. The doors were securely locked behind the victims who were closely packed in the chambers. The engine was started up, and carbon monoxide introduced into the chambers through special exhaust pipes. In a few minutes, the cries of the suffocating people died down, and after 10-15 minutes, a special team of Jews opened the outer doors of the chambers."*

At first, the Polish judiciary did not specify what kind of engine produced the carbon monoxide, and apparently, they were not interested in it either. Western judges and historians, on the other hand, had known Kurt Gerstein's testimony since 1946, but took notice of Rudolf Reder's testimony only much later. When they did, they were confronted with the insurmountable contradiction explained earlier: a Diesel engine that killed victims and a gasoline engine that did not kill them, with the further complication first pointed out by engineer Friedrich Berg that Diesel-engine exhaust gas is utterly inefficiency for the mass killing of human beings (see Mattogno 2021a; Berg 1984/1994/2019).

The significance and the outcome of the metaphorical contest described in this subchapter have an importance that goes well beyond the specific matter dealt with, because they pose a general problem of historiographic methodology that concerns all the fanciful accounts that circulated about all three alleged extermination camps.

By the time the trial against the former SS men who had operated Bełżec Camp was held in Munich in 1965, the official historico-judicial picture of this camp was well established and considered "self-evident," hence beyond legal challenges, in spite of all contradictory testimony. In order to try to obtain min-

imum sentences, the defendants then had no choice but to perform false "confessions" that conformed with it (see Mattogno 2016, Subchapter III.3., pp. 62-69).

2. Sobibór

2.1. The First Clues in the Jewish-Polish Underground Press

Józef Marszałek notes that the espionage service of the *Delegatura*, which was the branch of the Polish Government in exile in London during World War II that operated within Poland, and the intelligence service of the Polish National Army (the *AK*, or *Armia Krajowa*) "had a good knowledge of the Treblinka and Bełżec Death Camps, much less so with respect to Sobibór" (Marszałek, p. 47), which is attributable essentially to the extreme scarcity of self-proclaimed eyewitnesses for the camp's period of existence.

Bogdan Chrzanowski affirmed in 1985 that "the underground press wrote rather vaguely about another camp of immediate extermination, meaning Sobibór, even though first indications had already surfaced in August of 1942" (Chrzanowski, p. 103).

Wartime information about this camp was indeed sparse and vague from the first such "news" item onward, which was described by Ruta Sakowska as follows (Sakowska, pp. 40f.):

> *"In early July of 1942, Oneg Szabat's*[53] *group managed to identify the location of the second extermination camp located in the General Government: Sobibór. The first news item about Sobibór – which went into operation in early May – was brought into the Warsaw ghetto by two couriers of the Dror,*[54] *'Frumka' Płotnicka und 'Chawka' Folman. In early June of 1942, on orders of the Dror, they went to the Lublin region, i.a. to Werbkowice near Hrubieszów, where there was a commune of Jewish youths. The two women arrived at Rejowiec on 6 June 1942. However, the Rejowiec Jews were no longer there, as they had been deported to the extermination camp in mid-May.*
>
> *The following day the two young women reached Hrubieszów. On the way into town they met a column of several thousand Jews from Hrubieszów and its surroundings who were being herded to the station by the Germans.*
>
> *A few days later 'Frumka' Płotnicka reported about this to Eliahu Gutkowski, the second secretary of the underground archives of the ghetto, who recorded the accounts of the two couriers: 'I almost fainted, the people marched in rows of four, more than 2,000 persons, men, women, and youngsters, no children. I*

53 Hebrew for "Joy of the Sabbath," code name of a group of Jews dedicated to chronicling life in the Warsaw Ghetto, see https://en.wikipedia.org/wiki/Ringelblum_Archive.

54 Hebrew for freedom, name of a group of socialist Zionists in the Warsaw Ghetto.

noticed two or three children holding the hand of an adult. There was a deadly stillness in the ranks, people marched quietly, looking down with eyes that no longer saw anything…' This column was followed by a second group: old people and sick women, some eight to twelve people each on farm wagons; one could hear their subdued complaints and their prayers: 'Save us, oh Lord.' As 'Frumka' Płotnicka learned later, the children had been taken away from their parents and were taken 'to an unknown destination' in sealed [railway] *cars.*
The next day, the two liaison women were present at the station of the nearby town of Miąciń. And here, for the first time, they heard the name: 'Sobibór.' 'Frumka' Płotnicka told Eliahu Gutkowski: 'From morning till nightfall people arrived here with their wagons and their possessions. In the evening the Jews were herded into special cars; they could not take their possessions along […]. *The train left for 'an unknown destination.' There are rumors that the Germans had built another death camp at Sobibór, modeled on Bełżec.' 'Frumka' Płotnicka died during the defense of the ghetto at Będzin (Bendsburg, Upper Silesia). 'Chawka' Folman survived and later published her memoirs in Israel."*

The beginning of the black propaganda about this camp was decidedly sluggish, but the subsequent news was just as evanescent. On July 1, 1942, the journal *Polish Fortnightly Review* published an article which mentioned Sobibór in connection with the "destruction of the Jewish population" in Poland ("Documents from Poland," pp. 4f.):

"The German press reported that the ghetto had been transferred from Lublin to the village of Majdan Tatarski [Majdanek], *but in fact almost the entire population was exterminated. For instance, it is generally known that a certain number of Jews from the Lublin Ghetto were shut up in goods trucks, which were taken out beyond the town and left on a siding for two weeks, until all inside had perished of starvation.*[55] *The majority of the Jews of Lublin were carried off over a period of several days to the locality of Sobibór, near Włodawa, where they were all murdered with gas, machine-guns and even by being bayoneted. It is an authenticated fact that Lithuanian detachments of* szaulis,[56] *who have recently been brought into Poland, were used for these mass executions. The fetor of the decomposing bodies in Sobibór is said to be so great that the people of the district, and even cattle, avoid the place. One Pole working in Sobibór wrote a letter pleading to be granted a transfer elsewhere, as he could not remain in such conditions."*

A report dated September 7, 1942 contained this brief reference:[57]

"In spring the news came through that a new camp of tortures had been set up in Sobibór (Włodawski District). The winding up of the ghetto was expected al-

---

55 As explained in Chapter 1, this black-propaganda theme was later picked up and imaginatively embroidered by Jan Karski.

56 Term for Lithuanian volunteers in the service of German armed forces during WWII.

57 "Report on conditions in Poland." Report received by the Polish Government-in-Exile in London on November 27, 1942. Annex No. 7. Liquidation of the Warsaw Ghetto dated 7.IX.1942, p. 4. HILA, Box 29.

> *ready by the middle of April, and then, later, by the end of May. In June the rumor spread that it had been put off for some time. But the visit of Himmler to the General Government in the middle of July this year hastened the execution of the plan, and his former orders were even made stricter."*

The "Memorandum on the Situation in the Country for the Period October 11 – November 15, 1942" reported tersely that "Sobibór near Włodawa is temporarily inactive" (Gmitruk *et al.*, p. 273).

The newspaper *Rzeczpospolita Polska* (*Polish Republic*) wrote in its edition of November 19, 1942 (Chrzanowski, p. 103):

> *"Das Lager Sobibór bei Włodawa ist zeitweise nicht in Betrieb, wird aber noch erweitert."*

The first vague mention of the extermination method used at Sobibór – unidentified "gases" – appeared in an official report of the Ministry of the Interior of the Polish Government-in-Exile, dated December 23, 1942:[58]

> *"At that time – April/May – the first vague news about the camps of Sobibór, in the Włodawski District and Bełżec, in eastern Lesser Poland, reached Warsaw, indicating that there was mass poisoning with gases* [*gazami*] *and assassinations with electric current of transports of hundreds of Jews who were moved there from the territory of western Lesser Poland.* […]
> *They are taken to three killing places, Treblinka, Bełżec and Sobibór, where the transports are unloaded, the condemned are stripped naked and murdered, probably with gases* [*gazami*]*."*

The report entitled "The General Government under the Axe of the Occupier's Atrocious Terror," which was sent to London on January 6, 1943, contained these fleeting references (Gmitruk *et al.*, pp. 279, 284):

> *"Lately, the Jewish execution camp in Sobibór (Włodawa District) was also put back into operation.* […] *The train was directed to Włodawa. The threat of the situation is magnified by the fear that it may be headed to Sobibór, which is located on this line, the notorious slaughterhouse hidden in the woods."*

In 1943 the Polish underground press published more news about Sobibór Camp. The paper *Informacja Bieżąca* stated on April 1 (Marszałek, p. 46):

> *"The death camp of Sobibór has again been in operation since 10 March. At the moment, transports from Holland and France are arriving there. These Jews arrive in passenger trains and are convinced that they are to work in factories of the war industry further east. On Sunday, 14 March, Dutch Jews were even received at Sobibór by an orchestra; the next day, not one of them was alive."*

---

[58] Ministry of the Interior of the Polish Government-in-Exile in London. Report No. 6/42 dated London, December 23, 1942, and signed by Minister Stanisław Mikołajczyk, pp. 50, 53. HILA, Box 29.

The "Memorandum on the Situation in the Country. General Government and Eastern Territories for the Period March 25 – April 23, 1943", drafted on April 24, 1943, reported the following (Gmitruk *et al.*, pp. 323, 340):

> *"Recently, several large transports of Jews from France and Holland were sent to Sobibór.* […] *Over 300 people were shot on the spot, and over 4,000 were sent to Zwierzyniec Camp, from where those fit for work were directed to the Reich, and those unfit for work* [were sent] *to the Bełżec and Sobibór Camps, where they were apparently liquidated in gas chambers."*

A report of May-June of 1943 stated that, after the deportation of Jews to the work camps at Trawniki and Lublin, "women, old people and children were moved to Sobibór" (Marszałek, p. 46), which suggests that at this camp not everybody was exterminated but only for those unfit for work.

In the report of the *Delegatura* for the first three months of 1943 we read (*ibid.*):

> *"Some transports of Jews from France arrived during March of 1943. A train for Sobibór passed through the station of Radom on 3 March, on 6 March* [there was a train] *at Częstochowa for Oświęcim* [Auschwitz], *and on 11 and 18 March (a train of 30 cars) for Sobibór."*

The *Informacja Narodowa* No. 3 dated September 30, 1943 reported that, out of the transports of Jews which had reached the camp between 19 and 25 September, "90% were killed and 10% sent to the camp at Trawniki" (*ibid.*). In its No. 1 edition of September 3, the same paper had already written about "200 persons sent to the Sobibór death camp," which had been selected from Jewish transports directed from Białystok to Trawniki on 15-21 August (*ibid.*). At Trawniki, after yet another selection, "old people, women, and children were sent to their death at Sobibór" on September 27 (*ibid.*).

An unknown "eyewitness" composed a report on November 1, 1943 in which he said, among other things (Silberschein 1944b, p. 25):

> *"On the last day of the* 'Aktion,' [campaign] *9 June* [1942], *some 5,000 persons were assembled on the market square* [of Hrubieszów]. *The district supervisor appeared and carried out a selection according as he saw fit. The people he selected were allowed to remain in the town and work, the others were loaded on trucks, taken to Sobibór and executed there. (These Jews were sent to Sobibór because Bełżec was, by then, 'overcrowded.') Out of the 5,000 persons, 1,000 were moved to Sobibór."*

In November of 1943, the underground press devotes a few lines to the revolt at Sobibór. *Informacja Bieżąca* No. 44 of 10 November states for example (Marszałek, p. 47):

> *"The Jews have destroyed Sobibór Camp and escaped into the woods."*

The "Memorandum on the Situation in the Country. General Government and Eastern Territories for the Period October 24 – November 21, 1943, as well as

supplementing the previous period", sent by the *Delegatura* to London on November 29, 1943 contains some additional information (Gmitruk *et al.*, p. 499):

> *"Revolt at Sobibór. In the second half of October, there was a bloody event, a successful uprising of Jews at the Sobibór Execution Camp. The inmates of the camp, numbering several hundred, killed a few dozen of their German and Ukrainian executioners. After burning down the camp, all the inmates escaped."*

A passing reference to Sobibór is made in the report from the *Delegatura* for November/December 1943 (Berenstein, p. 366):

> *"In Lemberg* [Lwów], *the labor camp with several thousand Jews still remaining in it was dissolved. Two other small groups were also liquidated. This fact could not be changed* [avoided] due to *the fact that a Jewish group destroyed the camp and the execution site in Sobibor – as had happened once in Treblinka."*

In the "Memorandum on the Situation in the Country. General Government and Eastern Territories for the Period November 22 – December 18, 1943, with supplements for the previous period," sent to London on January 27, 1944, we read (Gmitruk *et al.*, p. 524):

> *"Also in November the Germans killed about 8,000 Jews in the famous Sobibór Execution Camp, and a smaller number of people, numbering between a couple and a few hundred, among them 600 Jews employed in the Puławy sawmill."*

2.2. The Testimonies of Former Deportees

A number of testimonies of former deportees did not find the slightest echo in the Polish-Jewish resistance press of the time.

The first known testimony is that of an anonymous Slovak Jew who was deported from Sabinów on May 27, 1942 and, through successive stages, arrived in Sobibór, where he was selected to work with a group of 155 other Jews, after which he was transferred first to Ossowa, then to Krychow. After his escape, he returned to his homeland where he wrote a text on August 17, 1943 titled "Factual report of a Jew deported from Slovakia who returned." The most important information about the alleged death camp is this:[59]

> *"In the vicinity of Sobibor, fire can always be observed at night, and a stench of burnt hair can be perceived in the wider area. Various indications suggest (at least the population claims so) that the corpses which were previously executed by electricity and gas – and later buried – are now exhumed and burned in order to leave no traces behind."*

---

[59] *Tatsachenbericht eines aus der Slovakei* [sic] *deportierten und zurueckgekehrten Juden*, dated "Slovakei, 17. August 1943." Moreshet Archives, Givat Haviva, Israel, p. 4. The German text has no umlauts.

Notwithstanding the fact that burials or outdoor cremations, as explained in the Introduction, do not by themselves prove any kind of mass extermination at all, because the question is purely quantitative in nature, here it can be observed that real mass cremations do not produce any perceptible "stench of burnt hair", because hair constitutes a negligible quantity compared to that of a corpse, it burns first and within a few seconds, and because its stench would be covered by the much more intense and lasting stench of burning flesh.

The burning of hair is also in contrast with the practice of shearing the deported Jews before the alleged gassing. If this hair-cutting practice was done as a result of following Richard Glücks's order of August 6, 1942, the hair was also to be cut from the men, provided that it was at least 20 millimeters long, so that the alleged victims were cremated basically without much hair.

On October 7, 1943 the partisan commander ZACHAR FILIPOWICZ POPŁAWSKI transmitted to the Plenipotentiary of the Communist Party of Belarus in the Brest District a report of a Ukrainian guard who had deserted from Sobibór and had joined the partisans. The witness described therein in detail the alleged extermination procedure:[60]

> *"Eight to ten railway cars are uncoupled from the train and moved to the camp grounds. Jewish workers open the cars and throw out the people – the living and the dead. Everyone falls onto the embankment. All that can be heard are the moans or cries of adults and children, the screams of the Germans and the hissing of whips. People run from the embankment through a corridor made of barbed wire. There is the first barracks (see map), where they throw down all their things: clothes, suitcases, packages. After exiting this barracks, they meet a German, who stands there with a whip and directs the men to the left, the women to the right. The women are led further down the corridor, towards Camp II, to the last two barracks, where they strip naked; money, watches, gold, silver, diamonds are taken from them. After the women, they lead to the barracks the men, where they, too, strip naked, and go to the 'bath' through the same corridor.*
>
> *The 'bath'* [*łaźnia*] *is divided into eight rooms. Each chamber holds 500 people. The doors close tightly, the valve* [*zawór*] *is opened. Gas from the engine* [*gaz z silnika*] *flows forcefully into the chamber. The wailing, crying and shouting of people can be heard through its wall. After 5-10 minutes, they are thrown, not yet completely dead, onto narrow-gauge carts, and at this time their teeth are pulled out, the remaining rings are removed from their hands. The corpses are taken to the hearth* [*do ogniska*], *they are dumped on the ground, and instantly they are placed on rails in sets of 1,000-1,500 people. A small fire is lit under them, and the people themselves catch fire and burn."*

This account cannot be considered a first "revelation" of the "truth", but is simply one of many versions of black propaganda – undoubtedly the one that comes closest to the final version that was arbitrarily chosen by judges and his-

---

60 Bem 2014, reproduction of the document between pp. 224 and 225. The camp map mentioned in the testimony can be found on p. 85.

torians. However, it differs in significant respects from the official version of the Hagen Trial (see Chapter 5), according to which there were six gas chambers and not eight; 80 people could enter each chamber and not 500; the gassing lasted 20-30 minutes and not 5-10. The last sentence is patently absurd: under a pile of 1,000-1,500 corpses, "a small fire" was lit, thanks to which they caught fire and burned by themselves! This testimony, however, remained completely in the shadows.

In the years 1944-1946, witnesses attributed the most-imaginative killing methods to the alleged extermination facilities at Sobibór.

On August 10, 1944, BER MOISEYEVICH FREIBERG, a former Sobibór inmate, told a Soviet investigator the following during an interrogation in Chełm (Ehrenburg/Grossman, p. 439):

> *"When a group of eight hundred people entered the 'bathhouse', the door closed tightly.* […] *In a separate building there was an electric machine which released deadly gas. Once released, the gas entered tanks, and from there, it came through hoses in the chamber to be asphyxiated* [sic]. *There were no windows in the building. A German, who was called the 'bathhouse attendant', looked through a small glass opening on the roof to see if the killing process was completed. Upon his signal, the gas was shut off, the floor was mechanically drawn apart, and the corpses fell below. There were carts in the cellar, and a group of doomed men piled the corpses of the executed onto them. The carts were taken out of the cellar to the woods in the third camp. A huge ditch had been dug there, and the corpses were first thrown into it and then covered up with dirt. The people who delivered and disposed of the corpses were immediately shot."*

Also known from this witness is a statement in Russian dated August 18, 1944, which presents a more-concise description:[61]

> *"When a portion of the people, 800, had entered the premises, the doors were hermetically closed. In the building there was an electric machine* [электрическая машина, *elektricheskaya mashina*] *which produced the asphyxiating gas. The gas produced passed into cylinders and from them through pipes into the room. Generally, all those who were in the room were asphyxiated in 15 minutes. The building had no windows."*

On August 10, 1944, CHAIM PODROZNIK, a Polish Jew who had been deported to Sobibór in March 1943, was also interrogated in Chełm. Even before his arrival, he knew that this was a "death camp," and that it was also called "the eternal camp." However, during his stay at the camp, he did not learn much more about its alleged exterminating function, because in the more than four pages of his account, he limited himself to this fleeting reference:[62]

---

61 YVA, P.21.1-56, p. 2.
62 YVA, P 21.1.-160, p. 1.

> *"At Sobibur* [sic] *120 men and 60 women arrived. The women and children, however, were immediately separated and taken to the 'bathhouse.' Many of us saw our wives and children for the last time."*

On September 17, 1944, HERSZ CUKIERMAN, another former inmate, stated:[63]

> *"The camp was divided into three parts. The first and second were in contact with each other. The third part was isolated, located in the woods, and access to its area was prohibited. In this camp, everyone went to be liquidated. In Camp 3, a part of the men, women and children were gathered, as many as the gas chambers could contain.* […]
> *In September, new gassing facilities were built. They had 8 chambers that held 100-120 people. In this way, 1,000 people could be killed at a time. After the construction of this complex, new transports began to arrive."*

Five years later, on September 14, 1949, Cukierman made a "Declaration" ("*Erklaerung*") at the Office of the Judicial Section of the Central Committee of Liberated Jews in the U.S. zone of [occupied] Germany in Munich. In it, Cukierman, who had stayed in Sobibór from May 1942 to October 1943, described the alleged killing of a transport of 1,600 Jews from Majdanek Camp on the orders of SS *Oberscharführer* Hubert Gomerski. In this context, the witness stated:[64]

> *"These 1,600 people were interned in our camp to be gassed. On the very day the gassing was to be carried out, there was a breakdown* [*ein Schaden*] *at the crematorium* [*im Krematorium*], *so that the cremation plant* [*die Verbrennungsanlage*] *could not be used."*

From this we can infer that the witness purported that a real crematorium existed inside Sobibór Camp.

On July 27, 1945 another former inmate, BERISCH FREIBERG, stated the following:[65]

> *"The bathhouse looked like this: a stone building, the size I can't indicate exactly, because we were not allowed to enter the third camp. Those who ever entered it were killed. Only once, when the gate was open, did I see a pile of corpses. So, the building was made of masonry, in front adorned with a red Star of David decorated with greenery, a window and iron doors, a flat roof, and on the roof a small window, where an SS man, whose name was Oberscharführer Getzinger, used to sit. He used to sit there, looking through the little window, observing, and when he saw that people were dead, he used to give further instructions.* […]

---

63 AŻIH, 301/14, pp. 1-4.

64 Sąd Apelacyjny (Court of Appeals) Lublin, 193, Vol. III, p. 697a.

65 Report of Berisch Freiberg recorded by Bluma Wasser in Łódź on July 25, 1945. Translation from Yiddish into German by accredited interpreter Gabriel Miller. Staatsanwaltschaft Dortmund, Ref. JS 27/61, Aktenband VIII, pp. 2637-2638. Some of the court documents related to Sobibór can be consulted in the NIOD Archives (*Instituut voor Oorlogs-, Holocaust- en Genocidestudies*) at Amsterdam.

> *He used to sit on the roof and enjoy the view of the gassed Jews. Inside there were pipes, just like in a shower room, and the people believed that water for taking a shower would come out of these pipes. When the people were inside, about 1,000 people at a time, the doors were bolted – there were no windows – gas, chlorine or talen* [?]*, came out of the shower pipes. It took between 15 and 20 minutes until all the people were dead. When the sadist saw from the little window that everyone was dead, the floor was opened with an electrical device, and the dead fell through, so that the next group of people could be brought in immediately afterwards. At the same time, the corpses under the floor were loaded onto trams, these are small wagons that run on narrow-gauge tracks, and they were taken to a place not far from the house."*

Here the witness pointed out that he had never entered Camp III. He had only seen a pile of corpses through the open gate to Camp II. But he contradicted himself later by stating that he had been selected to work as a barber in Camp III.

During an undated interrogation by the Israeli police, which was probably conducted for the Eichmann Trial, hence perhaps in 1960, Freiberg said that a German led the group of selected prisoners to a barber shop,

> *"to the last barracks, in front of the gas chambers, gave each of us scissors, and forbade us to make even a sound. In the barracks, there were two rows of benches, and I stood behind them. Groups of naked women were brought inside. The first ones recoiled when they saw men, and covered their* [intimate] *body parts with their hands. The Germans ordered them to sit down, and we shore off their hair."*[66]

A few years later, when testifying during the Sobibor Trial at Hagen on December 21, 1965, the witness reiterated:[67]

> *"I had to cut the hair of naked women in a barracks in front of the gas chamber."*

In 1945, the Dutch Red Cross published a summary of the testimony of URSULA STERN, who had been deported to Sobibór on April 9, 1943. We read there:[68]

> *"There was a gas chamber that could hold 600 people; gas was fed into the chamber through showers; after the people had died, the floor folded down, and they fell down. The gassing of a group took about a quarter of an hour."*

In October-December 1945, the investigating judge of the Lublin District Court, Sergiusz Urban, questioned several former Sobibór inmates, some of whom are completely unknown to Holocaust historiography.

On October 10, 1945, JOSEF TRAJTAG reported the following, among other things:[69]

---

66 Staatsanwaltschaft Dortmund, Sobibor 85 PM IV, p. 18.

67 Staatsanwaltschaft Dortmund, Sobibor 66 PM dec '65, p. 833.

68 Het Nederlandsche Roode Kruis. Afwikkelingsbureau Concentratiekampen. *Sobibor.* 'S-Gravenhage, 11.4.1945, p. 11.

> *"We were not allowed to enter the camp where the death chamber* [*komora śmierci*] *was located. Approximately 700 Jewish men worked there exhuming, transporting and cremating corpses. From the accounts of those who were employed there,* [it appears] *that the chamber itself had a large underground room, the walls, ceiling and floor of which were lined with iron plates that were hermetically connected together. People were poisoned there with gases* [*gazamis*], *but what gases were used no one knew, except the Germans. It was said that people died in this chamber* [*w tej komorze*] *within five minutes. Then the workers entered the pit* [*do dołu*] *that was under this chamber into which the corpses of the murdered people fell thanks to the automatic opening of the iron floor; they transported the corpses of those killed on wagons* [*na wagonetki*] *and took them to a large pit, about 50 meters away from the chamber. The corpses were doused copiously with gasoline and burned."*

SAMET MOTTEL, who had been deported to Sobibór in the summer of 1943, was most-likely interrogated in October 1945. In the related undated interrogation minutes, he also spoke of a "death chamber" ("*komora śmierci*"), without further details, but his comrades had calculated that "about two and a half million people had been liquidated at the camp."[70]

SRUL JANKIEL FAJGIELBAUM, also interrogated by Judge Urban, stated on November 5, 1945 that he had been taken to the "Sobibór Death Camp" in the winter of 1942-1943. He provided a detailed description of the extermination facility:[71]

> *"The death chamber* [*komora śmierci*] *proper was built near me* [at his workplace]. *It was lined with iron plates, and together with other workers, I carried these plates to the site. The ceiling, the walls and the floor were covered with plates. The work was directed by a German engineer whose name I do not know. The capacity of this room was very large; the size of 4 large rooms. I am convinced that these iron plates were insulated. Each time, 200 people, stripped naked, were pushed into the chamber. They were urged from the barracks through the corridor. The electricians stated that the people in this chamber were also killed with electric current* [*za pomocą prądu elektrycznego*], *which was produced inside the chamber by means of a special motor and machine. The current was conducted by means of special cables enclosed in tubes that led inside the chamber. After the people were locked into this chamber, you could hear screams and shouts coming from them, but they lasted very briefly, a few seconds, then silence followed. After that, 8-10 Jewish workers were brought into the chamber, who carried the corpses out to the narrow-gauge railway. These workers did not return to the barracks, and I got the impression that the Germans later killed them. When I worked together with other selected* [*inmates*], *we selectees worked by transporting the corpses on carts*

69 YVA, O.21-27, pp. 1f.
70 *Ibid.*, pp. 10-12.
71 *Ibid.*, pp. 3-6.

> *and taking them to a pile. The corpses were black* [*czarne*], *because, as I said, the people were killed with electricity."*

In an undated "Official Note," Judge Urban summarized the contents of an article on Sobibór that had appeared in the fourth issue of 1945 of the Russian magazine *Znamja* [*Flag*]; Urban wrote, among other things:[72]

> *"In the third* [camp] *was the so-called 'Banja'/'bathroom,' which was a masonry room with an iron door."*

JAN PIWOŃSKI, a Polish railroad employee, was questioned by Judge Urban on November 10, 1945, and reported rumors spread about the camp:[73]

> *"In my opinion, the extermination chamber for human beings was in operation right from the start, meaning during the period when the construction of the other rooms was still in progress. Because already then, I heard the sound of some engine. Regarding the way in which the people were exterminated, various things were said about it in Sobibór at that time. Some said that the Germans would use some kind of gas, others talked about pumping the air out of the chamber. A certain BIELECKI, a Pole taken prisoner by the Germans in Lwów, whom the Germans had forced to guard the chamber, stated that some gas was emitted from this engine, which was led though pipes into the chamber. The people inside are said to have perished within 15 minutes by this gas."*

SALOMON PODCHLEBNIK, who was interrogated on December 6, 1945, claimed to have stayed at the Sobibór "Death Camp" from April 28 to July 25-27, 1943. About the extermination system, he stated:[74]

> *"The people in the chamber* [*w komorze*] *were asphyxiated with gas* [*gazem*], *and then the corpses were burned on pyres* [*na stosach*]. *In my opinion, about half a million people were annihilated in Sobibór."*

He also knew only of one "gas chamber" in which the victims were killed with an undetermined gas.

The witness had already been interrogated in Lublin on September 15, 1944. On that occasion, he stated that he had been deported to the camp on April 28, 1943, and had escaped on July 20. Another prisoner had told him that already by then the number of victims amounted to about one million. He had been assigned to the *Waldkommando* (forest labor unit), which had 40 inmates. A transport of 3,500 Jews arrived twice a week. Podchlebnik said nothing about the killing method.[75]

JÓZEF MALIŃSKI, a Pole who had worked at the Sobibór railway station, stated on December 13, 1945:[76]

> *"I was never in the death chamber, not even in its vicinity,* [but] *I know that it was made of bricks and fixed with cement. It was opined that 500-600 people*

> *were liquidated at a time in the death chamber. How people were killed, whether by means of a current or an electric current* [sic], *I do not know, but I exclude the killing by electric current because of the low voltage. When people were being killed, a motor could be heard, but I do not know what its practical use was."*

On December 18, 1945, ICEK LICHTMANN, who had been deported to Sobibór May 15, 1942, made a statement in Krakow in which he reported:[77]

> *"In the middle of the forest, however, there was a small house with a red roof* [*domek z czerwonym dachem*] *into which about 1,500 people could fit. This little house was surrounded by a garden, above the house was the inscription 'Badehaus.' It was the gas chamber* [*komora gazowa*], *in which thousands of people were asphyxiated. It was located about 200 meters from the camp. After the gassing, the floor* [*podnaszono podłagą*] *was raised, the corpses fell into pits* [*do dołów*], *carts arrived at the bottom of these pits* [*and*] *took away these corpses, which were buried in pits* [*w dołach*] *in the woods. We were told about this by our fellow prisoners who had done this, and then they were killed as well,* [*and also*] *the Ukrainians who were guarding them.* [*…*] *In these conditions, I spent 17 months in the workshops, during which about a million people perished in the furnaces* [*w piecach*] *of this building with the red roof."*

According to the witness, there was a "gas furnace" ("*piec gazowy*") in Camp III.

On an unspecified date, most likely in 1945, EDA LICHTMAN, a Polish Jew deported to Sobibór in May-June 1942, wrote a short handwritten report in Polish titled "Sobibór Death Camp." According to her, there was a sign reading "*Seuchen-Bekämpfungsstelle*" ("Pest-Control Center") at the gate to Camp III. The gassing plant is described as follows:[78]

> *"It was a whitewashed building. On the roof, one could see the Star of David* [with] *a large inscription 'Nur für Juden'* ['Only for Jews']. *Two hundred people were pushed in and gassed. Oberscharführer Karl Bauer and Karl Bollender* [sic] *supervised the gassing. The gassed and sometimes even the living were thrown into pits, and the condemned were buried, then shot* [*rozstrzeliwano*]*."*

So, they were first buried, and then shot…?

In another undated but undoubtedly later statement, which was published by Miriam Novitch, the witness merely reported:[79]

> *"SS Scharführer Erich Bauer, master of camp No. 3, supervised the executions from a roof window of the gas chamber."*

The testimony by CHASKIEL MENDEL [MENCHE], who later became a questionable witness for the judiciary of the Federal Republic of Germany, probably dates back to 1945. He stated on August 22, 1950 that he had been in the

79 "From Mielec to Sobibor. Testimony of Eda Lichtman," in: Novitch, p. 56.

Posen forced-labor camp since June 1940, and from June 1941 until the beginning of May 1945 in the Gross-Rosen Concentration Camp. On July 7, 1958, he stated that he had been in Posen until August 1943 and then in Gross-Rosen. On March 15, 1960, he stated that he had been in Koło from October 1939 to June 1941, in Posen until August 1943, and in Sobibór until mid-October 1943. His Displaced-Person Card of October 1945 mentioned only "KZ Gross-Rosen," and in his application for an identity card of October 1946 he wrote that he had been in Koło from 1939 to July 1, 1942, in Sobibór from this date until 1943, and that he had been active as a partisan from 1943 to 1945.[80]

In the testimony in question, he stated:[81]

> *"The whole camp was surrounded with wires and by watchtowers. We went through Camp No. 1 and passed through a gate into Camp No. 2. In Camp No. 1, the SS men had selected 12 men for work, including me. My wife and children had been taken away. Shortly after that I saw the women being led down a narrow path. After that, I saw a few Jews busy sorting clothes. But they did not want to explain to me what was going on there. Then I saw how women and men stripping naked in a fenced-in area, cuddling up to each other due to the cold. A Scharführer said to them, 'You are going to work in your own country. It will be good there.' After that, people walked down a narrow path to a red house labeled 'Bath Room,' but no one came out from there.*
>
> *At the end of May a transport from Lvov arrived. There were many corpses in the railway cars. The living were led into a hall with a sliding floor. The people fell in and perished instantly. A few hours later we came in small carts and took the corpses to the furnaces. Meanwhile, the music played, and the Germans then ordered us to dance. They brought in women so that we had partners to dance with. Then the Germans pulled the gold teeth out of the mouths of the corpses, and threw the corpses onto the grate. Even some of us 100 workers were taken every day for the fire."*

In 1947 a journal in Yiddish edited by Israel Kaplan published a short testimonial account written by Yechezkel Menche (the Chaskiel Mendel mentioned earlier). Here he asserted that he had been deported to Sobibór from Izbica with a transport of 6,000 Jews, at a time when the cremation pits already existed, thus not before September-October 1942. However, in the list of transports to the camp from the General Government as compiled by Marek Bem, only one transport left Izbica at that time – on October 8 – with 2,500 Jews (Bem 2014, p. 266-268). The witness spoke of extermination, but had no idea how it was carried out, because he mentioned twice the term "bad-anshtalt", the equivalent of the German term *Badeanstalt* (bathing facility), and four times

80 Verdict of the *Bayerisches Oberlandesgericht*, Munich, of May 25, 1972 on an appeal by Menche for reparations (*wegen Entschädigung*). Wiederaufnahme-Verfahren Frenzel. Staatsanwaltschaft Dortmund, Ref. Js 27/61, Aktenband VIII, pp. 1162f.

81 Staatsanwaltschaft Dortmund, Sobibor 85 PM4 NO 186, unpaginated. This is an official translation from Polish.

"gaz-oyvns", in German *Gas-Öfen*, gas furnaces. The most significant sentence in the entire testimony is this:[82]

> *"After the Oberscharführer's speech, the people were led to the bathing facilities, and from there to the five gas furnaces. The gassed corpses were burned in four large prepared pits. Up to 300 SS directed the work.*
> *By my estimate, over one and a half million people were cremated in the camp."*

Menche was interrogated on April 22, 1975 in Melbourne on behalf of the German judiciary. His previous contradictory "knowledge" had now evaporated. He now merely reported the following:[83]

> *"As I have already stated, my wife and child were sent to Camp 2, and from there to Camp 3 for liquidation. I did not see this myself, but on the basis of my later experiences in the camp I know that this must have been the case, and as already stated, I did not see my wife and child again from that time on.* […]
> *Camp 3, the actual extermination camp, with gassing facilities and crematorium.*
> *I myself never went to Camp 3, but each of us knew what was happening there. We constantly saw at night the red fire from the burning facilities."*

BRONISŁAW LOBEJKO, who had been a Polish railway employee at Sobibór Station from the spring of 1942 to July 1944, was questioned by District Judge F. Zieliński on January 8, 1946, and reported the following:[84]

> *"According to reports of the Ukrainian guards, there were five gas chambers in the camp with electric light – in the form of baths. 500 people were herded into each gas chamber, which was then hermetically sealed. The killing was presumably done with the help of gas. This was evidenced by bottles similar to oxygen cylinders, which were delivered in large quantities."*

JULES SCHELVIS, the author of one of the best orthodox Holocaust studies on Sobibór, made a statement in Amsterdam on January 21, 1946, in which he stated that he had been deported to this camp on June 1, 1943. On arrival he was selected to work with a group of 81 deportees; after three hours he was transferred to Trawniki, and from there to Dorohucza. Therefore, he could not know anything about the fate that had been reserved for the rest of the transport. He claims that this had been revealed to him by one of his acquaintances, a certain Julek Monchait from Warsaw:[85]

> *"He had escaped from Sobibor and arrived at the Radom concentration camp, where I met him. He told me the following: 'After the men and women had undressed, they were led to a large barracks, the so-called bathhouse. In front of the barracks, on a lawn, stood a loudspeaker. It announced that they would*

now take a bath. […] *The hair was indeed cut off, and everyone was given a piece of soap with a towel, and they went into the barracks in groups. After 7 minutes, however, everyone was gassed. Special persons went into the barracks to examine the corpses for gold teeth. These were knocked out of the mouths. This way, the SS received a large quantity of kilograms of gold. We Jews had to drag the corpses to the crematorium, where they were burned.'"*

On June 22, 1946, SAARTJE WIJNBERG made an affidavit in which she stated that she had come to Sobibór from the Dutch camp in Westerbork on April 1, 1943 with a transport of 2,000 Jews. She described the fate of the alleged victims after the selection as follows:[86]

"The women's hair was cut, and they had to strip naked. The women had to undress in the barracks, the men outside in the open air. Afterwards, they were taken together with the children to the gas chamber of Camp III, without knowing what awaited them there. This barracks consisted of a large room in which showers were installed. However, no water flowed from these showers, but gas poured out, causing them all to suffocate.

I was in Camp II and could see how the victims entered the gas chamber. From outside, the familiar sounds of people being together in a confined space could be heard. The sound soon changed to wailing and crying, until it finally became silent. I know that the floor of the gas chamber consisted of two parts. These parts were lifted apart, and the bodies of the victims were thrown into carts that drove underneath and took the victims to the crematorium. A few hours later, a large fire could be seen in Camp III, and a horrible smell hung over the camp. The crematorium consisted of a furnace located in the ground."

Saartje Wijnberg was the wife of CHAIM ENGEL, who had also been deported to Sobibór, but already on November 6, 1942. Both husband and wife were interrogated in Zwolle on July 19, 1946, and their statements were summarized in a report. The fate of the alleged victims is described as follows:[87]

"Most of the time, the unfortunates were told that they had to take a bath. For this purpose, they were led to a special barracks, which was divided into a number of cabins that were equipped like shower cabins. Before entering, everyone had to undress completely. After undressing, the women had their hair cut off. This was not done with care, but in a crude manner. The hair was collected and shipped away. It was probably processed by some industry.

Gas poured into the cells from the shower openings. After the execution, the corpses were removed through trapdoors located in the floors of the cells."

Three years later, on August 29, 1949, Saartje Wijnberg confirmed these fables in another statement:[88]

"The people who arrived had to undress in one barracks, in the 2nd barracks their hair was cut, and in the 3rd barracks about 400 to 500 people had to take

---

87 ZStL, 208 AR-Z 251/59, Vol. 5, p. 890.
88 *Ibid.*, pp. 882f.

> *a so-called bath together. However, gas flowed in from the showers, and everyone was gassed. After that, the floor of the hall was opened, and the bodies fell into waiting carts which drove away. There were crematoria underground where everyone was burned. My husband heard from Ukrainians how the gassing and burning was done."*

The claim that some undetermined gas flowed from the showers was repeated on July 4, 1965 by KURT THOMAS in a statement for the Hagen District Court:[89]

> *"The showers blew gas instead of spraying water and the people suffocated a horrible death.* […] *All those murdered in the gas showers were burnt in the crematorium hole with help of coal and other flammables; the ashes were loaded into barrels and shipped to Germany as fertilizer."*

In 1946 another witness, LEON FELDHENDLER, stated (Blumental, p. 204):

> *"The bathroom was equipped as if it were really intended for washing (shower taps, comfortable furniture). The bathrooms were gassing rooms* [*gazowniami*]. *They gassed 500 people at once. Sometimes a stream of chloride was released* [*czasem puszczano prąd chlorku*]*; other gases were continuously tested."*

Also in 1946, ALEXANDER PECHERSKY (a.k.a. Pieczerski, a.k.a. Pechorskii, a.k.a. Peczorskij) published a booklet in Yiddish titled *Revolt in Sobibór* (Pechorskii 1946), an excerpt of which appeared in English in a book by Yuri Suhl, from which I take the following illuminating passage:[90]

> *"He* [the witness] *was an old-time inmate who worked at sorting out the clothing of those who were killed. He was well-informed. From him we learned where our comrades had disappeared and how the whole thing operated. He spoke simply, as though it were a conversation about ordinary matters, and we, the new arrivals, who had lived through some unusual experiences ourselves, shuddered as we listened to his story.*
>
> *'As soon as you were separated from them,' he said, 'they were taken to a second yard where everyone, without exception, must gather. There they are told to lay down their bundles and undress before going to the 'bath.' The women's hair is cut off. Everything is done quietly and efficiently. Then the bareheaded women, wearing only their undergowns, and the children, go first. About a hundred steps behind them go the men, completely naked. All are heavily guarded. There is the 'bath,'' he pointed with his hand, 'not far from where you see the smoke. Two buildings are standing there, one for women and children, the other for men. I myself have not seen what it looks like inside, but people who know have described it.*
>
> *'At first glance everything looks like a bath should look—faucets for hot and cold water, basin to wash in… As soon as the people enter the doors are clamped shut. A thick, dark substance comes spiraling out from vents in the ceiling. Horrible shrieks are heard but they don't last long. They are soon*

---

89 YVA, O.33-717.

90 Pechersky 1967, p. 12. In the original Yiddish text, this passage is on p. 9.

transformed into gaspings of suffocation and convulsive seizures. Mothers, they say, cover their little ones with their bodies.
The 'bath' attendant observes the entire procedure through a small pane in the ceiling. In fifteen minutes it is all over. The floors open up and the dead bodies tumble down into small wagons that are standing ready below, in the 'bath's' cellars. The full wagons roll out quickly. Everything is organized in accordance with the last word in German technology. Outside the bodies are laid out in a certain order. They are soaked with gasoline and set aflame. There is where they are burning,' he pointed again."

An undated manuscript in Polish dates to the immediate post-war period, maybe to 1945, which was drafted by Pechersky under the name Pieczerski, and is titled "Memoirs of the Sobibór Death Camp." A few words are indecipherable, and in the below translation, I fill in the relevant gaps with my educated assumptions (underscored in the text). In it, Pechersky reported a story similar to the one just quoted, which he said had been told to him by a prisoner named Alosza:[91]

"Women and children entered one bathroom, men another. Armed security personnel stayed behind, closing the doors behind them the doors <u>lined</u> with sheet iron. And there one could hear the muffled <u>hum</u> of electric motors [*elektrycznych motorów*]. *Some went to the water taps… And a wild, inhuman scream ordered them to <u>stop</u> and hurry back. Everyone looked up. And from the ceiling, through large metal fans* [*przez szerokie metalowe wentylatory*] *they were <u>engulfed</u> by black, dense wafts of gas pumped in by electric motors* [*czarne, gęste kłęby gazu wtłaczane przez elektryczne motory*]. *By now everyone understood that they were condemned to a martyr's death. The heart-rending cries, the frightened screams of the children <u>mingled</u> into a terrible ensemble. The mothers clutched their children to their chests; they lay down on the floor covering them with their own bodies. They died in terrible torments. Women instinctively protected their children, wanting to prolong their lives even for a brief moment, protecting them from death. Some <u>wandered around</u> like birds in a cage looking for some place and way of salvation. This gas was creeping lower and lower. The death of the people asphyxiated by this gas was terrible. Some people were desperate enough to throw themselves into the dense wafts of the gas, others tried to push it away by mindlessly waving their hands. After 15 minutes, it was already all over. In the two bathrooms, only the corpses of the murdered were left…* [illegible word]. *Through a small glass window at the top, 'the bath attendant'* [*łazienny*] *watched the process of asphyxiation unfold. Then, with a loud humming sound, the fans began to clear the air in the bathroom. After not too long, the special guard looked into the bathroom space through the large glass window in the ceiling. As soon as the air was purified, he gave a signal, and by means of another mechanism, the floor opened, and the corpses tumbled down into the basement* [*i przy pomocy innego mechanizmu otwierała się podłoga i trupy zwalaly się w dół w piwnicę*].

91 A.A. Pieczerski, *Wspomnienie z Obozu Śmierci Sobibór*. APMM, sygn. VII-353, pp. 124f.

> *And there, little carts* [*wagonetki*] *were already waiting for them* [the corpses…]. *Then the carts, loaded with corpses, took them out into the courtyard."*

During the following years, Pechersky abandoned these tales completely. In 1961, his new version read as follows:[92]

> *"From the second zone of the camp, the completely undressed people were taken to the third zone, which was equipped with special chambers, where even water pipes and small water basins were installed, supposedly for cleaning purposes. However, this was all a pretense, because as soon as the people had entered the chamber, the door of the same was closed, and gas was ducted into the chamber, by which these people suffocated."*

Then a group of 30 workers presumably took the bodies out of the chambers on carts, piled them up, and burnt them.

The themes of chlorine gas and collapsing floors were later merged into a new version by witness ZELDA METZ, who recounted (Blumental, p. 211):

> "[The victims] *went naked to the cash register. They handed over their money, jewelry and valuables. The Germans gave them tin badges or assigned numbers by voice, so that they could collect their money and belongings on their return. Then they entered the barracks, where the women's hair was cut off, then into the 'bath,' the gas chamber. They were asphyxiated with chlorine* [*dusili chlorem*]. *After 15 minutes, they were all asphyxiated. Through a small window, it was verified whether they were all dead. Then the floor opened automatically. The corpses fell into a railroad car that passed through the gas chamber, and took the corpses to the furnace. Before cremation, their gold teeth were extracted. The furnace was a huge hearth with an open-air grill."*

The chlorine-murder method was also asserted by SALOMEA HANEL, who arrived at the camp on January 17, 1943. She declared (Borwicz/Rost/Wulf, p. 64):

> *"Of 3000 people, 7 women and 18 boys were selected for work, the rest were sent to death. There were barracks; on one was the sign 'cashier.' The women were urged 'to the cashier,' their heads were shaved, they were ordered to strip naked, then they were given tickets to the bathroom. Men from the Gestapo told them that they were all going to the bath because they were full of lice. They had to put their shoes and clothes together, and in return they got a receipt. Once there was an incident because something had broken in the room. The people who got out ran around naked and hid outside. The Germans killed them with chloride* [*chlorkiem*]."

There is another statement by this witness, likewise in Polish, yet undated; the passage equivalent to the one just quoted sounds as follows in this statement:[93]

> *"The transport had 2,800 people, of whom 25 people were taken to the camp. Barracks* [sic]. *The women were led to the barracks, their hair was shorn, they stripped naked, and received tickets for the bath. The Gestapo men said they all*

92 Interrogation of Alexander Petscherski. Kiev, August 11, 1961. ZStL 251/59-13, p. 2674.
93 YVA, O.62-27, pp. 2f.

had to take a bath, because they were full of lice. The women went first. They had to arrange their shoes and clothes properly, and they got a receipt. There was one case where something went wrong in the chamber [*w komorze*]. *People got out and ran around naked, screaming at the top of their lungs. They were poisoned with chloride* [*chlorkiem*]*."*

According to HELLA FELENBAUM-WEISS, chlorine was used to kill deportees during transports (Novitch, p. 50):

"The arrival of another convoy distressed me in the same way. It was thought to come from Lvov, but nobody knew for sure. Prisoners were sobbing and told us a dreadful tale: they had been gassed on the way with chlorine, but some survived."

These conflicting rumors were reflected in the initial attempt at reconstructing the camp's history. In 1945, the Polish War Crimes Office attempted to sketch an initial "historical" picture of the camp as follows:[94]

"The third torture place for Jews was the 'death camp' of Sobibór, near Włodawa on the river Bug, to the south of Brześć Litewski, in the district of Lublin. This camp was used for the concentration of Jews during both the first and the second period of the liquidation of ghettos. In the first period – August 1942 – enormous masses of Jews from the General Government were brought to this camp to be destroyed in gas chambers. Besides Jews from foreign countries, especially from Low Countries and France, were brought there, who are given the assurance of being send to factories in the Reich, but in fact share the fate of the Polish Jews in the gas chambers, whilst their luggage and other movables become a booty of the warders. In summer 1943 large numbers of Jews from the district of Lublin and especially from the neighbourhood of Włodawa and Hrubieszów are brought to Sobibór. In the first half of 1943 a group of 1,000 Jews were murdered in Sobibór who were employed in war factories and brought from the Warsaw ghetto. These people had been previously promised by the German authorities their lives would be spared in recognition of their war effort. During the same period thousands of Russian Jews were destroyed in Sobibór who had been deported in masses from Mohilew, Smoleńsk and Bobrujsk districts. In the second half of October 1943 a sedition broke [out] *in the camp of Sobibór among several hundred of surviving Jews, who killed a number of hangmen, SS men and Ukrainians, burned down the barracks and escaped."*

This "historical reconstruction," which is decidedly insulting to any person with a critical mind, passed into the official report of the Polish government for the Nuremberg IMT in an even less-specific form (USSR-93, p. 42):

"This camp was used for the concentration of Jews during the first and second extermination periods of the ghettos. The Jews were killed here in gas chambers. Under the pretext of being led to factory work in the Reich, the foreign

---

94 Report of the Polish War Crimes Office, Dr. J. Litawski, officer in charge, on German crimes in Poland. 1945. AGK, MSW Londyn, 113, p. 626.

> *Jews, especially from Holland and France, were brought to Sobibór and executed. The strongest wave of executions in this camp was in 1943. Thousands and thousands of Jews were brought and killed in gas chambers."*

At the Nuremberg IMT, this passage was summarized even more tersely by L.N. Smirnov, deputy prosecutor for the Soviet Union, who stated during the hearing of February 19, 1946 in relation to the Polish government's official report (Document USSR-93; IMT, Vol. 7, p. 576):

> *"I end my quotation here, and I call the attention of the Tribunal to Page 136 on the reverse side of the document book; this is from a report of the Polish Government, which shows that the Camp Sobibur was founded during the first and second liquidation of the Jewish ghetto. But the extermination on a large scale in this camp really started at the beginning of 1943. "*

In October 1946, the Rescue Committee of the Jewish Agency for Palestine drafted a bulletin dedicated to Sobibór that summarized the "knowledge" of the time:[95]

> *"Three huts were reserved for the women: in the first, they had to take off their shoes; in the second, they undresses* [sic]*; in the third, they had their hair cut; all this – they were told – for the sake of hygiene. They were ordered to put their money and their valuables into large boxes. The women, stripped of everything, were then led into an enclosure made of ropes; as they passed by, the Germans, lined up in several ranks and armed with rifles and whips, assaulted them; little children were torn from their mothers, thrown to the ground and trampled upon with nailed boots until their skulls were smashed. Women who tried to cover their nakedness with some rag or another had their breasts cut off.*
>
> *The men were marched at the double to a third field. There, in front of the entrance to the bath-house, they were addressed by one of the officials, who told them that they were going to be sent to Ukraine, but had first to undergo a thorough cleaning, for everybody would be employed on the same kind of work. The men listened and believed; they suspected nothing, even as they were led through long railed passages which were camouflaged with tree-branches.*
>
> *At first, when there were no more than two or three transports daily, the victims were put to death by asphyxiating gases. Two Soviet tanks were placed between the two halls mentioned above, and when enough people were assembled in the halls, the motor-engines of the tanks were started up and the waste fumes diverted through a pipe into the halls. Twenty minutes later, the doors were opened and Jewish workers dragged the half-suffocated men outside, where the bodies were thrown into vast pits, strewn over with lime and covered with ashes.*
>
> *In due course, an electrically driven machine was constructed for the production of asphyxiating vapours which entered the bath-house through a rubber-tube. A German was watching the agony of the men through a little window in the roof, in order to ascertain whether death occurred within the fixed time. Af-*

[95] YVA, M.4-87, pp. 5f.

> *ter 15-20 minutes, at a given signal, the gas was turned off. The floor parted and the bodies fell into a cellar, from where they were collected to be buried in pits. Water was pumped into the halls, the floors were washed, the doors opened and all started over again.*
> *The prisoners who had been employed to help in the work were shot on the spot.*
> *When the number of transports increased to seven or eight daily, Germans at Sobibor found they were unable to keep up with the influx and transports were diverted to Wlodawa. The first transport to be sent there comprised 3,000-4,000 men from Kalish and the surrounding area.* […]
> *Part of the transports were destined for work in the camps. One of the prisoners operated the electrical machine which filled the cabins of the bath-house with fumes, poisoning his brethren."*

A report by Nachman Blumental titled "*Obóz śmierci – Sobibór*" ("Death Camp – Sobibór"), also dating back to 1946, describes the extermination system as follows:[96]

> *"The people 'very politely' receive towels and soap. The engine is started, one can hear its noise; sometimes there are cries, moans, but they are muffled* […]. *After 20-30 minutes, the motor is turned off. In the bathroom, the floor opens automatically* [*rozsuwa się automatycznie podłoga*], *all 'those who have bathed' – in fact, they have been gassed (with chlorine or another gas)* [*chlorem lub innym gazem*]*."*

2.3. The Birth of the "Gas Chambers"

The killing method using exhaust gas from an unidentified "engine" was made official only in 1947. In the course of Polish investigations into Sobibór Camp, the following was "ascertained" (Łukaszkiewicz 1947a, p. 52):

> *"Inside, this* [gassing] *building had masonry walls. It probably* [*prawdopodobnie*] *contained 5 chambers that held a total of 500 people. They were killed by the exhaust gas produced by an engine installed next to the chambers and connected to them by pipes."*

The inconsistency of the Polish judges' historical claims with the available evidence is demonstrated by the collection of testimonies edited by Miriam Novitch. She published 30 testimonies, almost all of former Sobibór inmates (Tomasz Blattj, Stanislaw Szmajzner, Hella Felenbaum-Weiss, Eda Lichtman, Abraham Margulies, Simha Bialowitz, the widow of Joseph Dunietz, Selma Wijnberg, Ber Freiberg, Kurt Thomas, Itzhak Lichtmann, Ilana Safran, Alexander Pechersky, Lea Reisner-Bialowitz, Aizik Rottenberg, Herschel Zukerman, Jehuda Lerner, Haim Lejst, Haim Treger, Elihahu Lieberman, Jacob Biskubicz, Moshe Hochman, Haim Powroznik, Yehezkiel Menche, Salomea

[96] AAN, 212-III-1, p. 4.

Hanel, Zelda Metz, Michael Knopfmacher, Esther Raab and Samuel Lerner, Moshe Bahir), which she introduced by describing the alleged extermination facilities as follows (Novitch, pp. 24, 26):

> *"Each new chamber was ten meters square, and had two doors, one on the east and one on the west. The victims entered by the western door, the dead were evacuated by the eastern one.* […]
> *In order to build the new gas chambers, old houses were pulled down and new ones were erected, each 4 x 12 meters. Five rooms were prepared to hold 70 to 80 people. Thus, 400 victims could be put to death at the same time, if children were included."*

However, none of the witnesses whose testimonies she presents provided even a vague description of the alleged gassing facilities (with the exception of Moshe Bahir, to whom I will return below, who repeated the widespread tale of gas flowing from showerheads and of collapsible floors). For the first gassing facility claimed for Sobibór, Novitch did not mention the number of chambers, while for the second, later facility, the density of victims is greatly underestimated: each room measured (4 m × 12 m =) 48 square meters and could contain 70-80 people; five rooms therefore measured (48 m × 5 m =) 240 square meters and could contain 400 people. The maximum density of victims was therefore (80 ÷ 48 m² or 400 ÷ 240 m² =) 1.7 persons per square meter, including children!

Novitch had derived the new facility's number of chambers – five – from Z. Łukaszkiewicz's reconstruction, who had ignored the history of the two alleged gassing buildings, and had mentioned a number of gas chambers that was irreconcilable with the number established by the Hagen District Court in its verdict of December 20, 1966: according to this, the first building contained three gas chambers measuring 4 m × 4 m, while the second facility had six chambers, also measuring 4 m × 4 m (see Chapter 5).

Ultimately, the claimed structure of the two alleged extermination facilities simply followed that attributed to Bełżec. In Volume III of the *Biuletyn Głównej Komisji Badania Zbrodni Niemieckich w Polsce*, the article on Sobibór immediately follows the one on Bełżec, for which the Polish investigating judges had arbitrarily opted for a killing system by engine-exhaust gas, as demonstrated in the previous chapter; this same method was also attributed to Sobibór for the simple reason of literary consistency.

Despite this choice by the Polish judiciary, the other legends continued to circulate after 1947.

In a memoir written around 1950, MOSHE BAHIR, a former Sobibór inmate, resurrected the fable of the killing rooms with a collapsible floor, and a basement below with carts hauling away the victims (Novitch, p. 147):

> *"Lager 3 was closed on all sides to the prisoners of Sobibor. It was impossible for us to see what was going on in that Lager because of the grove of pine trees which surrounded it. We saw only the roof of the 'bathhouse' which protruded*

through the trees. Thus we saw the murderous face of Oberscharführer Bauer who used to stand on the roof of that building and peep through the little window, into the death-chambers.
We all knew what was done inside the building. We knew that Bauer looked through the window in order to regulate the amount of death-gas which streamed through the ducts, which were in form of an ordinary shower. He was the one who saw the victims suffocating from the gas that was showered upon them and he was the one who ordered that the flow of gas be increased or stopped. And he was the one who used to see the victims in their final agony and in their death. At his order the machinery which opened the floor of the 'bathhouse' was activated, and the corpses fell into small carts which took them at first to mass graves and, later when time was short, to cremation ovens instead. Two hundred Jews worked in the gas chambers Lager."

This tale was repeated and made official by the only former Sobibór inmate who claimed to have seen the gas chambers with his own eyes: YA'AKOV BISKOVITZ. On June 5, 1961 he testified as follows under oath at the Eichmann Trial in Jerusalem:

"[Attorney General] *Q. Below, on the left, there are the gas chambers, and on the extreme left you wrote 'Fire Pit'. What is that?*
[Biskovitz] *Yes, that is the fire pit in which the victims who were brought out of the gas chambers were burned. After some time, a buzzing sound would be heard, the floor opened up, and the victims fell into the deep hollow below and were conveyed in this little train into the pit where the eighty men of Camp 3 were working, and they burned the bodies."* (State of Israel, p. 1184)
"President Judge: You described the inside of the gas chamber. For example, you told us how the floor opened up and the bodies fell below into the railway waggons.
Witness Biskovitz: Into the hollow below.
Q. Did you see this with your own eyes, or are you talking of things that you heard from others?
A. I will describe a shocking scene here.
Q. But first of all – did you, in general, have an opportunity of seeing these things from the inside?
A. Not everybody had the opportunity, but I, by chance, did. By chance I was taken to bring a cart with a barrel of chloride. When I was passing by the two larger stores in Camp 2, I detached the cart and pushed it towards Camp 3. I was supposed to leave it near the gate, but I could not hold the vehicle back. The gate opened and it pushed me inside. Since I knew I would not get out alive from there, I began to run back at top speed and managed to reach my place of work without anyone noticing. I kept this a secret – I am stressing this – even from the inmates of the camp who worked with me. From a distance, I saw the pit and the hollow and the small train that carried the dead bodies. I did not see the gas chamber from the inside; I only saw, from the outside, that there was a very prominent roof, and that the floor opened and the bodies fell below.
Q. You came to this conclusion from the nature of the structure?

> *A. Not from the nature of the structure – I saw it from afar even while I was running away quickly, although I cannot describe it exactly, after nineteen years.*
> *Q. Please understand me. You are somewhat familiar with these matters. Did you see the floor when it had opened up?*
> *A. I did not see that – I merely saw that underneath the gas chamber, there was a hollow which already contained bodies."* (*Ibid*., p. 1188)

So, Biskovitz first stated "I only saw, from the outside, that there was a very prominent roof, and that the floor opened and the bodies fell below," then, contradicting himself, he stated that he "merely saw that underneath the gas chamber, there was a hollow which already contained bodies" and "the pit and the hollow and the small train that carried the dead bodies." Even if one wanted to stick to the last statement, since the victims could not be gassed by remaining suspended in mid-air, the floor must have been collapsible, or tippable, or must have contained some kind of trap door, and this could well be a mere inference; but all this is irrelevant to this "eyewitness" statement:

> *"From a distance, I saw the pit and the hollow and the small train that carried the dead bodies."*

On November 9, 1965, at the Sobibór Trial held in Hagen (September 6, 1965-December 20, 1966), the witness, who at that time called himself Jakob Biscubicz, stated:[97]

> *"I was able to see the gas chamber from Camp II from above. The roof shone like metal. From the forest I could see the pits. I worked not far from Camp III. I did not look much because I was afraid. From the gas chambers one could hear the sound of the engines. The fire was also clearly visible."*

On this occasion, the witness stated that he had never entered Camp III, so that he committed perjury either at the Eichmann Trial or at the Hagen Trial – or both.

Miriam Novitch published a statement by the witness (under the name Jacob Biskubicz) which is undated, but was recorded undoubtedly prior to 1961. In it, he asserted that he had been deported to Sobibór in May 1943 with a transport of 3,000 Jews, of whom 80 were selected and "the others were sent into a forest to an unknown destination." Then he stated:[98]

> *"I couldn't believe in the reality of camp No. 3. One day, I was pushing a wheelbarrow loaded with chlorine and, eager to know what was happening in the camp, I went beyond the limit. I was nearly killed."*

It is clear that the witness did not know anything about the alleged extermination at that time; here he entered Camp 3 with a "wheelbarrow" rather than a

98 "From Hrubieszow to Sobibor. Testimony of Jacob Biskubicz," in: Novitch, pp. 120f.

cart, but he saw nothing. Later, he invented the fable reported above, developing the theme merely outlined in this early statement.

Even statements exist by witnesses who were convinced that the gassings were carried out using Zyklon B. LEON (JEHUDA) LERNER, who had been deported to Sobibór in the summer of 1943, stated the following in a deposition made in Haifa on December 16, 1959:[99]

> *"SS man Getzinger was the head of the gas chambers, and he threw in the cyclone gas to kill the people. After half an hour, there was no trace left of all Jewish-Russian prisoners of war, as well as of the other Jews from the Minsk ghetto; they were all gassed.* […]
> *One day they placed a hand grenade between the cyclone gas shafts, and as soon as Getzinger went to get new gas for the gas chambers, the grenade exploded and Getzinger was torn to pieces."*

The former deportee STANISŁAW SZMAJZNER stated the following as late as in 1966:[100]

> *"Bauer threw cyclone into the 'bath', which killed the people. Only at the beginning, the people are said to have been killed by exhaust fumes."*

3. Treblinka

3.1. Treblinka prior to Treblinka

According to orthodox Holocaust historiography, the alleged gas chambers of Treblinka started operating on July 23, 1942, the day on which the first transport of Jews from the Warsaw Ghetto is said to have been exterminated in them (Arad 1987, pp. 37-43, 81). However, Jewish black propaganda had already qualified that camp as a "death camp" almost two months earlier. The *Oneg Szabat* bulletin of May 29, 1942 described the events in Otwock, a town in the Warsaw District, as follows (Bańkowska/Epsztein, p. 228):

> *"More than 500 Jews were captured in the streets and houses and sent to Treblinka, to the death camp* [*do obozu śmierci*] *(in Treblinka there are 2 camps, a labor camp and a death camp* [*obóz pracy i obóz śmierci*]*). At the death camp, the murderers do not kill by shooting; no bullets are wasted for them* [the Jews]*; the execution is done with clubs* – [by] *torture to death. Part of the group of 500 captured Jews were* [sent] *to the labor camp for various jobs."*

The theme was taken up again in the bulletin of June 18, 1942 (*ibid.*, p. 236):

> *"Treblinka (camp) – From an eyewitness comes the following information: 'We dug huge pits. Every day, the Germans brought a group of 300 Jews, who were ordered to strip naked and enter the pit. Then the pit was filled up with the living people. I was in the camp for three weeks (May).'"*

The bulletin of July 2, 1942 contains a chapter entitled "Treblinka," which picks up and further develops the previous propaganda themes (*ibid.*, p. 247):

> *"In the first half of May, there was a mass execution of Jews. The number of victims reached 300 per day. Poles who had been rounded up were used to bury the victims. The Germans shot many of the Polish grave-diggers."*

On July 11, 1942, the *Dziennik Polski* (*Polish Newspaper*) published a "Report of Minister Mikołajczyk, delivered at the British Ministry of Information" on its page 3 which contained the following chapter titled "*Rzeź Żydów*" ("Slaughter of the Jews"):[101]

> *"The situation of the Jews appears to be even worse. The matter of the Warsaw Ghetto is well known. Hunger, death and disease continuously and systematically threatened the population. In the Lublin area, on the night of March 23-24* [1942]*, the Jewish population was deported. Sick and disabled people were killed on the spot. All the 2-3-year-old children of the orphanage, 108 in num-*

[101] "Sprawozdanie…" At that time, Stanisław Mikołajczyk was the Minister of the Interior of the Polish Government-in-Exile in London.

> *ber, were sent out of the city together with their nannies and killed. A total of 2,500 people were killed that night, while the remaining 26,000 were sent to the camps in Bełżec and Tremblinka* [*wywieziono do obozów w Bełżcu i Tremblince*]. *From Izbica Kujawska, 8,000 people were deported in an unknown direction. Reportedly, in Bełżec and Tremblinka the killing is carried out by means of toxic gases* [*za pomoca gazów trujacych*]*..."*

But the first Jewish transport only arrived at Treblinka 12 days *after* the date of the report. The Polish historian Dariusz Stola describes the background of the report as follows (Stola, p. 163):

> *"At the National Council's extraordinary meeting on July 7 Mikołajczyk presented an extensive report which officially confirmed the facts already known and included new ones. The Council voted to add to its Appeal of June 10 a passage on 'the planned extermination of almost the entire Jewish population.' Mikołajczyk specified executions of Jews in Lublin, Izbica Kujawska, Rawa Ruska, Biłgoraj, Wąwolnica, Mielec, Lwów, Wilno, Tarnopol, Radom, Stryj, and Przemyśl that demonstrated the scale and the organized character of the anti-Jewish action. He also mentioned that 'apparently, in Bełżec and Trawniki,* [the Germans] *murder* [Jews] *with poison gas.'"*

However, this does not explain anything and only complicates the matter, as David Engel noted (Engel, Note 123, p. 298):

> *"Mikołajczyk also spoke of executions of Jews by gas taking place at another location as well; according to the account in* Dziennik Polski, *this was Treblinka, whereas according to the* Polish Fortnightly Review, *15 July 1942, it was Trawniki. Both readings are problematic. Most of the available evidence indicates that the Treblinka gas chambers began their operation with the arrival of the first deportees from Warsaw two weeks after Mikołajczyk's speech. Trawniki, on the other hand, was a labor camp, at which no installations for gas killing were erected. It is thus not clear to what Mikołajczyk was referring, or where he got his information."*

A 1942 propaganda pamphlet of the Polish government-in-exile in London, under the title "Statement of the Polish Vice-Premier," quotes Mikołajczyk's speech he gave on July 9, 1942 at a press conference in the British Ministry of Information. Here is the passage under discussion (*Stop them Now*, p. 6):

> *"Altogether, in that night 2,500 people were massacrated,*[sic] *and the remaining 26,000 Jews of Lublin removed to the concentration camps at Bełżec and Trawniki.*
>
> *'Eight thousand people were deported from Izbica Kujawska to an unknown destination. In Bełżec and Trawniki murders are also carried out by means of poison gas'."*

The identical text appeared in the report published by the *Polish Fortnightly Review* on July 15, 1942 ("A Press Conference…").

Now, where did this happen, in Treblinka or in Trawniki?

The editors of *Dziennik Polski* informed in a note that the text they published was the one that Minister Mikołajczyk had delivered to the National Council of the Polish Republic (*Radzie Narodowej R.P.*). Since the Polish text clearly states "Tremblinka," the problem only arises with its English translation. The pertinent Polish phrase reads "*w Bełżcu i Tremblince*," where the two nouns are in the locative case; "Trawniki," which falls into the category of pluralia tantum, turns to "Trawnikach" in the locative case. One cannot believe that the editors of *Dziennik Polski* had confused a supposed locative "*w Bełżcu i Trawnikach*" in Mikołajczyk's original text with "*w Bełżcu i Tremblince*." This is already excluded by the fact that, in the chapter "22 Concentration Camps" ("*22 obozy koncentracyjne*") – which was not printed by the *Polish Fortnightly Review* – the Polish text mentions "Tremblinka" and Bełżec, without any mention of Trawniki.

3.2. Phantom "Death Camps"

On the other hand, Trawniki had its own propaganda connotation which made it even more "problematic" than Treblinka. On April 14, 1942 the *Biuyletyn Informacyjny* (*Information Bulletin*) published an article titled "The Killing of Jews in the Lublin Area", in which the following was reported:

> *"*[The Jews] *who remained alive, about 25,000 in number, were transported to the camps of Bełżec and Trawniki* [*w obozów Bełżcu i Trawnikach*]. *In these camps, according to the most-reliable reports* [*wedle najwiarygodnicjszych relacji*], *the mass killing of Jews by means of toxic gases took place* [*przy pomocy gazów trujących*]*."* (*Biuletyn Informacyjny*, p. 902)

On April 30, the same newspaper reported again about sealed railway cars arriving "at the Bełżec or Trawniki Camp" (*ibid*., p. 916). This news even appeared in the bulletin of the Jewish Telegraphic Agency of July 10, 1942 ("Nazis Slaughter…," p. 1):

> *"The suffocating of the 26,000 Polish Jews by poison gas took place in the two 'Jewish' concentration camps which the Nazis have established at Belzec and Trawniki."*

The editors of the *Polish Fortnightly Review* were undoubtedly inspired by it. In fact, Trawniki had been depicted by Polish-Jewish black propaganda as an extermination camp as early as June 1942:[102]

> *"Trawniki.*
> *On the Lublin-Chełm railway line, there is the small station of Trawniki and a hamlet of the same name. At the time of the outbreak of the German-Soviet war,*

[102] AŻIH, ARG [*Archiwum Getta*] 33.Ring.I/261 Mf. ŻIH-836, Bulletin of the *Oneg Szabat* containing information on the subject of the situation of Jews in various localities in the territory of the Polish Republic in the period April-June 1942 (June 24, 25, 30, 1942). Cf. Bańkowska/Epsztein, pp. 244f.

> *a camp for Soviet citizens and prisoners was established in Trawniki. This camp was soon 'liquidated' by killing most of the inmates, and during this operation, the local Jewish population* [was killed] *as well, numbering several hundred souls. For some time now, larger gas chambers* [*większe komore gazowe*] *and a primitive crematorium had been installed on the grounds. Since the installation of these gas chambers and the crematorium, trains of resettled Jews (mainly from Slovakia and the Czech Republic) arrived at Trawniki almost every day, about 1,500 per day. Upon arrival of the resettlers, they are stripped of everything they own, stripped naked, and then pushed into the aforementioned chamber. After the chamber is filled with victims, it is hermetically sealed, and a toxic gas is injected into the chamber using appropriate devices. After 15-30 minutes have passed, all those inside do not live* [anymore]. *Then, after adequate cleaning of the chamber from the remains of the gas, the asphyxiated Jews are burned in the crematorium. The clothes, underwear and shoes left behind by the Jewish victims are occasionally loaded onto railway cars and taken to the SS clothing factories, among others in Lublin (on the grounds of the old airplane factory) where these clothes are sorted and processed. The personnel employed in the Trawniki gas chamber and crematorium were exclusively SS men."*

The specification "on the Lublin-Chełm railway line" leaves no doubt that this was indeed Trawniki. Thus, the Jewish Resistance invented an "extermination camp" with gas chambers and a crematorium in Trawniki. This claim is even more-seriously flawed than the claimed transfer of victims to Treblinka a few weeks before the camp was actually opened, because it unequivocally shows that the Polish-Jewish propagandists who spread the first information about the "extermination camps" were deliberate liars.

A report by Israel Lichtenstein titled "Ten days of the 'trans-settlement action' of Warsaw Jewry," probably written in August 1942, speaks of the departure of railway cars with 120-200 people (Kermish, p. 698):

> *"In what direction? Nobody knows. Brest, Bobrójsk, Smoleńsk? – these are precisely the names. But anyone who knows the history of* Chełmno, Trawniki, *is aware of the way in which these unfortunates must perish: Machine guns, gas, electricity – these must be the redeemers of their suffering. And then mass graves for one thousand or one thousand five hundred bodies."* (Emphasis in original)

Here, too, Treblinka was ignored, and Trawniki was considered an extermination camp. On December 6, 1943, the *Daily News Bulletin* of the Jewish Telegraphic Agency wrote the following ("Germans have…," p. 4):

> *"The 'Jewish camps' are located at Belezec, Starogard, Potulice, Sobibor, Kosow-Podlaski, Treblinka, Trawniki, Poniechowek and also between Chelo* [Chełm] *and Wlodawa. Of these, Treblinka, Trawniki and Poniechowek are 'death camps' to which the Jews are sent to be executed. It is known that Treblinka has extensive execution facilities, such as gas and steam chambers."*

From this it is clear that this was not a confusion with the Bełżec and Sobibór Camps. In addition to Trawniki, it contains a reference to a phantom "death camp" at Poniechówek, a location a few kilometers from Nowy Dwór Mazowiecki and about 35 km northwest of Warsaw.

This news was reprised by the same bulletin on November 24, 1946 ("Jewish Mass Graves…"):

> *"Warsaw, 22 November (JTA). Police authorities today launched a campaign to put an end to looting of mass graves of Jews in the areas of Treblinka, Majdanek, Sobibor and Trawniki where Nazi extermination camps formerly existed."*

The "Memorandum on the Situation in the Country for the Period July 16 – August 25, 1942" (Bulletin No. 12) mentions another fictitious "extermination camp", Kosów Podlaski (Gmitruk *et al.*, pp. 217f.):

> *"Death Camps. The fate of the Jews deported from Warsaw is not exactly known. But the following facts are beyond doubt: a part of the deportees died in the railway cars of exhaustion, starvation, overcrowding and stench; the physically fitter ones were sent directly to work, it seems in the eastern territories in the rear of the front; the majority were sent to special Jewish camps that earned the name of death camps. These are the camps of Bełżec, Treblinka II, Sobibór in the Włodawa District and Kosów Podlaski. In these camps, Jews were killed in gas chambers built for this purpose."*

Other products of Polish-Jewish black propaganda were collected by Karl Yngve Vendel, an officer of the Swedish Consular Corps. On August 9, 1942, he visited some friends at their estate in East Prussia and stayed there until the 14th. Then he went to the Swedish Embassy in Berlin, where he wrote a report on the 20th on what he claimed to have seen and heard during his trip. Among other things, he reported the following:[103]

> *"The picture of the treatment of the Jews in Poland that I received from an informant* [*sagesman*] *is such that it can hardly be written down. Therefore, I want to limit myself to a few brief remarks. The treatment is different in different places, depending on the number of Jews living there. In some cities, there are Jewish quarters, in others, the ghettos are surrounded by a high wall, which the Jews can cross only at the risk of being shot, and finally in others, the Jews enjoy a certain freedom of movement. However, the intention is to exterminate them gradually. In Lublin, the number of Jews killed is estimated at 40,000. The extermination mainly affected Jews over 50, and children under 10 years of age. The others may remain alive to make up for shortages of manpower, and then, when they are no longer needed, they will be liquidated. Their possessions are confiscated, and mostly end up in the hands of the SS.*
>
> *In one town* [*stad*]*, all the Jews were rounded up for what was officially announced as 'delousing.' At the entrance, they had to leave their clothes, which*

[103] RAS, HP 324-84, p. 4. Long excerpts of the letter were translated into Polish by Lewandowski 1992.

> *were immediately sent to the 'textile collection'; the delousing procedure consisted instead of gassing* [*förgasning*]*, and then they could be put in a specially prepared mass grave. The source of all the information about the situation in the General Governorate that I have received is such that there can be no doubt as to the truthfulness of the informant's descriptions."*

Hence, "in a town" equipped with disinfestation facilities that "in reality" were homicidal gas chambers, the Jews were gassed and buried.

According to black-propaganda sources, an extermination camp equipped with homicidal gas chambers was also located in Lemberg [Lwów]. On May 18, 1943, the British received a "Memorandum" from Stockholm containing the statements of "two Belgian prisoners of war, L.H. and R.C., who escaped from Germany on 28th April and arrived in Sweden on 5th May [1943]," and who had been "in the penal camp at Rawa Ruska." They stated that "the Germans themselves boasted that at Lemberg they had specially constructed gas chambers where the Jews were systematically killed and buried. The total number was said to exceed 80,000."[104]

Another imaginary extermination camp was located "in the vicinity of Pinsk, for the eastern areas" (see the next subchapter). Finally, a Polish monthly published the following news in November 1943:[105]

> *"In the area of the former Warsaw Ghetto, the Germans built gas chambers* [*komory gazowe*]*, which went into operation for the first time on October 17 of this year. Since then, they have been killing ten* [sic] *people a day there."*

All this shows that the creativity of the Jewish-Polish black propagandists knew no bounds.

3.3. Treblinka in the Jewish-Polish Underground Press: Reports of Anonymous Eyewitnesses

As early as August 1942, the Polish-Jewish underground press began to spread far-fetched or patently false stories about Treblinka, purportedly based on eyewitness accounts. In this mishmash of information and disinformation, the most-varied killing methods appeared, including generic "gas chambers," but without special emphasis and often in correlation with other fanciful elements.

One of the first stories mentioning mobile gas chambers was published on August 17, 1942 in the *Informacja bieżąca* (*Current Information*), an internal bulletin prepared by the *Delegatura's* Information and Propaganda Office (Marczewska/Ważniewski, pp. 136f.):

---

104 Memorandum. To: Political Intelligence Department. From: Press Reading Bureau, Stockholm. 18th May, 1943. TNA, FO 371-34430, C 5895, May 26, 1943.

105 *Wieś i Miasto*, Vol. IV, No. 7, November 1943, p. 7.

> *"After the departure of the locomotives, the Jews are forced to undress, supposedly for the bath; then they are led into the gas chamber and executed, whereupon they – sometimes still living – are buried in excavated pits. The pits are excavated by machine; the gas chamber is mobile and moves back and forth over the pits* [*kamera jest ruchoma i przesuwająca się nad dołami*].
> *The camp strength amounted to 40,000* [!] *Jews on August 5* [1942]*; about 5,000 are executed daily. The liquidation is carried out by Ukrainians under the leadership of SS men. The operation on the Warsaw Ghetto is supposed to be completed by September of this year."*

This tale reached the ears of Wehrmacht Captain Wilm Hosenfeld, who wrote in his diary on September 6, 1942 what one of his subordinates had told him about the atrocities presumably committed by a *Sonderkommando* in Siedlce. The Jews were dragged through the streets, some of them killed straight away, others taken to the railway station (Roth, p. 229):

> *"Then they were taken away, 200 people in a cattle car that usually holds 42. Where to, nobody knows. What do they do with them? Nobody knows either! But it cannot remain hidden. Several of them always manage to escape, and through them the insane acts become public. The place is called Triplinka* [sic] *in the east of the Generalgouvernement. There the cars are unloaded. Many are already dead. The whole area is closed off with walls. The cars drive in and are unloaded. The dead are piled up next to the tracks, the arriving healthy men have to carry away the piles of corpses, have to dig new pits and cover up the filled ones, then they are shot. Other transports arrive and carry away the previous ones. The women and children, numbering in the thousands, are forced to undress and are herded into a mobile barracks where they are gassed. The barracks moves to a pit* [sic], *and the corpses are dumped into the pit by means of a device by which a side wall opens and the floor rises. This has been going on for weeks now."*

The "Memorandum on the Situation in the Country for the Period July 16 – August 25, 1942" (*Bulletin* No. 12) reported the following (Gmitruk *et al*., p. 218):

> *"Recently, the news came from Treblinka that on average the Germans are killing 5,000 Jews a day there. For the mechanical excavation of the pits in which the murdered Jews are buried, two dredgers* [*bagrownice*] *have been brought in which are working continuously. However, since the corpses are buried at a shallow depth and their number is enormous, one can smell the terrible stench of the rotting corpses five kilometers around Treblinka."*

In the following bulletin, No. 13, titled "Report on the Situation in the Country for the Period August 26 – October 10, 1942," this news was picked up and rehashed as follows (Gmitruk *et al*., pp. 250f.):

> *"In Treblinka, Bełżec and other camps* [sic]. *The Jews deported from the Warsaw Ghetto and from the ghettos near Warsaw were directed to the territory covered by the report, still primarily to the Treblinka and Bełżec Camps, where*

> *they underwent atrocious mass extermination in gas chambers. According to information from people who arrived from Treblinka, 300-500 people per day perish from gases* [*od gazów*] *in this death camp. The Jews are transported to Treblinka Camp not only from Warsaw and its surroundings, but also from other territories. On the arrival of each train with the jam-packed cars sprinkled with chlorine and lime,*[106] *20-30% of the deported Jews are usually found dead. It is rumored that, in addition to Treblinka and Bełżec, the Germans have established yet other killing camps for Jews in the General Government. Part of the deported Jews, the healthiest and strongest people, were sent to special camps in the East in order to be deployed there in particularly strenuous and often dangerous work."*

Therefore, according to this report, Jews of Warsaw were also deported to Bełżec!

The report published by the *Informacja bieżąca* on September 8, 1942 mentioned the use of an undefined gas with a delayed effect as a method of killing (Marczewska/Ważniewski, pp. 137f.):

> *"The extermination of the Jews takes place entirely independently from the events in the camp. The locomotive pushes the cars with the Jews under the ramp, all in sequence. The Ukrainians pull the Jews out of the cars and lead them to the 'bath' in the bathhouse. This is a building surrounded by barbed wire. They enter in groups of 300 to 500 persons. Each group is immediately locked up hermetically and gassed. Of course, this gas is not immediately effective, for the Jews have to walk to the pits afterwards, which are about ten to twenty meters away and 30 m deep. There they lose consciousness and fall into the pits, and the excavator sprinkles a thin layer of earth upon them. Then the next group follows."*

The same text was republished in Issue No. 34/59 on September 15.[107]

On September 20, 1942, an article titled "The Jews of Warsaw Are Killed in Treblinka" appeared in the *Bund*'s periodical *Oif der Vach* (*On Guard*) that reported the following tale (Arad 1987, pp. 244-246):

> *"During the first week of the 'deportation Aktion' Warsaw was flooded with greetings from the deported Jews. The greetings arrived from Bialystok, Brest-Litivsk, Kosov, Malkinia, Pinsk, Smolensk. All this was a lie. All the trains with the Warsaw Jews went to Treblinka, where the Jews were murdered in the most cruel way. The letters and greetings came from people who succeeded in escaping from the trains or from the camp. It is possible that in the beginning, from the first transports, some of the Warsaw Jews were sent to Brest-Litivsk or Pinsk, in order that their greetings would mislead, deceive, and provoke false illusions among the Jews in Warsaw.*

---

106 This fable, along with the one about Bełżec having been the destination of Jews deported from Warsaw, inspired Jan Karski to spin his yarn; see Subchapter 1.3.

107 AAN, 202-III-7, p. 148.

> *Actually, what was the fate of the deported Jews? We know it from the stories of the Poles and those Jews who succeeded in escaping from the trains or from Treblinka.* […]
> *The women and children from the arriving transport were divided into groups of 200 each and were taken to the 'baths'. They had to take their clothes, which remained on the spot, and were taken naked to a small barrack called the 'bath', which was located close the digging machine. From the bath nobody returned, and new groups were entering there constantly. The bath was actually a house of murder. The floor in this barrack opened up and the people fell into a machine. According to the opinion of those who escaped, the people in the barrack were gassed. According to another opinion, they were killed by electrical current. From the small tower over the bath, there were constant shots. There was talk that the shots were aimed at the people inside the barrack and those who survived the gas. The bath absorbs 200 people every fifteen minutes, so in twenty-four hours the killing capacity is 20,000 people. That was the explanation for the incessant arrival of people in the camp, from where there was no return, except a few hundred who succeeded in escaping during the whole time… During the daytime women and children were liquidated and during the nights, the men…*
> *The escape from the camp was difficult and dangerous, but there were people who tried to do it, in spite of the fact that the camp was strongly illuminated during the night.* […]
> *There were three such camps: one in the vicinity of Pinsk, for the eastern areas, another in the area of Lublin at Belzec, and the third, the largest, was Treblinka near Malkinia."*

On October 5, 1942, *Informacja bieżąca* circulated the following report (Marczewska/Ważniewski, pp. 138f.):

> *"Treblinka. The death camp is once more in operation. Transports arrive from the entire country (most recently Radom, Siedlce, Międzyrzec). At present 10 trains, rather than 20, are allowed to approach at a time, for it takes a long time until the bodies of those who died on the way (20-30%) have been unloaded. The gas chamber* [*komora gazowa*] *functions as follows: Outside of the barracks is a 20 HP internal-combustion engine, which is in operation around the clock. The end of its exhaust pipe is mounted in a wall of the barracks; the exhaust gases, with the admixture of toxic fluids* [*z domieszką płynów trujących*] *which have been specially mixed into the fuel of the engine, kill the people locked up in the barracks. Besides the Jewish workers, there is a Jewish orchestra as well as a group of Jewish women in the camp area with whom the staff enjoys itself. Up to the end of August, 320,000 Jews were exterminated in Treblinka."*

This account was later repeated in a series of reports on Treblinka sent to the Polish government-in-exile in London on March 31, 1943 (*ibid.*, p. 153):

> *"After arrival in the camp, the Jews receive the order to completely undress, under the pretext that they are being led to a bath. They are brought into a*

> *sealed chamber, a barracks, approximately 100 people at a time. Outside the barracks stands an internal-combustion engine of 20 HP, which runs around the clock. The engine's exhaust pipe leads through the barrack's wall, and the people locked up in the barracks are killed by exhaust gases channeled through it that contain toxic fluid additives, which have been especially mixed with the engine fuel."*

At this point, there was still only one "gas chamber," located in a barracks, which killed with the exhaust fumes of an internal-combustion engine, to whose fuel were added mysterious "toxic fluids." Different stories also circulated at the time, however. As Samuel D. Kassow wrote (Kassow, p. 192):

> *"*[O]*n October 9 Opoczynski reported rumors of a 'giant electric chair' in Treblinka, designed to kill ten thousand Jews and Poles a day. 'The Germans like to brag about their industrial prowess, and so they also want to run their killing industry with American efficiency.'"*

On October 8, 1942 the *Biuletyn Informacyjny* (No. 39; p. 1104) reported:

> *"In the course of two months of the horrible operation, about 90% of the ghetto's 370,000 inhabitants were taken away. It is probable that some of the deportees – the healthiest and most-robust – were employed somewhere in camps on the territory of Soviet Russia, but the vast majority were killed – mainly in the Treblinka Concentration Camp near Małkinia in special gas chambers."*

A brief report on Treblinka that appeared in the *Informacja bieżąca* of October 23, 1942 mentioned the construction of new barracks at the camp and the alleged killing of hundreds of Jews at the Treblinka railway station by Ukrainians. It also contains this sentence (Marczewska/Ważniewski, p. 139):

> *"The death chamber was expanded from a capacity of 350 people to 750."*

The "Memorandum on the Situation in the Country for the Period October 11 – November 15, 1942" (*Bulletin* No. 14) reproduces in the first person the eyewitness account on Treblinka of "a Jew who was sent there and managed to escape." In the account, the designations Treblinka I and Treblinka II refer to Camp 1 and Camp 2. I translate the essential part of the report (Gmitruk *et al*., pp. 272f.):

> *"After 15 minutes of travel, we arrived at Treblinka I Camp. We quickly left the railway cars. We were taken to a huge square surrounded by a very high barbed-wire fence. This square is located inside the camp, which in its entirety is also surrounded by a wire net interwoven with fir branches. After we were led through the square, the men were separated* [and placed] *on the right, the women and children on the left. The women were ordered to enter the barracks on the left, and to hand over their shoes before entering and to tie them in pairs. Inside the barracks, the women had to strip naked, and together with the naked children, they were pushed through a side exit onto the road leading to the huge barracks of Treblinka II Camp. This road is surrounded on both sides by a high wire fence. In these barracks, one is supposed to bathe; in reality, there looms death by gas asphyxiation* [*śmierć od uduszenia gazem*]*. I do not*

> *know what gas is used, but I know from a colleague who worked at Treblinka II Camp for 3 weeks that the corpses have a bluish color* [*zabarwienie sinoniebieskie*]. *I don't know how the barracks are emptied after the gassing, but I know that a special machine that can be heard all day is digging pits. After the women are brought into the death barracks* [*do baraków śmierci*], *the men are ordered to strip naked on the spot. I managed to join the group of Jews who were working, employed to take away the belongings left by the people pushed into the death barracks; this is done by a group of Jewish workers selected from the daily* [arriving] *new transports. I don't know the number of people killed in Treblinka, but the piles of clothes and shoes are enormous, reaching a height of 2 floors, occupying an immense space."*

The "death barracks" – instead of a single gassing facility – and even-more-so the "bluish color" of the corpses are precise indications of the made-up character of this tale. According to the current orthodox Holocaust narrative, the alleged gas chambers of the Reinhardt Camps were operated with the exhaust gases of gasoline engines, in which the toxic agent was carbon monoxide. The discoloration of victims who died from this gas is notoriously cherry red, not bluish, and after Thomas Kues's masterful treatment of this topic, there can be no doubt about this (Mattogno/Kues/Graf, pp. 856-868).

This account was later reworked and sent to London as "Treblinka (report of an officer who had participated in the 1939 campaign; his wife perished at Treblinka; he remained at the camp five days)." The last page of the original typescript features a sketch of the camp (Document 1) in which two rectangles marked with the number 13 are labeled as "*Baraki śmierci/komory gazowe*" ("Death Barracks/Gas Chambers"; Marczewska/Ważniewski, pp. 146-149). This confirms the false character of the tale.

On December 4, 1942, Abraham Stupp, a representative of the Jewish Agency in Tel Aviv, sent a telegram to Aryeh Tartakower and Rabbi Yosef Miller of the World Jewish Congress in New York, which states, among other things (restoring punctuation and implied words):[108]

> *"Warsaw deportations* [unfold] *since 22 June* [sic]. *7000* [deportees] *daily, once 20000. stop by October, 36000 remained. stop deported carried* [to] *Treblinka, there everey* [sic] *day trainloads* [of] *Jews arrive, they are stripped naked, clothes given tailors* [to] *be cut through* [in] *search* [of] *jewellery* […] *heaps* [of] *clothes lie about; then Jews taken* [to] *socalled bathhouse, hermetically closed chamber, air* [is] *pumped away, people suffocate. other reports say Jews killed* [with] *poison gas."*

An anonymous witness, who was deported from Częstochowa to Treblinka on September 21, 1942, was assigned to sorting clothes, yet he escaped on the sixth day and wrote a report (no date is given), in which he merely stated that the victims were sent "*do kaźni*" (which can mean both "to torture" and "to execution"), that "throughout the day, every 15-30 minutes, new transports went

---

[108] TNA, FO 371-30924.

do kaźni", and finally that "muffled screams came for about 3-4 minutes from the torture [site], especially when there were women." The original text includes four maps of Treblinka. The most-detailed one also has a legend that mentions as No. 28 the "Women's road *do kaźni*," and as No. 30 the "Men's road from the undressing place to the road *do kaźni*."[109] 41 sites are numbered on the map and the legend, but no number or legend entry for "*do kaźni*" appears anywhere, which confirms the false character of the account.

Among the reports on Treblinka sent to London on March 31, 1943 mentioned earlier, one states that the Jewish extermination took place in "gas chambers", without indicating with what gas they operated, but it specifies that there were one hundred "gas chambers" in Treblinka (Marczewska/Ważniewski, p. 151):

> *"In this gigantic wooden house, where there were approximately 10,000 people in standing positions, an SS officer greeted them very politely and said the following, word-for-word: 'You have worked too little up to now for the German State, and because of this, the German Reich has decided to resettle you in the Ukraine, so that you work more. You are in a transit camp here. You will proceed directly to the bath.'* […]
> *They finally reach their destination – apparently baths, but in reality gas chambers. They walk, a few of them at a time, into one chamber, and there are probably a hundred of these chambers* [*a tych komór jest pewnie ze sto*]. […]
> *The bodies are piled up in even layers, a hundred at a time, and chlorine is sprinkled on them."*

Among the reports delivered to London on March 31, 1943 was one titled "*Charakterystyka metód Treblinki*" (Characteristics of the Treblinka Methods), in which three further murder methods were listed: shootings, trains with car floors covered with quicklime, and water vapor (*ibid.*, pp. 153f.):

> *"At the beginning of the so-called resettlement operation, when the technical preparations of the machinery of death were still not perfected, the Germans killed their victims in Treblinka in an extremely simple manner: a machine gun opened fire upon a crowd of men, women, and children who were brought forward, and they were shot down, each and every one of them. A crew of gravediggers threw all – the bodies of those killed, the critically wounded, as well as those lightly wounded – into the pits prepared up to that time and strew them over with earth.*
> *In August as well as the following months, as the acceleration of the campaign exceeded the possibilities of the steam chambers, the transports were loaded into cars, which were sprinkled with a layer of lime and chlorine, so that after the arrival in Treblinka, only corpses of a violet-blue color were tossed out of the cars. All had suffocated in torment in the cars. For these transports (for example from Międzyrzec Podl., Kielce) Treblinka was but the place of burial. From this information it emerges that a punctual and precise execution of the*

[109] AŻIH, ARG, 300.Ring II/297. Mf. ŻIH-800. The handwritten document was transcribed into the article "Relacje dwóch…"

> *determined plan was important to the Germans. The methods described above were practiced when the capacity of the machinery of death in Treblinka was faltering. The teeth of the corpses pulled out of the steam chambers in Treblinka were examined. Gold teeth and bridges were extracted by means of dental instruments."*

The "Memorandum on the Situation in the Country. General Government and the Eastern Territories for the Period of March 25 – April 23, 1943" (Bulletin No. 19, drafted in Warsaw on April 24, 1943) contains a paragraph titled "The Horror of Treblinka," where we read (Gmitruk *et al.*, p. 323):

> *"According to information that could be ascertained only recently, the technical installations in Treblinka for mass killings are so perfected that at the peak of the intensity of Jewish transportation, in the autumn of last year, 15,000 Jews were murdered in Treblinka every day. The killing of 800 people in the barracks* [*w baraku*]*, which imitates a bathhouse, but in reality is a gas chamber* [*komorę gazową*]*, lasts barely 10 minutes. At a certain stage of the existence of the Treblinka Death Camp, i.e. in the summer and autumn of last year, the corpses of the Jews killed with gas were buried in the ground or* [covered] *with a layer of lime cement.*[110] *During the winter and recently, the corpses are not buried in the ground, but* [are treated] *with powdered lime with the addition of corrosive acids so strong that the body together with the bones becomes shapeless and gets reduced to dust. Evidently for the purpose of eliminating any evidence of the mass murders, the excavation of the graves filled with earth has begun, and the corpses are destroyed with that corrosive powder. From the abyss of these tomb-pits, an unbearable smell and stench is released that can be smelled in a radius of more than 10 kilometers."*

There is no need to comment on such fantasies, which moreover completely ignored the claimed outdoor cremation of corpses. These fantasies reappeared in the "Memorandum on the Situation in the Country. General Government and the Eastern Territories for the Period of April 24 – May 21, 1943" (Bulletin No. 20, drafted in Warsaw on May 22, 1943; *ibid.*, p. 359):

> *"Also from Treblinka came the news that the Germans have begun to reopen the huge local graves of the Jews exterminated en masse there; the exhumed corpses are sprinkled with a certain corrosive mixture that completely reduces the bodies together with the bones to ashes. In this way, the corpses of the Jews murdered in Treblinka are currently annihilated continuously."*

The next testimony of a Jew deported to Treblinka dates back to August 1943 and was published the following year. About the alleged extermination, he stated (Stone, p. 20):

> *"Behind the fence was what was called the 'camp of corpses' and there we were not permitted to approach. Two young men managed to get over from*

---

110 This fantasy was also attributed to Bełżec. Robert Kuwałek writes: "At first, the corpses were sprinkled with chlorine. Then, an attempt was made to cover them with wet cement, but the pits' cement cover cracked because of the gases." (Kuwałek, p. 160)

> *there to our side. From what they told us I can relate the following: There were about 500 Jews working there and eight barracks built for 7,000 men. The naked persons who were brought there were herded into the barracks and told they were going to be bathed. When a group of victims had been assembled in the building, it was flooded with gas. Those outside comprehended… and refused to enter. The S.S. men, the Ukrainians and the dogs got to work… This was the source of the screaming we had heard on every occasion. When everybody was inside, the doors were closed for 15 minutes… The 500 Jews were occupied in removing the bodies to a fire trench… those men lived under horrible conditions, and every day 10 or 12 killed themselves (to be replaced from the healthier-looking of the new arrivals)."*

From this it follows that there were eight gassing barracks, in which 7,000 people could be killed at a time, but then the witness speaks inexplicably of one building that was "flooded" with gas: by which gas and in which way is unknown.

In November 1943, Marek Ptakowski mentioned the "electric furnace engines" ("*motory elektrycznych pieców*") of Treblinka, which, in one half year, had produced three million victims! These had been killed in various ways:[111]

> *"Some transports went directly in front of machine-gun fire. Others were burned in electric furnaces, but the majority were asphyxiated in gas chambers."*

Among the claimed gassing systems was also this one:

> *"Then, when the intensity of the movement* [of transports] *increased considerably, the transports entered directly into a huge hall, from where they returned full of corpses."*

The "Memorandum on the Situation in the Country. General Government and the Eastern Territories for the Period of July 26 – August 26, 1943," sent to London on September 8, 1943, contains a paragraph on the August 2, 1943 uprising (Gmitruk *et al*., pp. 437):

> *"Bloody uprising in Treblinka. In the Jewish Treblinka* [sic], *there were recently several hundred Jews, craftsmen employed by the Germans in various activities, or laborers used in camp work. Recently, they were employed in the reopening of large mass graves with Jews executed in Treblinka, and in the cremation of the exhumed bodies. Some of these Jews still alive in Treblinka created an underground fighting organization. One day, at the beginning of August, the right moment was chosen for the uprising: a part of the German-Ukrainian staff went to the bath. The Jews threw themselves on the rest of the staff, disarmed them, killed about 50 Germans and Ukrainians, then set fire to the barracks. All the Jews in the camp fled to the wooded area around Treblinka. The Germans carried out large roundups in these woods. Some of the Jews were captured and killed, some escaped."*

---

[111] See Ptakowski; GFHA, Catalog No. 3177, Collection 11254, pp. 188, 193.

According Yitzhak Arad, it may be assumed that "about 100 fugitives managed to get clear of the Treblinka region and scatter throughout occupied Poland, or even beyond its borders" (Arad 1987, p. 298).

This means that already in August 1943 about 100 former inmates, many of them "eyewitnesses," should have been able to provide detailed, consistent and more or less identical descriptions on the alleged gas chambers of Treblinka and their operation, but in fact even after that mass escape, the same more-or-less-senseless stories continued to circulate, starting with the extermination by water vapor, on which I will focus in the next subchapter.

3.4. Water-Vapor Extermination Chambers

All the claimed killing system – engine-exhaust gas with toxic liquids mixed in, stationary and mobile gas chambers, delayed- and immediate-effect gas, shootings, trains with the cars' floors covered with quicklime, electricity, an electric chair – were mentioned sporadically and very briefly in the "information" spread about Treblinka. The killing method *par excellence*, however, which was described most often and in great detail, was that of water vapor.

The story about the water vapor was reported by the witness Jakub Rabinowicz already in the second half of September 1942 (see next subchapter), but it became official (propaganda) "truth" only two months later.

On November 15, 1942, the resistance movement of the Warsaw Ghetto, operating in the underground, composed a long article entitled "*Likwidacja żydowskiej Warszawy*" (Liquidation of Jewish Warsaw), which contained a detailed description of Treblinka; because of its importance, it deserves to be quoted in full despite its length. The report, which was sent to the Polish government in exile in London on January 6, 1943, was accompanied by an "orientation sketch," of which at least two versions exist (Documents 2 and 3).[112] A complete English translation was published in 1943 in the anthology *The Black Book of Polish Jewry* with the headline "Treblinka. Official Report Submitted to the Polish Government" and reads as follows:[113]

> *"The village of Treblinka is situated near the Warsaw-Bialystok railroad line, a few kilometers from Malkinia, in a sandy and wooded area. The population consists of Polish peasant-farmers and forest workers. In 1940,* [correct: 1941] *the Germans established a penitentiary concentration camp, Treblinka A, on the sandy stretches near the village, for Poles who were guilty of transgressions against the occupant, of not supplying the demanded amounts of agricultural produce, or who were caught smuggling. The discipline at the camp is*

113 Apenszlak *et al.*, pp. 141-147; the numbers in parentheses, not included in the Apenszlak's English translation, are from the Polish original and refer to the sketches appended to the report.

very strict; prisoners are shot on any pretext. The camp is as notorious as the penitentiary camp at Oswiecim.

In March, 1942, the Germans began the construction of another camp, Treblinka B, in the vicinity. That camp has become the slaughter-house for the Jews of Poland and of other European countries. Poles from the nearby Treblinka A, as well as Jews caught in the neighboring villages, were put to work at the preparatory construction. That work lasted until the end of April when the central building of the camp, death-house No. 1, was built. (14).

Treblinka B is situated on the sandy hills among woodland.[114] *The area of the camp is comparatively small, some 5,000 hectares (about 12,500 acres).*[115] *It is entirely surrounded by a green fence interwoven with barbed wire entanglements (3). Part of the fence runs through a young forest in the north (25). At the four corners of the camp, observation points were placed for the* Lagerschutz *(Camp Guard). The* Lagerschutz *consists mostly of Ukrainians armed with machine-guns. At the observation points strong searchlights have been placed to light the entire place at night. Observation posts are also set in the middle of the camp and on the hills in the woodlands. The western border of Treblinka B is formed by the rail embankment along which runs a side-track that connects the camp with the main railroad-line (1). The side-line (2) was constructed in recent months, in order that the trains of transports might be delivered directly to the slaughter-house. The northern border of the camp is formed in the forest; east and south the border cuts through sandy hills. In the area of the camp, bushes form a long stretch parallel to the railroad tracks starting in the north (25).*

A railroad-crossing (4) is adjacent to the side-track; trains with transports halt there.

*From that barrier there is an entrance to a square which holds two to three thousand persons. The square is fenced in with barbed-wire. On the square, not far from the northern border, there is a wooden barracks. In the south-western corner of the square there is a guard-house with a military post on 24-hour duty (7). South of the square, outside of the fence, there is a cloth-sorting place (*Lumpensortierungsplatz*) (21), and further south, there is the execution place of the camp-commandant and the graves of the victims murdered by him (22). The arrival square (6) is connected with the rest of the area by an entrance in the north-eastern corner of the fence (8). From there, a path runs through the woods for about 200 meters eastwards (9) and then turns at right angles to the south and runs along the forest, parallel to the western limit of the arrival-square. This road stops at a large building (10) of an unusual shape; it is an unfinished one-story brick-construction, about 40 meters long and 15 meters wide. (When we received the information concerning Treblinka B in the first half of September, this building was about to be finished.) The Germans began the construction of that building after the action*[116] *started, probably in the*

114 The former camp area is known to be flat.

115 The size of Treblinka amounted to 13.45 hectares. See the following chapter.

116 The operation of relocating the Jews of the Warsaw Ghetto.

middle of August, with the help of Jewish artisans picked out from among the Jews brought to Treblinka for slaughter. It is significant that the bricks for the construction had been brought from as far as Warsaw, in trucks attached to each transport. The bricks were loaded in the Warsaw Umschlagplatz *by Jewish workers. According to the report of an eyewitness, the interior of the building is as follows; a corridor 3 meters wide runs through the middle; there are five chambers on each side; the height of each chamber is about 2 meters; the area is about 35 square meters. The execution chambers are without windows, but they have doors opening on the corridor and a type of valve*[117] *on the outside walls. Next to these valves there are large scoops (they remind one of large vessels). In the walls pipes were installed from which water-steam is supposed to pour into the chambers. This was to have been death-house No. 2.*

A path (9) skirts the building and runs along its western wall finally ending at the next building (12) near death-house No. 1 (14). This building is at right-angles to the death-house No. 2. It is a brick construction much smaller than the other. It consists of only three chambers and a steam-room. Along the northern wall of this house runs a corridor from which there are doors to the chambers. The outside walls of the chambers have valves (until recently doors which had been changed into valves for utility reasons). Also here a scoop in the shape of a shallow vessel is placed at the height of the valves (15). The steam-room (15a) is adjacent to the building. Inside the steam-room there is a large vat which produces the steam. The hot steam comes in to the chambers through pipes installed there, each having a prescribed number of vents. While this machinery of death is in action, the doors and valves are hermetically closed. The floor in the chambers has a terra-cotta inlay which becomes very slippery when water is poured over it. There is a well next to the steam-room (16), the only well in the whole area of Treblinka B. Not far from the death-house, south of the barbed-wire and wooden fences, there is a grave-diggers' camp. The grave-diggers live in barracks (19) next to which are the kitchen buildings. On both sides of the camp there are two guard-houses (17, 20). The remaining area of Treblinka B is destined for the murdered victims. A part of that area is already a large cemetery (22, 23, 24). At first, Poles employed in the camps dug the graves; later, as the slaughter was intensified and the need for more ditches grew, special digging-machines (bulldozers) were brought, which ran day and night at grave-digging. A Diesel-motor supplies the energy and its rattle is a characteristic sound at Treblinka B.

The supervisors and execution-staff are small in numbers. The slaughter-house is commanded by an S.S. man of the rank of major (his name is Sauer). The German staff, consisting of S.S. men, are in terror of their chief. The moment they see him from the distance they drive the Jewish workers as well as the victims on their way to death with even greater energy. Altogether, there are ten Germans and thirty Ukrainians.

---

117 "*Klapa*", flap, trap door.

The German crew changes from time to time; sometimes S.S. men from various towns of the General Government who were active at the deportations there, arrive at the camp.
In addition to the German-Ukrainian Lagerschutz*, there is also the Jewish auxiliary, part of whom are busy at the sorting place for the clothing of the victims (*Lumpensortierungsplatz*), and part of whom act as grave-diggers. They empty the execution chambers and bury the dead; the rest work at the arrival-square. The groups of the Jewish auxiliary service are headed by group-leaders whom the Germans call 'kapos.' They are relatively better fed than the rest and wear a triangular yellow patch at their knees to distinguish them from the others.*
The personnel of the Jewish auxiliary service undergoes almost daily changes. Rarely can a Jew stand that service for more than two weeks, due to the inhuman treatment they receive at the hands of the Germans. They are constantly tortured and whipped; corporal punishment (25 strokes) is very frequent as well as the shooting of the weak ones who lose their fitness to work. This is done mostly by the chief himself. Every day there is a roll-call. The German asks who does not feel strong enough to carry on with the work? A few men step out of the row, report their unfitness and beg him – as though for a favor – to be shot. The executions take place at a special spot; the victim himself stands erect over a grave while the chief shoots at the back of the victim's head. The next victim has to step nearer and throw the body of the murdered one into the ditch, and then a few moments later, share the fate of his predecessor. These young Jews are so overworked that all will to resist is gone; on the other hand, the German terror is so atrocious that it makes them even want to die so as not to suffer further inhuman tortures. In one of the first days of September, the chief of Treblinka thus murdered 500 young Jews by shooting them one after another with his gun; what is startling is that not one of this group of a few hundred men attempted to resist death. The execution lasted from 7:30 to 3 p.m.
The relatively lightest work in the death camp is the sorting of the clothing of victims. While assigned that work, one can eat to one's heart's content, for the 'deported' Jews took along large food-stocks: bread, marmalade, fat, sugar. But the chief does not leave the men at this work for any length of time; after a few days, he transfers them to grave-digging.
The gaps in the Jewish auxiliary service are supplemented from among the transports arriving in Treblinka. As a rule, two transports arrive daily: one in the morning and one toward evening. In the period of greatest of the action a few transports arrive daily. Each train consists of a few score of freight cars. Some of the cars halt at the side-track straight across from the arrival-square, while the remaining cars are shifted to the side to wait until the first part is taken care of. The cars are quickly emptied. The tortured and excited throng breathes with relief when let out on the square. They are immediately taken over by the Jewish auxiliary guard headed by the 'kapos.' These give orders in Yiddish. The women and children are ordered to enter the barracks immediately while the men remain in the square. Looking around, they see a high pillar

with a poster bearing a large inscription: Achtung Warschauer *(Attention, natives of Warsaw) despite the fact that transports of Jews from many other towns of the General Government, from Germany and the states of Western Europe are also brought to Treblinka. 'Do not worry about your fate,' continues the poster. 'You are all going eastward for work; you will work and your wives will take care of your households. Before leaving, however, you have to take a bath and your clothing must be disinfected. You have to deposit your valuables and money with the cashier (of Treblinka) for which you will get receipts. After the bath and disinfection, you will receive everything back unharmed.'*

In the first period of murder in Treblinka an S.S. officer with a kind, confidence-inspiring face used to come to the square and hold a speech along the same lines. However, when in the course of action ever larger transports arrived from the various parts and the crowds had to be quickly liquidated, the Germans cancelled the speech as superfluous.

To make the Jews believe that actual classification according to trades would take place at the arrival-square in order to send occupational groups for labor, they placed small signs with the inscriptions: Tailors, Shoemakers, Carpenters, etc. It goes without saying that such segregation never took place.

*The '*kapos*' quickly put the men in rows of ten, ordering them to take off their shoes, undress completely and prepare for a bath. Everybody is permitted to take along a piece of soap and his documents* [sic]. *In the meantime the sorting-service men take away the clothing to the sorting-place. Women and children also have to undress completely. Now comes the last act of the Treblinka tragedy. The terrorized mass of men, women and children starts on its last road to death. At the head a group of women and children is driven, beaten by the accompanying Germans, whips in their hands. The group is driven ever quicker; ever heavier blows fall upon the heads of the women who are mad with fear and suffering. The cries and laments of the women together with the shouts and curses of the Germans interrupt the silence of the forest. The people finally realize that they are going to their death. At the entrance of death-house No. 1 the chief himself stands, a whip in his hand; beating them in cold blood, he drives the women into the chambers. The floors of the chambers are slippery. The victims slip and fall, and they cannot get up for new numbers of forcibly driven victims fall upon them. The chief throws small children into the chambers over the heads of the women. When the execution chambers are filled the doors are hermetically closed and the slow suffocation of leaving people begins, brought about by the steam issuing from the numerous vents in the pipes. At the beginning, stifled cries penetrate to the outside; gradually they quiet down and 15 minutes later the execution is complete.*

Now comes the turn of the grave diggers. Shouting and cursing, the German overseers drive the diggers to their work, which consists of getting the bodies out of the execution chambers. The grave-diggers stand at the scoop, near the valves. The valves open but not a body falls out. Due to the steam all the bodies have become a homogenous mass stuck together with the perspiration of the victims. In their death agonies, arms, legs, trunks are intertwined into a gigan-

tic macabre entanglement. To make it possible for the grave-diggers to get out single bodies, cold water from the near-by well is poured over the mass. Then the bodies separate and may be taken out. As a rule the surfaces of the bodies are not defaced; only the faces and buttocks are purple. The grave-diggers, constantly beaten and driven by the Germans, place the corpses on the scoops until the chambers are empty. The bodies lie piled up like slaughtered cattle. Now the burying takes place. Formerly (during the first half of August), the Jewish grave-diggers had handcarts to convey the bodies to the ditches, which had to be done at top speed. Lately, however, the chief did away with them. 'Ein Mann – zwei Leichen' (one man, two corpses), meaning that each grave-digger has to bury two corpses. He ties the legs or the arms of the body with his belt and running, pulls it from the scoop to the ditches, throws it in and, again running, returns for the next load. Formerly the graves were right at the death-house so that the burying of corpses could take place quickly. As new victims were added, the grave-line moved ever further to the east and the pulling of the corpses to the graves takes longer and longer. After the ditch is filled, the grave-diggers quickly cover the bodies with earth and the digging-machine nearby prepares the next grave.

The execution of the men is identical. They also are driven through the road in the woods to their death. The victims react differently while being driven in the direction of the death-house; some repeat loudly psalms of penitence, confess their sins; others curse God; but a sudden shout of the Germans and the blows falling upon the backs of the doomed men immediately brings silence on the whole crowd. Sometimes all the victims cannot get into the overcrowded chambers; then the Germans keep the rest in the woods near the slaughter-house. These people see and hear everything but there is no attempt at self-preservation.

This is irrefutable proof of the atrocious terror wielded over their victims by the Germans.

The new death-house provides for the liquidation of 8,000 to 10,000 victims. If we consider that right now 2,000,000 murdered Jews, or the greater part of Polish Jewry, are already buried in the area of Treblinka, the disturbing question arises: for whom do the S.S. intend that new house of death; who are to utter their last breath in the slaughter-house? Most probably the death-machine, once started, will not limit itself to murdering Jews. At present, the specter of death in steam chambers rises before the Polish population; there have already been some signs of it: according to a report of an eyewitness, the Germans exterminated a group of Poles in death-house No. 1, in the second half of August." (Underscoring added)

This report was immediately considered reliable and thus was widely disseminated, both because it was said to be based on eyewitnesses, and above all because it was incomparably more detailed than all the other reports that circulated at that time, plus it was also accompanied by a detailed map.

In December 1942, the newspaper *Głos Warszawy* (*Voice of Warsaw*), organ of the Warsaw Committee of the Polish Workers' Party, published an arti-

cle headlined "*Obóz śmierci w Treblince*" ("The Treblinka Death Camp") that presented a somewhat different story of the "steam chambers."[118]

> *"The description of the Treblinka Death Camp is based on recorded eyewitness testimonies* [*na zaprotokółowanych zeznaniach naocznych światków*], *primarily former local grave diggers* [*grabarzy*].
> *The village of Treblinka is located several kilometers away from Małkinia. In 1940, the Germans established a concentration camp near this village. In March 194*[2], *the Germans began to build a new camp in the vicinity of the concentration camp, which was to be used, like Bełżec and Sobibór near Włodawa, for the mass murder of people, but was to be considerably larger in size. The construction of this monstrous slaughterhouse was completed after two months, when* [construction of] *Death House No. 1* [*dom śmierci nr 1*] *had reached the roof. It is a windowless masonry building, which consists of a corridor, three chambers* [*komór*] *and a boiler room* [*kotłowni*]. *Doors lead from the corridor to the chambers. On the outside, the chambers have trapdoors that open onto the hollowed-out ramp of a large boiler* [sic]. *From the boiler, pipes go to the chambers; they are provided with openings, from which water vapor* [*para wodna*], *after overheating in the boiler, escapes into the chambers. Doors and hatches in the chambers close tightly.* […]
> *This building is Death House No. 2* [*dom śmierci nr 2*], *a building that the Germans began in August of this year, but it was still not finished in September. Death House No. 2 is to contain 10 chambers. Further south is Death House No. 1, where the Germans over the past five months have exterminated 2 million people, mainly Jews from various locations in Poland, Germany and Austria. But not only Jews. Eyewitnesses* [*naoczny świadkowie*] *report that in the second half of August a group of Poles were killed in Death House No. 1. The pits of those murdered occupy the entire eastern part of the camp."*

Until April 1943, the journalist Eugenia Szajn-Lewin lived in the Warsaw Ghetto and kept a diary of important events during this time. She recorded what was said about Treblinka in the ghetto until the end of 1942 (Szajn-Lewin, pp. 83f.):

> *"The worst thing is death in Treblinka. By now, all know of Treblinka. There they cook people alive. They know by now that Bigan has escaped from Treblinka.* […]
> *He* [Bigan] *will build halls like the ones in Treblinka. Everything will be modern: the boilers that are heated by current, the steam-gas in there, the floor movable and sloping. 'There I will drive in the Germans, all naked. Many, many Germans, so that every corner is made use of, every centimeter.' And from the boilers the gaseous steam is conducted through the pipes, the boilers are red, and the steam… a hellish boiling bath. Four minutes suffice, then the*

[118] AŻIH, ARG, 432.Ring. II/319. Mf. ŻIH – 801 (this is an undated typewritten transcript of the article with the annotation "Reproduction from Głos Warszawy, organ of the Provincial Committee of the Polish Workers' Party"); cf. Wiatr *et al.*, pp. 219f.

floor flap automatically drops down,[119] *and the slimy mass of red, curled bodies flows away into the cesspit. And finished, the pits are simply filled with chlorine, and there is no more trace of what was once alive. 'All this lasts only seven minutes, you hear me?'"*

Information Note No. 3 of the *Oneg Szabat* of December 22, 1942 ("Wiadomości" Nr 3 22.12.1942 r.) reported the following (Wiatr *et al.*, p. 271):

"Information from survivors [*od ocalałych*] *of the Treblinka massacre affirms irrefutably and unmistakably* [*w sposób niezbity i nie pozostawiający żadnych wątpliwości*] *that 1. at the beginning of the so-called resettlement operation from Warsaw and places in the provinces, probably because of the still technically inadequate set-up of the death machine in Treblinka, the Germans killed their victims in too-simple a manner: they opened fire with machine guns on the crowd of men, women and children who had arrived in Treblinka, and they were exterminated one by one. The group of grave diggers threw everyone – the corpses of the killed, the seriously wounded and the lightly wounded – into pits prepared in advance, where those who were still alive would die in inhuman agony. 2. In August and the following months, when the intensity of the 'resettlement operation' led to the possibility of the steam chambers of Treblinka, the Germans organized themselves in this way: they loaded the transports of people from the localities covered by the operation onto railway cars sprinkled with a layer of lime and chloride, so that, after the arrival from the trip* [sic] *to Treblinka, only corpses of a characteristic purplish-blueish color, with swollen bodies, were thrown to the ground from the cars of the transport in question – they had all died amid terrible torments, suffocated in the death cars. For these transports (e.g. the group from Międzyrzec Podlaski, from Kielce) Treblinka was already only a cemetery. From the above, it is clear that for the Germans it was a matter of punctual and careful execution of a* [well] *laid-out plan. The mass-killing methods mentioned above were considered auxiliary when for these or other reasons the capacity of the Treblinka death machine was insufficient."*

In Information Note No. 5, covering the period January 1-8, 1943 ("Wiadomości" Nr 5 1 stycznia-8 stycznia 1943 r.), we read (*ibid.*, p. 285):

"Treblinka. In 'Information' #4, we reported on an innovation introduced at Treblinka, consisting of cutting the women's hair before they were sent to their death in the steam chambers."

Information Note No. 6 (January 9-15, 1943) also returned to the topic (*ibid.*, p. 295):

"Treblinka. From the series of macabre German figments: music at Treblinka. As a further demonstration of German cynicism at the Treblinka torture site, we note the following fact: a little Jewish orchestra often accompanies the march of the naked men and women on their way to the steam chambers playing various lively Jewish melodies and cheerful marches."

---

119 This fable is commonly attributed to Sobibór.

In Issue 1(10) of January 1, 1943, *Głos Warszawy* reported:[120]

> *"Of the 400,000 Jews of Warsaw killed over two months in the steam chambers of Treblinka – 40,000 (10%) remained alive."*

On April 21, 1943, the story of the Treblinka "steam chambers" was also picked up by *Pravda*, with the appropriate adaptations (Sergeeva):

> *"The Central Death House at Treblinka B encompasses an area of 5,000 square meters. It is surrounded by a high barbed-wire fence. The execution chambers are windowless rooms that can be sealed hermetically. In the center of the camp are ten execution blocks. Next to these blocks is a boiler room, from which steam is brought into the blocks through pipes. Human beings are sent to the central death house in large numbers every day. Long lines of trains arrive every day, completely filled with people.*
>
> *These horrible caravans resemble transports of cattle sent to the slaughter. Upon arrival, the deportees are ordered to line up and strip naked; they are told that their clothes will be disinfested, and that they are going to bathe. Women and children undress a couple of steps away from the men. Then a frightening march begins. Along their way, these people begin to realize that they are being sent to their deaths. The women begin to scream, the children begin to cry. However, this does not last long.*
>
> *The German machine works like clockwork. There are no traffic jams. The guards speed up the march of the column. Those who fall are killed on the spot, the others are urged forward. A German officer stands at the entrance to the rooms. Adults are pushed into the chambers, children are thrown in onto their mothers' heads.*
>
> *The floors of the rooms are slippery. Usually, people fall and never get up again. When everyone has been pushed into the chambers, the doors are sealed hermetically. Then, the boiler room supplies the steam that is blown into the rooms.* […]
>
> *In this way, the population of Poland is exterminated. Day after day, according to a premeditated plan, systematically and in accordance with cannibalistic theories on the annihilation of the Slavic peoples, horrible, hair-raising operations are perpetrated."*

Jews were not mentioned at all! The victims of this alleged extermination were the Slavic peoples and in particular Poles!

On August 8, 1943, *The New York Times*, with reference to an article that appeared in a London newspaper, headlined on page 11: "2,000,000 Murders by Nazis Charged. Polish Paper in London Says Jews Are Exterminated in Treblinka Death House." The subtitle reads:

> *"According to report, steam is used to kill men, women and children at a place in the woods."*

---

120 AŻIH, ARG, 432.Ring. II/319. Mf. ŻIH – 801 (reproduction of the periodical, p. 3).

The article was based upon a contribution published on August 7 in the magazine *Polish Labor Fights*, which was nothing other than the report of November 15, 1942. This is indubitably clear from the quotes in the *NYT* article.

On the same day, August 8, a Polish newspaper published in London, the *Wiadomośći Polskie* (*Polish News*), reported a very colorful version of the steam-chamber fable (No. 32 (178), p. 2):

> *"Treblinka. In the vicinity of Małkinia, in the middle of the sand, among hills and pine trees, since the beginning of the occupation, there has been a penal camp for Poles who have committed administrative crimes. It is called Treblinka.* […] *In March 1942 the Germans near this camp began to build another one, called Treblinka B, to distinguish it from Treblinka A. The camp lay on sandy hills in the middle of groves; up to it the Germans brought a track from the main railway, in order to deliver the victims to the torture center itself. The peculiarity of Treblinka is large chambers in which,* [when] *full* [of people], *from a boiler numerous pipes carry water vapor. It escapes from the pipes directly into the chambers through numerous sufficiently large openings. The transports were unloaded quickly. The living were lined up and the dead were thrown onto the platform, checking first with a few kicks that no one simulated death.* […]
>
> *They would line up the semi-conscious men and a short distance away the women and children, ordering them to strip naked in front of the bath. And then the hissing of the whips intensified, the swearing and shouting intensified, and the victims were led quickly and with the greatest agitation into the chambers. At the entrance, they were greeted by the camp commandant, the notorious sadist Sauer, who pushed the women and children inside with a large leather whip with several tails. The floor of the chamber was slippery, the unfortunates could barely stand on it, their feet burned, people fell and then could not get up again, because others trampled them down. And so the strange human block grew up to below the ceiling of the room. Only when the whole floor was already full of people lying down, those who came next could stand on their backs. But not even for long. They fell with any movement, finding the floor terribly slippery, they tumbled. In this jumble of human bodies, Commandant Sauer threw the children over the heads of the men and women; the swearing of the SS came from the corridor, the hissing of the whips ceased, until finally the door to the chamber was sealed, filled to the ceiling with people, who were writhing in agony before death.*
>
> *The steam filled the space, becoming in this chamber the agent that hastened death, which would have ensued even without it – by asphyxiation. A collective agony began.*
>
> *The flaps of the chambers were opening upward* [*Klapy komór uniosły się na górę*]. *Young Jewish boys were already standing in front of them with buckets of cold water, without which the corpses could not be separated. The SS set their whips in motion to hasten the emptying of the chambers."*

On August 18, 1944 Joseph Linton of the Jewish Agency sent the British Foreign Office a memorandum dated November 5, 1943, describing the fate of the Warsaw Jews, but without explicitly mentioning Treblinka:[121]

> *"They were made to undress in a hut, and were told that they were to be given a bath. Some of them had to remain outside. When the naked Jews had gone inside the hut, steam was turned on for a quarter of an hour. At the end of this time the hut, which was on wheels, was rolled by SS men over an open pit. The floor of the hut was withdrawn and the corpses fell into the pit. Those who were left outside were told to fill the pit with earth. During this process one of the Jews escaped and told one of the Polish sources what he had seen. It was estimated that ten waggon-loads of Jews were murdered every day in this manner for a period of three weeks: the total would have been between 40,000 and 50,000."*

In 1944, Rabbi Abraham Silberschein published an eight-page report on the camp of "Tremblinki." This report contains many new elements compared to the report of November 15, 1942. Because of its importance, the document, deserves to be reported in its entirety (Silberschein 1944a, pp. 33-40):

> *"<u>Tremblinki – The Main Extermination Camp</u>*
> *The small village of Tremblinki lies on the Warsaw-Bialostock* [sic] *rail line. The main extermination camp, three times as large as that of Lublin, was located not far from the village. It was at first set up as a concentration camp for Jews and Poles; but in March 1942, the Germans transformed it into an extermination camp for Jews only. They reconstructed the camp expressly for this and equipped it with gas experimental rooms and furnaces.*
>
> *<u>The Camp</u>*
> *The camp was situated in the midst of dense forests, entirely cut off from the outside world, and was reachable by means of a railway track with the Warsaw-Bialostock main line. It encompassed an area of 100 Morgen*[122] *and is surrounded by the thickest barbed wire.*
> *It consisted of three sections: the actual camp; the extermination camp, and an open square. The actual camp has three blocks: a men's camp, a women's camp, and between these two, a children's camp (see map).*[123] *A three-meter-wide anteroom divides the inside of each block* [Blöcke] *into two parts. From the anteroom, doors open into the cells. Each cell measures 36 m² with a height of no more than two meters* […two illegible words]. *Each structure was 40 × 50 m in size. Aside from this, two more elongated buildings, each about 120 × 150 m in size, were constructed later as a men's camp (not shown in the plan).*
> *The extermination facilities took up approximately the same space as the accommodation spaces and contained a dressing room (see plan). The dressing room contained a reception room for the camp administration, an anteroom,*

and the actual undressing room. The entrance to the dressing room was from the open square. A door led from the dressing room to the baths, from there a door led to the experimental chamber for asphyxiating gases, and from there a door to the furnaces. The furnaces were connected with a railway, which led to the cemetery (see plan).
A large pedestal had been erected on the open square. There were almost no workshops and only a few job positions in this camp.

The Guard Service – The Treatment
An SS detachment under the command of Hauptmann Sauer supplied the guard service in the extermination camp of Tremblinki. The composition of the staff of the detachment changed frequently.
The inmates performed various tasks in connection with the requirements of the camp. They were terribly maltreated and abused at this and had to endure the most inhuman punishments imaginable for every petty violation of the house rules or other mistake. Not all worked, most of them waited in the cells until the gassing facility was able to take them. But sometimes they were killed even sooner in another manner. The Germans shot several Jews on a daily basis, above all the commandant Sauer himself. Every afternoon he had his executioners assemble the Jews who still remained alive. Then he asked: 'Who is weak, who can no longer work?' The Jews made no answer at all to this: whoever had had enough simply stepped forward from the line – and was shot down. In this manner, Hauptmann Sauer murdered 500 Jewish youths, one after the other, on a single day in the beginning of September 1942.

The 'Kapus'
The 'Kapus' occupied a special position. It was these Jews upon whom many important mechanisms of the camp were imposed. Most Kapus had sorted through the clothing of those who had been transported out of this life. They did this task at a place called the 'rag sorting place.'
Others were also working at the railway station with the reception of those freshly arriving. Others, again, had to work as gravediggers. It happened not rarely that the Jews so occupied lasted no longer than two weeks and committed suicide.

The Delivery
Day after day two trains arrived in Tremblinki, completely filled with Jews. Jews were carried off from all parts of Europe to this place; but the main contingent was made up of the Jews from Warsaw, north Poland, and the Baltic.
Every train was 30 to 50 cars long. The emptying of the cars proceeded at lightning pace. Then the Kapus received the arrivals and read to them the camp regulations in the Jewish language. At the station building, the following appeal was displayed: 'Have no concern about your fate! You are all traveling only to work in the east. You yourselves will perform the work and your women will do the housework. Before traveling on, you have to bathe and remove the germs from your clothes. Gold and other valuables are to be deposited at the counter, where you will get a receipt for them.' And really, in order to lull the

belief in these promises into a feeling of security, the Germans had established an office at the train station, where each new arrival had to appear and report his professional training. After fulfillment of these 'statistics,' the people were brought into the camp and at first only sent into the disinfection baths. After the bath they were temporarily sent to the individual cells. There they were supposed to wait until it was their turn. But for the most part, those instructed didn't know what fate awaited them. They still believed that they would soon be traveling on to a place of work. This belief was even strengthened by the fact that there were no large factory facilities in the camp and that it had all seemed as if it were only a transit station.

The Murder Work

But when the rooms could no longer accept new arrivals, the most-senior inmates were gassed. Every day groups of a thousand people each were brought into the gas and furnace chambers. At first, as at their arrival, they were led into the bath by the Kapus. Everyone had to take off clothing and shoes and remained naked. For the further deception of the victims, each was handed a little piece of soap. In the meantime, the work of putting the discarded clothing and shoes in order was performed. Hauptmann Sauer took them over in the reception room of the extermination facilities. He did not miss any opportunity to flog every single person. Then the Germans drove the women and children as the first ones into the extermination cells. Now the final act of the extermination began:

Men and women, old people and children, all naked, take their last walk into death. At the fore stride the women and children, then the men, old and young, follow behind. To impel them to run faster, the Germans strike them on head and body. Now the victims are running, tormented by fear: their cries of dread, especially those of the women and children, ascend to the sky. Now everybody knows where this is leading – to death. The floor is slippery, one slips and falls. But those fallen can no longer even stand up; for continually new victims are flung over them. The children are thrown into the room, above the heads of their mothers. The extermination cells fill up. When they are full, then they are hermetically sealed, from every side the pipes open, out of which flows gas. The death of asphyxiation reaps a quick harvest. Within a quarter hour it is all over. Then the Kapus must go to work. With pitiless blows, the guard personnel force them to perform their work.

The gates of death open – but the dead bodies somehow cannot be pulled out individually: for they have all clumped together with one another and stiffened under the influence of the water vapor.

Water is fetched from a nearby well and the bodies are sprinkled with it so the gravediggers can carry away the corpses. These are loosened by it, one from the other, and it is easier to remove them. Their appearance has not changed, aside from a violet coloration of the head and the back side [sic].

Now the dead are loaded onto the ramp, conducted over a railway to the cemetery in the mass graves, where the Kapus bring their task to an end. (See the

almost identical description in the article by Tymon Terlecki 'Alle Juden raus,' cited by us on page 18 in 'L'extermination des Juifs polonais IV').[124]
By many hundred thousands, Jews from all regions of Europe have been exterminated in this way in Tremblinki alone.

The Camp Orchestra
But the camp of Tremblinki had another 'specialty.' To wit, the Jewish Arthur Gold Orchestra (see plan) gave concerts there, and it had the duty of playing for those who were being led to their death!!!! At the same moment as thousands of Jews were perishing in the gas chambers, the musicians had to play cheerful melodies. Whichever of them refused to do it was hanged up by his feet with his head down. Several of the musicians were seized by madness in the middle of playing. The artists, one after the other, jumped willy-nilly amongst the crowd of people who were waiting for their turn, and they bellowed with voice breaking and face madly distorted 'Frait och, yidelach, ir got zum tot mit klezemer!' (Enjoy yourselves, you Jews, you are going to death with music). Then the German bullets whizzed, and they sank under them to become a lifeless lump on the ground. After this the orchestra was brought up to strength again and the performance was repeated every time."

This account is clearly based on the report of November 15, 1942 with the addition of new fanciful elements, such as the "furnaces" and the "experimental chamber for asphyxiating gases."

The text published by Silberschein is the result of a reworking of two very short drafts titled "Extermination Camp Treblinka" and "Extermination Camp Treblinki" ("*Vernichtungslager* Treblinka"/"*Vernichtungslager* Treblinki").[125] The measurements of the alleged extermination building (40 m × 15 m instead of 40 m × 50 m) and the killing chambers (35 m² instead of 36 m²) also change here. The total number of victims is "many hundred thousands" instead of 2,000,000. The same archival source also contains a French translation, "*Treblinki Camp d'extermination des Juifs*," according to which the extermination building measured 40 m × 15 m, was divided into two parts by a 3-meter-wide corridor, and each part contained five "cells" ("*cellules*") 3.5 meters wide and 18.5 meters long. These two senseless figures are accompanied by a question mark.

In February 1945 the fable of the steam chambers, with other imaginative variations, appeared in a pamphlet in French that saw the light of day in Belgium (*L'extermination des Juifs de Varsovie*, p. 40):

"When the room is so full that nothing can be added anymore, the doors are locked tightly, and the other rooms are filled in the same way. The boiler is then set in motion (all the barracks are arranged in a circle around a central boiler and are connected to it by numerous pipes). Boiling water steam is

---

124 This article appeared on November 7, 1943 in No. 45 of the political newspaper *Wiadomośći Polskie*, published in London, in which Tymon Terlecki quoted longer sections from the already-cited report of November 15, 1942.

125 YVA, M.20/160.

gradually introduced through the pipes, and the unfortunate people, suffocating more and more, end up succumbing amidst unimaginable suffering."

3.5. Testimonies of Former Treblinka Inmates (1942-1945)

The accounts presented in the previous subchapter were explicitly based on the statements of allegedly anonymous eyewitnesses who are said to have managed to escape from Treblinka. But already by the end of August 1942, reports of self-proclaimed eyewitnesses also existed, whose names and surnames are known, which should make them more-reliable than the anonymous ones. The fact that the fable of the steam chambers was nevertheless widely spread, is incomprehensible from an orthodox perspective, but has its own incontrovertible reason in the framework of the Jewish-Polish black propaganda, as I will explain in Subchapter 3.8.

One of the first witnesses was DAWID NOWODWOSKI, who was deported to Treblinka on August 18, 1942, but managed to escape after a few days. On August 28, 1942, he wrote a "Report of the stay at the extermination camp of Treblinka" ("*Relacja z pobytu w obozie zagłady w Treblince*"). However, no reference to mass extermination or killing chambers appears in the text. The only allusion, somewhat enigmatic, says: "2 executions after 15 minutes up to 40 minutes." (Wiatr *et al.*, pp. 126-129)

On the same day, August 28, Abraham Lewin, who had been among those who had recorded Nowodwoski's testimony, gave the following account of it (Lewin, p. 95):

"Today we had a long conversation with Dawid Nowodwoski, who returned from Tr[eblinka]. *He told us exactly all the suffering he had endured from the moment he was captured until his escape from the place of execution and his return to Warsaw. His words once again confirm what we know, and reaffirm beyond doubt that people of all transports were killed, and none of them could survive. And so, both those who are captured and those who voluntarily show up. This is the naked truth. Terrible. And to think that in the last few weeks at least 300,000 Jews from Warsaw, Radom, Siedlce, and many, many other places have been killed. Based on your account, we have written a testimony that is so terrible and gruesome that it cannot be expressed directly in human language. This is undoubtedly the greatest crime that has ever been perpetrated in the history of mankind."*

This account, full of drama but without any hard data, confirms that Nowodwoski's account was generic and vague.

The testimony of JAKUB RABINOWICZ dates to the second half of September 1942. Only a fragment of the original report is known, but it does not contain any reference to extermination facilities or killing methods.

There is, however, an important element in the development of the history of the gas chambers, the first reference to a Diesel engine, although it had a completely different function (*ibid*., pp. 136f.):

> *"The lights were turned off, the Diesel engine stopped running for the duration of the bomber flyover."*

Hence, this engine was connected to an electric generator that produced the electricity for the camp.

The Ring II/298 file in the Ringelblum archive, which contains the handwritten fragment in Polish, refers to two additional sources. The first is A. Lewin's "Diary of the Warsaw Ghetto," which contains a report dated September 27, 1942. It states that "Rabinowicz, relative of the Rabinowicz who returned from Treblinka, spoke for hours on end of the horror of Treblinka." The subject of the narrative is this (Lewin, p. 105):

> *"Completely naked women go to the bathroom – the house of death* [*dom śmierci*]. *Condition of the corpses of the killed. How do they kill people? With ordinary steam* [*zwykła parą*]. *Death follows after 7-8 minutes."*

The second source is Emanuel Ringelblum's "Chronicle of the Warsaw Ghetto," in which the following entry appears for October 15, 1942 (Ringelblum, p. 416):

> *"Message from the gravediggers (Jakob Rabinowicz), the Jews from Stoczek, who have escaped from railway cars loaded with objects, gold, and cash. Unanimous description of the 'bathhouse,' the gravediggers with golden patches on the knees.*
>
> *Method of killing: gas, steam, electricity."*

ABRAM JAKUB KRZEPICKI was deported to Treblinka on August 25, 1942. He managed to escape after 18 days by hiding in a railway car full of clothes, and he returned to Warsaw, where he wrote two different reports. In the shorter one, to which he also attached a camp map, the description of the presumed extermination plant is very poor (Wiatr *et al*., p. 212):

> *"From the central square a road through the woods leads to the bathhouse* [*do łaźni*]. *It is a small building hidden in the thickets, concealed by a green net placed on the roof.* […]
>
> *They let 800-1000 people enter into the bathhouse. None of us, workers, knew exactly how death was administered. However, there seemed to be a barely perceptible smell of chlorine around the bathhouse. I never worked on the evacuation of the bodies from the chamber, I did know, however, that it involved nearby pits, where they were then burned* [*spalane*] *along with all the camp waste. But before that, in a small hut located next to the bathhouse, the corpses have their gold teeth removed."*

The plan of Treblinka (Document 6)[126] is accompanied by a caption (Wiatr *et al*., p. 215): from the "undressing barrack" (No. 6) a narrow road (No. 7) leads

[126] Wiatr *et al.*, p. 216. The original is at: AŻIH, ARG 378.Ring. II/295. Mf. ŻIH-800

to the "bath building" ("*budynek łaźni*," No. 8); between the two structures, next to the road, is the "building designed for a crematorium" ("*budynek przeznaczony na crematorium*," No. 9); further up, to the right, are two "pits" ("*doły*"), to the left the "pit digger's shack."

Krzepicki's other report, written after December 26, 1942, is much longer and devotes a separate chapter to the Treblinka "bathhouse," but other references to it are scattered here and there. It states there that the victims undressed "before going into the gas" ("*do gazu*," *ibid*., p. 162); the witness specifies later (*ibid*., p. 171):

> *"After a couple of days of work sorting the objects – the new transports were not yet arriving all the time – after the noon roll call, I was taken away with four other people to sweep the road leading to the gas chamber* [*do komory gazowej*]*, or, as the Germans called it, the Badenanstalt* [*bathing facility*]*. We were terribly afraid of this place. Until then, I had never been there."*

One day, Krzepicki was traipsing around with a "column" of Jewish workers, when he managed to get a glimpse through "the open door of the gas chamber [*komory gazowej*]," a structure shortly before defined as "a large masonry building [*wielki murowany budynek*] that stood in the center of the death camp – the gas chambers [*komory gazowe*]." A detailed description follows, which is titled "Bath [*Łaźnia*] in the middle of the green forest. What can be seen through the open door" (*ibid.*, pp. 173f.):

> *"It seems, as I have already said, that this building stands among the trees. I have now observed that a green wire mesh has been stretched over its flat roof, which reaches behind the building with its edges. Could this be an anti-aircraft camouflage? Underneath the netting, one could see tangled pipes running through the roof. The walls of the building were covered with concrete on the outside. I cast a glance inside through one of the two* [*z dwojga*] *sturdy iron* [*żelaznych*] *doors painted white that was open. I saw a not very spacious hall – an ordinary bathing hall with all the normal equipment of a public bath* [*Zobaczyłem niezbyt obszerną salę – zwykła salę kąpielowaną z całym normalnym wyposażeniem publicznego kąpieliska*]*. The walls were very nice and carefully covered with white tiles* [*białymi kafelkami*]*. The floor was made of red-yellow terracotta tiles* [*Podłoga ułożona była z czerwono-żółtych płytek terakoty*]*. From the ceiling hung showers ... and ... nothing else. A cozy, well-cleaned bathhouse in the middle of the green woods. There was nothing else to see there. Instead, in front of the entrance to this 'bathhouse' you could see a lot. Not far away were mountains of clay and below them – still open, huge mass graves, in which already then rested tens, perhaps hundreds of thousands of 'people who had bathed.'*
>
> *As I was told, cremation of corpses was also carried out there.*
>
> *As a further improvement to the disposal of the dead – who knows if only of the dead – a new building had to be introduced, and we worked on its construction. It was said that it would be a crematorium* [*krematorium*]*."*

This text is similar to that of Abraham Krzepicki's report "Eighteen days in Treblinka" as published by Alexander Donat (Donat, pp. 77-145; although the original title is "A man who escaped from Treblinka… Interview with a returnee"). Arad states that the Yiddish manuscript was handed over by the leaders of the ghetto's clandestine archives to Rachel Auerbach "with the task of recording the testimony provided by Krzepicki," who died during the Warsaw Ghetto Uprising in April 1943 (*ibid.*, p. 77).

The first report mentions only one "bathhouse," which could accommodate 800-1000 people, but specifies that "[n]one of us, workers, knew exactly how death was administered."

The second report introduces blatantly conflicting elements; it speaks indiscriminately of a "gas chamber" (*komora gazowa*) and many "gas chambers" (*komore gazowe*), in the singular and plural, but the relevant building is described as a real "bathing facility" ("*Badenanstalt*"), consisting of a single room, with only two doors, showers, tiles on the walls and on the floor. On the roof, there was a tangle of pipes running through it that could only be connected with the showers. Besides that, "[t]here was nothing else to see there" – in particular, there was no cabin with the engine that was supposed to produce the lethal gases. This description is clearly incompatible with homicidal gassings, so that the term "gas chamber" in this story is a conspicuously extraneous element, probably introduced by Rachel Auerbach out of overzealousness.

In both accounts, the witness refers to the cremation of the corpses, which, from an orthodox perspective, is contradictory, because that cremation is said to have started only in April 1943. Krzepicki also spoke of a masonry crematorium he was helping to build, which also appears in the plan attached to the first report (Document 6), although it is known that no such facility ever existed in that camp.

JANKIEL WIERNIK is the best-known and most-important witness. He was deported to Treblinka on August 23, 1942, and escaped on August 2, 1943, but the first known mention of his writing *A Year in Treblinka* (*Rok w Treblince*) dates to June 6, 1944. On this date, Henryk Woliński, a Pole with a Jewish wife who had been working in the propaganda sector of the *Delegatura* since 1942, drafted a memo "Jews, materials for S.B." ("*Żydzi mater. do S.B.*"),[127] undoubtedly intended for the Government-in-Exile in London, in which he wrote that he enclosed the 21-page text "Rok w Treblince." He mentioned this in passing in connection with the fate of a transport of Jews transferred in 1943 to the Bergen [Belsen] camp, part of whom had been sent to Treblinka.[128] Evidently the report had been compiled recently. (Woliński or other informants would not have waited several months before sending such a propagandistically important document to London.) It is unknown why Wiernik waited so long to write his report. In fact, it was published in Polish in 1944 in the form of a

[127] "S.B." probably stands for "Sonderbehandlung" – special treatment, which is said to have been a German war-time code word for execution.

[128] Ghetto Fighters House Archives, Catalog No. 5966, Collection 23192, p. 50.

23-page pamphlet (Wiernik 1944a), and also as an English translation that same year (Wiernik 1944b).

There exists moreover a 22-page typewritten text with the same title, and also a 3-page manuscript titled "Report of a Jew, escaped from Treblinka, Janik Wiernik, residing in Warsaw, at 23 Wołyńska Street, 53 years old" ("*Relacje Żyda, uciekinieraz Treblinki, Janika Wiernika, zamieszkałego w Warszawy przy ul. Wołyńskiej 23, lat 53*"). In it, the alleged killing facility is described as follows:[129]

> *"Plaza* [sic] *built with 13 gas chambers (bath). Gas chamber 2m high 7m long and 7m wide. On one side a (normal) entrance door. On the opposite side – a flap which is opened after gassing people, the corpses are taken out through this flap. On the roof – a safety hatch used in the case of killing people with chlorine. After throwing the appropriate amount of chlorine, the hatch closes hermetically."* (Emphases added)

The typewritten text, from which I draw the following quotations, is almost identical to the published, printed text:[130]

> *"When I arrived at the camp, there were already 3 gassing chambers* [*komory do zagazowywania*]. *During my stay, 10 more chambers were added. The size of one chamber was 5 x 5 meters, a total of 25 square meters, the height was 1.90 meters. On the roof, an outlet with an airtight closure* [*wylot na dachu z hermetycznym zamknięciem*] *and pipe outlets, the terracotta floor* [*podłoga terakotowa*] *was sloping towards the ramp. The building, made of masonry, is separated from Camp No. 1 by a wooden wall. These two walls, wooden and masonry, together formed a corridor raised 80 centimeters above the horizontal plane of the entire building. The rooms had a connection to the corridor. A hermetically closed iron door* [*żelazne*] *led to each room. The chambers, on the side of Camp No. 2, were connected to a ramp* [*rampą*] *4 meters wide along all three chambers. The height of the ramp from the* [*ground*] *level was about 80 centimeters. From this same side led hermetically closed wooden doors. The door of each room on the side of Camp No. 2 – measuring 2-2.50 x 1.80 meters – could only be opened from the outside from the bottom upwards by means of iron posts. They were closed by means of iron hooks installed in the frames and wooden posts. The victims were pushed through the doors from the corridor side. The doors on side no. 2 were used to pull out the corpses* [of the] *gassed. Alongside the chambers was the electric-power station* [*elektrownia*], *almost the same size as the chambers, but higher than the height of the ramp. In the power station, there was the engine of a Soviet tank which was used for the introduction of gas into the chambers. This gas was fed in by connecting the engine to intake pipes.* [*Gaz ten wpuszcano, łącząc motor z rurami włotowymi*.] […]

---

129 J. Wiernik, "Relacje Żyda, uciekinieraz Treblinki, Janika Wiernika, zamieszkałego w Warszawy przy ul. Wołyńskiej 23, lat 53." Ghetto Fighters House Archives, Catalog No. 3166, Collection 11261, p. 2. The term *"normalne*" is speculative.

130 Wiernik 1944, pp. 5f., 8-10; Wiernik 1944a, pp. 6-10.

Into one chamber measuring 25 square meters, 450 and 500 people were pushed. [=18 to 20 people per square meter! …]
They start the engine, connect it to the intake pipes [*Puszczają motor, łączą z rurami włotowymi*]. [After] *25 minutes at most, all are lying side by side.* […] *Neither pretty nor ugly, everyone is yellow and poisoned* [*Nie ma ładnych i brzydkich, wszyscy żółci i zatruci*]. […] *10 to 15 thousand people were gassed every day* [*Gazowano dziennie po 10 do 15 tys. ludzi*]. […]
The new facility between Camp No. 1 and Camp No. 2, on which I worked, was built very quickly. It turned out to be 10 new chambers. These chambers were larger than the previous ones, 7 x 7 meters, about 50 square meters. After completion, 1,000 to 1,200 people were crammed into each chamber [20 to 24 people/m²!]. *The chamber system was corridor-based. On each side of the corridor 5 chambers. Each chamber had two doors. One on the side of the corridor, through which the victims were pushed in, the other on the side of the camp, parallel to the first, was used for extracting the corpses. The construction system of door one and two* [the two doors to each chamber] *was as in the previous chambers. The view from Camp #1 was as follows: 5 wide concrete steps, on the steps on either side were carefully arranged flower pots. A long hallway. On top of the roof on the camp side the star of David /magen* [Hebrew term: star] *David/. The building looked like an ancient temple. When it was completed, the Hauptsturmfuehrer told the subordinates: 'endlich die Judenstadt fertig'* ['At last the Jewish city is finished']. *Construction on these chambers lasted five weeks.* […]
The number of transports increased every day, because there were already 13 gassing chambers. More than once 20,000 [people] *were gassed in one day."*

At the end of November 1943, an anonymous report on Treblinka appeared in the newspaper *Kraj* (*Country*) that has close similarities with Wiernik's report ("Świadkowie zbrodni," pp. 30f.):

"Witnesses to the Crime
From a Jewish escapee from Treblinka, who remained in this camp for a period of about 10 months thanks to fortunate coincidences, we received the following report, which concerns the method of mass liquidation of the Jews in this 'factory of death.'
Our informant managed to escape together with a group of about 2,000 Jews after disarming and killing a part of the camp's guard personnel and after setting fire to the barracks. A part of the fugitives survived. They would be the only witnesses to the German crimes at Treblinka.
'I was arrested during a raid in the Warsaw Ghetto on August 22, 1942. Our transport – as we were told – was destined for work [deployment] *in the East. We were crammed into the railway cars under guard. The Lithuanians who were escorting us took money and valuables from us. I don't really understand how we believed in these work deployments at the time, since there were women and children among us. But nobody foresaw reality. It was only when we were on the very site that our eyes were opened.*

In the camp on the ground, there were literally piles of corpses. We were separated: 'women and children on the left, men on the right.' We were ordered to hand over money, documents, valuables. We were ordered to sort clothes, suitcases and bundles into piles.

After a couple of hours, a transport arrived from Międzyrzec. Then we were taken to carry the corpses out of the cars (this was mostly a transport of corpses). Then we were beaten mercilessly. When this work was finished, we were made to sit in a semicircle and were targeted by machine guns. We were ordered to change places, to go to the right, to the left, in the end about 100 were 'pardoned' because of the random grouping, the rest (hundreds) were hit by the gunfire. This ended at midnight.

In the morning the work – sorting of clothes, bundles etc. or burying the corpses in pits prepared with machines. The corpses were partially rotten; it happened that a hand or a leg of a corpse remained in the hand of the worker. I worked for two days on the corpses, then I was deployed as a skilled carpenter in the construction of the gas chambers under the direction [*pod kierunkiem*] *of Ukrainians. There were already three of them –* [another] *10 chambers were built.*

The killing procedure was as follows: the transport that had arrived was ordered to undress for the bath, and was directed to the chambers. The Ukrainian who stood at the door encouraged those hesitant by poking them with his bayonet, and he killed the recalcitrant ones. After about fifteen minutes, the corpses were removed from the second door. The 'baths' worked more and more every day until February. In addition to the chambers, the 'sickbay' was used, especially for the old and sick. The person in charge wore a white coat with a red cross. Those who were directed to the 'sickbay' were made to sit on benches at the edge of a large pit, and with a blow were thrown into the pit. There were also transports from abroad. I estimate the number of corpses in the camp at about 3,000,000. The average length of a worker's life was 3-4 days, sometimes a week.[131] *About 40 people remained from my transport, skilled workers. Many committed suicide. There were periods – epidemics of hangings. Because even the sadism of the guards was inhuman. There was a Ukrainian who cut off ears, nose, drove nails into the rectum… One cannot imagine this reality of the camp. Not even if you tried to describe it, only a film could illustrate it. We were also mistreated by our compatriots – the Kapos.*

In February, according to rumors, Himmler came to the camp. He began the clean-up. The corpses were exhumed – they were burned. During this period, mass liquidations also ceased. We built observation towers. I was also 'honored' with the duty to build a small house in 'Zakopane style' by order of the camp commander. During this period, we were fed a little better and were not tormented much. The 'liquidation' of the pits was proceeding; 3/4 of the pits had already been liquidated. We had no illusions – we knew that the moment this work was finished, we would be finished too. Plotting began. The special-

131 The witness survived for about 10 months or about 43 weeks, so his survival was, in fact, 43 times longer than ordinary survival! He was therefore a veritable continuous-miracle worker.

ized craftsmen who worked in the area of the entire camp were the liaison men, the grave diggers, when cleaning up the corpses, 'stole' something several times. Coins and valuables buried in hidden places attracted the Ukrainians. The guard detail was enticed to 'trade,' and in this way their surveillance was diverted.

By the end of May, we were ready, but the deadline was postponed. Five men had specific tasks (assault on the guard personnel, liquidation of the sentries after having previously lured them down from the turrets, burning [the barracks]*, removal of the barbed-wire barrier). Our 'revolt' broke out on the 28th, at 5:30. I do not know the details of the fight, because the main fight took place on the grounds of Camp II, where our five attacked the barracks of the guard detail, took up arms and began the fight. We only had tools. The fight lasted about 15 minutes; the camp fell. I killed with an axe a Ukrainian who was chasing me, whose gun jammed, and I ran with my comrades into the woods. In the woods, we dispersed. Thanks to the help and information of the peasants, I managed to get to Warsaw. My personal life is shattered, but I have a wish that gives me the strength to live: that the truth about Treblinka will not be lost.'"*

This account appears to be an early, outline draft of Wiernik's later report, as evidenced by comparing the opening part of both:

– Wiernik:

"It was August 23, 1942 in Warsaw, at the time of the blockade. […] *Order to enter the railway cars. They crammed 80 people into them.* […] *I had prepared everything, because there were rumors that we were going to the Ukraine, where we were going to work.* […] *In the meantime, the Ukrainians were having a great time, their loud and cheerful laughter reaching our ears.* […] *The place was littered with corpses, they were dressed and naked.* […] *The women and children were ordered to stand on the left, and the men to sit in the courtyard on the right.* […] *Before dusk, another train arrived from Międzyrzec. There were 80% corpses. We began to unload them."* (Wiernik 1944a, pp. 1-3)

– Anonymous:

"I was arrested during a raid in the Warsaw Ghetto on August 22, 1942. Our transport – as we were told – was destined for work [deployment] *in the East. We were crammed into the railway cars under guard. The Lithuanians who were escorting us took money and valuables from us.* […] *In the camp on the ground, there were literally piles of corpses. We were separated: 'women and children on the left, men on the right.' We were ordered to hand over money, documents, valuables. We were ordered to sort clothes, suitcases and bundles into piles.*

After a couple of hours, a transport arrived from Międzyrzec. Then we were taken to carry the corpses out of the cars (this was mostly a transport of corpses)."

It should be pointed out that the similarities concern only the content: there are no matching Polish expressions in the two texts, although both are written in the first person. Moreover, they have some differences (the date of the arrest: August 23 and 22; the date of the uprising: August 2 versus May 28, 1943; the number of victims: "millions"[132] and "3,000,000"). All things considered, there is no escaping the conclusion: either the anonymous witness was Wiernik, or Wiernik was inspired by the anonymous author's account. But it is clear that the anonymous witness knew nothing specific about the alleged gas chambers, although the stated purpose of his narrative was to preserve "the truth about Treblinka." It follows that either Wiernik knew nothing precise about the alleged gas chambers in November 1943, just four months after his escape from Treblinka, or he subsequently plagiarized the anonymous witness's account.

In 1945, OSKAR BERGER wrote a memoir about Treblinka.[133] According to this, he had been deported from the Kielce Ghetto "in June 1942," and "two days later," he arrived in Treblinka, therefore when the camp was not yet in operation. On his arrival, he saw hundreds of corpses scattered on the ground; he was chosen with a group of 20 Jews to clean the railway cars; all the other members of the transport had to lie down on the ground in a square and were machine-gunned from the roof of the barracks. After 30-40 minutes, they were all dead, and Berger's group was forced to carry the corpses to a mass grave. Berger continues as follows:

> *"At the end, we were 200 Jews, who were goaded as the Sonderkommando in T II by our dehumanized henchmen from dawn until late at night to gather the countless victims of their daily massacre. Two to three transports daily, and each one brought 5000 men, women and children."*

Transports filled only with corpses also arrived:

> *"On occasion, transports arrive with corpses only. We suspect that these people were killed by gas in the railway cars, because we did not notice any wounds. Their bodies are convulsively intertwined, the skin is discolored bluish."*

After 20 days, the camp commander chose from three transports 200 craftsmen, and the head of the *Sonderkommando* declared "that the large gas chambers should be ready within a few weeks." Then, "this inconspicuous little house of bricks" was built near the mass graves, and was called "bathing facility":

> *"From now on, arrivals at T II were no longer shot. They now have to undress inside the fence of the 'bathing facility' and line up there naked – men, women and children, all together. They themselves have to bundle shoes into pairs. And then, subjected to beatings and maltreatment, which the SS again dishes out most 'liberally', they move forward toward the 'bathing facility'. Those who do not hurry are beaten so badly that they reach the building half-dead.*

---

132 "Świadkowie zbrodni," p. 23: "*oni zgładzili miliony*," "they killed millions."

133 "T II geschildert von Oscar Berger." YVA, M.9-530.

> *Now, with a disgusting carnage, most of the victims are driven into the 'bath-house'. Already after ten minutes, the Sonderkommando has to assemble and empty the gas chambers. We take the corpses on carts to the mass graves for burning."*

And here is the story's epilogue:

> *"In September 1942, I and my comrade Karl Gottlieb make a desperate attempt to carry out our escape plan. Between blankets, bundles of clothes and piles of suitcases, which we had to stow in the railway cars, we hide shortly before the departure of the train. We succeed. We remain unnoticed, and the escape is successful. Thus, we could both escape from the inferno of TII."*

This "eyewitness" was therefore deported to Treblinka before the camp was opened, and escaped in September 1942. There were no gas chambers initially, and the killing of the deportees was done by machine-gun fire. After about twenty days, a gassing facility made of bricks, the "bathing facility," was built, in which he, as a member of the *Sonderkommando*, worked on removing the corpses. Despite this, he did not even know how many gas chambers there were nor what gas they operated with. The reference to the cremation of the corpses is clearly anachronistic. I have already commented on the claimed blue color of the alleged gassing victims' skin.

On December 12, 1945 SILVIA KERSCH, who had been deported from Grodno to Treblinka on January 18, 1943, wrote to her relatives in the United States a letter in which she stated:[134]

> *"Tremblika* [sic] *was called the people's factory* [*fabryka ludzi*], *where thousands of people perished every day. There were '4 big furnaces'* [*4 wielkie piece*] *in which people were thrown alive for cremation. The sight was terrible. In a dense forest* [was] *a red ground-level building and 4 tall chimneys."*

The case of SAMUEL WILLENBERG is especially important because of what the witness did *not* report. According to him, he was deported to Treblinka in October 1942 and remained there until the day of the uprising. Donat reports his long testimony, which he introduces with these words (Donat, p. 189):

> *"The excerpts published here are part of his memoires* I Survived Treblinka, *which were written in 1945 in Lodz, and are now in the archives of the Israeli semi-annual* Moreshet. *The full memoirs will be published shortly."*

Although these "extracts" cover 25 pages (*ibid*., pp. 189-213), they do not contain the slightest mention of the alleged extermination procedure carried out at the camp. The Yad Vashem Archives preserve a long report by Willenberg in Polish in two parts: the first consists of 23 consecutively numbered pages, the first of which shows as a header the personal data of the witness, with the indication that at the time he lived in Łódź. The text is interrupted at page 23. The second part has seven pages numbered from 1 to 7, which begins with the sentence I report below. A handwritten note in Polish that is difficult to decipher

---

134 YVA, O.33-2117, p. 4.

refers to Willenberg and Treblinka. This text should be the logical continuation of the one mentioned above, but in the archives' folder it has been placed before it.[135] The unique and remarkable fact is that the extermination procedure is not given on any of these 30 pages; the only veiled reference is this (I, p. 17):

> *"After each transport, they took away the clothing that was in a yard behind the barracks. This was the sorting process. After the performance of their workday, these people were directed naked to the chambers* [*do komór*]*."*

The Polish text is only partially similar to the one published by Donat. For example, Willenberg's opening sentence: "In the spring of 1943, we began to expand Treblinka" (II, p. 1), is rendered by Donat as follows: "In the meantime, we continued to expand the camp" (Donat, p. 199).

The following sentences, which are certainly not irrelevant, do not appear at all in the English translation (I, p. 1):

> *"Toward the end of 1943, when transports were arriving increasingly rarely, the Germans began to liquidate the Treblinka staff with great ferocity. If in the first months after my arrival at the camp the number of workers reached up to 2,000 – this was already in the winter of 1942-1943 – our number had decreased to 900. These 900 people were joined by 100 people from the transport from Warsaw that arrived in January 1943."*

The differences are also evident at the ends of the two texts; Polish text (I, p. 7):

> *"We quickly crossed a grove. We crossed a road. There were about 200 of us. We split up. Most of us, including Wiernik, ran along another road. The rest, along with me, went along the railroad and the road. Along the road, a small group of people from the surrounding villages were walking about. I shouted to them: 'Hell has burned down,' and looked towards the woods. Above the woods there was an intense glow. The cemetery of millions of Polish Jews had burned down."*

English text (Donat, pp. 212f.):

> *"In front of me and behind me, men are running. It is difficult today to figure out how many were saved. I presume that about 200 men broke out the route along which I escaped.*
> *On another side, about 150 escaped.*
> *Now I am running with all my might among the trees. I feel a pain in my leg. I am wearing boots, and I feel blood filling up my right boot. The woods come to an end. I cross a highway and am once again swallowed up in a thick damp forest.*
> *Warmth and pleasant odors all around me. Night falls."*

Willenberg's memoirs were published in 1986 in a Hebrew translation in Tel Aviv with the title *Mered be-Treblinka* (*Revolt at Treblinka*), then in an Eng-

---

[135] YVA, M-49.P-247, pp. 1-7 and 1-23. To distinguish the two texts, I refer to them as II and I, respectively.

lish translation in 1989, titled *Surviving Treblinka*. But even this text displays a profound omission of the alleged extermination system, regarding which it presents two passages evidently taken from the Holocaust literature of the time (Willenberg, p. 52):

> *"Soon the yard was clean and tidy. A moment later, the racket of an engine reached us from afar.*
> *'Now they poison the people with gas', I was told with terrifying simplicity. 'With gas made by a diesel engine'."*
> *"This is how they pack about 400 people into each gas chamber. A diesel motor from a Soviet tank is started up, producing burning gas which is piped into the chambers. The man in charge of the motor is Ivan, the same brute who stuffed everyone into the gas chambers in the first place."* (*Ibid.*, p. 59)

Be that as it may, despite these late hints, Willenberg remains the least-informative witness to the extermination procedures allegedly used at Treblinka.

3.6. The Soviet Investigation (1944)

In the middle of August 1944, the 65th Soviet Army conquered the region around Treblinka. The camp had been dissolved a year earlier. The military investigating judge of this army's Military Office of Prosecution, First Lieutenant of Justice Jurowski, went to work immediately, supported by other officers – Major Kononyuk, Major V.S. Apresian, First Lieutenant F.A. Rodionov, Major M.E. Golovan, and Lieutenant N.V. Kadalo – and conducted investigations on the grounds of the camps Treblinka I and Treblinka II between August 15 and 23. They furthermore questioned witnesses: Samuel Rajzman, Lucjan Puchała, Marianna Kobus, Stanisław Zdonek, Barbara Zemkiewicz, Józef Pukaszek, Stanisław Krym, Cheni Trać, Hejnoch Brenner, Abe Kon, Stanisław Kon, Mieczysław Anyszkiewicz, Tadeusz Kan, Franciszek Wesolowski, Max Lewit and Kazimierz Skarżyński.[136]

On August 24, 1944, a mixed commission composed of the Soviet officers mentioned above as well as representatives of the local Polish authorities produced the first official report concerning the camps Treblinka I and II. Regarding Treblinka II it states:[137]

> *"The Treblinka II Camp was an enormous death combine. The entire Jewish population of all the nations of Europe occupied by the Germans, was brought here for burning, besides many 'unfit' people of other nationalities. The death factory in which the SS men ruthlessly and zealously exterminated millions of people was in operation around the clock for 13 months, from July 1942 until September 1943. This diabolical undertaking ceased to exist only after the prisoner revolt in the Jewish camp.*

---

136 GARF, 7021-115-11, pp. 15-43.
137 *Akt*, August 24, 1944. GARF, 7021-115-9, pp. 103-110.

Dozens of witnesses attest to having seen how up to three transports of Jews, with 60 cars each, arrived in the camp on a daily basis. The trains left the camp either loaded with sand or empty.
Martyrs of the camp who survived recount that they were delivered in railway cars in which there were 150, 180, or even 200 persons each. While traveling they were dying of hunger. There was no water. They drank urine. […]
At the railway branch line at Treblinka there was something in the camp which resembled a fine train station; the length of the platform was reckoned for 20 cars. All special buildings, where people were murdered, were carefully camouflaged on the outside as beautiful facilities. The avenues were sprinkled with sand and bordered by flowers, garden beds and fir trees – all this in order to deceive the 'passengers.' […]
Some persons, who escaped the pyre through a miracle, have portrayed the nightmarish images of the incineration of people:
The Jews delivered to the camp were received by the SS unit. The men were led to a special square, but the women and children were taken to the barracks. Beautiful and young Jewesses were taken by the Germans for themselves for a night. All men, women, and children were told to undress. The women's hair was shorn and it was sent to Germany as raw material. The clothes were sorted and likewise sent to Germany. The victims were ordered to take along valuables – gold, paper money, documents. The naked people were shown to a cashier's counter one by one, and they were told to deposit everything. After they had done this, they were allowed to go on and were led along the sand-strewn, flower-bordered avenue into the 'bath,' where they were given soap, a towel and underclothing. After depositing of the valuables, already on the way to the 'bath,' the polite tone gave way to roughness. Those who were walking were urged on by rods and beaten with canes.
The 'bath' was a house, which consisted of 12 chambers, each 6 × 6 m in size. 400 to 500 people were driven at a time into one chamber. It had two doors, which could be sealed hermetically. In the corner, between ceiling and wall, were two openings connected with hoses. Behind the 'bath' stood a machine. It pumped the air out of the room. The people suffocated within 6 to 10 minutes. The second door was opened and the dead were brought on wheelbarrows to the special furnaces.
In these, important scholars, physicians, teachers, musicians, the relatives of noted personalities were cremated. In such a way the sister of the famous psychiatrist Sigmund Freud, the brother of the French Minister Sourez [?] *and others were incinerated. (Witness testimony of Abe Kon, Hejnoch Brenner, Samuel Rajzman).*

The report ends with six "conclusions," of which the most-important is the first:

"On the basis of the preliminary facts, the cremation of people has been determined beyond a doubt. The extent of the extermination of human beings was monstrous: about three million."

On September 11, a "Report of the front-line press TASS" was issued, bearing the title "The Death Camp in Tremblinka" (sic). I reproduce the most-significant excerpts:[138]

> *"Tremblinka! At this word people tremble and look fearfully around. People who lived in the vicinity of Tremblinka could not sleep at night: the screams of the men, women, and children whom they were murdering ripped through the darkness. The stench penetrated from there. They were burning people there.* […]
> *Tremblinka – that is the same as Majdanek. It is one of the numerous factories of death, with which the Germans thickly covered Polish soil.*
> *The 'Tod-Lager'* [German in original; correct: *Todeslager; death camp*]*, as the Germans themselves officially called it, was established close to Tremblinka sometime in June 1942.* […] *By the beginning of July, the first transport arrived, filled to bursting with people – with 'living raw material,' as the doomed were officially called. The camp gate opened to the sound of a lively march, and the stream of living people poured inside. From this point on, this stream was uninterrupted for two years. The voracious gate consumed up to two thousand people daily.* [[139]…]
> *A fat Unterscharführer sent the human chain into the 'bath.' This was a low square room without windows, with a heavy entrance door. A large hose, through which gas was carried, led into the 'bath.' The people were forcibly pushed into the 'bath,' the door was tightly closed with a steel bar, the Unterscharführer gave a signal, and the 'bath-master' switched on the machinery of death.*
> *In the beginning, the 'bath' had three compartments and could hold 1,200 people. The Germans, however, were not satisfied with this capacity, and they quickly constructed a new building three times as large. Here there were 8 chambers, and the bath could accommodate 4,800 people at a time.*
> *The people in the 'bath' died under horrible tortures after ten minutes. The 'bath-master' observed this by means of a small glass window in the door. Here, every minute was costly – after all, thousands of other people were waiting their turn. For this reason, the 'bath' functioned with German thoroughness. Those for whom there was no room were beaten dead or flung onto the pyre alive.*
> *The corpses were retrieved from the 'bath' by a special squad; they were stacked upon rails which ran across wide pits. In the pits a fire burned that was never extinguished. This was the final stage of the 'processing.' The corpses were cremated and the human ashes were brought to Germany to fertilize fields. Even the roads inside the camp were sprinkled with it.* […]

139 In the text originally "up to 7,000 people," then corrected by hand.

Tass Special Correspondent"

On September 15, 1944 a Polish-Soviet Commission of Investigation of German Crimes consisting of the secretary, Dr. P. Sobolewski, the representative of the information and propaganda sector of a Polish institution, M. Chodzko, and the representative of the War Office of the 2nd Belorussian Front, G.E. Levakov, authored a "Protocol of a preliminary investigation and a provisional inspection in the former concentration camp 'Tremblinka'," which summarized the investigations carried out by the Soviet military judiciary. I quote the relevant passages of the report:[140]

> *"The site of Tremblinka lies 7 km from the railway junction of Małkinia in the Sokolowski District. The German criminals built a railway line to the place where the camp was located, in order to be able to bring the transports of prisoners directly and unobserved into the concentration camp.* […]
> *The concentration camp Tremblinka consisted of two sections, which were at a distance of one-and-a-half kilometers from each other. The first section was named 'Death Camp No. 2.' This camp, on whose grounds only two burned-down farm buildings can now be found, was divided into two parts, and a railroad track led to this Camp No. 2. Here, something along the lines of a train station was constructed in order to disguise the actual mission – extermination. A three-layer fence was camouflaged with tree branches. For this reason, the people taken here believed initially that they were at a transit point on their journey to the east.*
> *In the first section of Death Camp No. 2, the prisoners who had been interned there had to undress. They were instructed to deposit their clothing at a certain place, and then forced to run naked with arms raised in the direction of the so-called bath. This was only a sham bath; it was actually a gas chamber consisting of three rooms. In the beginning, the method of pumping the air out of rooms by means of a small car motor was employed. Then, as a result of the great number of those destined for death, they began to use chemicals. About 400 people could be crowded into this space at a time. On the roof of this – hermetically sealable – building was a small window, through which the death struggle of the dying could be observed.* [[141]…] *Approximately 400 Jews worked at this chamber; they dragged out the corpses of those asphyxiated and threw them into enormous trenches which were located in the area of Death Camp No. 2 and which had been prepared beforehand and dug out by an excavator.*
> *In the winter of 1943, the German murderers proceeded to exhume and burn the corpses. For this purpose, they also used an excavator. The personal documents found here, torn into pieces and thrown away, prove that citizens of Poland, of the Soviet Union, of Czechoslovakia and other nations, members of the intelligentsia as well as simple workers, were killed here.*

---

140 GARF, 7021-115-11, pp. 43-47.

141 A similar device, as I showed in the previous chapter, was also attributed to the alleged killing chambers of Sobibór.

The second section of the concentration camp was named 'Camp No. 1' and was located one-and-a-half kilometers away from the Death Camp. […]
The objects found bear witness to the fact that here men, women, and children of every age were interned here, entire families. The things found, such as violin parts, children's toys, devices for waving the hair [hair curlers], *books and the like, show that many came to this place who did not suspect their journey's destination. Pieces of burned and destroyed passports confirm that citizens from Poland, the USSR, Czechoslovakia, and other nations occupied by the Germans were interned here."*

On September 24, the Soviet investigative commission drew the first official map of the Treblinka Camp.[142]

What did the interviewed witnesses know about the extermination system alleged used at the Treblinka Camp?

ABE KON, a former Treblinka prisoner, stated on August 17, 1944:[143]

"I was sent into the Treblinka Camp in October 1942 with my relatives – father, mother, two sisters, a brother. […] *The naked people walking by were struck by whips. They were walking to a building, which had been nicely built with cement. A Jewish symbol, the 'Star of David,' was attached to the house. At the entrance to the 'bath' stood a Ukrainian with a knife and whip. He stabbed those who did not want to enter with the knife and dragged them into the building. The service staff named this Ukrainian 'Ivan the Terrible.'*
Plan of the 'Bath': The bathhouse consisted of 12 compartments. Each compartment measured 6 × 6 m. The height amounted to 2.5 m. They drove 400 people in each cabin. The people stood. They threw the children on their heads. The compartmentshad two doors, which could be sealed hermetically. In the corner between ceiling and wall two openings were connected with hoses. Behind the 'bath' stood a machine. It pumped the air out of the compartments. The people suffocated within 6 to 15 minutes. The second door was opened and the people were dragged out. Their teeth were examined and golden teeth were ripped out. From there the bodies were carried away on stretchers and were buried in the ground. They weren't buried any farther than 100 m away from the 'bath.' People were driven into the 'bath' three times a day. In this way 15,000 to 18,000 persons were destroyed each day. That's how it went for two months. Later, machines dug these bodies up and they were cremated in furnaces. There were no fewer than one million burned.
Later, the extermination process proceeded as follows: suffocation and burning. They were incinerated in a specially manufactured furnace, which could hold up to 6,000 bodies. The furnace was filled with corpses. Gasoline or petroleum was poured over them and burned. The cremation lasted up to an hour. […] *Those who could not walk to the 'bath' – invalids, old people – were sent to the 'hospital'; they went there. They were placed at the edge of a deep pit on the bottom of which was a pyre made up of human beings. The victims were*

142 Reproduced in: Mattogno/Graf, p. 337.
143 GARF, 7021-115-11, pp. 33f.

shot in the back of the neck, whereupon they fell into the pit and burned. So it went, day after day."

On August 22, Abe Kon gave another deposition, in which, strangely enough, the description of the "bath" presents a different element, as is evident from the following comparative analysis of the two texts:

– Deposition of August 17, as just quoted:

"The bathhouse consisted of 12 compartments. Each compartment measured 6 × 6 m. The height amounted to 2.5 m. They drove 400 people in each compartment. The people stood. They threw the children on their heads.
The compartments had two doors, which could be sealed hermetically. In the corner between ceiling and wall two openings were connected with hoses. Behind the 'bath' stood a machine. It pumped the air out of the compartments. The people suffocated within 6 to 15 minutes."
"Баня состояла из 12 кабин. Каждая кабина 6 х 6 метров. Высота 2,5 метра. В кабину загоняли по 400 человек. Люди стояли. Сверху на них набрасывались дети.
Кабина имела двое дверей герметически закрывавшихся. В углу между потолком и стеной было два отверстия соединенные шлангами. За "баней" стояла машина. Она выкачивала воздух из камер.
Люди задыхались через 6 – 15 минут."

– Deposition of August 22:[144]

"The bathhouse consisted of 12 compartments of about 6x6 meters each, 2.5 meters high. They used to put 400 people in each compartment. People stood there huddled together. Children were thrown on top of them. The gas was turned on. After 6 to 15 minutes – death."
"Баня состояла из 12 кабин примерно 6х6 метров каждая, высотой 2,5 метра. В кабину загоняли человек по 400. Люди стояли там тесно прижавшись друг к другу. Сверху на них бросили детей. Пускали газ. Через 6 – 15 минут – смерть."

The underlined words are identical or differ only in case or position in the sentence. Basically, the witness replaced the machine that sucked air from the chambers with an indeterminate gas.

On August 22, 1944, the Pole KAZMIERZ SKARŻYŃSKI gave the following statement:[145]

"Incarcerated Jews in the camp reported that many hundreds of prisoners at a time were penned in hermetically sealed chambers and were asphyxiated by pumping out the air. The people died very quickly – in 10 or 12 minutes. According to the stories of the Jews, the furnace was a pit of 25 m in length, 20 m wide and 5-6 m deep, with a grate made out of train rails on the bottom of the pit, which served as an air vent. The bodies were piled on the rails and burned. The glow from the fire was visible at a distance of 15 km. During the day a

144 Sverdlov, p. 106. The statement is signed "R. Kon," but it is undoubtedly Abe Kon.
145 GARF, 7021-115-11, p. 16.

> *black smoke spread. In a strong wind, the smell of burning was still perceptible 30 km from the camp."*

Kazimierz Skarżyński also gave another deposition – the day after the one mentioned above, hence on August 23 1944, in which, like Abe Kon, he removed the reference to pumping the air from the death chambers:[146]

> *"The Jews died in a special chamber* [в специальной камере] *in 10-12 minutes. The pit in which they were burned was 250 meters long, 20 meters wide and 5-6 meters deep, with a grate of rails at the bottom that formed an air vent. The corpses were thrown onto the rails in piles. The fire was visible at 15 kilometers, and the stench of burning could be smelled at 30 kilometers. The screams of the Jews, who were taken to the gas chambers* [к газовым камерам], *could be heard 2-3 kilometers away."*

The impetus for these significant changes is not apparent. It could be assumed that at the beginning the two witnesses had only indirect knowledge and that after the first interrogation they changed their version by talking to other survivors who had more-direct knowledge. However, together with Rajzman, they were undoubtedly the most-direct witnesses in the group of those interrogated by the Soviets. Lucjan Puchała was a railway employee;[147] Marianna Kobus was a resident of a nearby village;[148] Stanisław Zdonek was a former inmate of the Treblinka I Camp,[149] as was Barbara Zemkiewicz;[150] Józef Pukaszek worked on filling railway cars with sand;[151] Stanisław Krym had been interned at Treblinka I;[152] Cheni Trać spoke only about a shooting at Treblinka I on June 23, 1944.[153] Regarding the alleged extermination method, HEJNOCH BRENNER was even less-specific than Kon and Skarżyński:[154]

> *"Each convoy consisted of 6,000 people. The 'bath'* ['баня'] *killed 5,000 people at a time."*

STANISŁAW KON stated that he had been deported to Treblinka on October 2, 1942, but he knew nothing about the alleged extermination method:[155]

> *"The camp for the extermination of the Jews was established in July 1942.* […] *Over the course of 13 months, 15,000 to 18,000 people were killed every day. For about 2 months, fewer transports arrived: for 1 or 2 there were no transports at all. I think that in total about 3 million were exterminated."*

155 *Ibid.*, p. 35, interrogation protocol of August 18, 1944.

Mieczysław Anyszkiewicz was only a former detainee of Treblinka I,[156] just as Tadeusz Kan[157] and Franciszek Wesolowski.[158] Even Max Lewit was only interned at the Treblinka I Labor Camp, although he was a Jew from Warsaw.[159]

None of the other witnesses questioned by the Soviets up to August 23, 1944 had more precise knowledge than Kon and Skarżyński, and their subsequent introduction of "gas" or "gas chambers" was even less-detailed than the fabulous air-suction machine they had previously mentioned, but it was to this latter version that the Soviet investigators adhered in their report of August 24, 1944.

This demonstrates that neither Kon nor Skarżyński knew anything about any killing system notionally used on millions of Jews was, and that they were limited to imaginative conjecture, a fact that is moreover explicitly confirmed by Abe Kon in his interrogation by Polish official of October 7, 1945, which I discuss in the next subchapter.

But this also applies to SAMUEL RAJZMAN. On July 28, 1944, he made an 8-page statement in Lublin in Polish that bears the heading "Report from the Treblinka Death Camp. Personal experience." The following narrative appears in it:[160]

> *"After the women's hair was cut, they passed into the bathing facility, which consisted of 10 compartments, each of which contained 700-800 people. In these compartments were even hung towels and the rules of the bathing establishment. After people had been let into the compartments, they were hermetically sealed and with a machine the air was sucked out / at first, then they began to use toxic gases* [*gazy trujące*]. *People were asphyxiated in this way. People stayed in the compartments 10-20 minutes, because the time or the mass of people waiting did not allow* [taking] *the "bath" for a longer time. After 20 minutes they were thrown onto the hearth* [*na palenisko*] *and it often happened that after being thrown into the fire the victims would utter cries, but the German criminals did not react to this; at most they ordered them to cover them with corpses and on rare occasions they would take pity and shoot these people."*

The witness also presented a count of the camp's alleged victims, which shows 2,774,000 casualties.[161]

This statement was published in English translation in March 1945 by the U.S. government's Committee on Foreign Affairs with the title "Uprising in Treblinka" (Rajzman, pp. 120-125).

161 *Ibid.*, p. 109.

In August of 1944, Rajzman wrote a 16-page report titled "'*Kombinat smerti' v Treblinke*" ("The Treblinka 'Death Factory'"), in which he described this camp's extermination method as follows:[162]

> *"After the shearing* [of their hair], *the women were sent into the 'bathing facility,' which consisted of a row of chambers, each of which could hold 700 persons. In the chambers, towels were hanging and a sign with the inscription 'Rules for using the bath'! The people were led in, and the doors were hermetically sealed. In the beginning, the method of pumping out the air was employed: the people died the death of asphyxiation under frightful torments. As time went by, the Germans switched to poisoning with gas, which went more rapidly. Each group stayed in the chamber from 12 to 20 minutes, no longer, for masses of new arrivals were waiting for their turn in the 'bath.' After twenty minutes, the bodies were already afire on an enormous pyre. Sometimes, desperate lamentation sounded from the fire. The Germans paid no attention to it – an expression of the 'extraordinary German tenderheartedness.' There were instances when one of the Germans delivered the coup de grâce to one of those thrown alive into the fire. Before the bodies fell into the fire, they were examined by a group of 'dentists', who checked whether perhaps there were teeth, crowns, or fillings of gold present; all of it was torn from the mouths of the dead with pliers.*
>
> *The corpses were burned in a huge pit. Cement foundations were erected on its bottom, upon which a grate made from railway rails was fixed. Under the grate burned an intense fire, into which some kind of fluid dripped* [from the corpses]. *The workers at the furnace* [sic] *were changed every two days, and only rarely did anyone remain more than a week at this 'work.' They were replaced by a fresh labor force, which came in with the new trains day after day. In 'reward' for their days of labor, these prisoners were not sent into the 'bath,' but were killed instead by a shot to the back of the neck."*

Later, on September 26, 1944, Rajzman was interrogated by Lieutenant Jurowski. The witness stated that he had arrived in Treblinka on September 27, 1942 and had remained there until August 2, 1943. Therefore, according to his statement, he spent more than ten months in the camp and must have known all about the gas chambers and their function, if there were any. Yet he reported the following:[163]

> *"Dr. Horonschitzki likewise had no access to the chambers, but of what was known to him, he told me the following: the people were driven in large parties into the chambers of the so-called 'baths.' These chambers were hermetically sealed. In the first period, the killing occurred by means of pumping out the air from the chambers; then one resorted to other methods – poisoning by chlorine gas and Cyclon gas. On the camp territory there was a special store of materi-*

[162] S. Rajzman, "'Комбинат смерти' в Треблинке." GARF, 7021-115-8, pp. 7f. This deposition, mentioned in the August 24, 1944 report by representatives of the Soviet 65th Army, was acquired by the Soviets as evidence.

[163] USSR-337, p. 9 of the German translation.

als with a large amount (up to 15 tons) of so-called Chloren.[164] *Chloren came in blocks, white in color. I saw how barrels of this Chloren were carried into the second section every day."*

A few days earlier, on September 21, Jurowski had interrogated another witness, ABRAHAM ISAAK GOLDFARB. His report became one of the documents prepared by the Soviets for the Nuremberg IMT. It was later translated into German. The witness claimed that he had been deported to Treblinka from "Mensischez Podlaski", probably Międzyrzec Podlaski, on August 18, 1942. On an unspecified date, Goldfarb made another statement in Hebrew and Yiddish of which Yitzhak Arad is the only one to report excerpts. Since Goldfarb mentions "Ivan Demaniuk [sic]," it can be considered certain that this statement was made after 1986, the year in which John Demjanjuk was extradited from the United States to Israel on the charge of being "Ivan the Terrible," whose surname Goldfarb did not know in 1944.

In the two statements, the antecedents – the journey and the arrival – are narrated with significant differences. In 1944, he recounted:[165]

"On August 18, the transport, which consisted of about 80 cars, pulled in [to the camp]. *The cars were so crowded with people – suffice it to say that in my car there were 215 men.* […]

We left the town of Mansischez on August 18 at 11:00 in the morning. We arrived at Treblinka Station at 5:00 a.m. on the 19th of August. We were forced to stand at all times; not only were we not given food and water, but any attempt to obtain water from outside was prevented by shooting us on the spot. We had to defecate in the cars themselves. […]

From Malinka [Malkinia] *Station onward, our transport no longer consisted of 80 cars, but only of 20. The remaining 60 cars stayed behind temporarily at Malinka Station until the 20 cars were unloaded. When the doors of the cars were opened at the station – Treblinka Camp – it turned out that in 9 car 50-100 people each had died along the way. In the remaining 11 wagons, almost all died of asphyxiation. On the other hand, only a few corpses showed traces of gunshot wounds – this was the work of the gendarmes en route. For example, in our car, the mortality was relatively insignificant – 15 men – and all of them died of asphyxiation – because there were 8 little windows. The cars were intended for the transport of birds."*

At Treblinka, the witness learned from a certain Leib Czarny that the guards had fired bullets filled with toxic gases [*Giftgase*] at the deportees in the railway cars!

And here is the later version for the Demjanjuk Trial:[166]

---

164 The term has the signification of "chlorination" (sterilization with chlorine), but evidently is used here as a synonym for chlorine.

165 USSR-380. "*Zeugenvernehmungsprotokoll*" of A.I. Goldfarb, pp. 2-4.

166 Arad 1987, pp. 64 and 84 (two different quotes from Goldfarb's testimony). The archival reference is: "YVA, 0-3/1846, testimony of Abraham Goldfarb."

> *"At the end of August 1942, the Germans carried out the expulsion from Mazaritz.* [sic…] *When the Jews were brought to the railway station, the Germans forced 150-200 of them into a freight car designed for sixty or seventy. The cars were closed from the outside with boards. Water and food were not provided. People were suffocating; there was no air to breathe. Before we moved off, the Germans sprinkled chlorine in the cars. It burned the eyes. The weaker among us fainted. People climbed on top of each other and banged on the walls with whatever they could find. The children were so thirsty they licked their mothers' sweat. ... There were 150 people in our freight car. During the two-day trip to Treblinka, 135 suffocated.* […]
> *When we reached Treblinka and the Germans opened the freight-car doors, the scene was ghastly. The cars were full of corpses. The bodies had been partially consumed by chlorine."*

It should be pointed out first of all that Arad writes that Goldfarb arrived at Treblinka on August 25, 1942 (Arad 1987, p. 84). This information was undoubtedly taken from the witness's statement. However, in 1944, Goldfarb had claimed to have arrived at Treblinka on the 19th. This is only the first of multiple contradictions. The journey lasted either "two days" or 18 hours. Goldfarb's car contained either 215 people, of whom 15 died, or 150 people, of whom 135 died. Furthermore, in the 1944 version there is no mention of the cars having been sprinkled with "chlorine." Finally, it should be noted that, according to the ruling of the Düsseldorf Jury Court of September 3, 1965, Treblinka Camp's railway platform could accommodate 20 railway cars, but any surplus cars waited at Treblinka Station, not Małkinia Station (Rückerl, p. 217).

This beginning already shows that the reliability of the witness is highly doubtful.

In his 1944 deposition, Goldfarb described the alleged extermination facilities at Treblinka in great detail. As soon as he arrived at the camp, he was assigned to unload the corpses from the railway cars and take them to mass graves. He was then part of the group of 980 male inmates and 25 female inmates who worked at the camp. He always remained in Camp 2, and was in charge of transporting corpses from the gas chambers to the mass graves, together with a group of 200-300 Jews. In this context, Goldfarb also mentions the "later author of the booklet 'Death in Treblinka' Jakob Werni [*sic*]" (USSR-380, p. 5).

Since this testimony is practically unknown, I present the essential part of his account despite its length (*ibid.*, pp. 5-7):

> *"One week after my arrival in the camp I was employed together with 25 other prisoners in the construction of the building with compartments in which people were murdered later. Already at my arrival at the camp, there was a building which contained 3 compartments for murdering people. The building was located in the forest, 200 meters from the platform of Treblinka Station. Access to the building was controlled by a fence made of barbed wire, which was cov-*

ered with pine branches for camouflage. In itself, this building was an ordinary one-story brick building with an iron roof.
From the entrance steps, one first entered a wooden annex, which resembled a corridor. Both the entrance door and the three iron doors leading from this annex to the three chambers of this house were hermetically sealable. Each of these three chambers has the size of 5 meters long, 4 meters wide and 2 meters high. The floor and the walls were covered with tiles in a cement-like fashion. Each chamber had an opening in the ceiling, which was covered with a net. Along the wall of the chamber was a pipe with a peculiar branch and a net-like bottom. This branch was almost at the wall itself. The wall had a significantly sooty area at this spot. Opposite this entrance door is an equally hermetically sealable exit door. All three doors of these chambers open sideways. At the house, there is a cement ramp. This is the brief description of this building.
Once at night – in mid-September 1942 – I and a group of prisoners were given the task of carrying the bodies of murdered people out of this building. I can tell something about the method of this murdering. Each of these chambers was extraordinarily densely packed with corpses. Both the chambers themselves and the corpses emitted a mixed smell of processed gases and burning, and most of the corpses had traces of significant bruising coming from their mouths. During the first period, a narrow-gauge track led to the building, upon which we transported corpses in small carts to the pits. On the question of the building's equipment and the mechanics of extermination of people, it is extremely important to add that in the annex of the building, an ordinary tractor-engine was set up, which was put into operation in two cases: when the chambers were filled with people, and for lighting purposes. From this generator, a pipe originated, through which the gases flowed out. This pipe led into the building through the floor to each chamber – as I said already – through the branching pipe. The second pipe of the generator led directly to the street. That is clear. When the engine served the purpose of exterminating people, the gases were introduced into the chambers through the system of pipes, but when it served the basic purpose of supplying the electric network, the gases went directly to the outside. The engine was operated by 2 guards – the first of them was Ivan, who was called 'Ivan the Terrible' in the camp."

The other guard's name was Nikolai. Goldfarb explains that, before entering the chambers, many people had had their ears, noses and other body parts cut off, and women had had their breasts cut off; then he continues as follows (*ibid.*, pp. 8-10):

"Now I would like to proceed to the description of the construction of the new building, which was designated for suffocating people, that is, go back to that point where I started the narration of the tragedy of the old house. The new building was built 20 meters away from the old one. 120 workers – Jews – were employed on its construction. In charge of the construction was the German engineer – Scharführer (I no longer remember his name). The construction lasted from the last days of August and was finished in the last days of November 1942. The new building 'Gasierungsgebaeude' [a non-existing German

term] *differed from the old one only by its size. It was significantly larger. It was also a one-story brick building. There were no wooden annexes. A road led to this building, which led from Camp No. 1 to our Camp No. 2. Around the building was a fence with barbed wire, which was covered with pine branches. The entrance to this building was reminiscent of a religious institution: on the top of the roof was a sign of David – Zion's Star – and on the sides, a peculiar altar was located. All this was decorated with flowers, so that externally no one could think that the tempting institution was a gassing building. The stairs led to a long corridor with 5 chambers on the right and on the left, with the only difference that on the left side, next to the last chamber, there was a small room for the engine. The chambers were connected with the corridor by doors covered with absorbent cotton and cloth, and hermetically sealable. Light fell into the corridor through windows located in the roof itself. Each chamber was 6 x 6 m square, 2 m high. The walls were covered with lime* [plaster?], *the floor was made of cement. The chambers were illuminated by windows located in the roof. In the wall in the corridor there were special small round openings and little spy windows for observation from the corridor, namely to see what was going on in the chamber.*

Opposite the entrance door was an exit door; however, these were not opened sideways, but from the illuminated bottom up, and they were on special hinges. Near each door was a ramp made of cement, on which the corpses were piled up for removal. The poisoning of the people was done in the same way as in the first building. From the engine, the pipes from which the gas flowed ran along the corridor to the chambers. One such pipe led to each chamber. There were special openings in the roof for the gas to flow out of the chamber. In fact, when this gassing building started its activity, it turned out that the engine would not be able to supply all 10 chambers with enough gas. It was sufficient only for 2 chambers. Then, for some time, while the engine was being repaired, another method of extermination – even more torturous – was introduced.

A significant amount of chlorinated lime was hurriedly brought to the building. A certain amount of chlorinated lime in a moistened state was put inside the chamber, which was then hermetically sealed. The extermination process of the people in the chamber lasted incomparably longer, and therefore was much more torturous. The people were kept in the chambers for 24 hours, and sometimes some remained alive. In connection with the fact that the gas supply to the chambers completely met the 'requirements', this [type of] *exterminating the people in this cheap way lasted the whole winter. The engine was started up in April 1943. This engine was operated by the German named Thomasch and the already-known Ivan and Nikolai. Thus, the extermination of many hundreds of thousands of people went on with the help of their poisoning by the gases produced by the engine."*

Regarding the number of victims, Goldfarb affirmed (*ibid.*, p. 11):

"The number of people exterminated in the camp is difficult to determine. Every 24 hours, up to 5,000 people were killed on average. There were also days

when transports of 1,000 people arrived, and there were days when their number reached 10,000 and 15,000."

In the later statement made in Israel, Goldfarb described the alleged gassing procedure in a very superficial manner, but added a few new elements that he had learned in the meantime:[167]

"At the entrance to the gas chambers stood the two Ukrainians, Ivan Demaniuk [sic] *and Nikolai, one of them armed with an iron bar, the other with a sword. Even they drove the people inside with blows… As soon as the gas chambers were full, the Ukrainians closed the doors and started the engine. Some twenty to twenty-five minutes later an SS man or a Ukrainian looked through a window in the door. When he had made sure that everyone had been asphyxiated, the Jewish prisoners had to open the doors and remove the corpses. Because the chambers were overcrowded and the victims had held on to one another, they were all standing upright and were like one single mass of flesh."*

I will return to the testimonies of Wiernik and Goldfarb in Section 3.9.2.

The journalist Vasily Grossman went to Treblinka in September 1944, during the Soviet investigation, and drafted a long article titled "Треблинский ад" ("*Treblinskij Ad*", "Treblinka Hell"). The 36-page typescript[168] appeared two months later in the Soviet newspaper *Znamja* with the same title (Grossman 1944). In 1946, this article was summarized in the *Black Book* under the headline "Report from Treblinka." It opens with a kind of preface with a description of the background (Grossman 1946, p. 398), which in the original typescript is found within the text:[169]

"Everything written below was compiled on the basis of the accounts of living witnesses, the testimonies of people who worked in Treblinka from the first day of its existence until August 2, 1943, when the rebellious, doomed inmates burned down the camp and fled into the forest; on the basis of the depositions of arrested guards,[170] *who confirmed word-for-word and supplemented the witnesses' accounts in many respects. I myself saw these people, spoke with them at length and in detail; their written accounts are before me on the table."*

Grossman conducted a journalistic investigation, parallel to the judicial one, to which he had access. In his report, he described the first alleged extermination facility as follows:[171]

"The first 3 concrete chambers were not large, 5 x 5 meters, or an area of 25 square meters [each]. *The height of a chamber was 130* [190[172]] *centimeters. In*

167 Arad 1993, pp. 126f.; in Arad 1987, p. 86, he quoted only the initial, rather irrelevant, part of this text.

168 V. Grossman, "Treblinskij ad," GARF, 7021-115-8, pp. 168-203.

169 *Ibid.*, pp. 170f. (pp. 3f. of the typescript).

170 The Soviets did not arrest any Treblinka guards.

171 *Ibid.*, pp. 184f. (pp. 17f. of the typescript).

172 The typescript has 130, but this was changed to 190 in the subsequent article. Grossman 1944, p. 133.

each chamber, there were two doors, one through which people were let in, the other for the removal of the corpses [of those] *gassed. This second door was very wide, about two and a half meters. The chambers were installed together on a foundation."*

Regarding the second facility, Grossman wrote:[173]

"The area of each chamber was 7 x 8 meters, or 56 square meters. The total area of the ten new chambers was 560 meters [square]*, and including the area of the three old chambers, which continued to operate in case of the arrival of small groups, Treblinka had an industrial killing area of 635 meters* [square]*. 400-500 people were put together in one chamber. Thus, when fully loaded, an average of 4,500 people were exterminated in 10 chambers with each batch."*

On the alleged killing system, he elaborated in even-more detail:[174]

"Various means were used to bring about death. One was to push into the chambers the exhaust gases of an engine, taken from a heavy tank, which was used to produce electricity for the camp. These gases contained 2-3% carbon monoxide, which combines with the hemoglobin in the blood to form a stable compound known as carboxyhemoglobin. Carboxyhemoglobin is far more stable than the compound of oxygen and hemoglobin that forms in the alveoli in the process of respiration. In 15 minutes, all the hemoglobin in the blood combines with carbon monoxide, and breathing ceases to have any real effect. A person gasps for air, but the oxygen does not reach their body, and they begin to suffocate; the heart beats frantically, carrying blood to the lungs, but this blood, poisoned as it is by carbon monoxide, is unable to absorb oxygen. Breathing becomes shallow and labored, consciousness becomes clouded. The people show all the symptoms of agony from suffocation, and die as if strangled.

The second method adopted at Treblinka, the one used most-frequently, was pumping the air out of the chambers with special pumps [откачивание с помощью специальных насосов воздуха из камер / otkačivanie s pomoš'ju spetzial'nykh nasosov vozdukha iz kamer] – *death began from causes roughly similar to carbon-monoxide poisoning: people were deprived of oxygen."*

Grossman was clearly inspired by Jankiel Wiernik's account, which was already known to the Soviet investigating judge Jurowski (see Subchapter 3.8.).

Similar information can also be found in an undated report, yet undoubtedly from 1945, by a certain JANINA BUCHHOLCOWA (Bukolska) titled "The Treblinka Death Camp", where we read:[175]

"At the beginning of the camp's existence (at the end of July), the gassing chambers were not yet ready, and the 'elimination' of the transports took place in this way: on the railway platform, machine-gun fire was immediately opened on the people climbing out. Very quickly, the first 3 chambers were built, which

---

174 *Ibid.*, pp. 186f. (pp. 19f. of the typescript).
175 J. Buchholcowa (Bukolska), *Obóz śmierci w Treblinke*. AAN, 212-III-1, p. 11.

could 'liquidate' 1,200-1,500 people at a time. But this 'yield' did not satisfy the Germans, who shortly afterwards (in September) built a large building with 10 chambers, which could swallow 6,000-7,000 people at a time. The average daily 'production' was 12,000 corpses, but in the periods of greater intensity, it reached 20,000.

In the chambers, they killed by pumping out the air and injecting into the chambers exhaust gas from a motor [*przez wypompowywanie powietrze i wpuszczanie do komór gazu z motoru spalinovego*]*, then toxic 'cyklon' gas was also used instead."*

3.7. The Polish Investigation (1945-1946)

On November 6, 1945, Investigating Judge Zdzisław Łukaszkiewicz inspected the site of the former Treblinka Camp in the presence of Jerzy Maciejewski, prosecutor of the Siedlce District Court, the accredited surveyor Karol Trautsolt, the witnesses Samuel Rajzman, Henryk Reichman-Romanowski and Stanisław Kucharek, and the mayor of the village of Wólka Okrąglik.[176] I will return to the results of the inspection in Chapter 6.

In January 1946, RACHEL AUERBACH wrote a report in Yiddish in Łódź about the visit titled "*Oyf di felder fun Treblinke*" ("On the Fields of Treblinka"), which was published in 1947.[177]

Already in 1943, she had written a long manuscript, in which she referred to Treblinka in this way:[178]

"The steam chambers [*komory parowe*] *i.e. the 'baths', as well as the 'furnaces'* [*piece*] *are built – that much is clear – so that from the inside of them no one comes out alive."*

By 1946, Auerbach already had access to a range of literature and testimonies about Treblinka (the writings of Krzepicki, Wiernik, Grossman, Łukaszkiewicz; Donat, pp. 26f.). Nevertheless, her description of the "bathing establishment" still had imaginary elements, such as the suction pump, the "tank" of combustion gases, and the blue corpses (*ibid*., pp. 34-36):

"This was a gray-white building with all the accoutrements of a regular public bath in the inside: 'cabins,' plus a few chimneys protruding from the roof.

You entered the cabins from a corridor through doors just big enough to admit one person at a time. The door had been made so narrow on purpose, so that people who were already inside would not attempt to break down the door and escape. The cabins were lined with white tiles halfway up the walls. The floor

176 AGK, NTN 69, pp. 90f.

177 Auerbach 1947. On p. 13, the editing date is given as "Lodzsch, Januar 1946."

178 R. Auerbach, "Oni to nazwali wysiedleniem… (Rzecz o wytępieniu Żydów w Polsce)" ("They called it resettlement… (The truth about the extermination of the Jews in Poland)"). GFHA, Catalog No. 3168, Collection 11237, p. 23.

> *sloped down to wide, hermetically sealed chutes,*[179] *facing the entrance gate. Real showers were set in the ceiling of the rooms, but they were not connected to any water pipe. They were connected to something else: Initially, in the first building, there were three cabins. Later, when the enterprise had proven 'viable', it was expanded. A second 'bathhouse' of the same type was constructed, bigger and nicer than the first one, with 10 cabins inside.* […]
> *The motor, installed in a workshop near the bathhouse, could be started now. First, a suction pump was brought into play to draw the pure air from the chamber. After that, the pipe to the reservoir of exhaust gas from the motor could be opened.*[180]
> *'A few minutes later,' Jews who had worked in that part of the camp recalled, 'we would hear terrible screams from that building.' The screams of human pain, terror and despair. At the last moment, it seems, when the pumps started to suck out breathable air, all self-control broke, and there was an outbreak of collective hysteria inside the gas chamber.*
> *Later… in due time… all was quiet again…*
> *Perhaps 25 to 45 minutes later, the chutes*[179] *on the other side could be opened and the corpses tumbled out. The bodies were naked; some of them were white, others were blue and bloated."*

In his final report titled "The Treblinka Extermination Camp," Łukaszkiewicz mentioned the following witnesses: Jankiel Wiernik, Henryk Poswolski, Abe Kon, Aron Czechowicz, Oskar Strawczyński, Samuel Reisman [sic], Alexander Kudlik, Hejnoch Brener [sic], Stanisław Kon, Eugeniusz Turowski, Henryk Reichman, Szyja Warszawski and Leon Finkelsztein (Łukaszkiewicz 1946a, p. 133). In this report, the Polish judge reported excerpts from some of the testimony; other excerpts were published by Marian Muszkat in 1948 (*Polish Charges*…, pp. 187-196).

JANKIEL WIERNIK (who also called himself Jan Smarzyński) was interrogated by the Polish judge on October 12, and made a brief statement,[181] to which I will return in Section 3.9.1.

On January 4, 1947, Wiernik was heard as a witness during the trial of Ludwig Fischer, the German wartime governor of the Warsaw District, which took place from December 17, 1946 to March 3, 1947.[182] He claimed the following about the alleged gas chambers:

> *"Ten such chambers were built; previously there were only three. When the chambers were newly built, work began in them as* [only] *the Germans could do: normally, systematically, from 6 a.m. to 1 p.m. and, after the lunch break, until 6* [p.m.]. *When larger transports arrived, 12,000-15,000 and even 18,000*

---

179 The original Yiddish text has here "קליאפע" ("*kliape*"), equivalent to German *Klappe* = a hinged lid/flap.

180 Yiddish text: "Then the tank reservoir [*rezervuar*], where the engine's combustion gas is collected, is attached"; Auerbach, p. 39.

181 AGK, NTN 69, pp. 31f.

182 AGK, NTN 75, pp. 6-17.

> [people] *were killed daily* [sic]. *From January 1, 1943, 8,000-12,000 began* [to arrive], *and then increasingly more.*
> *President – So there were up to 18,000 murdered per day?*
> *Witness Wiernik – Yes.*
> *President – How many chambers were there?*
> *Witness – Three and then thirteen. These new gas chambers were 7 x 7 meters and therefore about 50 square meters, or 95 m³ in volume. 1,000 or even 1,500 people were pushed in at a time. They were thrown in as long as there was room. Once they* [the Germans] *had enough chambers available, they worked systematically, as I say. When a transport arrived after 6 o'clock, when the chambers were already closed, the people were let into the chambers without releasing the gas, so that the people suffered all night long. In the morning, they would open the chambers … (the witness cries). When they opened the chambers in the morning, there were often people still alive, mostly children of 10, 13, 14 years of age. When the children tried to escape, they* [the Germans] *would shoot them one by one. He who managed to shoot a child was happy."*

Wiernik further stated that "in late January or early February 1943, Himmler arrived. He was accompanied by three people in military uniforms," one of whom was Ludwig Leist, at that time mayor of Warsaw, who was a co-defendant during the Fischer Trial.

Defense attorney Sliwowski then asked the witness why, in his booklet *A Year in Treblinka*, he did not mention Leist's presence when reporting on Himmler's visit to Treblinka. Wiernik replied:

> *"This was a surprise to me. I didn't know Leist, I see him now for the first time.*
> *President – Does the witness know him by sight?*
> *Witness – Yes."*

Meaning that he did not know Leist's name, but that he had recognized him in the dock. In his booklet, Wiernik had written in this regard (Wiernik 1944a, p. 13):

> *"It was the time when Katyn was a topic* [of conversation] *for the Germans. It was useful as propaganda. Once by chance we happened upon a newspaper and we believed these atrocities. At this same time, it seems, under the influence of these same events, Himmler arrived at Treblinka and gave orders to burn all the bodies of those killed."*

In the 1947 interrogation, the witness stated:

> *"I will talk more about how the burning was done. At first, the corpses were thrown into pits, until February* [of 1943], *there were already more than 2.5 million corpses. When Himmler visited the camp and gave the order to exhume and burn all the corpses, even dredgers* [*bagry*] *arrived, the pits began to be opened, railroad tracks were placed on metal supports, the corpses were placed on top, and the fire was lit."*

Previously, he merely stated that the Germans had exterminated "millions" (Wiernik 1944a, p. 22). The figure of 2,500,000 is more than three times the figure currently in vogue: about 781,000 (see Subchapter 7.1.).

Several partially burned documents concerning proposals for promotions of certain German leaders of the Reinhardt Camps suggest that Himmler visited Sobibór Camp on February 12, 1943.[183]

A letter from the *SS-Hauptamt, Personalhauptamt* (SS Main Office, Main Office Human Resources) in Berlin concerning Christian Wirth, undated but probably from April 1943, states (Friedlander/Milton, 1992, Doc. 432, p. 340):

> *"After an inspection of Sobibor Camp, where W. is currently working, the Reichsführer SS has agreed to a promotion…"*

On May 22, 1943 the SS and Police Leader in the Lublin District, Globocnik, wrote to the SS Main Office Human Resources that the men proposed for promotion did not have police ranks but ranks of the general SS, "and these [promotions] were granted to them by the RF-SS personally on the occasion of his last visit and detailed inspection of all facilities on February 12, 43" (*ibid.*, Doc. 435, p. 343). A little later, Globocnik again mentioned a visit by Himmler to all the installations of "Operation Reinhardt" ("after his thorough inspection of all installations of Operation 'Reinhard'"; *ibid.*, p. 344).

In a letter to the RSHA, probably written by the SS Main Office Human Resources, it is reported that, "after a visit to Sobibor Camp, the Reichsführer SS agreed to a promotion…" (*ibid.*, Doc. 438, p. 348).

Finally, the *Adjutantur* (the aide-de-camp's office) of the Reichsführer SS advised the SS Main Office Human Resources on August 19, 1943 as follows (*ibid.*, Doc. 439, p. 349):

> *"During his last visit to Lublin on February 2, 1943, the Reichsführer SS ordered the promotion of…"*

Himmler's visit is also mentioned in Globocnik's letter to the head of the SS Main Office Human Resources, SS *Gruppenführer* Maximilian von Herff (Berenstein, p. 301):

> *"On the occasion of his visit in March, the Reichsführer SS visited facilities of Operation 'Reinhard'…"*

Himmler's visit to Sobibór on February 12, 1943 is therefore documented. But did he also visit Treblinka?

To get a definite answer, one has to look at Himmler's service diary (*Diensttagebuch*) of 1943. The entry of February 12 informs us that Himmler, accompanied by three SS officers – SS *Hauptsturmführer* Grothmann, SS *Obersturmführer* Kiermaier and SS *Oberscharführer* Koch – departed from Lötzen Airport (East Prussia) at 10.30 a.m. and landed in Lublin at 12:00 p.m., where he was met by SS *Obergruppenführer* Krüger and SS *Gruppenführer*

---

183 Some promotions to SS ranks encountered bureaucratic obstacles because the persons to be promoted did not belong to the SS, but to the police (*Kriminalpolizei*).

Globocnik. After "lunch at the airport hotel" ("*Essen im Flughafenhotel*"), he left at 12:30 p.m. "by car to Cholm" ("*mit Wagen nach Cholm*"). This was followed at 2:00 p.m. by the "departure from Cholm by special train to the SS Sonderkommando ("*Start von Cholm mit Sonderzug zum SS-Sonderkommando*"), then from 3:00 p.m. to 4:00 p.m. by the "inspection of the SS Sonderkommando" ("*Besichtigung des SS-Sonderkommandos*"). At 4:00 p.m. "return trip to Cholm" ("*Rückfahrt nach Cholm*"), and finally, between 17:00 and 18:30, "return trip by car to Lublin" ("*Rückfahrt mit Wagen nach Lublin*").[184] The next day at 10:00, Himmler left for Lublin Airport ("*Fahrt zum Flughafen*"), where his plane took off at 10:30 ("Start Lublin"); after landing at 12.30 p.m. in Rastenburg, he drove to the Hitler's headquarters ("*Landung Rastenburg; Fahrt zur Wolfsschanze*").[185]

Neither these nor the following entries contain any reference to a visit of the Reichsführer SS to Treblinka, which therefore never took place.

The testimonies to this effect are therefore unfounded: Himmler never visited Treblinka, and the "eyewitnesses" who saw him with their own eyes lied through their teeth, starting with Wiernik.

When Wiernik wrote his booklet, he reported practically nothing about Himmler's alleged visit. From the related account I quoted earlier it appears that he reported mere rumors, but did not see the Reichsführer SS himself. In his 1947 interrogation, however, he claimed to have seen both Himmler and Leist:[186]

> *"I saw Leist in the company of Himmler, I do not remember exactly whether it was at the beginning of February 1941* [sic] *or in December; I declare one hundred percent that he was with Himmler /he points at him with his finger."*

It is clear that Wiernik had to implicate the defendant Leist in some way, so he embroidered the story of Himmler's visit according to the fable, widespread in the immediate post-war period, that the discovery of the mass graves near Katyn induced the Reichsführer SS to give the order for the exhumation-cremation of the corpses of those allegedly gassed. But this discovery occurred only on April 13, 1943, one or two months *after* his alleged visit to Treblinka.

Wiernik further exaggerated the capacity of the alleged gas chambers – 1,000-1,500 persons at a time on 49 square meters. In his booklet, as I have shown earlier, he claimed 1,000-1,200 persons per chamber, so that the upper limit of the claimed density was 30 persons per square meter!

On October 9, 1945, SAMUEL RAJZMAN made detailed statements about various aspects of the camp's operation, but said nothing about the essential one of the gas chambers. He spoke vaguely of a road leading "to the gas chambers" ("*do komór gazowych*") and of chambers, pits and hearths (*komory*, *doły*,

paleniska) which were allegedly located in the camp's second sector.[187] His other claims are disproportionate and unbelievable. According to him, the Jewish service personnel ranged from 500 to 800 people.

> *"During my stay, several tens of thousands of people passed through this group (constant changes* [with people coming] *from the new transports), of whom at least 25,000 were killed or died of wasting away."*

Rajzman arrived at Treblinka on September 28, 1942 and escaped on August 2, so that his stay at the camp lasted a little more than ten months. In this period, at least 25,000 Jewish staff members allegedly perished, which means that, during this entire period of time, the staff was completely replaced no less than (25,000 ÷ 800 =) 31 times! Of course, Rajzman miraculously escaped death every time.

According to anecdotal evidence of the time, the witness asserted:

> *"I am convinced that Himmler made a visit to the camp in February 1943, arriving by airplane and landing near the camp. I also assume that in March 1943 the camp was visited by Governor Frank. SS generals made constant visits, and were shown the entire camp and its operation."*

Rajzman was also questioned at the Nuremberg IMT, during the afternoon session of February 27, 1946. In the transcript of the hearing, the interrogation, conducted by the tribunal's president, covers six pages.[188] He repeatedly spoke of "gas chambers," but never explained how they were structured and how they worked, and no one asked him. The president was only interested in secondary issues:[189]

> *"*[Rajzman] *The workers immediately took up all the clothes and hauled them to barracks, and the people then were obliged to go out to the gas chambers naked.*
>
> [President] *I would like you explain how the Germans called the gas chambers?*
>
> [Rajzman] *This street was called Himmelfahrt Street; that is to say, Ascension Street; that is to say, the road to heaven."*

The questioning continued wearily, but seemingly with some doubt on the part of the presiding judge:[190]

> *"*[Rajzman] *The procedure of undressing and introduction into the gas chambers lasted, for the men, about 10 minutes, and for the women not more than 15 minutes. The women lasted 15 minutes because before they went to the gas chambers their hair was cut off.*

188 Official transcript of the International Military Tribunal in the matter of The United States of America, the French Republic, the United Kingdom of Great Britain and Northern Ireland, and the Union of Soviet Socialist Republics against Hermann Wilhelm Goering et al., Defendants, sitting at Nurnberg, Germany, on 27 February 1946, 1400-1700, Lord Justice Lawrence presiding, pp. 5097-5102.

189 *Ibid*., p. 5097.

190 *Ibid*., p. 5098.

> *The President: Do you mean that there was only 10 minutes between the time that* [they] *were landed out of the trucks and the time they were put into the gas chamber?*
> *The witness: As far as men were concerned, I am sure it did not last long than 10 minutes."*

This implies, moreover, that the haircuts of all women entering a "gas chamber" lasted only five minutes! The interrogation also fleetingly touched on the subject of the "gas chambers", but Rajzman evaded one of the very few important questions asked of him:[191]

> *"*[The President] *Tell, us, Witness, how many persons were exterminated in the camp on an average daily?*
> [Rajzman] *On an average I believe they killed ten to twelve thousand persons daily.*
> [The President] *In how many gas chambers did the killing take place?*
> [Rajzman] *At first there were only three gas chambers, but then they built more gas chambers. It was planned to increase this number to twenty-five.*
> [The President] *But how do you know that? Why do you say, Witness, that they planned to increase the number of the gas chambers?*
> [Rajzman] *Because all the building material had been brought and put in the square. I asked, 'Why? – there are no more Jews' and I was told that they would bring other nationalities."*

However, this does not explain the number – 25 "gas chambers" – and it is clear that the witness did not know what to say about the alleged new killing building.

It is not apparent why the Soviet prosecution preferred this witness over Abraham Isaak Goldfarb, who only two years earlier had given a far-more-detailed deposition.

Also in 1946, Rajzmann wrote a long essay titled "My Stay at Treblinka" ("*Mój pobyt w Treblince*"), which covers eight and a half pages in the printed version (Blumental, pp. 182-190). Although he claimed in this essay that 25,000 people were exterminated in Treblinka daily (*ibid*., p. 186), he did not describe any extermination system, and made no mention of the alleged death chambers.

By the 1950s, Rajzman had happily associated himself with the official version of the 'gas chambers,' but he remained quite silent about the details. In his report, published in English by Donat, he contents himself with the following remarks:[192]

> *"The women had to line up, and all their hair was clipped off. It was destined for use in German mattresses. Naked, they went the road of no return, into the gas chambers. While they undressed and walked into the gas chambers, the*

---

191 *Ibid*., p. 5102.

192 Donat, p. 232. Donat states that this text is based on an English translation by a certain Howard Roiter of an eyewitness report given by Rajzman in Yiddish and recorded on tape (p. 251). The date is not given, but on p. 250, the witness mentions 1950.

> *Germans hit them very hard; many died from the beatings alone. Everybody was pushing to get to the gas chamber fast, because the Ukrainians and the Germans were beating them so hard. Everybody was stampeding forward. The whole place was covered with blood. People didn't know that it would be the end there; the idea was simply to get out of the place where they were beating you. And in doing that, they went straight into the gas chambers."*

In these few sentences, Rajzman thus mentions the "gas chambers" four times, but spares not a word as to their structure and manner of functioning.

STANISŁAW KON, who had been deported to Treblinka on October 1, 1942 and assigned to collecting the clothes of the alleged victims in Camp 2, testified on October 7, 1945.[193] Although Kon mentioned nothing about the killing system during his interrogation of August 18, 1944 (see previous subchapter), this changed during his actual testimony on trial, where he mentioned the two alleged killing systems then-most-in-vogue among the rumor-mongering witnesses:

> *"As for the chambers, I saw them from a distance while working on palisade repair. They looked like sheds. Above them was the star of Zion and, as I heard, the word 'Judenstaat'* [Jewish State] *was posted. The shed was set on high concrete foundations, so it was accessed by a few steps. Inside there were concrete chambers on either side of a corridor,* [from] *where each chamber was entered through hermetically sealable doors. On the outside, each chamber had a liftable shutter that was raised after the people had been killed, so that a considerable portion of the corpses fell out by force of gravity. The individual chambers were so full of people that the doors were closed with great force. The killing itself was done by pumping* [extraction] *of air or by the introduction of exhaust gas* [przez wypompowanie powietrza lub puszczanie gazu spalinowego]. *I do know, however, that near the shed* [*obok szopy*] *an engine was installed. I do not know whether it was for pumping* [out] *air or for the production and introduction of exhaust gas."*

Kon described the beginnings of the alleged exterminating activity by appealing to one of the fanciful themes then in vogue:

> *"As far as I know, the extermination of Jews in Treblinka began in June 1942; then there was an initial period in which people were killed with machine guns and buried with their clothes. Often, during work on the camp grounds, pits full of dressed corpses were found."*

And finally, here is the inevitable reference to Himmler:

> *"Comrades recounted that Himmler visited* [the camp] *in March 1943, and supposedly gave the strict order to burn all the corpses."*

ABE KON was interrogated on October 9, 1945 (pp. 16f.). He was deported to Treblinka on October 2, 1945 from Częstochowa, in a transport of 60 railway

---

193 AGK, NTN 69, pp. 4-6. Subsequent page numbers from there, unless mentioned otherwise.

cars with 100 persons in each. Upon arrival, he was selected as part of a group of 60 persons to sort clothes.

> *"Two weeks after arriving at the camp, I had the opportunity to speak with a bricklayer who had worked on the construction of the chambers built during the camp's initial organizational period, and who had managed to get into the camp's first part. He said that there was a total of 12 chambers, made of concrete, with a corridor system. From the corridor, narrow doors led to individual chambers, but on the outside walls there were shutters* [*klapy*] *for the removal of corpses. They killed by extracting the air from the chambers* [*przez wyciągania powietrza z komór*]*."*

Thus, the witness reverted to the version of his Soviet interrogation of August 17, 1944. On that occasion, he had also stated that "for two months" 15,000-18,000 people a day were killed at Treblinka, or about 900,000-1,080,000. But to Judge Łukaszkiewicz, he said:

> *"From the time of my arrival to December 1942, an average of three transports of 60 wagons each arrived at the camp non-stop,"*

and, from his description of these transports, it is to be understood that each car contained 100 people. Therefore: 18,000 deportees per day for three months (October-December 1942), that is, 1,656,000.

Apparently, Kon knew nothing about any visit of Himmler to Treblinka, because regarding visits he stated merely:

> *"At the camp, there were often visits from generals, among them, in particular a general of small stature, slender, came often from Lublin."*

HEJNOCH BRENER, questioned on October 9, 1945 (pp. 20f.), stated that he had arrived at Treblinka from Koniecpol on October 15, 1942 with a transport of 60 railway cars, each with 180-200 persons. (The interrogation protocol incorrectly gives 1943 as the year of arrival). As soon as he arrived at the camp, he was picked as part of a group of 200 men who were temporarily assigned to sort clothes. By a stroke of luck, he was able to join the group of permanent workers who performed the sorting.

> *"On the third or fourth day after arrival, I was assigned to the group of barbers who were obliged to cut the women's hair before death. On the very first day of this group's work, we were sent to the so-called Lager 2 (there were chambers, pits and staff barracks), where a barbers' room was set up in one of the chambers intended for the extermination of persons. At that time, I had the opportunity to observe the arrangement of the chambers, as I worked during the liquidation of the victims of a 60-car transport. The chambers were located in a long building, they were made of concrete, the access to the chambers was from a corridor through small doors* [*małe drzwiczki*]*. There were two holes in the ceiling to pump the air out (people were killed by pumping the air out with a motor located next to the chambers)* [*W suficie były dwa otwory, którymi wypompowano powietrze (zabijano ludzi przez wypompywanie powietrza motorem, umieszczonym obok komór)*]*. The floor of the chambers was sloped to-*

> *ward the outer walls, in which raised* [liftable] *shutters were located. After the killing (it took about 15 minutes after the chambers were closed) the shutters were lifted, and the bodies fell out lifelessly, from where they were taken to the pits."*

There were 16 benches in the chamber-turned-"barbershop," with four to five barbers working at each bench. This means at least 64 places to sit, and as many barbers working concurrently. If the rooms measured 7 m × 7 m (= 49 m²), as Wiernik claimed, and if a bench was 3 m long and 40 cm wide, two benches could fit side-by-side in that chamber, with 8 rows of them taking up (8 × 0.4 m =) 2.4 meters of space, leaving ([7 m – 2.4 m] ÷ 9) 42 cm of space in front and behind each row of benches, which is barely enough room for the legs of the women sitting on them, let alone for any barbers to move around cutting hair. The number of benches and barbers therefore made no sense, but Brener, being a self-proclaimed eyewitness to this set-up, should have known precisely. This rather silly idea of transforming a gas chamber into a barber-shop was later taken up and developed by the notorious impostor Abraham Bomba.[194]

Brener provided further details:

> *"As far as I know, all the rooms were of the same size, and each held over 400 people."*

But Wiernik claimed that each chamber contained between 1,000 and 1,500 people! Brener further specified that the burning of the corpses began about six weeks after his arrival (October 15, 1942), which brings us to the end of December, hence two months *before* Himmler's alleged visit to Treblinka and his alleged order to exhume and burn the buried corpses. Of this alleged visit, however, Brener knew nothing, because on visits by outsiders he only stated:

> *"During my stay at the camp, there were frequent visits from SS generals, who were shown the entire camp and the system of exterminating people."*

OSKAR STRAWCZYŃSKI, who was questioned on October 7, 1945 (pp. 7-10), stated that he had arrived in Treblinka on October 5, 1942 with a transport of 60 railway cars, each carrying 150 people from Częstochowa. Fifty young men, including the witness, were selected for work at the camp.

On the alleged gas chambers, he reported that "in the hut where the women undressed, there were roughly a dozen (*kilkunastu*) barbers who immediately cut the women's hair," which contradicts Brener's silly claim that this took place in one of the gas chambers. The witness's claims about the alleged gas chambers are all from hearsay:

> *"From the accounts of Hersz Jabłkowski, who was a blacksmith and came from Stoczek Węgrowski, I know what the gas chambers looked like. Jabłkowski worked on the gas chambers, and then for some time he was in our group (I*

---

194 Robert Faurisson drew attention to this false witness already in 1985 (Faurisson 1985). See also Smith 2003; Kues 2009b.

clarify that Jabłkowski was brought to the camp early, in May 1942, and at that time the camp was not yet thoroughly set up, so he could be in the first part of the camp, although he worked on the construction of the chambers in the second part). From his account it appears that there were concrete chambers on high concrete foundations, square-shaped, about 3 meters on each side [*betonowe komory o boku około 3-ech metrów, kwadratowe*],[195] *the floor was actually tiled. During the construction, showers were installed on the ceiling, but they were not connected to any water pipe, and Jabłkowski said that, when he was working on the construction, he asked the German overseer why the showers were not connected to pipes; the German replied that this would be done later. Jabłkowski worked on the construction of four rooms that were located in a building. The entrance to the building was served by steps on the aforementioned foundations.*

From the corridor, which was in the center, a small door [*małe drzwiczki*] *led to each room. The small doors were so narrow that only one person could enter at a time. They were made that way so that no one could back out, because the crowd following and the narrowness of the space did not allow it. On the outside, each chamber had a large shutter that rose up, through which the bodies were removed. The floor was actually covered with tiles and sloped toward the shutter. This had two purposes: first, to facilitate the corpses to fall* [outside]*, and second, to facilitate the flow of blood. I don't know exactly what the system was for killing people in the chambers. In my opinion, this was done either by pumping out the air* [*przez wypompywanie powietrza*]*, or by introducing gas from an internal-combustion engine into the chambers. I assume that no poisonous gas was used."*

Regarding transportation, the witness stated:

"Again from Jabłkowski's accounts, I know that mass transports of Jews began arriving at Treblinka at the Jewish holiday 'Tyszbeaf' [*Tishah b'av*]*. This holiday is in July. I do not remember on which day it fell in 1942* [July 22-23, 1942]*. From the time of this holiday to the end of November or beginning of December 1942, an average of three transports of people arrived every day, each one with 60 railway cars."*

Assuming a load of 100 people per railway car (although Strawczyński claims there were 150 people in each car), 18,000 deportees would have arrived every day at Treblinka, and over a period of about 130 days a total of 2,340,000!

HENRYK REICHMAN (alias Romanowski) asserted during his interrogation on October 12, 1945 (pp. 29f.) that he arrived at Treblinka on October 10, 1942 with a transport from the Lublin District which contained 12,000 persons. 150 people had been crammed into each car, meaning that the train must have consisted of 80 railway cars. Upon arrival at the camp, the witness was temporarily selected with a group of men to take away the clothes of the deportees. When the work was done, a German asked if there was a barber in the group,

195 Hence, each "chamber" had an area of 9 square meters.

whereupon Reichman came forward and was subsequently sent "to the area of Lager No. II (where the chambers were) to cut the hair of the naked women." In this regard, the witness reported a story similar to Brener's:

> *"The haircutting took place in a chamber, the first one, used as a barbershop. The building in which the chambers were located contained 10 chambers, with dimensions of eight-by-eight meters, the height was about two meters. The entrance to the chambers was from a corridor, but each chamber had a lift-up shutter toward the outside for the removal of corpses. The killing of people was done by extracting air from the chambers and introducing gas from the engine* [*przez wyciąganie z komór powietrza i wprowadzanie gazu z motoru*]*. The engine was located in an annex near the chambers. I remember that once, when the size of a transport was smaller, the Germans made an experiment: they did not introduce gas, they only extracted air. After 48 hours, when the chamber was opened, there were still people showing signs of life. Next to this building with 10 chambers was another smaller building with three chambers, also with an engine. In the large chambers, in the building that contained 10 chambers, about 1,400 people entered at a time. At the time of maximum extermination, all 13 chambers were used."*

After working for three days as a barber, Reichman was permanently assigned to Camp II, at first charged with transporting corpses, then with extracting gold teeth from the corpses. Regarding the exhumation-cremation of the alleged victims, the witness asserted anachronistically:

> *"The burning of corpses began on a larger scale in January 1943, when the new head of Camp No. II arrived, an SS expert at burning corpses. At that time, five or six furnaces* [*pieców*] *were built which looked like this: iron rails were placed on concrete bases on the surface of the ground. With dredgers, they put about 2,500 corpses from the pits at a time* [*kładziono bagrami z dołów około 2,500 trupów na raz*] *on top of this grate, and lit it from below."*

The witness evidently was unaware of the story of Himmler's alleged visit to Treblinka in February or March 1943 and of the alleged exhumation-cremation order, since he placed the start of the burnings in January.

In contrast to many of his colleagues, who spoke of an average daily influx of 18,000 deportees, Reichman asserted:

> *"From the time I arrived at the camp until about December 25, 1942, about 10,000 people arrived at the camp every day for extermination, sometimes as many as 18,000."*

The undated deposition of SZYMON GOLDBERG was published in 1946. The witness had been deported to Treblinka from Częstochowa in the first half of September 1942. He remained at Camp 1 for six months, then was transferred to Camp 2, where he worked for five months at the "gassing compartment":

> *"There, I carried the corpses from the gassing compartments* [*z kabin gazowych*] *to the blaze."*

The victims were sent "to the bath" [*do kąpieli*], which the witness describes as follows (Blumental, p. 179):

> *"They were even given a piece of soap. And then it was taken away from them at the gassing compartments. There were also showers in the compartments, but they didn't work, so* [they were only] *'for pretense'. One compartment contained a crowd, about a thousand people. They were stuck to each other; one person stuck to another person. They would kill by pumping out the air* [*przez wypompowanie powietrza*]*; one machine was for pumping* [*jedna maszyna była do wypompowywania*]*; and by introducing gas from a vehicle* [*przez wpuszczenie gazu z samochodu*]*. Ether (!) was burned, and this smoke was introduced* [*Eter (!) się palił i wpuszczali ten dym*]*. There was also chloride* [*Chlorek*]*. When I was working in the second camp at the removal of the corpses, I saw that the corpses were pale* [*blade*]*, the women often had hemorrhages, many had blood coming out of their mouths; their eyes looked distraught."*

There is no need to comment on these puerile fantasies of Polish-Jewish black propaganda.

HENRYK POSWOLSKI was interrogated by Judge Łukaszkiewicz on October 9, 1945 (pp. 18f.). He had been deported to Treblinka on January 19, 1943 with a transport of 3,000 people from the small Warsaw Ghetto. He was saved because an inmate of the service staff, who had an armband with the inscription "*Aelteste der Juden*" ("The Eldest of the Jews"), gave him the job as a bricklayer and stoker on his own initiative. There, he became part of the service staff, but he was *not* assigned to Camp 2. He told this hearsay story:

> *"Regarding the construction and installation of the chambers, my information is based on the accounts of workers who, in the initial period of the camp, had the opportunity to access the location of the chambers and pits. The chambers were made of concrete, I heard that they were even covered with tiles. On the walls were installed washbasins, which were meant to imitate a real bathhouse. On the ceiling were dummy shower heads, not connected to the water mains. I am sure that I was told that among the rooms there were two that had open* [collapsible] *floors. Under the floor passed carts with which the corpses were carried away* [*pod podłogę pojeżdzały wagoniki, ktorymi wywożono trupy*]*. They killed in this way: with a Diesel engine, placed near the chambers, first they pumped out the air, and then they introduced the exhaust gases of the engine.* [*wypompowywał najpierw powietrze a później wprowadzono spalinowy motoru*]*."*

Speaking of the so-called "sickbay," the witness reported that the sick and disabled were killed there.

> *"After the killing, all the corpses were burned. A certain white powder* [*jakiegoś białego proszku*] *was used for burning (I think it facilitated the burning)."*

Poswolski also took up the tale of Himmler's visit to Treblinka, which he described as follows:

> *"It seems that in March 1943 the camp was visited by Himmler. The camp staff and the Jewish workers gathered in the courtyard at 4 p.m., and a report was made, which was received by SS Man Küve. The latter in turn reported to the camp commandant, who then reported to Himmler. I assume that Himmler's visit was the start of the main operation, the purpose of which was to erase all traces of the crime. From this moment on, the corpses were exhumed from the pits by means of dredgers and burned."*

Poswolski therefore limited himself to expounding the trite propaganda themes that were in vogue in 1945 among Polish-speaking witnesses, including the fable of the gas chambers with collapsible floors, which was most-widespread among witnesses testifying about Sobibór Camp.

On December 28, 1945, Judge Łukaszkiewicz interrogated LEON FINKELSZTEIN,[196] who made statements that were as detailed as they were implausible. Finkelsztein had arrived at Treblinka on July 22, 1942 with a transport of 7,000 people from Międzyrzec Podlaski. Each railway car contained 200 people:

> *"Since the cars were sprinkled with chlorine, many people died during the journey, so that there were up to 50% dead bodies in the cars on arrival at Treblinka."*

A similar tale was told by Abraham Isaak Goldfarb, who had been deported to Treblinka from the same location on August 18, 1942.

When Finkelsztein arrived at the camp, where the transport was met by an orchestra, he managed to join a group of deportees who had received a red mark, and this saved him. He described as follows the work he was assigned to initially:

> *"When I was brought to the camp, the land was not yet fenced in and on the second day after my arrival I was immediately assigned to the group of workers who worked on the construction of the palisades. I worked there for three weeks."*

But because the first transport of Jews from Warsaw arrived at Treblinka the next day, July 23, one cannot seriously believe that the camp was still without a fence when it opened operations, and that those fences were built only during the following three weeks.

The account of the witness continues as follows:

> *"After this period* [of three weeks], *SS Man* [Kurt] *Franz chose the 200 strongest among us, and sent our group to the second part of the camp, where the chambers were. There I learned from a cook that 200 workers had been shot the day before who had rebelled and refused to work in the chambers. We had to replace them. At the time, there were three chambers in operation that were located in one building. The entrances to the individual chambers opened from a corridor, and were sealed with airtight doors. On the outside were large raised* [liftable] *doors, through which the bodies were taken out. The chambers*

[196] AGK, NTN 70, pp. 285f.

> *were lined with tiles. Next to the chambers, in an annex, was an engine, whose exhaust poisoned the victims. Death occurred after about 20 minutes. Sometimes, when the engine failed, the chambers were sprayed with chlorine, and the victims suffered greatly. I remember that once, after a whole night of such a poisoning, some people were still alive, and were buried anyway. It is not true that the floors of the chambers were open* [collapsible]*."*

The anecdote of the 200 workers shot was clearly a pretext to justify the witness's assignment to Camp 2. The description of the alleged gas chambers follows Wiernik's pattern, including the reference to the killing with chlorine, which the witness embroidered according to the version that had developed in 1944, particularly by Abraham Isaak Goldfarb. Burying people alive is one of the silliest black-propaganda themes.

Although this witness claimed that he had remained in Treblinka from the first to the last day (that of the uprising), he told very little about the alleged second gassing plant:

> *"As far as I remember, in November 1942 the new building containing 10 chambers was put into operation; the killing took place there likewise by means of exhaust gases; the capacity of these chambers was considerably greater."*

He furthermore stated that

> *"for a time, there was a railroad with carts for transporting the corpses, but it was soon eliminated, because, in the judgment of our executioners, loading and unloading the carts was very time-consuming. The corpses were simply dragged by the workers* [grabbing them] *by the limbs."*

Given that there were allegedly 21 mass graves in Camp 2, and that each contained up to 200,000 corpses (a total of 4,200,000!), the alleged substitution of a narrow-gauge railway system by dragging corpses individually by the arms or legs seems demented.

The witness added:

> *"As for the number of victims killed in Treblinka, it is difficult to establish it exactly. In my opinion, from the time of my arrival at the camp to the time of the uprising, transports of 3,000 to 12,000 people* [per day] *arrived continuously."*

The time limits are July 22, 1942 and August 2, 1943, or some 370 days, so the number of deportees would range from a minimum of 1,110,000 to a maximum of 4,440,000, where the second figure corresponds best to the number of those allegedly buried (4,200,000), if we follow this witness's fictitious account. Finkelsztein also spoke of the elimination of the corpses:

> *"As for the burning of corpses, at the beginning (still in 1942) they tried to burn the corpses on piles* [*na stertach*]*, but this did not give* [good] *results, so already in 1943, they began to build furnaces in pits* [*piece w dołach*]*, where special fans were used to blow in air. However, even these furnaces did not work well, so in the end the usual grates of iron rails on concrete bases were built. On such a grate, many corpses were placed together, and the burning*

gave good results. Such a grate was lit with a small amount of wood or rags soaked in gasoline, and then the corpses burned by themselves."

Leaving aside the anachronism of the beginning of cremations already in 1942, the system described by the witness, which is the same as the one allegedly adopted at Auschwitz (albeit without any fans that would have made it much-more-effective), did not work at Treblinka, although it is said to have worked perfectly fine at Auschwitz. On the contrary, the method that allegedly gave good results at Treblinka was based on the fable of the autocombustion of corpses.

As regards fables, in this context the witness tells another one. During the exhumation,

"large quantities of corpses still remained in the pits, because the workers did their best to sabotage the pits in this way: at every moment of inattention on the part of the Germans or Ukrainians, they covered large quantities of corpses with sand, which thus were never burned."

The expression "large quantities", if it is to make any sense, should be related to the number of those alleged to have been buried – over four million – meaning that huge numbers of corpses should still be there today. But such corpses have not been found.

ARON CZECHOWICZ testified on October 11, 1945 (pp. 27f.). He arrived at the camp on September 10, 1942 with a transport of 8,000 people from the Warsaw Ghetto. On arrival, the camp commandant selected 80 men, among them the witness, who recounted:

"On the first day, I worked sorting clothes, then I was sent to the part of the camp where there were chambers (the so-called Totenlager). I worked there for two weeks and one day, while I was busy carrying lumber toward a group of workers from the first part of the camp (where there were no chambers, only warehouses and housing barracks); taking advantage of the inattention of a Ukrainian, I managed to sneak into the group of workers from the first part of the camp. I stayed there, working on sorting clothes.

I can give the following details about my work in the so-called Totenlager. At the time of my arrival, there were three chambers in operation. On the outside, the building containing the chambers was similar to a shed. On each side in the walls of this building there were three large raised [*liftable*] *shutters at the top, through which the corpses were removed after the killing. On the roof of the building, there were three openings surrounded by a tube in the shape of a small chimney* [*trzy otwory otoczone rurą w ksztalcie kominka*], *and I saw with my own eyes that, after the chambers had been filled, through these openings a Ukrainian poured some liquid* [*jakiś płyn*] *into them from a sheet-metal canister (an ordinary canister like those used for heating oil). At the same time, the engine in the adjoining building, which was also operated by Ukrainians, began to run. At first, shouts could be heard from inside the chambers, but then there was total silence. More than 500 people entered each room, I believe.*

During my presence in this camp, the chambers were filled with people four times a day."

Hence, the witness saw with his own eyes small chimneys on the roof of the alleged gas chambers, through which a Ukrainian poured an undefined liquid from a canister! For what purpose is unknown.

Each alleged gas chamber contained more than 500 people, a figure identical to the maximum figure given by Wiernik (450-500 people). If the dimensions were the same (5 m × 5 m = 25 m²), one chamber contained 20 people per square meter. Since there were three chambers, and four batches of killing were carried out in one day, the daily figure of victims was 6,000. The time limits should be September or October 1942. This figure contradicts the huge influx of deportees imagined by several of Czechowicz's colleagues, starting with Oskar Strawczyński, according to whom, from the opening of the camp to the end of November 1942, 18,000 deportees arrived at Treblinka every day, only a third of whom could have been killed in the alleged gas chambers, if using Czechowicz's figures.

EUGENIUSZ TUROWSKI was heard by Judge Łukaszkiewicz on October 7, 1945 (pp. 11f.). He reported that he had been deported to Treblinka on September 5, 1942 in a transport of 50 railway cars from the Częstochowa Ghetto. Each car is said to have contained 100 persons. Upon arriving at the camp, he was selected with a group of 25 men as a mechanic, then assigned to the machine shops, where he worked until the uprising on August 2, 1943. From a Ukrainian named Grigor and a Jewish inmate named Jankiel, he learned that the first Jewish transports had arrived at Treblinka in June 1942, hence before the camp was opened.

"At that time, an extermination system had not yet been organized, so people from the transports were rounded up in the yard and killed with machine guns. They were buried in the pits with all their clothes. In mid-August 1942, or perhaps earlier, the gas chambers were installed. At first, there were four gas chambers, but by the time I arrived at the camp, another 10 chambers had already been built."

Similar fantasies were also conveyed by Oskar Berger as shown earlier. Turowski added to them the presence of fans to ventilate the alleged gas chambers. He did not know when the influx of mass transports began, but since his arrival in early December 1942, "at least three transports per day of 60 cars each" arrived at the camp, presumably with 100 persons per car, or 18,000 per day. He did not report, however, "how the extermination of people in the gas chambers took place."

Turowski further stated:

"As far as the erasure of traces of the crime is concerned, it is known to me that during the initial period, I presume more or less until June 1942, the corpses were exclusively buried in pits; later on, the corpses began to be burnt partially on piles [*na stertach*]*; then, already in the winter of 1942-1943, the*

> *burning began in special pits with grates installed* [in or on them], *and with the help of fans* [*przy użyciu wentylatorów*] *which blew air under the grates. During the period of maximum intensity of the corpse burning, dredgers* [*bagry*] *were used to extract the corpses from the old pits."*

These are more anachronistic claims and fanciful stories (such as the fans, this time to stoke the fire) that each witness used to season their tale according to the whim of the moment.

On October 9, 1945, Łukaszkiewicz questioned SZYJA WARSZAWSKI (pp. 22f.), who had been deported to Treblinka on July 23, 1942 with a transport of 1,800 people from Kielce (in 18 cars with 100 people each). The circumstances under which he was saved are quite unique. Upon arrival at the camp, the deportees were forced to lie on the ground, and were shot in the back of the head. Fortunately, the witness was only wounded in one hand and remained among the corpses until the evening. Then he was taken to a pit, where Jewish workers made him join them, and in this way, he became a member of their group. The story continues as follows:

> *"At first, I worked for two days with the corpses. From this period, I remember the fact of the arrival of a transport from Międzyrzec of about 20 cars. In these cars, there were mainly corpses of men, women and children who had perished from chlorine poisoning* [*skutkiem zatrucia chlorem*], *because the floors of the cars, as well as the victims of the upper part, were sprinkled with a layer of chlorinated lime."*

Hence, this chlorine myth was not only bandied about by Goldfarb and Finkelsztein, but also by Warszawski.

The witness told the following about his own activity:

> *"I lived all the time in the area of* '*Lager II*'. *We were 6 specialists, joiners-carpenters, always employed in construction (Wiernik was also in this group), and we were able to pass from Lager II to I and vice-versa while working. Working in the vicinity of the chambers, I had the opportunity to carefully observe their layout. By the time I arrived at the camp, four* [*czetery*] *concrete chambers on high foundations were already finished. The corridor in the center of the building that contained these chambers had entrances to the individual chambers of such size that only one person* [at a time] *could pass through the small doors. On the outside, each chamber had a raised* [liftable] *shutter* [*klapę*] *at the top, through which the corpses were thrown out. In principle, about 300 people could be brought into each chamber, but in order to hasten* [the killing process], *up to 600 were put in, often on the heads of the first victims who were already in the chamber. The poisoning was done by ducting in exhaust gases from an engine that was installed next to the chambers in a special wooden room."*

This witness was therefore able to "carefully observe" four gas chambers (instead of the usual three). Although each chamber was designed to hold 300 people, twice as many were crammed in, even on the heads of the victims al-

ready inside. If the dimensions of these chambers were as indicated by Wiernik (5 m × 5 m × 1.90 m; see Section 3.9.1.), they would have contained 24 persons per square meter and, with such a low ceiling, it would have been at least difficult to fit still more people over the heads of those already inside.

ALEKSANDER KUDLIK was heard by Łukaszkiewicz on October 10, 1945 (pp. 24f.). He recounted that he arrived at Treblinka on October 12, 1942 from Częstochowa in a train of 60 cars, each containing 120 people. Upon arrival, the camp commandant selected 30 deportees for work, and the witness, taking advantage of the Germans' inattention, managed to sneak into this group, which was assigned to sorting clothes. Then he was assigned to sort fountain pens, of all things, a job he claims to have performed for eight months in the first part of the camp. Here is his tale on the gas chambers from hearsay:

> *"In the second part of the camp, to which I did not have access, were the chambers and pits. Some inmates who were carpenters (in particular Wiernik) had the ability to move from one part to another. I know from their account that in the chambers people were killed by pumping out the air and then pumping in combustion gas* [*przez wypompowywanie powietrze i wpompowania następnie gazu spalinowego*]. *There were 10 chambers that could hold a total of about 5,000 people",*

therefore 20 people per square meter. Following the fables in vogue at the time, the witness added:

> *"As for the number of transports, from my arrival to December 1942, an average of three transports of 60 cars arrived each day."*

Judge Łukaszkiewicz also questioned several indirect witnesses, mostly Polish railroaders or workers who had worked at Treblinka Station or in surrounding areas. These were Józef Kuźmiński (October 16, 1945; pp. 75f.), Wacław Wołosz (October 18, 1945; p. 77), Mieczysław Lasowski (October 18, 1945; p. 78), Stanysław Adamczyk (October 26, 1945; p. 85), Lucjan Puchała (October 26, 1945; pp. 86-88), Wacław Bednarczyk (October 27, 1945),[197] Stanysław Borowy (November 21, 1945; pp. 105f.), Władysław Chomka (November 26, 1945; p. 191) and Franciszek Ząbecki (December 21, 1945).[198] Only three of them made statements that have some relevance to the theme of this chapter.

LUCJAN PUCHAŁA was a railway worker who had worked at Małkinia Station until June 1942, and then at the construction of the track from Treblinka Station to the sand pit near the Treblinka I Labor Camp. He reported:

> *"I learned in particular that a building of brick and cement had been constructed in which, as I later became convinced, there were chambers for the extermination of people. I heard that there were eight such chambers, and about 700 people could enter in each one of them.* […]
> *Since the gravel pit was located near the site of the death camp, I was able to observe many facts about the operation of this camp. It is known to me that*

197 *Ibid.*, p. 288.
198 *Ibid.*, pp. 131f.

immediately after July 1, 1942 three dredgers [*bagry*] *were brought in, with which pits of several dozen meters in length, fifteen meters in depth and ten meters in width were dug. On the day when the work on the railway branch was finished, the building for the chambers was already almost ready. From the middle of July, railway transports of Jews began to arrive immediately. At first, there was only one transport per day, sometimes two. The transports were brought to the platform in groups of twenty cars, because no more could fit on the branch line. There were from 200 to 280 people in the cars /chalk inscriptions on the cars/. Working at the gravel pit, I was able to survey the terrain of the camp from a knoll. It is well-known to me that, when a transport arrived, the SS and Ukrainians would chase the Jews out of the cars, and separate the men on one side, and the women and children on the other. After the separation, they ordered them to strip naked, then took them to a square, and shot them with machine guns. The corpses were buried in pre-made pits. This situation lasted more-or-less until the middle of August 1942, when the pits full of corpses and covered only with earth opened up as a result of the decomposition of the corpses, so that a terrible stench spread. The transports were then stopped for a period of about two weeks, and during this time the surface of the pits was cemented over. More-or-less from September 1, 1942, the activity in the camp began to intensify. At that time, the chambers were already in operation, and the extermination of people began on a large scale. Every day, two or even three transports of 60 cars each arrived without surcease.* […] *As for the burning of corpses, this began as early as the fall of 1942. In the winter, apparently after Himmler's visit, mass burning began and, as I heard, Himmler gave the order to extract the gold teeth from the oral cavities of the victims."*

Puchała embroidered the chestnuts of black propaganda with his own interpretation: there were eight gas chambers (not three or ten or altogether thirteen); the depth of the mass graves, equivalent to the height of a five-story building, is clearly disproportionate, as is the normal number of occupants of a car: from 200 to 280! The machine-gunning of the victims is another recurring theme in the testimonies of the time, as well as the even-more-fanciful covering of the mass graves with a layer of concrete, which, as I showed in Subchapter 3.3., was also attributed to Bełżec (Note 110, p. 105).

The beginning of corpse cremation in the fall of 1942 is a blatant anachronism, while Himmler's visit to Treblinka is a pure invention.

WŁADYSŁAW CHOMKA was a railroad worker who maintained a track section from Małkinia up to two kilometers from Treblinka Station. Among other things, he stated:

"While working on the railroad tracks, I often had the opportunity to talk to Jews who were employed by the Germans in railroad work. They belonged to the working staff of the extermination camp. I know from their stories that, during the period of greatest transport intensity, 7,000-10,000 people were exterminated every day, but there were days when 30,000 were exterminated. I remember that one of these workers, whose name was Sadowski, told me that at

> *the chambers there was a Ukrainian who used a rod* [*drągiem*] *to drive the people inside, and at the same time he enjoyed cutting off various parts of the victims' bodies."*

According to the current version of this legend, the Ukrainian in question was armed with a dagger or bayonet. In this regard, Leon Finkelsztein stated:[199]

> *"When the victims were pushed into the chambers, the Ukrainians Iwan, Mjkolaj and Woronkow cut off the women's breasts with a saber* [*szabla*]*."*

FRANCISZEK ZĄBECKI had worked at Treblinka Station since May 1941 as a rail traffic controller [*dyżurny ruchu*]. He spoke among other things about the period following the closure of the camp:

> *"During the fighting in 1944, when the Germans retreated under the pressure of the Red Army, the front line remained in the vicinity of the station for some time; then the station was blown up and burned down by the Germans. At the station, the railway documents were destroyed, which would have constituted evidentiary material, but I managed to hide some of them at the risk of my life."*

In the interrogation of December 21, 1945 by Z. Łukaszkiewicz,[200] Ząbecki told the story of the recovery of the documents after the bombing of Treblinka Station in 1944, and said that he was handing them over now to the Polish judge, stating, "I am submitting [*składam*] them now as documentation for the present case."

In 1946, Łukaszkiewicz published the previously mentioned booklet *Obóz straceń w Treblince*, which is an attempt to outline the camp's history based on testimonies. Among these, Ząbecki's testimony is also mentioned several times, but without any reference to whether he had handed over documentation on rail transportation to the judge. The most-important content concerns the meanings of the abbreviations "P. Kr.", "PJ" and "Da" (Łukaszkiewicz 1946b, p. 37). In the appendix, the judge published three railroad documents, but without mentioning that he had received them from Ząbecki. Even if Ząbecki's account were true, it is not known how many and which documents the witness managed to secure.

3.8. The Significance of the Report of November 15, 1942

The wide circulation of the story of the steam chambers testifies to the fact that it was considered very reliable, indeed the most-reliable of all those circulating that I have reported above. It was even officially endorsed. In the Polish government's report on German crimes in Poland prepared for the Nuremberg

---

199 *Ibid.*, p. 286.
200 *Ibid.*, pp. 131f.

IMT and presented by the Soviets as Document USSR-93, we read about Treblinka:[201]

> *"When the process of exterminating Jews was initiated, Treblinka became one of the first camps to which victims were brought. They were put to death in gas chambers, by steam and electric current."* (Emphasis added)

The story of the Treblinka "steam chambers" was famously the subject of another official Polish government report, which was admitted to the IMT as Document PS-3311 (IMT, Vol. 32, pp. 153-158). It described as follows the "Charge Number 6" against Hans Frank, who had been the head of the General Government during the war:

> *"The German authorities acting under the authority of Governor General Dr. Hans Frank established in March 1942 the extermination-camp at Treblinka, intended for mass killing of Jews by suffocating them in steam-filled chambers."* (*Ibid.*, p. 154)

The certification of the report, prepared on December 5, 1945, are presented as follows:

> *"C e r t i f i c a t e*
>
> *This will certify that the document entitled 'Charge No 6, Camp of Treblinka,' concerning the extermination of Jews in this camp, is hereby officially submitted by the Polish Government to the International Military Tribunal by the undersigned under the provisions set forth in Article 21 of the Charter.*
>
> Dr. Cyprian
> *Dr. Tadeusz Cyprian*
> *Polish Deputy Representative*
> *on the United Nations War*
> *Crimes Commission in London"* (*Ibid.*, p. 153)

With this document, the steam-chamber claim became an indisputable fact, because the Nuremberg Tribunal simply took "judicial notice" of it.

The Polish government's Charge Number 6 against Hans Frank is based essentially on the November 15, 1942 report, of which it incorporates extensive passages, in particular those relating to the structure of the two "death-buildings" and the alleged killing system.

The report of November 15, 1942 is therefore the most-important historical source for Treblinka Camp during the time of its existence, and the entire subsequent orthodox historiography relies on this report, beginning with the description of the alleged "gas chambers," as I will demonstrate in the next subchapter. Nevertheless, it has been such a headache for orthodox historians that they occasionally cite it with blatant falsification. The Israeli historian Yitzhak Arad, for example, summarizes it as follows (Arad 1987, pp. 354f.):

---

[201] USSR-93, English version. The Republic of Poland in the case against: 1. German war criminals. 2. Their corporate bodies and organizations, designated under Charge No. 1 before the International War Court, p. 44. An indication as to the report's credibility is given by the inclusion of a chapter entitled "A Soap Factory of Human Fat" following the section on Treblinka!

> *"In this document there is a description of the construction of the Treblinka extermination camp, its location, its size, and a detailed plan, including a sketch of the area. This report also includes a description of the dozens* [sic] *of new gas chambers and other structures in the camp. With regard to the camp staff, it states that, in addition to the Germans and Ukrainians there are also Jews, whom the document calls 'Jewish auxiliaries', who are employed at ancillary works, in sorting of clothes of the murdered and removing the corpses from the gas chambers and burying them. The document mentions the extremely difficult conditions under which the prisoners are kept, the daily killings among these Jews, and that their life expectancy in this camp was no more than two weeks. In the description of the way the transports were treated, there is reference to the deceptive ploys of the Germans and a description of the extermination process from the moment the people disembarked on the platform – the way they were tortured – until they were led into the gas chambers, as well as the system of burying the corpses. In conclusion, it stated that by then two million Jews had been murdered in Treblinka – the majority of Polish Jewry. The report concludes by asking why the new gas chambers were built, since indeed the majority of Polish Jewry had already been killed, and states that, according to one eyewitness, the Germans had already killed a group of Poles in the middle of August.*
>
> *This report is the first in which there is a comprehensive description of the Treblinka extermination camp. The facts are, for the most part, correct. Their source is escapees from the camp who reached the Warsaw ghetto and who gave testimony for the Ringelblum Archive and to Jewish underground groups in the Warsaw ghetto. This report is based therefore on the descriptions of witnesses who had seen for themselves the process of extermination, who had lived in the camp for days or weeks as prisoners, who had been employed at various jobs, and who had succeeded in escaping. The facts that they related on the basis of what they had seen were accurate, but the reference to two million Jews murdered was incorrect. In the period to which this report refers, one-fourth to one-third of the number cited in the report had been murdered. Also the detail about the murder of a group of Poles in Treblinka was incorrect."*

The gross falsification by way of omission committed here by the greatest orthodox expert on the Operation Reinhardt camps betrays his grave embarrassment in the face of this essential historical source which, on the basis of the testimonies of self-proclaimed eyewitness, undermines one of the fundamental cornerstones of orthodox historiography, namely the claim that the alleged gas chambers operated not with steam, as this source claims, but with engine-exhaust gases.

Arad claims, however, that the report contains "a description of the dozens of new gas chambers" as well as a description of the "extermination process," but he doesn't write a single word about the steam chambers; instead, he brazenly transforms them into "gas chambers"! Furthermore, he asserts that the claims in the report are "for the most part, correct" and that the witness testi-

mony was "accurate," although orthodox historiography had long since banished the steam chambers to the realm of myths.

No-less-dishonest is the summary that Polish historian Józef Marszałek gave of the November 15, 1942 report (Marszałek, p. 42):

> *"In this section* [of the report] *the site and topography of the camp are shown exactly, and the number of the gas chambers* [*komór gazowych*] *as well as their structure with the facilities for the gassing* [*do gazowania*] *of the victims are described."*

Ryszard Czarkowski, on the other hand, does not explicitly falsify the text, but omits the reference to "steam chambers," limiting himself to two short quotes ripped out of their context. By so doing, these quotes become completely meaningless (Czarkowski, p. 120):

> *"The execution rooms have no windows, but have doors that open to the hallway and some sort of folding door in the exterior walls."*
> *"The floor in the rooms is covered with terracotta tiles, which become very slippery when wet. Next to the boiler is the well – the only well on the entire Treblinka B grounds."*

But Czarkowski placed these quotes in a context that misleads the reader to assume they were "gas chambers."

In the following subchapter I will document how these fictitious "steam chambers" were literarily transformed into equally fictitious "gas chambers" operating with exhaust gases from an engine.

The first attempt at a literary reworking of the November 15, 1942 report is the text presented by Silberschein. Although his map of the camp is completely different (see Documents 4 and 5), the instrument of killing remains the same. The map shows a structure of four rooms with the victims' route indicated by arrows (see Documents 4f.): "*Garderobe*" (undressing room) → "*Bains*" (baths) → "*Versuchsraum für Erstickungsgase*" (experimental room for asphyxiating gases) → "*Oefen*" (furnaces), from which a "*Schienenweg zum Friedhof*" (a rail track to the cemetery) leads to the "*Friedhof*" (cemetery). This drawing has obvious inconsistencies with the current orthodox Holocaust narrative: the "baths" (which is supposed to be a euphemistic term for the "gas chambers") are evidently real here; the "experimental asphyxiant gas room" operated with "water vapor" according to Silberschein's text; the "furnaces," if they were cremation furnaces, constitute a double contradiction, first because no such furnaces were ever installed at Treblinka, and second because they would have made a "cemetery" quite superfluous.

3.9. The Literary Genesis of the Treblinka "Gas Chambers"

3.9.1. Jankiel Wiernik and the Report of November 15, 1942: Analysis of a Plagiarism

The starting point of the literary development of the Treblinka murder weapon is the report of November 15, 1942 with its "steam chambers". The importance of this report lies primarily in the fact that it constitutes the primary source of Wiernik's account, which precisely transformed the "steam chambers" into "gas chambers." Before proceeding, I should remind the reader that this witness wrote in his first draft of what later became the booklet *Rok w Treblince* that the victims were killed in gas chambers by throwing chlorine into them from a hermetically sealed trapdoor placed in the ceiling (see page 125). At that time, he had not yet decided what the alleged extermination system should be, and he collected the rumors about chlorine killings, which were also spread about Sobibór (Graf/Kues/Mattogno, pp. 63-76), and which were echoed by the witnesses Abraham Goldfarb, Szymon Goldberg and Samuel Rajzman for Treblinka.

But then, Wiernik changed his mind and resumed the description of the extermination procedure of the above-mentioned report, replacing, with a daring plagiarism, the steam chambers with the gas chambers using the exhaust gas of an engine.

The plagiarism is already evident from the fact that the map attached to the booklet *A Year in Treblinka* (Document 7) is identical to the one that illustrates the report of November 15, 1942 (Documents 2 and 3), has the same heading "*Treblinka. Szkic orjentacyjny*") and the same numbering. In this booklet, Wiernik wrote (Wiernik 1944b, p. 43):

> *"I, for one, resolved to give the world a description of the inferno and a sketch of the layout of that accursed hell hole."*

The typewritten Polish text is much-more-sober and precise (Wiernik 1944, p. 21):

> *"Ja za cel sobie obrałem żyć, by to opisać. Naszkicowałem plan miejsca zbrodni, by światu pokazać."*
> *"My goal was to live to describe it. I sketched a map of the crime scene to show the world."*

In the printed booklet, this phrase appears as follows (Wiernik 1944a, p. 22):

> *"Ja za cel sobie obrałem, by to opisać. Naszkicować plan miejsca zbrodni i światu pokazać."*
> *"My goal was to describe it. To sketch a map of the crime scene and show it to the world."*

However, the Polish booklet does not contain any map. Two legitimate questions arise: How can it be explained that a map supposedly drawn in order to "show the world" the Treblinka "crime scene" *was not* attached to the publica-

tion intended precisely to "show the world" the Treblinka "crime scene"? And was the map published in *A Year in Treblinka* really drawn up by Wiernik?

In the interrogation of October 12, 1945 Wiernik stated:[202]

> *"In the winter of 1943, I immediately wrote down all my memories and experiences of Treblinka, while they were still fresh, and my work was published in Warsaw in early 1944 by a Clandestine Organization as a paperback entitled 'A Year in Treblinka'."*

During the Eichmann Trial in Jerusalem, where Wiernik appeared as a witness for the prosecution, he made the following assertion at Session No. 66 on June 6, 1961 (State of Israel, Vol. III, pp. 1202f.):

> *"Q.* [Attorney General] *After the War, immediately following the War, you drew a sketch of Treblinka?*
> *A.* [Wiernik] *Yes. This is it, here. I drew it. I prepared it when I was still underground, after my liberation in 1943. I drew it."*

Therefore, Wiernik would have drawn his map already in 1943. He acknowledged as his the map accepted by the tribunal precisely as "Sketch of Treblinka drawn by Witness Ya'akov Wierkik [sic]"[203] (Document 8). This drawing had been published by Filip Friedman in 1946[204] (Document 9). On this reproduction, a small section of the camp is missing, perhaps caused by a double folding of the sheet. The curious fact is that the Polish edition of this book does not contain the map in question.[205] The original is in the GFH archives (Document 10)[206] and has the heading "*Plan sytuacyjny obozu śmierci w Treblice*" ("Location Map of Treblinka Death Camp").

The map that served as a model for the one published in the American edition of Wiernik's report was received by the British Foreign Office on August 18, 1944 (Document 11)[207] and evidently also reached the United States. The sender was the representative of the Jewish Agency for Palestine in London, Joseph Linton, who had received it, together with the report on the "steam chambers," from the Minister of the Interior of the Polish Government-in-Exile in London.[208] The map probably reached the United States through one of these channels.

However, the enigma of the absence of the map in the Polish booklet still remains: why did Wiernik not attach the drawing he claims to have drawn months earlier?

208 "Allied Reports. Auschwitz and Treblinka," in: http://www.holocaustresearchproject.org/revolt/Allied%20Reporst%20on%20Treblinka%20and%20Auschwitz.html (last accessed on May 24, 2021).

As far as the alleged extermination installations are concerned, this map clearly follows that of the November 15, 1942 report, as can be seen visually by comparing Document 12 (section from Document 2), which shows the two steam-extermination installations, and Document 13 (clipping from Document 9), which refers to Wiernik's gas chambers. The only thing that is different are the numbers designating the various camp facilities:

#	MAP OF NOVEMBER 15, 1942	#	WIERNIK'S MAP[209]
10	Central corridor of the second building with 5 steam chambers on each side	23	"A building with a large corridor, containing five gas chambers on each side, with a platform outside each chamber"
11	Second building with steam chambers		
	Non-existing	24	"Room with motor feeding gas into the chambers"
14	Three steam chambers	25	"Building divided into three gas chambers, with a platform outside the building."
13	Platform outside the building		
15a	Boiler room (*"kotłownia"*)	26	"Room with motor feeding gas into the three chambers, also electric dynamo for the two camps"
	Non-existing	27	"Room with dentists sorting teeth taken from the dead"
	Non-existing	28	"Workshops (carpenters, shoemakers, sheet-metal workers)"

Wiernik's plagiarism is further confirmed by comparing the relevant descriptions. I highlight in bold the common elements.

a. Report of November 15, 1942 (translated from the Polish original):

> *"According to the report of an eyewitness, the interior of the building looked like this:* ***a corridor*** *3 meters wide runs through the middle, and* ***on each side, there are 5 rooms, chambers****; each chamber is about 2* ***meters*** *high; the surface area of each chamber is about 35 square meters. The execution chambers are without windows, but they have doors opening on the corridor and a type of* ***shutter*** [*Klapa*] *on the outside walls. Next to these shutters there are large* ***ramps*** *with a slightly hollowed-out floor reminiscent of a large trough. Workers installed* ***pipes*** *from which water vapor was to be released. This is to be Death House #2. The street through the middle of the woods (9) curves around this house, runs along the western wall through the trees of the woods (12) and ends at the next building, Death House #1 (14).*
>
> *This building is* ***perpendicular*** *to Death House #2. It is a much-smaller* ***brick*** *building than the one previously described. It consists of only* ***three chambers*** *and a boiler room. Along the north side of this house runs a corridor from*

[209] The captions are by Friedman 1946, p. 81.

which, through doors, one can enter the rooms. The outer wall of the rooms has a ***shutter*** *(until recently it had a door, which has been replaced with a shutter for reasons of convenience). There, at the height of the shutter, there is also a* ***ramp*** *in the shape of a trough (15). A boiler room is connected directly to the building (15a).*

Inside the boiler room is a large boiler to produce water vapor, and through ***pipes****, which run along the death chambers and have an appropriate number of holes, the superheated water vapor is released into the chambers. While this machinery is in operation, doors and stutters are closed* ***hermetically****. The floor in the chambers is covered with* ***terra cotta tiles*** *which become very slippery when wet. Next to the boiler is the well – the only well on the entire Treblinka B grounds.* […] *They* [the excavators] *are driven by a* ***Diesel engine****, the roar of which is the characteristic noise of the Treblinka B Death Camp."*

b. Wiernik's Text (as quoted before):

"When I arrived at the camp, there were already ***3*** *gassing* ***chambers****. During my stay,* ***10 more*** *chambers were added. The size of one chamber was 5 x 5 meters, a total of 25 square meters, the height was* ***1.90 meters.*** *On the roof, an outlet with an airtight closure and* ***pipe outlets****, the* ***terracotta floor*** *was sloping towards the* ***ramp****.*

The building, made of ***masonry****, is separated from Camp No. 1 by a wooden wall. These two walls, wooden and masonry, together formed a corridor raised 80 centimeters above the horizontal plane of the entire building. The rooms had a connection to the corridor. A* ***hermetically*** *closed iron door led to each room. The chambers, on the side of Camp No. 2, were connected to a* ***ramp*** *4 meters wide along all three chambers. The height of the ramp from the* [*ground*] *level was about 80 centimeters. From this same side led* ***hermetically closed*** *wooden doors. The door of each room on the side of Camp No. 2 – measuring 2-2.50 x 1.80 meters – could only be opened from the outside from the bottom upwards by means of iron posts. They were closed by means of iron hooks installed in the frames and wooden posts. The victims were pushed through the doors from the corridor side. The doors on side no. 2 were used to pull out the corpses* [of those] *gassed. Along the chambers was the electric power station, almost the same size as the chambers, but higher than the height of the ramp. In the power station, there was the* ***engine*** *of a Soviet tank which was used for the introduction of gas into the chambers. This gas was fed in by connecting the engine to intake* ***pipes****.* […]

Into one chamber measuring 25 square meters, 450 and 500 people were pushed. […]

They start the engine, connect it to the intake pipes. [After] *25 minutes at most, all are lying side by side.* […] *Nothing is pretty or ugly, everyone is yellow and poisoned.* […] *10 to 15 thousand people were gassed every day.* […]

The new facility between Camp No. 1 and Camp No. 2, on which I worked, was built very quickly. It turned out to be ***10*** *new chambers. These chambers were larger than the previous ones, 7 x 7 meters, about 50 square meters. After*

> *completion, 1,000 to 1,200 people were crammed into each chamber. The chamber system was corridor-based.* ***On each side of the corridor 5 chambers****. Each chamber had two doors. One on the side of the corridor, through which the victims were pushed in, the other on the side of the camp, parallel to the first, was used for extracting the corpses. The construction system of door one and two* [the two doors to each chamber] *was as in the previous chambers. The view from Camp #1 was as follows: 5 wide concrete steps, on the steps on either side were carefully arranged flower pots. A long hallway. On top of the roof on the camp side the star of David /magen David/. The building looked like an ancient temple."*

Thus, the report of November 15, 1942 contains all the essential elements of the plagiarism:

– first extermination building: 3 rooms, 2 doors opposite of each other in each room that can be closed hermetically, the external ones as a shutter; the presence of pipes inside, terracotta floor, a ramp along the north side;
– second extermination building: 10 rooms, 5 on each side of a central corridor; doors, pipes and floor as in the first building, 2 ramps on either side of the building.

Finally, the Diesel engine should also be mentioned, although it was mentioned in connection with the excavators in the Nov. 1942 report.

In particular, according to Wiernik's description, the first gassing facility consisted of four rooms in all, three "gas chambers" and an "electric power station" which, according to the typewritten Polish text, "*wzdłuż kamer znajdowała się*", i.e. "was along the chambers" (Wiernik 1944, p. 5), not behind one of them, so in his drawing it corresponds to Structure No. 28. On Wiernik's map, the former Room 15a of Document 12, the "boiler room", and the adjoining small room – previously without number or name – are labeled with No. 26, and part of the ramp forms Room 27, which previously had no number or name either. These three rooms are not mentioned in Wiernik's description.

Second, in his drawing, a small circle appears at the lower right corner of Room 26 (Document 13), which, according to the caption, represents a "well." This is mentioned in the Nov. 1942 "steam-chamber" report (and labeled in the respective map with No. 16), but not in Wiernik's description, who therefore drew this detail from that source as well.

The reference to the "outlet with an airtight closure" and to the color of the alleged poisoners (they were "*żółci*", yellow), which is reminiscent of the yellowish color of chlorine, resulted from an oversight by Wiernik, since this clearly refers to his first version – that of killing with chlorine.

This type of "closure" was also used in later versions of the tale, but since they had lost their original function, they took on other, no less fanciful ones.

Wiernik's story is the link between the steam-chamber version and the gas-chamber version currently in vogue, but it has a significant discordance with respect to the current gas-chamber narrative: the engine that is said to have

produced the gases for killing the victims was not specifically intended for this purpose, but was the engine that drove the power station's electric generator, which was located "along the chambers" and was "almost the same size as the chambers" ("*prawie tej samej wielkości co komory*"), i.e., it was a facility parallel to the first alleged extermination facility with three chambers, hence precisely the one labeled with No. 28 in Wiernik's map.

In the typewritten version of Wiernik's text, the passage that interests us here is written as follows (*ibid*.):

> *"Wielkość kamery wynosiła 5 x 5 m, razem 25 m kw., wysokość 1,90m. Wylot na dachu z hermetycznem zamknięciem i wloty rury, podłoga terakotowa, pochyła ku rampie."*
> *"The size of the chamber was 5 x 5 m, total 25 sq m, height 1.90m. Roof outlet with airtight closure and pipe inlets, terracotta floor, sloping towards ramp."*

There are other noteworthy elements in this text. The first concerns the dimensions of the gas chambers, which are 5 m × 5 m × 1.90 m, while the handwritten text says 7 m × 7 m × 2 m. This comes from a reworking of the data contained in the report of November 15, 1942, which mentions (for the second gassing building) "gas chambers" of 35 square meters each and 2 meters in height. Wiernik may have apportioned the area into 5 m × 7 m (= 35 m²), using the 5 as the length and width of the chambers in the first gassing building (5 m × 5 m), and the seven for the second building (7 m × 7 m), allowing himself a little freedom with regard to height (1.90 meters instead of 2).

The second element is the terracotta floor (*podłoga terakotowa*) of the "gas chambers," which was also copied from the Nov. 1942 report:

> *"Podłoga w komorach wyłożona jest posadzką terakotową" – "The floor in the chambers is covered with a terracotta flooring"* (Marczewska/Ważniewski, p. 142).

Wiernik's plagiarism is thus an indubitable fact.

Before examining the subsequent development of the version of the gas chambers, one must ask how it is possible that two witnesses could have seen practically identical killing facilities, but that for one it was operating with water vapor, while for the other it was operating with engine exhaust. From an orthodox perspective, there can only be two possible answers:

Hypothesis #1: Initially there were actually steam chambers, which were later replaced by gas chambers. This is not possible, because Wiernik arrived at Treblinka on August 23, 1942, while the report on the steam chambers of November 15, 1942 refers to "the first half of September." The steam chambers would therefore have existed when Wiernik was already at the camp, but he does not mention them.

Hypothesis #2: The "eyewitness" of the steam chambers made a mistake: he observed openings inside real gas chambers, but mistook the exhaust fumes coming from them for water vapor and deduced that they were steam chambers. Even this explanation is impossible, because the description of the steam

chambers is not that of an external observer, but that of an "eyewitness" who saw everything from inside and describes it exactly. The text speaks explicitly of a "boiler room" ("*kotłownia*") containing "a large boiler to produce water vapor" ("*duży kocioł do wytwarzania pary wodnej*") that was fed into the chambers through pipes ("*za pomocą rur*", "through pipes"). Even the description of the opening of the steam chambers after the alleged murder categorically excludes killing with exhaust gases from an engine:

> *"Due to the steam all the bodies have become a homogenous mass stuck together with the perspiration of the victims. In their death agonies, arms, legs, trunks are intertwined into a gigantic macabre entanglement. To make it possible for the grave-diggers to get out single bodies, cold water from the near-by well is poured over the mass. Then the bodies separate and may be taken out."*

To the best of my knowledge, the plan of the "steam chambers" reproduced here as Document 14 was made in the "second half of 1942" (the exact date is not given).[210] It is almost identical with the plan in the Nov. 1942 report, except for the fact that the heading, the numbers and the captions are missing.

A later plan, drawn "after July 1942," is already very detailed (Document 15).[211] In it, the first building is referred to as "*stare kąpieliska*," the second as "*nowe kąpieliska*," meaning old and new bathhouses. In both facilities, the steam chambers are marked with the letter "K" (*Komora*), and the chambers of the old facility also with the Number 14. The old facility's Room 15a is explicitly labeled as "*kotłownia*", boiler room, and Room 13 as "*Korytarz*", corridor. The circle with the Number 16 is explained as "*studnia*", well. In the new building, the label "*Korytarz*" appears, and the two side ramps are also drawn in.

Such precision further excludes the possibility of an error on the part of an outside observer. The only possibility is therefore that the "eyewitness" saw real steam disinfection/disinfestation facilities (*Dampfentwesung*), which also explains Krzepicki's description of the "*Badenanstalt*":

> *"*[…] *a not very spacious hall – an ordinary bathing hall with all the normal equipment of a public bath. The walls were very nice and carefully covered with white tiles. The floor was made of red-yellow terracotta tiles. From the ceiling hung showers ... and ... nothing else. A cozy, well-cleaned bathhouse in the middle of the green woods. There was nothing else to see there."*

Rachel Auerbach also provides another important link between the steam chambers and the engine-exhaust gas chambers, as she mentions

> *"engines for the excavation of mass graves, engines for operating steam death chambers* [*motory do obsługi parowych komor śmierci*]*."*[212]

[211] AŻIH, ARG, 384.Ring.II/488. Mf. ŻIH-809. "After July 1942. Warsaw Ghetto. Unknown author, map of Treblinka Extermination Camp."

[212] R. Auerbach, *op. cit.* (note 178), p. 16.

What I have outlined above also provides a probable and plausible answer to the question I posed earlier: why did Wiernik not include the map of Treblinka Camp in the Polish booklet which he had drawn several months earlier? In Poland, the report of November 15, 1942 on the "steam chambers" was generally known, and the relevant maps of Treblinka were also known in certain resistance circles. Publishing a camp map in *Rok w Treblince* that so blatantly followed the lead of the above-mentioned report would have made Wiernik's plagiarism too evident.

3.9.2. Abraham Isaak Goldfarb und Jankiel Wiernik: Plagiarizing a Plagiarist

Just as the story of the "steam chambers" was the primary source of Wiernik's account, Wiernik's tale became the source of Goldfarb's narrative.

At the time of the preliminary Polish-Soviet investigation into Treblinka (August-September 1944), the investigators were familiar with Wiernik's pamphlet, which they explicitly cited as a source of information in their report of August 24, 1944: "… and information from the book 'Год в Треблинке/ *God v Treblinke*'" (= *Rok w Treblince = A Year in a Treblinka*).[213] This was also known to Goldfarb, who mentioned his colleague "Jakob Werni [sic]" as the "author of the booklet 'Death in Treblinka'" – "death" rather than "year," an error perhaps due to a slip of the German translator (there is in fact a assonance between "Год/*God*" and "*Tod*").

Goldfarb did not limit himself to drawing the essential elements of his story from Wiernik's, but developed on his own initiative one of the most fantastic elements of it. Some obvious contradictions are probably due to misunderstandings on Goldfarb's part or to his own literary "ornaments."

The first gassing building for Wiernik contained 3 rooms measuring 5 m × 5 m × 1.90 m; Goldfarb changed that to 5 m × 4 m × 2 m, and added a first blunder: it was "an ordinary one-story brick building with an iron roof [*mit einem Eisendach*]"!

Wiernik's manuscript cited earlier contained an even bigger goof:

> *"On the roof – a safety hatch used in the case of killing people with chlorine. After throwing the appropriate amount of chlorine, the hatch closes hermetically."*

In the typewritten text of his booklet, from which all references to killing by chlorine have been deleted, this hatch is transformed into a device whose function is never explained:

> *"On the roof, an outlet with an airtight closure* [*wylot na dachu z hermetycznym zamknięciem*]*."*

Goldfarb embroidered the story of the hatch with vivid imagination:

> *"Each chamber had an opening in the ceiling, which was covered with a net."*

---

213 GARF, 7021-115-9, p. 109.

He did not explain the function of these openings either, which must be deduced by analogy from the description of the second killing building:

> *"The chambers were illuminated by windows located in the roof."*
> *"There were special openings in the roof for the gas to flow out of the chamber."*

Since any lighting windows had to be made of glass, they are unlikely to have served as gas vents. On the other hand, to air out the chambers after a gassing, it would have made no sense to install gas-exhaust hatches in this unique iron roof, since it would have been sufficient to open the two doors of each room for ventilation.

Goldfarb developed to the point of absurdity the initial idea of killing by chlorine, which at the time was still circulating in Polish-Jewish black propaganda. To introduce this fable, he had to distort Wiernik's story, who had limited himself to writing:[214]

> *"The engine in the new chambers worked badly. The unfortunate people suffered for hours before they died.* […] *When the chambers were opened, many were often still half-alive and were killed with* [rifle] *butts, bullets or or mighty kicks. Often the victims were left in the chambers overnight, and the engine was not started. Lack of space and crushing played their part, killing a very large percentage* [of people] *amidst terrible torments."* (Emphasis added; see footnote)

Goldfarb then invented the additional story that "the engine would not be able to supply all 10 chambers with enough gas. It was sufficient only for 2 chambers" – which, by the way, implies that the German designers of the system were incompetent. Therefore, the killing system was temporarily changed:

> *"A significant amount of chlorinated lime was hurriedly brought to the building. A certain amount of chlorinated lime in a moistened state was put inside the chamber, which was then hermetically sealed. The extermination process of the people in the chamber lasted incomparably longer, and therefore was much more torturous. The People were kept in the chambers for 24 hours, and sometimes some remained alive."*

Calcium chloride is a white crystalline powder that was used as a disinfectant at the time – according to black propaganda, however, it was also the substance with which the floors of railway cars of Jewish transports were sprinkled. In this imaginative use, it appears as "chlorine" in Goldfarb's second story (Arad 1987, pp. pp. 64, 84):

> *"Before we moved off, the Germans sprinkled chlorine in the cars. It burned the eyes. The weaker among us fainted.* […] *The cars were full of corpses. The bodies had been partially consumed by chlorine."*

---

[214] The printed text, which I use here, differs in this respect from the typescript, which does not contain the sentence I have put in italics. In addition, the opening sentence bears "nie" instead of "źle" (error for "źle"), i.e., "the engine did not work" instead of "the engine worked badly." Wiernik 1944a, pp. 9f; 1944, p. 10.

How calcium chloride was "put inside" into the alleged gas chambers and what lethal action it exerted, remains shrouded in mystery. According to Goldfarb, this fantastic killing system was used from the startup of the new gassing building (end of November 1942) until April 1943, therefore for at least four full months, but Goldfarb is the only guarantor of this extraordinary notion. None of his colleagues reported anything about it.

Goldfarb also expanded on Wiernik's account of the power station, but here too he added a touch of originality:

– Wiernik:

> *"Along the chambers was the electric power station, almost the same size as the chambers, but higher than the height of the ramp. In the power station, there was the engine of a Soviet tank which was used for the introduction of gas into the chambers. This gas was fed in by connecting the engine to intake pipes."*

– Goldfarb:

> *"From the entrance staircase, one first entered a wooden annex, which resembled a corridor.* […] *in the annex of the building, an ordinary tractor-engine was set up* […]*"*

What is certain is that for Wiernik the power station was a separate structure from the first gassing building and parallel to it, while for Goldfarb it was an integral part of the building; moreover, one mentions a tank motor, the other a tractor motor – and that difference is not insignificant.

Wiernik fleetingly mentions the system connecting the engine to the gas chambers:

> *"This gas was injected by connecting the engine to intake pipes.* […] *They start the engine, connect it to the intake pipes.* [After] *25 minutes at most, all are lying side by side."*

Goldfarb decorated this theme with his vivid imagination as well:

> *"Along the wall of the chamber was a pipe with a peculiar branch and a net-like bottom."*

The motor

> *"was put into operation in two cases: when the chambers were filled with people, and for lighting purposes. From this generator, a pipe originated, through which the gases flowed out. This pipe led into the building through the floor to each chamber – as I said already – through the branching pipe. The second pipe of the generator led directly to the street.* […] *When the engine served the purpose of exterminating people, the gases were introduced into the chambers through the system of pipes, but when it served the basic purpose of supplying the electric network, the gases went directly to the outside."*

Apparently – and this is how Jurowski interpreted it in his drawing of the installation (see below) – two pipes started from the engine: one went directly out onto the street, the other entered the building and had a branch on the wall of the first gas chamber; from here, via three other branches, it entered each chamber. It is not clear how the two pipes were connected to the engine.

There is no need to emphasize too much that the entire gassing pipeline, with its imaginative developments, was a mere literary evolution of the pipeline that is said to have carried water vapor to the individual "steam chambers."

Goldfarb's description of the second gassing building follows Wiernik's, but even here he takes some liberties: the chambers did not measure 7 m × 7 m × 2 m, but 6 m × 6 m × 2 m; moreover, as in the first building,

> *"Light fell into the corridor through windows located in the roof itself."*

The two witnesses' testimonies diverge even more from each other on the duration of the second building's construction. For Wiernik, work "on these chambers lasted five weeks," while Goldfarb asserted that "construction lasted from the last days of August and was finished in the last days of November 1942," hence 13 weeks.

Regarding the number of victims, Wiernik had written:

> *"10 to 15 thousand people were gassed every day."*

Goldfarb reworked this theme as well:

> *"Every 24 hours, up to 5,000 people were killed on average. There were also days when transports of 1,000 people arrived, and there were days when their number reached 10,000 and 15,000."*

At the time of his second statement, Goldfarb no longer remembered the fairy tales he had told in 1944, and tapped into the Holocaustic lore of the time, such as the gassing duration of 20-25 minutes (Wiernik had written: "25 minutes at most"), but on the killing system he was extremely vague, and it is not even clear whether he was referring to a real gassing. Goldfarb's reference to a "single mass of flesh" of the execution victims is instead a leftover of the description about the supposed result of executions in the steam chambers (see above, Subchapter 3.3.):

> *"Under the effect of the steam, the corpses formed a monolithic mass held together by the excrement of the slain. In the agony, many arms, legs and trunks became gruesomely entangled."*

3.10. The Judicial Triumph of the "Gas Chambers"

At the end of 1945, three different versions of the extermination technique presumably used at Treblinka were still competing for supremacy: the steam version, the suction-pump version and the engine-exhaust version. Jankiel Wier-

nik, with an impudent plagiarism, transformed the "steam chambers" into "gas chambers," and this version imposed itself as judicial "truth" especially for the Polish investigators.

The prevailing version among the witnesses questioned by the Soviets in the first phase of their investigation was sucking out the air from hermetically sealed chambers by means of a motor-driven suction pump, and it was thanks to Abraham Goldfarb's plagiarism that they zoomed in to the "gas chambers."

It is not known whether Lieutenant Jurowski, after questioning this witness on September 21, 1944, drafted a report on Treblinka, but it is certain that he drew two sketches representing the first and second extermination facilities.

The first sketch (Document 16) is clearly based on Goldfarb's testimony. I have added the numbering of Document 12 onto this drawing. Room 15a becomes the staff room (in Jurowski's sketch: #6), while the small adjacent room, which was previously a simple unnumbered vestibule, becomes the engine room (#2). The unloading ramp for corpses, which was previously a single ramp along the north side of the building (#13), now doubles, with the creation of a second ramp on the other side (#1: north ramp; #7: south ramp). Jurowski drew the system of pipes invented by Goldfarb, in red in the original and always highlighted in grey by me (red in the ebook version): he indicated with "a" the outlet of the pipes in the rooms, with (б, b) the openings on the ceiling of the rooms that in the original version of Wiernik's story were used for the introduction of chlorine, and that now, as mentioned earlier, remained without a comprehensible function.

As for the second building, the findings of the preliminary investigation had stopped at the alleged existence of 12 gas chambers measuring 6 m × 6 m, in which the victims were killed by pumping out the air. The relevant drawing by Jurowski (Document 17) also refers to Goldfarb's testimony, but strangely enough he drew the "12 compartments" from the testimony of Abe Kon. Here too, the structure of the building is practically identical with that which contained the steam chambers, hence identical with those on Wiernik's plan, with the only difference that Goldfarb, followed by Jurowski, invented the engine room at the end of the corridor.

However, these plans did not play any role in orthodox Holocaust historiography until they were discovered by Jürgen Graf and myself at the Central State Archive of the Russian Federation in Moscow and published in our study of the Treblinka Camp (Mattogno/Graf, Docs. 18f., pp. 344f.).

It was thus the Polish judicial "truth" that imposed itself, albeit with difficulty, as the historical "truth". In 1946, Judge Z. Łukaszkiewicz sanctioned it as follows in his official report "The Treblinka Extermination Camp," which was published in the *Bulletin of the Central Commission of Investigation into German Crimes in Poland* (Łukaszkiewicz 1946a, pp. 136f.):

> *"According to the witnesses Wiernik, Reichman, Czechowicz and Finkelsztein, the description of the chambers (in which the victims were gassed) is as follows: Both buildings were constructed with the corridor system, but in the*

> *larger building the entrances to the chambers were on both sides of the corridor, while in the smaller building only on one side. These entrances were small and closed with airtight doors. In the interior walls of the chambers were large hermetically sealed shutters* [*klapy*] *that rose up and were used for the removal of corpses. The chambers were lined with tiles; the floor sloping outward facilitated the removal of corpses. In the ceiling there were openings* [*otwory*] *connected by pipes with combustion engines, located in outbuildings* [*w przybudówkach*] *next to each building. These openings were used to introduce exhaust gas into the chambers with which the victims were asphyxiated. Witness Wiernik, who worked as a carpenter throughout his stay at the camp and who enjoyed a certain degree of freedom as a result of this qualification, gives the dimensions of the chambers: in the smaller building 5 x 5 meters, in the larger building 7 x 7 meters."*

As can be seen, Łukaszkiewicz imaginatively resolved the ambiguity of the openings in the ceiling of the chambers – in Wiernik's original version intended for the introduction of chlorine into the rooms – by turning them into the outlets of the gassing pipes, but in this case, there would have been simple outlets, not "openings", meaning hatches or small windows. He also arbitrarily distorted the testimonies he claims to rely upon, because two witnesses attributed completely different functions to these alleged openings, as indicated earlier. Aron Czechowicz stated in this regard:

> *"On the roof of the building, there were three openings surrounded by a tube in the shape of a small chimney, and I saw with my own eyes that, after the chambers had been filled, through these openings a Ukrainian poured some liquid into them from a sheet-metal canister (an ordinary canister like those used for heating oil)."*

And here is Hejnoch Brener's claim:

> *"There were two holes in the ceiling to pump the air out (people were killed by pumping the air out with a motor located next to the chambers)."*

The nonsensical story of the narrow entrance doors, which merely would have delayed the entry of the hundreds of victims who had to pass through them, came from Hejnoch Brener's and Oskar Strawczyński's depositions, but for the former there "were two holes in the ceiling."

The Polish judge eliminated any reference to "extracting air from the chambers" prior to gassing (Henryk Reichman). Apart from Wiernik, none of the other three witnesses he cited provided a "description" of the gas chambers, so that his reference to Reichman, Czechowicz and Finkelsztein was misleading. In his book, Łukaszkiewicz himself quoted the following passage from the statements of Aron Czechowicz, whom he questioned on October 11, 1945 (Łukaszkiewicz 1946b, p. 10):

> *"*[…] *I was employed at the camp transporting lumber. This lumber was intended for the construction of the new chambers, which were being completed at this time."*

Since the witness had been deported on September 10, 1942 and the event narrated referred to September 20, Łukaszkiewicz deduced that the new gas chambers had come into operation in October (Łukaszkiewicz 1946b, p. 10).

With regard to Leon Finkelsztein, who was interrogated on December 28, 1945, the Polish judge limited himself to a few brief remarks: the witness had arrived in Treblinka on July 22, 1942 and the first gassing building with three chambers was already in operation (*ibid.*). Łukaszkiewicz even had the impudence to report this atrocity tale of Finkelsztein (*ibid.*, p. 18):

> *"As they pushed the victims into the chambers, the Ukrainians Iwan and Mikołai, armed with sabers, cut off women's breasts."*

However, the trail leading to the triumph of the gas-chamber version was initially fraught with glaring contradictions.

Łukaszkiewicz's report, which was written on December 29, 1945, was accepted by the Soviets and submitted during the Nuremberg IMT.[215] However, as I pointed out earlier, in their official report on German crimes in Poland prepared by their government for the Nuremberg Trials and presented by the Soviets as Document USSR-93, the Poles stated that in Treblinka the victims were killed "in gas chambers, by steam and electric current," although they were well aware of Wiernik's pamphlet, so much so that they mentioned it in their report. In fact, this document reads (USSR-93, p. 45):

> *"As in other cases, a first-hand document is presented also in this one which describes the conditions and crimes in Treblinka. It comes from a former inmate who managed to escape from the camp. This was Yankiel Wieznik* [sic]*, a Jewish builder, who spent a year in Treblinka."*[216]

This evidently means that the Polish government did not endorse the killing method claimed by Wiernik, but neither did it want to give up a first-hand witness. Hence this peculiar compromise.

During the Nuremberg IMT, L.N. Smirnov mentioned this passage of the Polish report when presenting it as Document USSR-93, further distorting Wiernik's name:

> *"On Page 70 of the Russian text of this report, there is a quotation from the statement of Jacob Vernik, a carpenter from Warsaw, who spent a year in the extermination camp of Treblinka 2.* […] *This is what Vernik said in presenting a report on Treblinka to the Polish Government; a report which, as he stressed in his foreword, was his only reason 'to continue his pitiful life':* […]*"*

This is followed by two quotations from Wiernik's pamphlet which appear already in the Polish report and which were quoted again by Smirnov (IMT, Vol. 8, pp. 239f.). The Soviets played along with the Polish-government scheme, because instead of getting Goldfarb, who had given a detailed description of the "gas chambers" (Document USSR-380), into the witness stand, they called

---

[215] USSR-344. "Vernichtungslager Treblinka. Eidesstattliche Versicherung der bisherigen Angaben der Voruntersuchung bezüglich des Vernichtungslager 'Treblinka'."

[216] Two quotes from the introductory chapter of Wiernik's pamphlet follow.

Samuel Rajzman, who gave a deliberately ambiguous statement: in the light of the official Polish report, his generic "gas chambers" could in fact also be interpreted as steam chambers.

As mentioned in the previous chapters, the case of Treblinka had a decisive influence for the Polish judiciary in attributing the killing system by means of engine-exhaust gas also to the Bełżec and Sobibór Camps, both due to the early date on which the first report on Treblinka Camp was finalized (December 29, 1945), and due to the presence of an "eyewitness" (Wiernik) who had expressed himself clearly and in detail on the alleged extermination method.

3.11. The Copycats

However, the gas-chamber version operating with engine exhaust was only slowly imposed. In the immediate post-war period, the fables invented by Polish-Jewish black propaganda continued to circulate, and others were added. The more-recent witnesses who had some knowledge of Wiernik's claims tried to follow it, but without renouncing their own personal contributions; those unfamiliar with Wiernik's tales unleashed their imagination even more.

In 1945, a memoir appeared in France by a certain BER BASKIND, a "Warsaw Ghetto survivor" who described as follows the alleged gas chambers of the "Tremblinki B" camp on the basis of the inevitable "eyewitness testimony" (Baskind, pp. 41, 43):

> *"On the outside, one might believe that these are just two bathing facilities. But in reality, these are gas chambers that can swallow 800 people at a time.*
> *The extermination technique is simple. After all openings have been plugged, it suffices to simply let the asphyxiating gases enter the chambers for 8 minutes. Not one minute more; the operation is minutely calculated and timed to avoid wasting precious gases!*
> *Once the operation is over, the doors are opened, and the terribly swollen corpses are removed; sometimes people in agony who don't wait to die. They are all burned together in immense holes previously dug. The work of a privileged few is carried out there who are selected as soon as they get off the train.*
> […]
> *The eyewitness who tells us what we have just read personally worked first at transporting the corpses, then loading the railway cars, for several days. With the help of his companions, he was able to hide in one of the carriages under a pile of clothes. Since these wagons were not guarded, he managed to abscond through an opening on the way to Lublin, and to flee."*

These "precious gases" certainly could not have been ordinary engine-exhaust gases.

In 1946, a Jewish historical journal written in Yiddish, *Fun Letztn Churbn* (*From the Last Extermination*) published the "eyewitness account" of a certain

SIMCHA BUNIM LESKY titled "In Treblinke." He arrived there at the end of July 1942 on a train that contained 10,000 deportees, 120-140 per car. On arrival at the camp, 800 young men, including the witness, were chosen to sort the deportees' clothes. The others were sent to a shed (*opdakh*), where they undressed, "then they were ordered to go to a fence woven of plants and wire, and from there to pass through a small door [*durkh a kleyn tirl*] on the other side." Machine-gun fire was heard throughout the night. The next day, the dead were collected and thrown into a pit:

> *"A layer of wood and a layer of men. And so, then, the bodies of our loved ones went up in flames."*

After three days, 17 of the original 800 prisoners remained alive. On the fourth day, the witness fortunately managed to escape by hiding in a train leaving the camp (Lesky; translated from Yiddish by Kladderadatsch).

The few clear facts of the testimony are at odds with those of the current orthodox narrative. The fence mentioned there should have been the so-called "hose" ("*Schlauch*") that connected Camp 1 to Camp 2, but it supposedly did not connect a shed to a "small door," but started outdoors and went to the alleged gas-chamber building. The cremation of corpses in late July-early August 1942 is also completely anachronistic. The system of killing is not explicitly stated, but it seems that machine gunning played an important role.

The following year, the same magazine published the eyewitness account of Henike Szperling titled "Treblinka." The witness claims to have been deported there in September 1942, and presumably remained there until early August 1943, when he escaped as a result of a prisoner uprising. He remained in Camp 1, where he worked in a unit assigned to sorting clothes. I translate the most-significant passage of the testimony (Szperling; translated from Yiddish by Kladderadatsch):

> *"Between Camp I and Camp II, three huge excavators work day and night, throwing huge piles of earth between the two camps. The blazing glow of the burning bodies rises day and night to the sky, and can be seen from miles away. When the wind blows in the direction of our camp, there is such a terrible stench that we cannot begin to do anything. Only when the wind changes direction can we resume our work normally. It is strictly forbidden to go from camp to camp. In the initial period, the food carriers used to come to us from Camp III and tell us the latest details of the atrocities taking place there. This churns our stomachs, makes our heads spin frantically. It often takes hours before we can get back to work. Our gushing tears cannot soothe our helpless rage and searing pain.*
>
> *They tell us how the path to the death camp passes through a garden. A short distance before the death camp is a booth, where everyone is ordered for the last time to hand over money and gold, and always under threat of execution: first* [comes] *the avarice of Nazism, not even the smallest value can be lost. At the death bath* [*totyn-bod*], *on which only the Star of David stands out, the victims are received with bayonets, and are taken to the bath chambers* [*bod-*

> *kamern*] *at bayonet points. While the men enter the chambers with more or less composure, the most terrible scenes take place among the women. Without any consideration, the SS men know how to silence the women with only the butt and bayonet of their rifle. When all the unfortunate women have been pushed into the chambers, the doors are shut tightly. After a few seconds, a frightening, terrifying scream bursts through the walls, a scream that is directed to the heavens, that cries out for vengeance. The scream becomes fainter and fainter, more and more dull. Eventually, everything falls silent. Then, the doors are opened, and the dead bodies are thrown into huge mass graves containing 60 to 70 thousand people. When there was no more room in the mass graves for fresh victims, a new order came to burn the bodies. A deep pit was dug, old crates, boxes, wood and the like were thrown into it. The whole thing was set on fire, a layer of corpses was thrown on top of it, then more branches, and on top of them more corpses, and so on. Later came the order to dig up the corpses from the mass graves and burn them as well."*

In this testimony the killing system remains a mystery: the victims entered the "bath chambers" alive and came out dead, and that is all. The capacity of the mass graves, 60,000-70,000 corpses (it is not clear if this refers to them all together or to each one), is in any case disproportionate, because it refers to Camp 1. The alleged practice of burning the corpses when there was no more space in the mass graves, besides being naive (the space available at Treblinka was enormous), is at odds with the current orthodox narrative; so too is the cremation method, which is also nonsensical: instead of first building a pyre of fuel and corpses in alternating layers, flammable material was thrown into a pit and then set on fire; only when this pyre was ablaze, were layers of corpses and additional wood thrown into the flames. This impossible cremation procedure was allegedly adopted before the exhumation-cremation of the corpses buried in mass graves started, which is another contradiction.

On December 24, 1947, ELIAS [ELA, ELIAHU] ROSENBERG made a detailed 12-page statement in German in Vienna titled "The Treblinka Death Camp," but it remained buried for decades in some archive,[217] and only reappeared during the Demjanjuk Trial.[218] The witness, who had been deported to the camp on August 20, 1942, described the first alleged killing building in detail:[219]

> *"The first thing that met our eyes was a building made of rough bricks in the shape of a tall barn. As I learned later, these were the gas chambers in which countless people died a horrible death. In this building were three compartments, about the size of a normal living room. The floor and half of the walls*

---

[217] Eliahu Rosenberg appeared as a witness at the Eichmann Trial in Jerusalem (Session 66 on June 6, 1961), but in his deposition he made no mention at all of his earlier report of December 24, 1947. State of Israel, Vol. III, pp. 1212-1215. The report in question is not even mentioned by Donat in his biographical note on Rosenberg (Donat, p. 289).

[218] Elias Rosenberg, *Tatsachenbericht. Das Todeslager Treblinka*. Wien, am 24.12.1947. A copy of the signed and notarized document was reproduced in Rullmann, pp. 133-144. An unsigned transcript is in the Yad Vashem Archives, O.33-39, pp. 1-11.

[219] E. Rosenberg, *Tatsachenbericht*. pp. 4f.; Rullmann, pp. 136f.

> *were covered with red stone tiles, so that* [one] *would not see the blood that often stuck to the walls. In the ceiling. there was a small window, sealed airtight, that could not be opened and through which the man could look who controlled the gas supply. There was also a shower head on the ceiling, but there was no water pipe leading to it. Since it was dark in the chambers, one could not see that along the walls there were some pipes with a diameter of about five centimeters, through which the gas – it was the exhaust of a single Diesel engine – was led into the cabin. Four hundred people were squeezed into one chamber. Since they could not even move because of the terrible lack of space, it was not possible for them to fall down or to fight back in any way. The Ukrainians were interested in chasing as many people as possible into the gas chamber in one 'batch,' because then they needed less gas, and the victims also suffocated earlier. As a rule, the gas was fed into the chambers for about 20 minutes, and then* [they] *waited for another quarter of an hour until the last gasps of those dying could no longer be heard.* […]
>
> *Since it was not possible to see through the window mounted in the ceiling of the gas chamber whether the people were yet dead, during each gassing two Germans stood at a /door/ trap door visible only from the outside and listened until no sound could be heard inside. Then the trap doors were quickly opened, and the corpses of those gassed were taken out."*

The witness then recounts the following anecdote:[220] In March 1943, a transport of 6,000 Jews arrived from Grodek. Approximately 30 young men attempted to escape; 10 were shot down, while the rest were captured and

> *"they were pushed into the gas chambers, but as a punishment, no gas was introduced for them, but chlorinated lime was thrown into the chamber, which decomposed only slowly. It took a full twenty-four hours before their gasps could no longer be heard.*
>
> *Shortly thereafter, new gas chambers were built, with room for up to 12,000 people. In order to use as little gas as possible, the compartments were built very low, so that a taller person could stand in them only when bent over. It sometimes happened that in the larger compartments, where the light gases flowed mostly to the ceiling, single children remained alive. The little ones were led to the pit and were mercilessly shot down by the guards."*

The story is clearly inspired by Wiernik's tale, but Rosenberg also wanted to add his touch of originality.

I noted earlier that Wiernik, in his transformation of the "steam chambers" into "gas chambers," forgot to eliminate the chlorine-inlet hatch in the ceiling of the rooms, which became an enigmatic "outlet with airtight closure." Witnesses who later incorporated this device in their narratives interpreted it in various ways. Rosenberg added a further explanation: it was an observation window. On the one hand, this is in contrast to the testimonies according to which observation windows were built into the doors of the chambers or (ac-

---

220 *Ibid.*, pp. 7f./pp. 139f.

cording to Goldfarb) into their walls along the corridor, and on the other hand, it is nonsensical, since from this window "it was not possible to see through the window mounted in the ceiling of the gas chamber whether the people were already dead": but then, how could the gas controller regulate the flow of gas on sight?

The structure of the two alleged gassing facilities is similar to that described by Wiernik: in the first, each of the three gas chambers could hold 400 persons (Wiernik: 450-500), the gassing lasted 20 minutes (Wiernik: 25 minutes), the 10 gas chambers of the second facility could hold a total of 12,000 persons (Wiernik: 1,000-1,200 persons each, or 10,000-12,000 in all).

Rosenberg suggests that the ceilings of the second facility were lower than those of the first facility, although these were already relatively low: 1.90 meters according to Wiernik. (He did not comment on the second facility.) A further reduction, as the witness explicitly says, would have forced tall people to stoop, thus reducing the capacity of the rooms.

In addition to these variations on Wiernik's theme, the witness also added two major absurdities of his own: he claimed that the second gassing building was built after March 1943, and, in a much-less-imaginative way than Goldfarb, he repeated the fable of killings with chlorinated lime.

The fantastic character of the story is evident from the fact that Rosenberg knew practically nothing in his first, brief statement, which he made earlier, probably in 1945, under the first name Ela to the Historical Commission of Warsaw. The original text is written in very bad French with horrifying spelling mistakes. In the Ghetto Fighters House Archives, the first page of the French text is preserved (the following page contained only a couple of lines), and the Hebrew translation of the entire text (to tell the truth, more of a paraphrase than a translation), which in turn was translated into English on the presentation page of the document, which I use only for the missing final lines. Some phrases make no sense, and I translate them according to the logic of the discourse, or report them as they are. I also restore punctuation and implied terms:[221]

> *"Ela Rosenberg, born in Warsaw in 1924 at 25 Gesia Street. My father was killed in 1940. In August 1942 my family and I* [were deported in a] *railway car of 100* [people] *to Treblinka. When the train stopped it was morning. I* [saw] *from the window with the barbed* [wires] *the Małkinia Station. The Germans separated the train cars and sent them to the camp.* [The doors] *were opened immediately* [and the Germans shouted] *RAUS, RAUS. Men and women were separated, I said goodbye to my mother and sisters. I went to the men's side. We were ordered to sit down and* [were told] *that we* [were to] *bathe there, then we would be reunited with our families. They would also give us new clothes and we would go to work elsewhere. At this moment a German came swaggering in* [*en courage*: in courage] *and selected 30 people, including me. I*

[221] GFHA, Catalog No. 248, Collection 10737.

was happy to return [to] *my mother. He* [led us to] *a large yard* [with] *many clothes, suitcases, bundles and even money and other things. We still had our coats, and he told us to take them off and get to work. I did not understand anything and I asked* [*jńai (j'ai) dń* (?)] *other people, I did not know that we were forbidden to speak. I saw a man who lived* [in] *my street, but he had been caught in a roundup four days before me* [and] *I asked him*[: '] *Where are ours* [family members?']. *He did not answer* [*il ne dit*], *with tears in his eyes he told me*[: '] *You no longer have your mother or your sisters*['] [*il me dit tu nńa plsu ni ta mere ni tes osuers*]. *He had not finished speaking* [when] *two Germans arrived; they had no doubt noticed our conversation, and beat us mercilessly on the head, 25 blows on his naked bodies, and I had to get up from the ground; I could hardly work, until 10 o'clock in the evening. At 10 o'clock we were driven into the barracks, suddenly voices in German. A knife was stuck in Max* [*on a mit un couteau a Max*], *and after a few* [minutes] *he died, he croaked* [*il mou* (?) *creva*]. *They started beating us angrily and shooting at us. I received a bayonet blow in the shoulder. 100 people were killed and our heroes* [sic]. *Then, having finally arrived in the barrack, I tore my shirt and* [with a] *piece* [I] *made oensemment* [? bandaged?] *my arm. With the bayonet on my fingers. He threw himself on the ground crying and in pain* [sic]. *The elders knew that one had to get up even before daylight and wait for them to* [leave] *the shack. They did not open it screaming until 11 o'clock, they lined up 200* [prisoners] *and killed them on the spot in front* [of us], *with the machine gun and the rest at work. They didn't have to give us food and drink for three days. I work at sorting shoes. A German comes* [and] *takes 50 men, he says only for 10 minutes. An easy job. He leads us through the whole place to a door which we go through*[:] *my blood freezes in my veins. I have* [there is] *a pile of corpses on the ground, prisoners* [were] *picking them up bleeding, going towards them, picking them up* [and] *putting them on a stretcher, laying them down and cutting* [*et de poser et couper* (?)] *to take them elsewhere. I have no lashes in my eyes, suddenly* [comes] *a whiplash on my head. We are told to each take one dead person and carry him* [to] *the pit. We had to go* [to the] *gas chamber* [*chażbre a gaz*] *to bring the dead to the street,* [with] *beatings and shouting.* ['] *Schnel*[l] *Hunde'* [Quickly, dogs]. *The dead had been placed badly, the Germans started beating us. There is so much blood in the pit, the dead were submerged. I worked there for five months. They threw chlorine on the dead. In February 1943 the order came to pull* [out] *with a dredger* [the corpses]. *"*

The last sentence reads: "*En fevrier 43ż vient l rdre de detrer avec bagier*" [*En février 43 vient l'ordre de déterrer avec bagier*[222]], meaning "In February 43 come [came] the order to disinter [the corpses] with an excavator." The English translation of that sentence on that document reads:

"In February 1943 came the order to burn the bodies; we incinerated 8,000 bodies."

[222] Polish term meaning dredger (here in terms of excavator).

In 1948, in Buenos Aires, a testimony by SYMCHA POLIAKIEVICZ was published in Yiddish under the title *A tog in Treblinke* (*A Day in Treblinka*). The witness, who remained in Camp 1, thus reported what he came to know about the alleged extermination, which was practically nothing (Poliakievicz, p. 64; translation from Yiddish by Kladderadatsch):

> *"Out on the death square it is quiet now. The cries of those who were led off to 'bathe' have ceased. The screams have been swallowed up in the death chambers. Only for our suffering there still is no end. Around us, murderers mill about in a drunken state. In the distance, motors roar unceasingly, trucks drive in and out of the camp square. The hell has changed its appearance. A new arrival would not at all realize that he now found himself in such a terrible extermination camp."*

JERZY RAJGRODZKI was deported to Treblinka on September 12, 1942 and escaped on August 2, 1943. On an unspecified date, he wrote a lengthy report on his stay at the camp, which was published in 1958. Among other things, he gave a detailed description of the alleged gas chambers there (Rajgrodzki, pp. 105f.):

> *"At first there were only 3 gas chambers* [*komore gazowe*] *with a ramp facing our side. When I arrived at Lager II in mid-September, 10 new gas chambers were put into operation. They could hold about 4,000 people at a time. About 400 people could be crammed into each chamber. The gassing time was about one hour. Loading and unloading took a little longer. The pits were located to the east and west of the buildings. The new chambers were perpendicular to the old ones; there was a passageway between them. The building of the new chambers had massive walls. In the center was a long corridor, from which doors led to the 10 chambers, 5 chambers on each side. The doors* [*drzwi*] *of the chambers were narrow and had little glass panes* [peepholes] *to look through. It was ascertained whether the victims were already ready and whether the doors could already be opened from the opposite side, where the ramps were. The gates* [*bramy*] *were sturdy and sealed with a transverse wooden beam that allowed for interlocking closure. The gates were quite wide, about 2.5 meters, and fit precisely so that the gas would not escape. When the victims were now poisoned by the gas from engine combustion* [*zatrute gazem spalinowym od motorów*], *the gates were opened, and the bodies were thrown out. I worked a few times on the removal of the corpses. They were entwined, sweaty, and one layer was about five feet high. The walls were covered with tiles. The area of such a room could be 30-40 m². On the ceiling was an installation that resembled showers. The entrance to the gas chambers on the 'Himmelstrasse' side was lavish. There was a porch. The whole thing was similar to the entrance of a synagogue. In the middle, above the entrance, was the Star of Zion at the end of the portico. Over a few steps, one reached the corridor. The gassing equipment was located between the old rooms and the new ones. A door on the side of our barracks led to the machine room. The following people worked in the machine room: Iwan (more rarely), Mikolaj (more often) – both*

> *Ukrainians – as well as a Jew, a young man, who was later married. Lager II was located on the southern side, to the north of us was Lager I. In 1943 the old rooms were converted into workshops."*

This testimony is a poor rehash of Wiernik's account with the addition of other fictional elements. The capacity that Wiernik attributed to each of the three rooms of the first gassing plant (400 persons) here passes to the second plant, which therefore has a total capacity of (400 x 10 =) 4,000 persons. The width of the external shutters (2.5 meters) corresponds to Wiernik's maximum width (2-2.5 meters), but not the area of the rooms: 30-40 square meters (for Wiernik 25 square meters in the first building and about 50 in the second), nor the duration of the gassing (about one hour against 25 minutes). The nonsensical story of the very narrow access doors had already been reported by Hejnoch Brener and Oskar Strawczyński. The witness also picks up on the theme of the peepholes in the doors (or walls) of the alleged gas chambers, which contrasts with that of the small observation windows in the ceiling, whereas for Rajgrodzki, there "was an installation that resembled showers" on the ceiling, another fairly common propaganda theme. From Wiernik, the witness also took the location of the gassing engine: "The gassing equipment was located between the old rooms and the new ones." Wiernik placed the engine in the "power station," which was parallel to the first gassing building, and thus indeed between the old and new chambers (see Document 13, No. 28).

Part Two:

Archeological Research

4. Bełżec

I have dealt with this issue in detail in two previous studies (Mattogno 2016; Mattogno/Kues/Graf, Chapter 11); here I merely summarize and integrate the main arguments I made there.

4.1. The Findings of Judge Godzieszewski (1945)

On October 12, 1945, the regional investigative judge of the District Court of Zamość, Czesław Godzieszewski, presented an "Account of the Diggings in the Cemetery of the Bełżec Extermination Camp," in which he set down the findings from the inspection of Bełżec Camp he had made that day, aided by 12 workers. In this context, he wrote (Libionka, p. 139):

> *"The pit labeled No. 1 was excavated to a depth of 8 meters and for a width of 19 meters; in this way, it was excavated to the bottom of the pits. During the excavation, at a depth of about 2 meters, the first layer of ashes from burned human corpses mixed with sand was found. This layer had a thickness of about one meter. The next layer of ashes was discovered at a depth of 4-6 meters. Among the ashes extracted were found some charred parts of human bodies such as: hands, arms, also female hair and human bones not completely burnt. Also, pieces of burnt wood were extracted. The layer of human ashes in Pit No. 1 ended at a depth of about 6 meters. The pit labeled No. 2 was excavated to a depth of 6 meters. In this pit, the layer of human ashes began at a depth of about 1.5 meters, and continued with small interruptions to a depth of 5 meters. Along with the ashes were also extracted human hair, a piece of human body, shreds of clothing and remains of human bones not completely burned. The pits labeled No. 3 and 4 were excavated to a depth of 3 meters. In Pit No. 4, at a depth of about 80 cm, a human skull with the remains of skin and hair as well as two tibias and a rib were found. In addition, in these pits, at a depth of one to three meters, human ashes mixed with sand and the remains of human bones that were not completely burnt came to light. The pits labeled with the numbers 5, 6, 7, 8 and 9 were excavated to a depth of 2 meters, and from them only sand mixed with human ashes and human bones were extracted, such as jaws and tibias.*
>
> *During the excavation of all the pits, it was ascertained that the soil of the camp cemetery had been excavated before, which is evident from the fact that*

the layers of human ashes are not homogeneous, but mixed with soil. The exhumed human bones, the parts of human bodies that were in a state of total decomposition and the ashes were deposited in one place until the arrival of the coroner."

The next day, October 13, 1945, the findings were inspected by the coroner. The subsequent report describes primarily the results of the examination performed by the judge and the coroner (*ibid.*, pp. 140f.):

"During the inspection of the death camp grounds and especially of the pits dug on October 12, 1945, a large quantity of human bones such as skulls, parts of skulls, ribs, clavicles, scapulae, arm bones, femurs, wrist joints, fingers, pelvises, and foot bones were found. Some of the above bones are only partially burned or not exposed at all to the action of fire.

Most of the bones are devoid of soft body parts, with the exception of a few skulls, in which there are remains of decomposed skin and hair.

Among the remains of human bodies exhumed on October 12, 1945 were recognized: two forearms and a part of the lumbar spine with soft body tissues and traces of charring. The part of the lumbar spine came from an adult man, while the forearms belonged to a child of a couple of years. Judging by the size of the individual bones, it can be ascertained that they come from people of various ages, starting from children of a couple of years to very old men; this is attested by the finding of jaws without teeth and numerous dental prostheses.

Among the jaw bones, a partially burned jaw was found in which, in addition to milk teeth, the presence of permanent teeth was found, which shows that it belongs to a child of 7-8 years. In the cranial bones there were no traces of entry holes or other mechanical wounds. Similarly, no traces of gunshot wounds or fractures were found in the long bones. Due to the advanced state of decomposition, it is difficult to determine to which organs the shapeless pieces of soft tissue of human bodies belonged that were found. Two femurs belonging to a child of about two years were found in one of the holes dug by the population of the surrounding areas in search of gold and valuables. These limbs had partly undergone decomposition and partly mummification. The ground of the cemetery and especially the excavated pits are covered with layers of varying thickness of human ashes from the combustion of human corpses and wood, and are mixed in various proportions with sand. The color of the ashes varies from ash white to dark gray, they are of unctuous consistency and smell of rotting human corpses.

In the ashes appear clearly charred human bones and pieces of charcoal. In the lower layers of the ashes there is a more-intense smell of putrefaction than in the upper layers. The hair that has been found is mostly female, as can be seen from its length and the type of hairstyle (braids and hairpins fixed with clips). In addition to natural hair, there are also wigs for women. This concludes the inspection."

The coroner's expert opinion, which comes at the end of the report, reached the following conclusions: The bones found were human in origin and came from

a "large number" ("*duża ilość*") of corpses; these corpses had been interred about three years earlier; some of them did not present traces of incineration; and the examination of the skulls and other samples excluded shooting as the cause of death (*ibid.*, p. 141).

As for the number of corpses, the report cited above does not give any precise data, but the general tone of the report, and its insistence on describing individual bones as if they were unique pieces, leaves one very perplexed as to the value that must be placed on the expression "large number" of corpses hypothesized by the coroner.

4.2. The Archaeological Investigations of Prof. Andrzej Kola (1997-1999)

4.2.1. The Mass Graves

In 1997, the *Rada Ochrony Pamięci Walk i Męczeństwa* (Council for Safeguarding the Remembrance of Struggle and Martyrdom) of Warsaw, together with the United States Holocaust Memorial Museum of Washington, D.C., decided to undertake archeological diggings within the area of the former camp at Bełżec, with the principal aim of identifying the mass graves described by witnesses. The work was conducted by a team of archeologists from the Nicolas Copernicus University of Toruń, led by Professor Andrzej Kola; it was conducted in phases: in 1997 from October 12 through 25, in 1998 from April 27 through June 6 and from October 25 through November 14, and finally in 1999 from September 12 through 25. The historians Robin O'Neil and Michael Tregenza took part in the project in 1997 and 1998; the latter, on his own account, investigated the area with a metal detector. In 2000, Kola wrote a paper on the diggings titled *Hitlerowski obóz zagłady Żydów w Bełżcu w świetle źródeł archeologicznych. Badania 1997-1999* (Kola 2000a), which was also published in English under the title *Bełżec: The Nazi Camp for Jews in the Light of Archeological Sources: Excavations 1997-1999* (Kola 2000b). During the research, core samples of the soil were taken in the designated area at 5-meter intervals with a manual drill some 6 to 8 m long and 65 mm in diameter. Altogether 2,227 core samples were taken. The soil samples taken were then analyzed to determine their contents. Based on 236 core samples, 33 mass graves in two distinct areas of the camp were located. Kola provides a drawing and a brief description for each of them. He then summarizes his observations as follows (Kola 2000b, pp. 38-40; in labored English):

> *"The first zone, probably the older one, contained the graves appearing close to the other in western and north-western part of the camp.* […] *That was probably the place, where they started burying the victims. Generally 21 graves were reported in that area, which makes nearly 64% of the whole number in that site. The largest graves were also registered in that part. One can*

not exclude, however, that several of them (reported as graves of a big volume) were previously some separated smaller ones, which borders mixed either during covering them with soil, covering the traces of the camp up after closing the camp down or result of burglary searches after the war. […]
The other zone of the graves' appearance takes up the north-eastern area of the camp. 12 graves were reported here (about 36% of the total number), with more regular forms (mainly of a rectangle view), which differed from one other in size and appearing in significant scattering. In the area of those graves, transformation of ground, characteristic for the first zone does not occur at all, or very rarely. The other parts of the camp are free from graves. The majority of graves situated here reached the depth between 4,00-5,00 m. One can suppose that those depths were regarded as the optimum ones; underground waters appeared at bigger depths. In the first zone, as we can suppose, connecting smaller neighbouring graves into bigger ones by destroying earth walls separating them was observed. That is why the bigger graves show clearly former original pits. The structures of grave contents in both zones are similarly varied. One can report graves filled with bodies in wax-fat transformation (in bottom parts of the ditches, as a rule), over which there are layers of body ashes and charcoal. Similar structure was reported in 10 graves (No 1, 3, 4, 10, 13, 20, 25, 27, 28, 32). In the rest of the graves in number of 23 only the layers of crematory ashes as well as charcoal placed on a few levels with sandy ground were observed. In non crematory graves, there was often a layer of lime placed over the bodies, which purpose was to quicken the process of decomposition of the corpses. The total surface of the burial pits at the area of the camp amounts about 0,52[223] *ha, which states barely 9% of the camp territory in the present, enclosed shape.*[224] *The total volume of the graves is estimated for about 21,000 m³. The big number contains mainly ashes of bodies, which made killing and burying hundreds of thousands of people in one place possible."*[225]

In the table below I have summarized the details of the graves' dimensions:

223 Actually 0.59 hectares (about 1.5 acres). Cf. below.

224 In the southeast, the original surface area of the camp extended beyond the present boundary and measured about 6.2 hectares.

225 The original Polish reads, translated: "Thus an important part of the volume of the pits consists mainly of ashes of bodies and this shows the fact that hundreds of thousands of people were killed and buried there."

#	Dimensions [m]	Depth [m]	Surface [m²]	Est'd. volume, [m³]
1	40×12	4.80	480	1,500
2	14×6	2.00	84	170
3	16×15	5.00	240	960
4	16×6	2.30	96	250
5	32×10	4.50	320	1,350
6	30×10	4.00	300	1,200
7	13–14×27	4.50	364.5	1,600
8	28×10	4.00	280	850
9	8×10	3.80	80	280
10	24×18	4.25–5.20	432	2,100
11	9×5	1.90	45	80
12	6×16×11.50×18	4.00	~132	400
13	12.50×11×17×18[226]	4.80	~200	920
14	37×10	5.00	370	1,850
15	13.50×6.50	4.50	87.75	400
16	18.50×9.50	4.00	175.75	700
17	17×7.50	4.00	127.5	500
18	16×9	4.00	144	570
19	12×12	4.00	144	500
20	26×11	5.00	286	1,150
21	5×5	1.70	25	35
22	9×15	3.50	135	200
23	16×8.50	4.00	136	550
24	20×5.50	5.00	110	520
25	13×5	4.00	65	250
26	13×7	4.00	91	320
27	18.50×6.00	5.00	111	450
28	?	?	~17.5	70[227]
29	25×9	4.50	225	900
30	5×6	2.70	30	75
31	9×4	2.60	36	90
32	15×5	4.00	75	400
33	9×5	3.00	45	120
		Total:	5,490	21,310

The 33 graves thus have a total surface area of 5,490 square meters and a total volume of 21,310 cubic meters.

4.2.2. Actual Mass-Grave Data

But are Kola's statements about the number, shapes and sizes of the mass graves reliable?

[226] Dimension taken from Kola's drawing.
[227] Assuming an average depth of 4 meters.

It should be pointed out immediately that the geometric shapes of the mass graves outlined by the Polish archaeologist are not a fact, but an arbitrary conjecture. He publishes a map of the mass graves (Document 18; Kola 2000a, p. 19) and a grid map of the boreholes drilled in the former camp area with sampling sites five meters apart from one another (Document 19; *ibid*. p. 70).

The circles represent the 2,227 boreholes drilled. Those colored in red are the boreholes where remains pointing to mass graves were detected, which should be 236, but this map only contains 229.[228] Combining these circles gives 21 areas from which Kola inferred the number and shape of the pits. However, these areas have nothing to do neither with the number nor with the shapes of these pits, as it is clear from the comparison between these areas and Robin O'Neil's related drawings (Documents 20f.; O'Neil, p. 59):

– Areas Nos. 1 and 2 should correspond to Pits Nos. 13, 33, 32 and 9
– Area No. 3 to Pit No. 29
– Area Nos. 4 and 5 to Pit No. 26
– Area No. 5 to Pit No. 25
– Area No. 6 to Pits Nos. 27, 28, 30 and 31
– Area No. 7 to Pits Nos. 12 and 24
– Area No. 8 to Pit No. 10
– Area Nos. 9 and 11 to Pit No. 14
– Area No. 10 to Pits Nos. 16 and 17
– Area No. 12 to Pits Nos. 15, 18 and 19
– Area No. 13 to Pit No. 20
– Area No. 14 to Pit No. 8
– Area No. 15 to Pit No. 7
– Area No. 16 to Pit No. 22
– Area No. 17 to Pits Nos. 6 and 23
– Areas Nos. 18 and 20 to Pit No. 5
– Area No. 19 to Pit No. 3
– Area No. 21 to Pits Nos. 1 and 4
– the three boreholes to the right of Area No. 19 to Pit No. 2
– the (one!) borehole in Area 14 to Pit No. 11
– the (one!) borehole in Area 15 to Pit No. 21

As can be seen, defining the exact contours of the mass graves, based on a sampling grid whose mesh size was way too large, was so difficult that Kola defined them in a completely fanciful and arbitrary manner. His drawings of the mass graves are therefore purely fictitious and are far from corresponding to the results of the boreholes. On the other hand, since the boreholes are oriented according to an orthogonal north-south and west-east grid, it is easy to find straight lines and right angles in the aforementioned areas, which, howev-

[228] This plan therefore contains an insignificant margin of error for the purposes of my demonstration; of the missing surveys, I have in fact identified two (Pits 1 and 11), so that those actually missing are only five out of 236, or merely 2.1%.

er, do not follow the contours of the pits, but rather those of the boreholes, and this can also be demonstrated.

I will take as an example Pit No. 1, the widest pit which Kola identified through 13 core samples, as can be seen in his related drawing (Document 22). In Document 23, I present my own elaboration of the drawing in which I have inserted the 5 m × 5 m grid adopted by Kola, the points of the positive core samples (1-13) and those of the negative samples (01-07). From this drawing, it appears that the delimitation of the pit made by Kola would have required that all core Samples 01 through 07 had to be positive, which they were not, so Kola's delimitation of the pit is not backed up by his data.

The actual contours are drawn in Document 24. The area delimited by Points A-F is about 245 m², almost half of the area given by Kola (480 m²). However, the strange conformation of this geometric figure is compatible with three small pits arranged as they appear in the drawing in Document 25. This is also the most probable situation. In fact, nothing shows any relationship between these three pits that would allow interpreting them as one single large pit. The three pits have a combined area of about 100 m². The survey plan also shows that this is the most probable situation (Document 26; in the area of Pit No. 1, the sampling location is not shown where the number XXII appears). In this plan, No. 4 refers to the corresponding pit, identified by Kola by means of the four indicated core samplings. The related drawing (Document 27) shows that Kola identified a simple rhombus (A-B-C-D) whose surface is about 30 m², but he considered it to be 16 m × 6 m = 96 m².

Another obvious abusive interpretation of the actual data is represented by Pit No. 11 (Document 28). How could Kola identify on the basis of soundings 5 meters apart a pit measuring 9 m × 5 m?[229]

The sampling map confirms the arbitrariness (see Document 29). Only one positive (red) sample appears here (the second is the one I have indicated with the letter "B"). The blue circles around it designate "ground disturbances – unidentified field objects or disturbances near pits" (p. 70). Kola therefore arbitrarily prolonged the limits of the pit on both sides by 2 m (2 + 5 + 2 = 9 m) and arbitrarily fixed its width at 5 m.

Other instances of arbitrary delineation of pit boundaries on the basis of soundings on the same line include Pit No. 2 (3 soundings, 14 m × 6 m; p. 22), No. 24 (4 soundings, 20 m × 5.5 m; pp. 34f.), No. 27 (4 soundings, 18.5 m × 6 m; p. 36), No. 28 (3 soundings, 12.5 m × 5 m),[230] No. 30 (3 soundings, 9 m × 4 m; p. 38), No. 31 (2 soundings, 9 m × 4 m; p. 38) and No. 33 (2 soundings, 9 m × 5 m; p. 38). The dimensions of all of these pits are arbitrary and much larger than can be inferred from the core-sample data.

---

229 Kola 2000a, p. 27; subsequent page numbers in the text from there unless stated otherwise.

230 *Ibid.*, p. 37. The measures, not indicated, are taken from Kola's drawing.

The greatest abuse of Kola's actual data concerns Pit No. 21: on the basis of a single core sample, Kola was able to "ascertain" that around this one sampling site there was a pit measuring 5 m × 5 m! (p. 33)

All other pits were delimited by Kola with these same fallacious procedures. I present two more examples: Pit No. 10, with its 24 m × 18 m (= 432 m²) is the second-largest. Kola delimited it by 16 soundings (p. 27), which I indicate in my elaboration of his drawing (Document 30). By joining the individual points, the result is Figure A-B-C-D-E-F-G, which has an area of about 237 m². From the 5-meter grid I added, it turns out that, in order to delineate Kola's geometric figure, Soundings 01, 02, 03, and 04 would have had to be positive as well, but they were negative.

One final example is Pit No. 7, with its 364.5 m² the third largest pit (Document 31). Here, too, the geometric figure resulting from the core samples is defined by the letters A-B-C-D-E and has an area of about 180 m². Kola abusively outlined the contours of the pit as if the core samples taken at 01, 02, 03, 04 and 05 had been positive, while instead they were all negative, meaning that there were no traces of mass graves at those points.

If one considers only the four pits I examined here (Nos. 1, 4, 7, 10), which represent about 23% of the total area, Kola abusively enlarged their surface by about 680 m², hence by 50%.

His demonstrative procedure is therefore arbitrary and fallacious in terms of the number, shapes and sizes of the mass graves. Moreover, the real areas of ground disturbances, *i.e.* those that actually result from the soundings, include the nine pits excavated by Investigative Judge Godzieszewski on October 12, 1945, as well as the wildcat diggings carried out for two decades by the local populace.

Kola himself admitted (Kola 2000b, pp. 39f., 65):

> *"One can not exclude, however, that several of them (reported as graves of a big volume) were previously some separated smaller ones, which borders mixed either during covering them with soil, covering the traces of the camp up after closing the camp down or result of burglary searches after the war.* […]
> *In the first zone, as we can suppose, connecting smaller neighbouring graves into bigger ones by destroying earth walls separating them was observed."*
> *"Additional disturbances in archeological structures were made by intensive dig-ups directly after the war while local people were searching for jewellery. The facts make it difficult for the archeologists to define precisely the ranges of burial pits."*

During the interrogation of October 14, 1945 by Judge Godzieszewski, Stanisław Kozak stated (Libionka, p. 150):

> *"After the removal of the fences, people from the surrounding area began digging up the camp grounds in search of gold, diamonds, and other precious items left behind by the Jews. This continues to this day. This also explains the*

> *large number of human bones scattered in the soil of the former camp and the large number of ditches dug* [*i wielka ilość rozkopanych dołów*]*."*

Again on April 11, 1946, the prosecutor of the Zamość District Court wrote in his report (*ibid.*, p. 235):

> *"Currently, the camp grounds are completely dug up by the surrounding populace looking for valuables."*

All things considered, one can therefore justifiably state that the order of magnitude of the real surface area of the mass graves on the grounds of the former Bełżec Camp is around 50% of that identified by Kola, in round figures approximately 3,000 square meters, for a volume of about 10,800 cubic meters.

4.2.3. Comparison of Research Results with Testimonies

Rudolf Reder and Kurt Gerstein, the two main witnesses on Bełżec Camp, both described the local mass graves in detail. I have dedicated a separate study to these two witnesses, where I translated all of Reder's known statements and summarized Gerstein's statements in detail (Mattogno 2021a). Here I will merely focus on their statements regarding mass graves.

Reder stated on September 22, 1944:[231]

> *"The corpses were dragged into* [already] *dug pits measuring 100 x 25 x 15 meters."*

In 1945, Reder reiterated:[232]

> *"One pit was 100 meters long and 25 meters wide. One pit held about 100,000 people. In November 1942 there were 30 pits, hence 3 million corpses."*

In his well-known "confession" of April 26, 1945, Gerstein wrote:[233]

> *"Then, the naked bodies were thrown into large pits of about 100 x 20 x 12 meters, located near the death chambers."*

Therefore, a pit had a surface area of 2,500 square meters for Reder and 2,000 for Gerstein, and a volume of 37,500 cubic meters for the former and 24,000 for the latter. However, Kola's claims that the largest pit (No. 27) had a surface area of only 540 square meters, and the most-voluminous one (No. 10) had a volume of only 2,100 cubic meters. Moreover, as Kola himself pointed out, most of the pits had a depth of 4-5 meters. Therefore, not even the depths of 12 or 15 meters asserted by the two witnesses are confirmed by the investigations. As far as Reder's testimony is concerned, the 30 pits he allegedly saw in the camp would have had a total surface area (7.5 hectares) that is greater than that of the camp itself (6.2 hectares)!

---

231 Interrogation protocol of R. Reder by the Soviet prosecutor's office of Lviv Oblast (district) (Lwów). GARF, 7021-149-99, p. 18.

232 Neither month nor day is given; declaration titled "*Bełżec Rudolf Reder Komory gazowe*" made to the Krakow Section of the Central Jewish Historical Commission (*Centralna Żydowska Komisja Historyczna*); Borwicz/Rost/Wulf, pp. 56-59.

233 PS-1553, p. 7.

A comparison of Kola's map of Bełżec Camp – in which the areas of the mass graves are indicated by vertical cross-hatching – with the corresponding drawing by Robin O'Neil (Documents 18 and 21), which more precisely indicates the position of the graves and their defined contours, shows that most of the graves were located along the camp's north-western border (on the left in the drawing). Some graves appear to be located in the center of the camp, and a few along the north-eastern border (at the top of the drawing).

In 1946, Reder wrote a memoir titled *Bełżec*, which was published in Krakow by the Central Jewish Historical Commission. On p. 43 of this booklet, there is a camp map drawn by J. Bau following Reder's description (Document 32; Reder 1946, p. 43). This drawing – reproduced by Kola without commentary (2000b, p. 7) – is oriented in the opposite direction to the norm, so it must be viewed upside down for a proper comparison with other camp maps. It shows 26 pits along the northeastern boundary and six in the camp's center.

The "official" camp map drawn by the Central Commission of Inquiry into German Crimes in Poland appeared in the article titled "The Bełżec Extermination Camp" by Eugeniusz Szrojt, a member of the aforementioned commission (Document 33).[234] In this map, the area of the mass graves is represented by a rectangle on the northeastern camp border.

Consequently, the locations of most of the mass graves indicated by Kola is in distinct contrast to both Rudolf Reder's testimony and the findings of the Polish Commission of Inquiry. On the other hand, if one examines the map of Bełżec published by Yitzhak Arad (1987, p. 437), one must conclude that the living quarters of the Ukrainian guards, the sanitary facilities (barbers, infirmary, dentists for SS and Ukrainians), the kitchen for the Ukrainian guards, the garage and the shoemaking and tailoring workshops (labeled with numbers 3, 4, 5, 7 and 8 in the map) were located next to mass graves or even above them!

But these are not the only problems resulting from the locations of the pits. Kola's and O'Neil's maps (Documents 18 and 21) show mass graves scattered in bulk over almost the entire camp without any precise orientation or order. There is no need to invoke the proverbial German pedantry, which was well interpreted even by Reder. In fact, in his map, the 30 phantom mass graves all have the same size and orientation and are neatly arranged in two parallel rows. This is a question of simple common sense: an orderly arrangement of the pits obviously would have allowed for a more-rational use of the available space and greater sanitary protection for the camp personnel.

4.2.4. The Discovery of Corpses

Kola states that ten pits (Nos. 1, 3, 4, 10, 13, 20, 25, 27, 28, 32) are "filled with bodies in wax-fat transformation," but then immediately specifies that they are

---

234 Szrojt, unpaginated insert. Kola reproduced this map as well (2000b, p. 7), likewise without any commentary.

found "in bottom parts of the ditches, as a rule," which means that these pits are not at all "filled" with bodies in a state of saponification.

Before addressing the problem of the number of corpses present in these pits, it is necessary to clarify what "fat-wax transformation" or saponification is. It consists in

> *"the transformation of cadaveric fats into an insoluble soap called adipocere. It is observed in cadavers stored in moist environments, in water, or in environments where putrefaction is hindered. The process begins after 2-3 months and is completed within a year."* (Strano, p. 254)

With reference to investigations performed at Bełżec during the period from April 28 to June 4, 1998, Robin O'Neil proposed a generic assessment of the number of bodies (O'Neil, p. 54):

> *"In two of these graves the bodies had not been exhumed and burnt as per the Himmler directive of 1942. How many bodies remain in these two graves is difficult to establish. To be sure, there are many thousands."*

Michael Tregenza, on the other hand, had the audacity to give a precise figure (Tregenza, p. 258):

> *"Although it is difficult to determine the number of unburned bodies, a conservative estimate is at least 15,000."*

The only way to dispel any uncertainty would obviously have been the exhumation of the bodies buried in the pits. The reason – or pretext – why this was not carried out is that Jewish law regarding burials allegedly prohibits it. The disturbance of the mortal remains of a buried Jew would somehow disturb his soul as well.

It is a fact, however, that this alleged law has been violated many times and even has been considered non-existent, without the exhumers ever reaping any serious rabbinical wrath. In another study, I documented this with two photographs of the exhumation of the surface layer of corpses from a mass grave in partial compliance with rabbinical law (as published by Patrick Desbois), and furthermore several cases in total disregard for rabbinical law with photographs and summaries of exhumation reports of Jewish corpses near Iasi (Romania), September 12, 1945; at Białystok (Poland), November 22, 1945; at Kerecsend and Budapest (Hungary), November 5, 1957; at Yurburg (Lithuania) in 1958; from mass graves in concentration camps in Germany in 1958; at Popricani (Romania) in 2004, and with other cases (Mattogno/Kues/Graf, pp. 1087-1091).

Kola published the results of 137 of the 236 samples taken. The related 137 graphs take up four and a half pages of a book of 84 pages in total (each page contains graphs of 32 samples), so all 236 samples would have taken seven and a half pages, or just three pages more. This leads to the assumption that he published the most-relevant ones – as any author does with the documents he reports in his book –, so that the remaining ones were undoubtedly less-relevant, if not irrelevant.

Of these 236 samples, only two (483/XV-30-60 and 486/XV-25-50) from Pit No. 10 bear the explicit indication "human corpses" (Kola 2000b, p. 15; in the Polish text: "*ciała ludzkie*"). The symbol designating "unburned human bones and saponified mass" ("*nieprzepalone kości ludzkie i masa woskowo-tłuszczowa*"), a kind of stylized double x, as well as in the above-mentioned samples, appears in only four other samples (485/XV-30-50, Pit 10, 286/XVI-90-40 and 332/XVI-85-40, Pit 3, and finally 1042/XIV-45-80, Pit 20; *ibid*, pp. 15, 17f.). This means that out of 236 only six were positive. The thickest layer was found in Sample 332/XV-85-40 (marked as "tooth/human hair/water/ human hair"/"*ząb/włosy ludzkie/woda/włosy ludzkie*"), which corresponds to approximately 15% of the depth of the pit, thus to about 0.75 meters of the total 5 meters. Kola also mentions the finding of human remains to a thickness of 1 meter in Pit 27 (*ibid*., p. 36), but without reporting the graph of any of the four boreholes performed in that area. But this does not change the order of magnitude.

If the descriptions of the individual pits are also examined, the following overall picture results.

GRAVE NO. 1: "the pit was filled with bodies in wax-fat transformation" (*ibid.*, p. 21). 13 core samples were taken, but Kola doesn't indicate the contents for any of them. Yet, as I mentioned above, Kola states that these human remains were "in bottom parts of the ditches, as a rule," and therefore this grave cannot be "filled with bodies."

GRAVE NO. 4: "The drilling was given up here at the depth of 2.30 m, because of a layer of bodies in wax-fat transformation" (*ibid.*, p. 23). The graphs of the four core samples (293/XVI/90-5, 294/XVI/90-0, 295/XVI/85-0 and 296/XVI-85-10; *ibid.*, p. 17) do not at all show the symbol for "bodies in wax-fat transformation," and therefore the related statement is either a mistake or a display of Kola's excessive zeal.

GRAVE NO. 10: "The grave was very deep (the drills in particular places were stopped at the depth of 4.25 to 5.20 m, because of bodies in wax-fat transformation and underground waters presence)" (*ibid.*, p. 27). Kola published the graphs of seven of the 16 core sample taken from this pit. Only three of them bear the symbol for human remains:

– 483/XV/30-60, with a layer of approx. 20 cm
– 485/XV/30-50, with a layer of approx. 20 cm and another layer of approx. 20 cm 1.5 m further below
– 486/XV/25-50, with a layer of approx. 30 cm.

In Kola's related drawing (see Document 34), I inserted the number of individual drillings, underlining the ones mentioned above. As is evident when comparing this drawing with the survey map (Document 20), Sample No. 485 (like Samples 499, 500, and 504) is not even part of those used by Kola to locate Pit No. 10, which he delineated based on 14 soundings. Furthermore, of the surrounding drillings, Nos. 481, 482, 484, 487 and 488 are negative. The last three

are less-deep, but the term marking them, "*blokada*" = "blocked", does not necessarily mean that they were blocked by the presence of human remains, because in such cases the term used is "blocked (human corpses)" ("*blokada (ciała ludzkie)*"), as for Samples 483 and 486 (*ibid.*, p. 15). This demonstrates the presence of some human remains in a state of saponification only in correspondence to the three above-mentioned sampling locations, and therefore it is wrong to speak of a layer of human remains covering the whole surface area of this pit.

GRAVE NO. 28: "In the deep parts of the core sample, we saw two layers of human remains in the state of saponification clearly outlined, from time to time covered with lime."[235] As can be inferred from Kola's related Figure 45, he refers to Sample 1647/IX/70-30, the only one located "in the deep parts" of the pit (the other two are in the shallower part).

To recapitulate, Pit No. 1 reportedly contains a layer of human remains of indeterminate thickness. The presence of human remains is not documented by the soundings for Pit No. 4. For Pit No. 10, human remains are present only in three out of the seven samples published by Kola; since he says nothing about the remaining nine, we have to limit ourselves to the reported data. In Pit No. 28, human remains were found in one out of three samples.

Therefore, the only legitimate conclusion that can be drawn from the core samples is that the above-mentioned pits contain only scattered human remains.

On the other hand, considering the small number of boreholes drilled, one cannot even exclude the presence of other layers of corpses around those identified by Kola; indeed, this is actually likely. If examining the location of the three boreholes in Pit No. 10 (underlined in the drawing) that revealed the presence of human remains in a saponified state, it turns out that they are concentrated in two small areas on the lower left: from Borehole 485 to 486 and around 483 (Document 34). This suggests that there were originally two small 40-50 square-meter pits in this area with a few layers of human remains at the bottom. The same could be true for Boreholes 286 and 332 of Pit No. 3, which are adjacent at the standard distance of 5 meters along the south-north diagonal of the pit (*ibid.*, p. 22), and for Borehole 1042 of Pit #20. In conclusion, the most-likely scenario is that the pits contained at most a few hundred corpses.

4.2.5. The Significance of the Presence of Human Remains

All orthodox commentators interpreted the presence of these human remains as proof of the reality of the mass extermination allegedly perpetrated at Bełżec. As I noted earlier, O'Neil launched the slogan as early as 1998: the human remains allegedly belonged to victims of the gas chambers who had not been exhumed and cremated, in disregard of a phantom order allegedly issued by

[235] Kola 2000b, p. 37. I translate from the Polish text (Kola 2000a, p. 36) myself, as the English translation is unclear.

Himmler.[236] In this way, O'Neil created a logical closed loop which started from the assumption that the human remains were victims of the gas chambers in order to "prove", on the basis of their presence, the reality of the gas chambers! These commentators' claim that the aforementioned human remains moreover refute the revisionist theses is not only unfounded, but also grotesque. In fact, no revisionist historian would ever claim that no deaths (nor even limited killings[237]) of people ever occurred in Bełżec. Inmates died in this camp from epidemics, hard work and hardship even before it became an extermination camp according to the orthodox narrative. On the other hand, when it became a transit camp according to the revisionist thesis, at least 441,000 Jews passed through it. There undoubtedly occurred both natural and non-natural deaths among them, the order of magnitude of which is difficult to establish. If one assumes with Dieter Pohl a mortality of some 5%,[238] the death toll would already be over 22,600.

This fact completely invalidates the orthodox commentators' interpretation, as it shows that the presence of human remains in the soil of the former Bełżec Camp is not at all irreconcilable with the revisionist thesis. In order to truly refute this thesis, it would be necessary to show that corpses in the order of magnitude of hundreds of thousands are or were buried in the camp grounds.

It should be remembered that Bełżec was a camp for Gypsies since April 1940, and at least 1,140 were interned there. In August of that year, this camp became the Main Camp (*Hauptlager*) of a network of forced-labor camps, with a total occupancy of about 15,000 Jews, as part of the so-called "Otto Program," which consisted of fortification work to protect the German-Soviet border by digging anti-tank ditches. Between 2,800 and 3,000 inmates were interned in Bełżec at that time. Various infectious diseases spread among the Gypsies and the other detainees, including typhus. Casualties numbered in the hundreds.[239]

All these events undoubtedly left traces in the ground, but these were studiously ignored in Kola's investigation.

4.2.6. The Alleged Gas Chambers

In addition to locating mass graves, Kola's archaeological investigations were also aimed at identifying the remains of the camp's architectural structures. The results were described by him in detail.

---

236 On this, see Part Two of Mattogno 2018.

237 In another study, I argued that the only reasonable conclusion that orthodox historians could draw from the transfer of some of the personnel of Operation T4 to the Operation Reinhardt camps is the extension of the euthanasia program to the Jews who were to be deported to the East, and that this may well have happened; see Graf/Kues/Mattogno, Chapter 8.4. "Euthanasia and *Aktion Reinhardt*", pp. 270-281.

238 Pohl, p. 194. See Part Three.

239 Libionka, pp. 38-40 (A photograph in the unpaginated appendix shows "Gypsy children in the Bełżec Labor Camp in 1940" – about ten children in a rudimentary shack); Dziadosz/Marszałek, p. 61; Mattogno 2016, pp. 97-99.

In this case, unlike the procedure adopted for the presumed mass graves, excavations were carried out to bring to light the archaeological discoveries. Kola published 12 photographs of them. In this context, the identification of the remains of the alleged homicidal gas chambers was obviously of particular historical importance, but the need to find them at all costs pushed the Polish archaeologist to the most unlikely hypothesis.

After having described six objects (Buildings A – F) irrelevant to his agenda, Kola focused on "Building G". In this regard, the core samples

> *"revealed the existence of an undefined building negative, made completely of wood, partly buried in the ground, dismantled totally. In the bottom view the relicts had a shape of a regular rectangle with the size of about 3,5 x 15 m, which bottom was deposited horizontally to the depth of about 80 cm.* […] *The wooden building served probably as gas chamber in the second stage of the camp functioning* [sic], *in autumn and winter 1942. Such an interpretation could be confirmed by its location in the camp plan. The probing drills from the north-eastern and eastern part of the building excavated only mass grave pits. Location of the gas chamber close to the burial places in the second stage of the camp existence was confirmed by some of the witness reports."* (Kola 2000b, p. 61)

This is incredible. The only reason why this "*Building G*" must have contained the alleged homicidal gas chambers of the second phase of the camp is its location vis-à-vis pits whose own locations are inferred from bore samples! Kola evidently never even considered whether this wooden structure could have belonged to the initial phase of the camp, *i.e.*, the year 1940, and whether the pits could have been dug after the structure had been dismantled. Actually, everything stated above about this building contradicts the testimonies and the judicial findings. Kola is well aware of this, as he writes (*ibid.*, FN 28, p. 61):

> *"According to him* [Rudolf Reder], *however, the* [gas] *chamber was made of concrete. The excavations carried out in that area did not prove any traces of brick or concrete buildings, which makes that report unreliable."*

However, this assessment of Reder's testimony has two devastating consequences for orthodox Holocaust historiography.

First, it should be pointed out that in six statements, made between 1944 and 1956, Reder resolutely affirmed that the alleged gas chambers were "made of concrete" ("*z betonu*"), "of grey concrete" ("*z szarego betonu*"; see Mattogno 2021a, pp. 13-54), hence he was absolutely adamant about this fact. However, Reder's "report" (*i.e.*, his set of statements) still remains central in Polish historiography on Bełżec, and the only decent orthodox book on Bełżec Camp – written by Robert Kuwałek – draws extensively on it. Therefore, dismissing Reder's testimony generally as unreliable seriously undermines the entire orthodox narrative of that camp.

The second consequence is that one would have to classify all the witnesses and all the judicial findings on Bełżec as "unreliable," because they all agree

that the gas chambers of the camp's second phase were housed in a brick-and-concrete structure. For instance, for the second phase of the camp, the sentence handed down in the Bełżec Trial (January 18 to 21, 1965) mentions explicitly the construction of

> *"a solid stone building with a total of 6 gas chambers measuring 4 by 5 meters."* (Rückerl, p. 133)

And the *Encyclopedia of the Holocaust*, under the entry "*Belzec*," chapter "*Second Phase*" states (Gutman, Vol. I, p. 178):

> *"The existing gas chambers were demolished and in their place a new building, made of brick and concrete and containing six 13-by-16-foot (4 × 5 m) cells, was erected."*

Kola's hypothesis contradicts the testimonies and judicial findings not only regarding the construction materials used for the alleged gas chambers, but also regarding their surface area. As is clear from the two quotes above, their official dimensions are 4 m × 5 m, thus 20 square meters, or 120 square meters for all six chambers together. Adding the central corridor (1.5 meters wide according to Reder), results in a building of (3×5 m=) 15 m × (2×4 m+1.5 m=) 9.5 m = 142.5 m², or (3×4 m=) 12 × (2×5 m+1.5 m=) 11.5 = 138 m², depending on the arrangement of the rooms. Building G as identified by Kola, on the other hand, left a footprint in the ground of 3.5 m × 15 m, or 52.5 m². It allegedly contained six gas chambers arranged on either side of a central corridor, as can be seen from the object in the center of the plan drawn by a certain J. Bau following Reder's descriptions (see Document 32). This corridor was one and a half meters wide and traversed the entire length of the structure (1.5 m × 15 m = 22.5 m²). Hence, for the six gas chambers remained only (52.5 m² – 22.5 m² =) 30 m², *i.e.* (30 m² ÷ 6 =) 5 m² for each room, which therefore measured 5 m × 1 m!

To recapitulate: On the one hand, the archeological findings contradict the testimonies and the judicial findings, making them inadmissible; on the other hand, Kola's hypotheses regarding the functions of "*Building G*" are in disagreement with the testimonies and the judicial findings. However, if we are to accept the official thesis, we cannot free ourselves from these sources: Either the gas chambers did exist the way the witnesses have described them, or they did not exist at all. And because the archeological findings contradict the witnesses, the gas chambers of the second phase of the camp never existed.

As for the alleged gas chambers of the first phase of the camp, their structure was described in detail by the witness Stanisław Kozak during his interrogation of October 14, 1945. Kozak claims to have participated in their construction (Libionka, pp. 146f.). This building presumably was a wooden shack measuring 12 m × 8 m, divided into three rooms measuring 4 m × 8 m (*ibid.*, p. 146). It is said to have been located in the southern sector of the camp, near the inner railway siding. Kola therefore carefully examined this area of the camp for the remains of these first imaginary gas chambers.

In the area of the southwest corner of the camp, he located the remains of a large building which he called "Building D" (which I labeled with the letter D in the map of the findings in Document 18). In the sampling map, it appears as excavation 11/98 (Document 35, where I added the letter D). Note that the remains of this structure were identified by eight soundings, and its footprint is basically square, while in the mapping of the findings it is rectangular and much wider.

The foundations of this structure measure 26 m × 12 m. Kola describes it as follows (Kola 2000b, p. 55):

> *"The building had at least 6 equal rooms with the sizes of about 16.60 x 3.80 m, separated by inside wall. Only the southern (6th) room was additionally divided into two smaller ones."*

This contradicts the drawing of the diggings he presented (Figure 69 on p. 55; see Document 36), which shows foundations of about 16 m × 12 m, and walls dividing the structure into six main rooms (which I have numbered 1 through 6 in the drawing mentioned) with dimensions of about 5 × 3.80 meters. In Sector No. 2, there is a brick pit measuring 6 m × 1 m (labeled "K" in the drawing of the diggings) "serving originally as a canal [sic] for repairing cars" (*ibid.*, p. 56). And the two photographs published by Kola (*ibid*., pp. 55f., Photos 71f.), the first of which shows the entire excavation (see Document 37), leave no doubt about this. The conclusion is inescapable (*ibid*., p. 57):

> *"One can suppose the room served as a garage."*

I have dwelt on this point because, surprisingly, Kola clumsily tries to pass it off as the first extermination structure, with its three gas chambers!

Of this, Kola gives not even a vague hint on the four pages he dedicates to "Building D." The contrast between a real garage with a workshop for vehicle repairs and the alleged homicidal gas chambers is too glaring. He therefore introduces his nonsensical hypothesis underhandedly, in a different context. A few pages further on he says that he did three soundings in the area north of "Building D" in order

> *"to verify the location of the railway which served in the first stage of the camp functioning for removing the corpses from the gas chambers to the grave pits. It was connected with the interpretation of the function of Building D as gas chamber."* (*ibid*., p. 64/2000a, p. 63)

But what sort of a link could there be between "Building D" and the alleged gas chambers? Again, only its location!

The camp's alleged narrow-gauge railway that Kola was looking for was mentioned by Kozak, who declared (Libionka, p. 147):

> *"Along the northern side of the aforementioned barracks* [the one that contained the "gas chambers"]*, a ramp of planks had been built at a height of about one meter, and along this ramp a narrow-gauge track had been laid*

> *leading to the pit that was located at the same corner as the northern and eastern border of the death camp."*

And here is the result of Kola's search (Kola 2000b, p. 65):

> *"However, traces of that railway were not found."*

Later, possibly a little discouraged by this resounding failure, Kola returns to his hypothesis in a slightly more moderated tone (*ibid.*, p. 66):

> *"Only the building D was relatively big. Can it be interpreted as a death chamber?"*

Then Kola restates the description of the supposed first gassing structure given by the witness Kozak and comments (*ibid.*):

> *"They* [the remains of *"Building D"*] *are different, much bigger building size, which were about 26.00 x 8.00 m,*[240] *and the interior was divided into 6 rooms.* […] *The function interpretation of building D and the witness's description is not fully in accordance with the observation made during archeological works. It concerns first of all its location inside the camp. That building was excavated in its western part, whereas, according to S. Kozak 's report the gas chamber described by him could have been placed several meters toward the south from that place. Moreover the witness mentioned erecting the hut with the destination of being a gas chamber, when in the case of building D could have only an adaptation of the existing building equipped with a garage canal. The division of foundation part of building D into 6 identical rooms indicate that its overground part had 6 frame-houses, one of which served as garage."*

To summarize: The barracks described by Kozak was at a different location than the traces of "Building D." It was built expressly as a gassing structure, whereas "Building D" evidently had a different purpose. It measured 12 m × 8 m as opposed to the latter's 26 m × 12 m. It was subdivided into three rooms rather than the six in "Building D," and finally there is no trace of a camp railway. Thus, Kozak's description is in absolute disagreement with the archeological findings. But Kola did not want to draw the logical conclusion that this witness, too, is unreliable. Instead, he opted for an unbelievable loophole (*ibid.*, p. 67):

> *"In such an interpretation the gas chamber in the first stage of the camp existence must have been situated south-east from Building D and south to it the changing room and the barber."* (Emphasis added)

In other words, since the remains of "*Building D*" are in total disagreement with Kozak's description, and since the homicidal gas chambers must have existed, it follows that they were located "*south-east of Building D*"! However, neither the core-sample drillings nor the excavations indicated that such presumed remnants exist; in fact, absolutely no construction remains were found

---

240 As I have indicated above, the remains measured 26 m × 12 m according to the survey by A. Kola.

there. Thus, in his attempt to salvage the official thesis at least partly, Kola is obliged to have recourse to an act of faith: There are no archeological traces of those elusive gas chambers, but nevertheless they did exist!

The actual results of the investigation were admitted candidly by O'Neil who wrote (O'Neil, p. 55):

> *"We found no trace of the gassing barracks dating from either the first or second phase of the camp's construction."*

And this is an incontrovertible fact. The results of Kola's investigations are that they radically refute the statements of the two Polish key witnesses to Bełżec Camp about both the mass graves and the alleged gas chambers.

5. Sobibór

5.1. The First Archaeological Investigations

The Central Commission of Inquiry into German Crimes in Poland began its investigation of Sobibór Camp in early October 1945, and concluded it in October 1946. The site was inspected, but no excavations were carried out.[241]

The first scientific archaeological research in the area of the former Sobibór Camp was carried out during the years 2000-2001 by Prof. Dr. Andrzej Kola,[242] after having concluded his research at Bełżec. The most-important results – the discovery of six burial areas of various shapes and sizes, a small cremation site and five structures (named A, B, C, D, E) related to buildings/barracks, except for Object C, which I will return to below – were carefully described and analyzed by Thomas Kues and myself in two other studies, to which I refer.[243] In the present context, it will suffice to recall that Kola thoroughly investigated four hectares of land of the so-called "*Lager III*" (which was allegedly used for exterminating Jews and therefore had to contain the remains of the alleged gas chambers), which he named XVII, XVIII, XXIV and XXVI. The technique of investigation was described by Kola as follows (Kola 2001, p. 116):

> *"Due to the considerable area to be explored, initially the drilling locations were determined by the intersections of a 5-meter grid, with an additional, narrower grid at sites where the drill cores had shown positive results (i.e., in places where man-made objects had been located – e.g., relics of buildings or graves). With this assumption in mind, at least 400 drillings would be required on each hectare.*
>
> *In the second phase, carried out from 19th August to 13th October, investigations of the camp's terrain using coring continued. Simultaneously excavations of selected structures (localized as a result of the Phase One drillings) were started.*
>
> *During the springtime phase, 4 hectares of the area of the former Camp III (i.e., hectares XVII, XVIII, XXIV and XXV) were fully investigated by coring. In each hectare 400 basic drillings were made; additional drillings enabling a*

> *more-detailed localization of the remnants of anthropogenic structures were made in places of soil disruptions.* […]
> *Additional drillings were carried out: 90 in hectare XVII, 76 in hectare XVIII, 18 in XXIV, and 21 in XXV; thus, altogether 1,805 drillings were made on 4 hectares."*

Despite this painstaking work, Kola was unable to find the remains of the alleged gas chambers. Searches continued in the following years; those of 2004 and during the years 2007-2011 were presented and discussed in detail by Thomas Kues.[243]

In July-August 2004, the Muzeum Pojezierza Łęczyńsko-Włodawskie (Museum of the Lake Region of Łęczna-Włodawa), under the direction of Marek Bem, resumed the archaeological research at the site of the former camp in cooperation with the television Discovery Channel, the German geophysics company Büro für Geophysik Lorenz and the Polish archaeological company Sub Terra Badania Archeologiczne. In October 2007, the original research group was joined by archaeologists from Israel's Ben-Gurion University, including Yoram Haimi and Isaac Gilead. None of these searches, however, led to the discovery of the remains of the alleged gas chambers.

The search was resumed in 2012 under the direction of Wojciech Mazurek, assisted by the company Sub Terra Badania Archeologiczne, with the assistance of Yoram Haimi, and lasted from November 26 to December 24. After a winter break, further work was carried out in May 2013. In his 2013 "Preliminary Report", Yoram Haimi wrote (2013, p. 1):

> *"At the end of the 2012 excavation season, we requested to continue archaeological research in Camp III and the Steering Committee granted approval to continue an additional excavation season. The purpose of the excavation was to examine Mass Graves Numbers 1, 2 and 7 as well as a location further to the east in the area of Camp III. Due to the sensitivity of this excavation area, we requested the rabbinical supervision of Alex Schwartz on behalf of Rabbi Schudrich from Warsaw.*
> *The archaeological excavations were extended over an area of 1000 square meters in December 2012. They were interrupted by winter weather and renewed again in May 2013 when an additional 650 square meters in four separate areas were investigated."*

The excavations revealed archaeologically important elements (fences, more mass graves, to which I will return below). Also worthy of mention is the discovery of the remains of a facility that has been interpreted as the "barracks of the Jewish prisoners," which Haimi describes as follows (*ibid.*, p. 17):

> *"East of the asphalt surface in Hectare XXV were found the remains of the barracks of the Jewish prisoners (Fig 2). This area requires further investigation. However, the present excavation season has revealed an area of 10 x 15 meters of the floor of the barracks (Fig 21). The remains of low pillars supporting the floor were discovered here similar to the Barrack Object 1714 uncov-*

ered in the summer of 2012. Pieces of barbed wire were found along the exterior of the place in which the walls of the barrack stood (Fig 22). A surprising discovery was traces of an escape tunnel, located 1.60 m. below the floor of the barrack (Fig 23) oriented eastwards toward the exterior of Camp III (Fig 24). Further excavation is required in this area."

His Figure 2 (Document 38) is a map with the new findings marked in red (here as such in the ebook version), including the presumed "Barracks of the Jewish prisoners."

5.2. The Discovery of the "Gas Chambers"

Archaeological research continued the following year, and finally, in September 2014, the discovery of the foundations of four gas chambers was proclaimed with great fanfare in the European and American media. However, this momentous find brings with it very serious problems that no one has ever considered.

In the immediacy of this sensational discovery, Wojciek Mazurek published online a "Preliminary report from the pre-investment archeological excavation works at the former German-Nazi extermination camp in Sobibor conducted in the summer and autumn 2014. Second report of the period Sept. 1 – Sept 30, 2014" (Mazurek 2014). Together with all the other reports on the ongoing forensic research posted between 2011 and 2017 on the Sobibor Museums's website (http://sobibor.info.pl), this report, too, was deleted in 2018 and disappeared without a trace.[244] Peculiarly, Mazurek announced the discovery with much restraint in his 2014 report (*ibid*., pp. 2f.):

"During the September 2014 the excavation works in the area of the asphalt square with the stone tower and monument covered an area of about 10 ares [= 1,000 m²]. *First, the square was cleaned from the sand layer. Between the existing tower and monument numerous relicts of the first commemorating the victims of Sobibor from the year 1965 have been found. The current location of the tower and the monument was located in the early 80-ies of 20 century. Between the tower and the monument, which was removed on 1 September 2014 but without the concrete base, a row of the square footings of the crushed bricks bonded with cement mortar with dimensions of 60 x 60 cm, running from south to north at a distance of about 3 meters from one another, the last in the north at a distance of 4 m. In the region to the east of the monument, whose base has not yet been removed, the relics of the brick foundations with a width of about 30 cm (two bricks* ***longitudinally*** *or one brick crosswise) have been found. They comprise a group of 4 profiles of the rooms with dimensions of 5 m*

[244] While working on the 2017 edition of his *Lectures on the Holocaust*, Germar Rudolf saved copies of all the reports, and when the Sobibor Museum deleted them in 2018, he posted them all online: www.codoh.com/media/files/SobiborForensicReports.zip.

> *on the east-west* [recte: north-south] *axis and 7 meters on the east-west axis. From the eastern side the rooms were closed with the semicircular formed foundation benches with a width of about 30 cm, similar semicircle closes the extreme southern room. In the space of about 3 m, a row of pole holes (spaced at a distance of 2 to 3 m) is running. This is probably the area of the corridor separating two groups of rooms of* ***alleged gas chambers****, which is closed from the south with a wider space with dimensions of 5 x 3 m, where probably a petrol engine was located, whose exhaust fumes killed hundreds of thousands of people."* (Emphases in original)

5.3. The Layout of the "Gas-Chamber" Facility

Mazurek published two photographs of the remnants of the alleged gas-chamber facility. One drone photo shows the exact location of the remnants (Document 39). They are located close to the east side of a square, at the center of which stands a monument Mazurek calls the "stone tower," with a square base of 4 meters on a side. The photograph is taken from a north-eastern position looking toward the southwest. The other photograph, from ground level looking toward the south, shows the brick foundation walls brought to light (Document 40). The masonry remains are therefore located under the former paved road that led from the square to the monumentary mound of ashes, which can be seen in the background in Document 40 (top left), as it clearly appears in an aerial photograph from a higher altitude (Document 41).

At first, the discovery comprised only four rooms, which are clearly visible in photographs of the time. One of the most-widely used is Document 42, in which I numbered the individual rooms (11: alleged "engine room"; 2-4: alleged Gas Chambers 2-4; Chamber 1 is behind the photographer, hence not visible). On September 26, 2014, the daily newspaper *Spiegel Online* published a news report on the discovery, which was illustrated by a fairly sharp aerial photograph (Document 43; Hecking 2014). Here, the stone tower is referred to as the "Polish Monument (modern)."

In the aerial photograph published by *Der Spiegel*, the top is oriented to the west, rather than north. In Document 43a, I have restored the standard northward orientation. Document 44 depicts the same scene in much more detail; in both photographs I have tagged the stone tower (A), the shaft identified by Kola (B), which in Document 38 is referred to as "Object C," two benches on the edge of the excavation (C), the no-longer-existing road (D) that led to the monumentary ash mound, and the alleged gas chambers (1, 2, 3, 4). In Document 44, the east sides (to the right, on the side of the benches) consist of semicircular-wall remnants (a, b, c, d). Document 45 is a photograph taken looking westward. In the foreground, one can distinctly see the semicircular wall (c). Document 46 shows this wall looking eastward (Baran, p. 20).

In Document 47, the presumed Gas Chamber 1 with the semicircular wall (a) appears in the foreground. Document 48 shows the same scene a little closer, and Documents 48a and b explain this photo.

The find I have designated with the letter (B) is the well located by Kola (Hectare XXV, Area 35, Excavation 3/01) at a depth of about 40-45 cm below the asphalt surface, whose wall covering was initially unearthed about 50 cm from its upper edge; further searches were carried out inside the well, to a depth of 5-5.10 meters. This was the only well found in the *Lager* III area (Kola 2001, p. 119). In the final phase of the work, a large concrete cylinder with a lid was placed over the excavation of the shaft (Document 50), which, as I will point out below, is visible in various photographs in front of the remnants of the alleged gas chambers. This well is located about 6 meters from the northwest corner of the remnants, so one has to wonder how it is possible that Kola, with his 5-meter-by-5-meter drill grid, was able to locate this small circle, which has a diameter of 90-100 cm, but missed the remnants of the alleged gas chambers, which are located less than half a meter from the paved surface that covered them.

As far as the dimensions of these remnants are concerned, if one sticks to the aerial photograph published by *Der Spiegel*, the measurements mentioned in the pertinent article – 5 m × 7 m – turn out to be rather uncertain.

The western perimeter wall is about 20 meters long, hence each room a little less than 5 meters wide (considering the thickness of the outer walls and partitions). The northern wall (delimiting Room 4) also measures about 5 meters, however, Rooms 3, 2 and 1, as I explained above, have an arched eastern side, so their measurements are less than 5 m × 5 m, which is particularly evident in Room 1, whose southern wall is about 3.5 meters wide. The western wall is about 12 meters away from the stone-tower monument.

In 2015, the area of the find was cordoned off by a metal fence that also included the parallelepiped-shaped monument and the well, preventing access to the remains. Documents 51 and 52 show the remnants from south to north; Document 53 from west (next to the stone tower) to east; Documents 54 and 55 from north to south, Document 56 from the northeast corner; Document 57 shows the fenced-off area from the north at a distance, from the road that led to the ash mound, which is clearly visible in the background in Documents 51 and 52.

The masonry structure that stood on these foundations therefore had a very unusual floorplan, and the reason for the presence of four semicircular walls on the eastern side of the building remains completely unexplained. But this is only the beginning. The crucial problem is in fact the following: what makes it possible to establish that the above-mentioned remnants are those of a homicidal gassing facility consisting of four gas chambers? Obviously, the only possible point of reference – since there are no documents – is of an anecdotal nature. For years, archaeologists, blinkered by their "historical" fixations, searched for the alleged gas chambers because political correctness demanded

that they had to exist, so sooner or later – digging a little here, a little there – something was bound to be found that the researchers could stick the coveted label onto. In order to be a *condicio sine qua non* of validity, this ideological prejudice should require the conformity of the archaeological remains with the testimonial statements. However, as I will document below, this essential condition does not exist at all.

In 2014, before the fateful "discovery," historian Marek Bem wrote a general study of Sobibór Camp, which, partly because of the author's qualification (a historian, for many years director of the Sobibór Museum), constitutes the most-thorough work on that camp (Bem 2014). The following year its "updated" English translation appeared (Bem 2015) – I will explain later in what ways it was updated. This is thus the reference work on Sobibór Camp, the most-authoritative orthodox text.

Regarding the alleged gas chambers, M. Bem writes (Bem 2015, p. 59):

> *"On the basis of the several dozen very different, often too general and imprecise descriptions that are available, I consider the Hagen jury's description of the Sobibór gas chamber to be adequate to match a possible appearance of the chamber at the time. It is a highly general description, but it includes the most crucial matters, and suitably takes into consideration observations provided by eyewitnesses, whose testimonies were and still are the only descriptions of that building:* […]*"*

This is followed by a long quotation from the judgment of December 20, 1966, of which I translate only the passages relating to the alleged gas chambers (first and second gassing buildings) from its original German:[245]

> *"About 500 m west of this chapel, the advance unit built the gas chamber building, a small solid structure with a concrete foundation. Inside this building, three adjacent cells measuring 4 x 4 m were sealed off gas-tight.* […]
>
> *For two reasons, additional construction appeared necessary to the Lublin headquarters and the camp management in Sobibor in the fall of 1942. The gas chambers proved to be too small, making the 'capacity' of the Sobibor Camp too low. Under the technical supervision of the defendant L.*[ambert]*, a construction team from the Lublin headquarters partially demolished the old gas-chamber building, and replaced it with a new, larger solid building with twice the number of chambers. The cells – each with an area of 4 x 4 and a clearance height of 2.20 m – were arranged on both sides of the building either in such a way that they left a central corridor or that they formed only one row. Each of the cells could be filled with about 80 people standing close together. With now six chambers, about 480 people could be killed during each gassing operation after completion of the construction work, which proceeded quickly within a few weeks due to the use of Jewish prisoners as helpers."*

Bem then sets out his considerations (I remind the reader that he wrote his Polish text before the "discovery" of the alleged gas-chamber ruins): In his

---

245 Rüter/de Mildt, 2001, pp. 92f., 98; cf. Rückerl, pp. 163, 172f.

opinion, one of the problems with the gas-chamber building was that of the construction system of the foundations. Given the sandy soil of the camp, he considered it very likely that the walls of the building rested on horizontal beams ("the foundations consisted of [horizontal] support beams [*z belek podwalinowych*], rather than on concrete foundations").

In this context, he specified (Bem 2015, pp. 59-61/2014, pp. 64-67):

> *"To a very limited degree, the only possible chance to find answers to these questions is through archaeological research. I am of the opinion that the excavations made in the spring of 2011 have, beyond doubt, shown the route of 'the road to Heaven' in its final stage, which 'ushered' victims into the gas chamber. Such findings increase chances of locating the remains of the gas chamber. Getting to know the place where the chamber was built offers a chance for a thorough analysis of its framework. Consequently, such an analysis enhances the probability of a factual description of its ground part and ways of functioning."*

The English translation of the original Polish text is abruptly interrupted by a supplement, well highlighted in bold type and between square brackets, which says (2015, p. 61):

> *"**[On 8 September 2014, the archaeologists unearthed remains of red brick walls. All the indications are that these are the remains of the gas chamber. The excavated area lies between the (so-called) 'road to heaven,' the crematorium, the remains of the barrack which, at the time when the camp was operational, belonged to the special commando unit, and the well. A panel of experts from the Museum of the Auschwitz-Birkenau Nazi German Concentration and Extermination Camp have officially confirmed the find. Undoubtedly, this remarkable discovery will be of vital importance in further research into the Holocaust because it might enable researchers to, firstly, arrive at a more accurate estimate of the Sobibór camp's victims, and, secondly, to obtain more precise information as to the exact way in which the victims were murdered.]**"*

This paragraph is full of scurrilous and even puerile propaganda. First of all, Bem does not mention the number of alleged gas chambers found – four – which is in open contrast to the "finding" of the Hagen District Court that staged the Sobibór Trial (September 6 – December 20, 1966), which Bem himself considered very close to reality: six chambers. Two "gas chambers" are therefore missing, and this cannot be an irrelevant fact. The reference to the "panel of experts from the Museum of the Auschwitz-Birkenau Nazi German Concentration and Extermination Camp" who are said to have "officially confirmed the find" is almost comical: how could this group, based on a few rows of bricks scattered here and there that belonged to a structure of which nothing is known, confirm that these were the remains of "gas chambers"? And why would that be "official"? The next comment instead borders on dementia: how could one possibly establish, again on the basis of a few rows of bricks, "a

more accurate estimate of the Sobibór camp's victims," and how could one "obtain more precise information as to the exact way in which the victims were murdered"?

Further on, Bem publishes a "map of archaeological finds made on the territory of the former German extermination camp in Sobibor in the years 2001 – 2014. Compiled by Wojciech Mazurek and Rafał Ratajczak," which was updated as of December 31, 2014 (Document 58; *ibid*., p. 105). It also shows the alleged gas chambers, as can be seen clearly in Document 58a, which is a cut-out of the map.

Here the authors have correctly drawn the four alleged gas chambers, which I have numbered 1-4 in Document 58b, even with semicircular eastern sides (a-b-c-d), but they have imaginatively added along the western side a long corridor (10) flanked by four other gas chambers (5-8), with the alleged access staircase behind the southern side (9) and the alleged small room with the gassing engine to the north (11). The resulting plan is not only arbitrary, but also asymmetrical, because the rooms on the West side (5-8) are clearly smaller than those on the East side. Moreover, the problem of the number remains: eight, instead of six rooms.

And precisely six rooms were also advocated by Jules Schelvis. In his opinion, "the first gas chambers in Sobibór were built according to the original Bełżec pattern. The layout and dimensions [of the chambers] were identical."[246]

For Schelvis, the Bełżec model was also adopted for the second extermination facility at Sobibór, so much so that he reproduced the Polish drawings of the Bełżec facility to illustrate the structure of the alleged gas chambers in Sobibór. The second plan shows a facility with six gas chambers arranged in groups of three on either side of a central corridor, with an access staircase at the front, an engine booth at the back, and two side "ramps" (Document 59). In his plan of the camp, Schelvis drew precisely a gassing facility with 3 + 3 gas chambers (Document 60). At this point, he adduces the testimony of former SS *Scharführer* Franz Hödl, who stated during his interrogation of April 18, 1963:[247]

> *"During my time there, the gas chamber was not concealed from aerial view by a camouflage net hung above it. The gas chamber itself consisted of an elongated concrete barracks with a central corridor. From this central corridor one entered the individual extermination cells, three or four of which were located to the left and right of the corridor. It was dark in these cells. There was a flat roof, in which, to my knowledge, there were no hatches. The outer walls were formed by foldable doors along the entire length, which were folded up after the gassing. This was also the way of ventilating the cell."*

---

246 Schelvis, p. 118. The statement is repeated on p. 120.

247 Staatsanwaltschaft Dortmund, Protok. Vol. III, Gomerski Trial, p. 1278.

Hödl is said to have been the operator of the killing engine. The fact that he was not sure about the exact number of alleged gas chambers is surprising, to say the least. In his trial sketch of the Sobibór Camp of March 25, 1966, he was forced to decide on the number of alleged gas chambers, and opted for 3 + 3 (Document 61).[248] However, in order not to displease anyone, Hödl drew 4 + 4 gas chambers in the sketch of September 25, 1974 (Document 62).[249]

The Ukrainian auxiliary Vassily Pankov gave the following description (Graf/Kues/Mattogno, p. 149):

> *"At the camp there were 6 not-large gas chambers, sized about 3 × 4 meters, and 50-70 and even up to 100 detainees were put into each chamber, and then the doors would be hermetically closed and a diesel motor operated, from which the exhaust fumes would be piped into each chamber. For an hour or more the detainees were killed by the gas in the gas chambers."*

It is a fact that these are practically the only descriptions of the second gassing building at Sobibór. It is well known that there are no self-proclaimed (former) inmate eyewitnesses to the alleged gas chambers at Sobibór (with the exception of the mythomaniac Ya'akov Biskovitz; see Subchapter 2.3.), so to get a description of the facilities, one has to rely on the post-war statements made by former SS men who, according to orthodox Holocaust historiography, played an important role in *Lager* III. However, they knew practically nothing about the new gas chambers, starting with their alleged builder, SS *Unterscharführer* Erwin Hermann Lambert. In the interrogation of October 2, 1962, he stated:[250]

> *"As I mentioned at the beginning, I was in the Sobibor death camp for about a fortnight to three weeks. It may have been in the autumn of 1942. However, I cannot be sure of the exact time.*
> *At that time, I received an order from Wirth to enlarge the gassing facility in Sobibor; in fact, I was to build the facility according to the model of Treblinka. At that time, I went to Sobibor together with Lorenz Hackenholt. Hackenholt was in Treblinka at that time. First, I drove together with Hackenholt to a sawmill near Warsaw. There Hackenholt ordered a larger consignment of lumber for the reconstruction work in Sobibor. Then the two of us drove to Sobibor. There we reported to the camp leader Reichleitner. He then gave us the pertinent instructions for the construction of the gassing facility.*
> *Before my arrival, the camp was already in operation, and a gassing facility had already existed. Probably the reconstruction had to be done because the old facility was not big enough or not solid enough."*

The narrative of this alleged event continues for another 28 lines, but without the slightest mention of structural details of the new "gassing plant."

As far as is known, SS *Hauptscharführer* Lorenz Hackenholt has never been interrogated.

---

248 *Ibid.*, p. 60.
249 *Ibid.*, p. 1278.
250 Interrogation of Erwin Hermann Lambert, October 2, 1962. ZStL, 208 AR-Z 251/59, Vol. VIII, pp. 1542f.

SS *Oberscharführer* Hermann Erich Bauer, the alleged "*Gasmeister*" (gas master, gassing operator) of Sobibór, only mentioned the new gassing plant in passing:[251]

> *"Lager III was full of trees. I remember clearly that there was a camouflage net over the gas chamber.* […]
> *During the reconstruction of the gas chamber, the camouflage net was torn down. I don't know whether it was put up again later.* […]
> *The gas chamber was at first a purely wooden construction. During the time I was there, it was torn down and solidly rebuilt.* […]
> *I am completely sure that the gas chamber was built anew."*

SS *Unterscharführer* Hubert Gomerski, who served at *Lager* III, stated otherwise:[252]

> *"I do not remember any reconstruction of the gas chambers.*
> *At the chamber exits, only board walls were placed in front of the openings and then wedged shut. Trap doors were not installed. I know only of three doors – and three chambers. There was no corridor in the middle, where the chambers were on the left and right."*

However, as I pointed out in another study (Mattogno/Kues/Graf, pp. 762-768), Lambert and Hackenholt could not have taken the second gassing facility in Treblinka as a model for Sobibór, because the construction of the Sobibór facility is said to have been carried out in June-September 1942, while in Treblinka the work supposedly began only in late August/early September of that year. In this regard, Lambert stated (Arad 1993, p. 132):

> *"We must have worked for six or eight weeks on that job* [of building the large gas chambers]*."*

Therefore, the construction at Treblinka was completed in mid or late October, hence *after* the construction of the Sobibór facility. On the other hand, the design of the second gassing facility at Treblinka is said to have been different from the one claimed for Sobibór: six or ten "gas chambers" of 8 m × 4 m each at Treblinka, but six "gas chambers" of 4 m × 4 m each at Sobibór, so that the "model" for the claimed Sobibór facility should have been the claimed facility at Bełżec, not Treblinka.

Hence, if we insist on there being any logic to this, the alleged second gassing facility at Sobibór Camp was built on the model of that of Bełżec and contained 3 + 3 gas chambers, according to Schelvis's interpretation. However, there does not seem to be any logic in the matter, as the following summary shows:

1. Hagen District Court: six gas chambers measuring 4 m × 4 m, arranged on either side of a central corridor (3 + 3 chambers) or (!) in series one after the other.

---

[251] Staatsanwaltschaft Dortmund, Protok. Vol. III, Gomerski Trial, pp. 1129f.
[252] Interrogation of November 20, 1965. Staatsanwaltschaft Dortmund-XI' 65, p. 711.

2. Franz Hödl: six or (!) eight gas chambers, arranged on either side of a central corridor (3 + 3 or 4 + 4 chambers).
3. Vassily Pankov: six gas chambers of 3 m × 4 m.
4. Hubert Gomerski: three gas chambers.

Returning to the initial topic, another surprising fact is that, despite the existence of a multiplicity of maps of the camp drawn by former inmates and former SS men indicating the location of the alleged gas chambers, twenty-five of which were published by Bem,[253] it took fourteen years of research to arrive at the alleged archaeological discovery.

What I have set out above confirms that the discovery – the remains of four alleged gas chambers – is at odds with conflicting witness statements and trial findings.

It is not necessary to insist too much on the fact that the only guarantors of the existence of a gassing facility at Sobibór Camp are the alleged eyewitnesses, who claim to have seen it with their own eyes. But if an archaeological discovery contradicts these testimonies, there are only two possibilities: either the discovery is bogus (in the sense that the remains of a structure of unknown purpose are attributed the status of gas chambers), or the eyewitnesses were blatantly mistaken about the alleged extermination facility, and this radically invalidates their related extermination testimonies.

However, there is also a third possibility, and it is the most-sensible, which is also valid for Bełżec: the eyewitnesses lied, therefore their fantasies cannot and do not match the archaeological reality.

Wojciech Mazurek's and Rafał Ratajczak's escape route from this dilemma, which adulterates the facts, to say the least, was to transform the remains of four rooms into the remains of eight rooms, plus an additional cell. This was clearly inspired by Hödl's map of September 25, 1974, as is evident from the comparison of the two drawings (Document 63), a map that was well-known to historians and archaeologists of Sobibór and is among those published by M. Bem.[254]

W. Mazurek was well aware that the alleged discovery of four gas chambers was in contrast to all the testimonies and trial verdicts. In fact, in the report quoted earlier, he left open a window for a future "adjustment" of the "discovery":

> *"In the space of about 3 m, a row of pole holes (spaced at a distance of 2 to 3 m) is running. This is probably the area of the corridor separating two groups of rooms of alleged gas chambers, which is closed from the south with a wider space with dimensions of 5 x 3 m, where probably a petrol engine was located, whose exhaust fumes killed hundreds of thousands of people."*

---

253 Bem 2015, pp. 78-101; 2014, pp. 85-110.
254 *Ibid.*, p. 107.

If the "space of about 3 m" wide was a corridor, it is utterly unclear why there is "a row of pole holes (spaced at a distance of 2 to 3 m)" in its center. Such a row of pole holes suggests the presence of a fence rather than a corridor.

The "adjustment" was made in 2016, when Teresa Mazurek, Wojciech Mazurek, Rafał Ratajczak explained:[255]

> *"In the area of the asphalt square the foundation outlines of 8 rooms used as the foundation for the older walls of the gas chambers. Three rooms on the south have dimensions of 4,00 x 5,30, the extreme northern room had the dimensions of 4,00 x 3,40 m. In the area east of the monument 4 outlines of brick foundations have been uncovered (dimensions: 5,05 m on the axis north-south and 6,80 m on the axis east-west). From the eastern side the rooms were closed with the semicircular formed foundation benches* [*ławami fundamentowymi* = foundation walls] *with a width of about 30 cm, similar semicircle closes the extreme southern room. Between the relics of western and eastern there was a space of about 3 meters, a row of pole holes (spaced at a distance of 2 to 3 m) is running. North from this corridor adjusted a wider space with dimensions of 5,05 x 3,50 m, where probably a petrol engine* [*silnik benzynowy*] *was located, whose exhaust fumes killed hundreds of thousands* [of] *people."*

I give the dimensions of the various rooms in Document 64. In this drawing, the real findings are those colored in red and dark green; those in orange are mere traces, and those in light green mere conjectures.[256] Hence, the real remnants of the alleged gas chambers concern only four rooms.

The plan that appears in the document clearly shows an asymmetric building, and the dimensions given for the rooms are certainly not accurate. In fact, none of the rooms has a clear rectangular shape; on the contrary, they all represent indefinable, oddly shaped geometric figures. The northern walls of Rooms 1-4 should all measure 6.80 m, but in fact they are all different; the eastern walls should be 5.05 m long, but they are even-more-different than the northern walls, with more-or-less-arched contours.

Rooms 6, 7 and 8 are supposed to be 5.30 meters long each, but Room 8 is longer than the other two, Room 5 is the allegedly smallest gas chamber (3.40 m × 4.00 m = 13.60 m², although it is not rectangular), and the alleged engine room (No. 11) is larger than this gas chamber: 5.05 m × 3.50 m (but it is not rectangular either), *i.e.* 17.67 m² versus 13.60 m²! As can be seen in Document 65, of this room only two pieces of foundation remain on the East and West sides (which I have indicated with the letters "E" and "O").

The four western rooms (Nos. 5-8) form a sort of isosceles trapezoid whose northern side measures 4 meters, while the southern side measures 3 meters.

The small room on the south side (9) is instead said to be the base of the staircase leading into the alleged gas-chamber building, similar to what is claimed for the Bełżec facility (see Document 59). If a simple staircase re-

---

255 Mazurek/Mazurek/Ratajczak, 2017, p. 33. The passage also appears in an earlier report in English by the same authors: *idem* 2016, p. 29, from which I quote the labored English here.

256 For the re-colored printed black-and-white illustration see the caption of Document 58b.

quired such a foundation, it would be needed all-the-more-so for the two lateral "ramps" (also drawn in Document 59), meaning the two concrete platforms purportedly located on either side of the building that are said to have served for easier removal of the alleged gassing victims from the individual chambers. However, archaeologists found no trace of the two "ramps" but, apparently, did not even question their existence.

A photograph taken from the south (Document 66) shows the aforementioned Room 9 in the foreground: here, however, the small piece of masonry on the north side and the debris located on the sides clearly form a semicircle.

The remnants, as I noted above, contain other foundations of semicircular perimeter walls, a feature that is at least unusual and has not been explained by archaeologists.

The real discovery is therefore the one that appears in a photograph published in the "2015 Annual Report" of the Majdanek State Museum (Document 67; Kowalczyk-Nowak, p. 24): ruins of 4 rooms (Rooms 1-4) plus the two smaller ones to the north (11) and south (9), all (but especially the latter) with more-or-less-tampered wall remnants.

In 2014, Polish archaeologists knew perfectly well the testimonial-judicial "truth" of the alleged gassing facility's layout (3 + 3 or 4 + 4 rooms), so that, in their perspective, they discovered half a building at the time: but how can one seriously believe that it took them two years to unearth the other half (in a rectangular area of about 80 m² adjacent to the half building already discovered)?

It can therefore be concluded that the alleged discovery is in contrast with all the testimonies and the court findings, both for the number, for the shape and for the sizes of the alleged gas chambers. This discovery also has a surprising background.

5.4. The Discovery (1945), Covering-up (1960s) and Rediscovery (2014) of the "Gas Chambers"

In a valuable work, Marek Bem and Wojciech Mazurek have outlined, among other things, the history of the Polish judicial investigations on Sobibór Camp (Bem/Mazurek 2012a&b). Summarized succinctly, these investigations began on October 4, 1945, and concluded in October 1946, with camp inspections and the interrogation of witnesses. On November 23, 1945, the prosecutor of the Lublin District Court compiled a report for the Krakow office of the Central Commission of Inquiry into German Crimes in Poland, in which he noted, among other things (Bem/Mazurek 2012a, p. 31):

> *"The gas chamber was blown up; in the place where it was located, judicial inspection revealed only remnants of rubble* [*resztki gruzów*]*, which make it impossible to determine their surface and size."*

In 1947, Judge Łukaszkiewicz summarized the results of the investigation in an article, whose title translates to "The Sobibór Extermination Camp," in which he wrote (Łukaszkiewicz 1947a, p. 50):

> *"As a result of the measurements taken during the investigation, a drawing of the camp area was compiled, in which all the remains that have been preserved in the camp to date were indicated. Also in the records, there is a drawing of the camp at the time of its operation submitted by the Central Jewish Historical Commission and compiled by former inmates of the camp. The location of the rubble during the investigation is in general agreement with the site of the gas chamber in this reconstructive drawing."*

The map that accompanies the article contains the location of the "*Komory gazowe*" ("gas chambers") written inside a red rectangle (Document 68).

Bem and Mazurek publish a geodetic map made by engineer Marian Cudny in 1951, which contains "the location of the elements of the camp infrastructure detected and identified by the Central Commission of Inquiry into German Crimes in Poland in the course of local investigation and inspection in the years 1945-1946" (Bem/Mazurek 2012a, p. 36). Unfortunately, the map is not very clear (Document 69), however the two objects I have labeled A and B can be identified thanks to another document.

In the early 1960s, the Council for the Protection of Monuments of Struggle and Martyrdom (*Rada Ochrony Pomników Walk i Męczeństwa*) decided to establish a memorial on the grounds of the former Sobibór Camp. The project was awarded to the architect Romuald Dylewski. In 1962, he drew up a plan for a circular ash mound with a diameter of 50 meters. In addition, in the area where the alleged gas chambers were located, he designed a stone pillar with a square base measuring 4 m × 4 m, 8 meters high, and next to it a stone slab measuring 6 m × 6 m, 30 cm high, which was not built. A statue was erected in its place.

In the technical explanations of his project, architect Dylewski examined individual sections of the camp, including the "gas chamber site" ("*Plac komór gazowych*"). In the relevant paragraph he noted (*ibid*., p. 44):

> *"The gas chambers represented the quintessence of the crime; at the same time, they were the place of extreme torture of the victims. This place is therefore particularly worthy of being taken as a model and to be emphasized. The project involves covering the remains of the foundations of the chambers* [*pokrycie śladu fundamentów komór*] *– in strict accordance with the contours provided on a geodetic basis – with an asphalt square, in which a monument with a torch will be erected. The asphalted square will be an extension of the road at this location, with dimensions of 30 x 30 meters."*

In the center of this square, it was planned to place the two monuments mentioned above. In order to carry out his project, architect Dylewski drew a new map of the former Sobibór camp which is a reworking of engineer Marian Cudny's map. The title is "Sobibór Extermination Camp 1942-1943 Existing

Situation – 1962."[257] The caption lists various remains (*ślady*), including the "Ruins of the Gas Chamber Building" ("*Ślady budynku komór gazowych*"), indicated by the letter S. Document 71 shows a section of the map, in which the area of the presumed gas chambers appears in the shape of an L. I have rotated this section by 90°, so that it corresponds to that of Document 72, and I have added the letters A and B. In both maps, A indicates the area of the presumed gas chambers, B the chapel, still today existing on the road that runs along the east side of the former camp. Document 73 is an excerpt of Document 71, which shows the area of the presumed gas chambers: sides a and b measure about 30 meters; Side a faces south, Side b faces east, towards the chapel. As can be seen by comparing Dylewski's map with an aerial photograph (Document 74), and with the map published by Bem (Document 72), where A and B also indicate the area of the alleged gas chambers and the chapel, this area was already perfectly well-known at the beginning of the 1960s. Right above it, the asphalt square of 30 m × 30 m was indeed built, by adding the north-western Quadrant c to the L-shaped remnants of the alleged gas chamber (Document 75).

In the text quoted earlier, Mazurek himself confirms this fact:

> *"Between the* [still] *existing tower and monument numerous relicts of the first commemorating the victims of Sobibor from the year 1965 have been found."*

But already at that time, the soil covering the future memorial square had been largely removed in order to create the asphalt road that would pass over the remains of the alleged gas chambers, as can be seen by comparing the two photographs in Document 76, which show the road leading to the ash mound after the discovery (above) and during the work on the monument (below).

With that, the circle is closed: the remains of the alleged gas chambers were identified in 1945, covered with asphalt in the 1960s (and probably damaged in the process), and then rediscovered in 2014!

In the 1960s, such an operation had a predominantly memorial and symbolic character. From 2000 onwards, historical-archaeological interest prevailed, and the search for the gas chambers took on a decisive function: on the one hand, the hope was to find confirmation of the testimonies, on the other hand to refute the so-called "deniers."

As I have documented earlier, however, the discovery is in radical contradiction to the testimonies. It follows that either the eyewitnesses lied and there never was any gassing facility, or the remains discovered in 2014 do not belong to the alleged gassing facility. But since by now archaeologists have thoroughly sifted all possible and imaginable locations on the former camp grounds, it can safely be concluded that there never was any gassing facility.

---

5.5. The Mass Graves

In the years 2000-2001, Andrzej Kola carried out an archaeological survey on the grounds of the former Sobibór Camp. The results were described by him in two articles (Kola 2000c, 2001), which in turn were summarized and analyzed by Thomas Kues, as mentioned earlier. On the basis of 1,805 soundings similar to those carried out in Bełżec, Kola identified seven pits. The following table summarizes the relevant data (Graf/Kues/Mattogno, p. 128).

For Pits Nos. 1 and 2, Kola uses the term "*grób ciałopalny*," "cremation grave," meaning a pit containing cremated human remains. Pits Nos. 3-6 moreover contained corpses in a saponified state. Pit No. 7 was a "cremation conglomerate" by which was meant a "cremation grave" or "a place where corpses were cremated" (Kola 2001, pp. 116f.), meaning a real "cremation pit."

In subsequent research, 13 more pits were discovered. One mass grave, south of Grave No. 7, measured 25 m × 5 m and was 1.9 to 2.1 meters deep (Mazurek 2011, p. 4). It was referred to as Pit No. 8 (Object 882). In addition, "3 other small cremation pits" were found which were numbered 9-11 (Mazurek 2013, p. 1).

In the spring of 2013, "two skeletal burials were discovered" which were assigned Numbers 12 and 13; the first contained the remains of six corpses, the other just of one body. Another single grave, No. 14, contained a single corpse. Common grave No. 15, to which I will return below, was also located. Grave No. 16 contained the remains of at least two corpses (*ibid*., pp. 11f.).

Excavations carried out in the fall of 2015 showed that grave No. 8 and No. 15 were one continuous L-shaped grave (*ibid.*, p. 8). The depth was over 2.5 meters (Mazurek/Mazurek/Ratajczak 2016, pp. 24f.); this measurement evidently applies to Section 15 (since the depth of Grave No. 8 was only 1.9-2.1 meters). The entire pit was given the Number 8/15. The dimensions of Section 15 are not indicated, but the maps showing the pits (see below) show a length of about 15 meters and a width of about 5. Therefore, the entire pit measured 40 m × 5 m = 200 m². In the course of research, the archaeologists came across a pit in which, at a depth of 70-80 cm, there were burnt bones. It became Pit No. 17 (*ibid*., p. 30). Pit No. 18 had already been surveyed in 2011 and was then considered a garbage pit; the discovery of human bones in it made it classified precisely as Pit No. 18 (*ibid*., p. 36). The series is closed by two other very small pits, Nos. 19 and 20 (*ibid*., pp. 37f.).

The pits were surveyed topographically, and the corresponding maps permit getting a fairly accurate idea of their dimensions (Documents 77 [Mazurek 2013, p. 3] and 78 [Haimi 2015, p. 5]).

Above I noted that Pit No. 8/15 had a surface area of about 200 square meters. Of the remaining pits (9-14 and 16-20), the largest were Nos. 17 and 18, which measured roughly 4 m × 5 m each; all others were much smaller, mostly single burials. Taken all together, these pits did not even reach 100 square me-

Dimensions, Locations and Contents of Mass Graves at Sobibór Camp							
#	DIMENSIONS [m]	AREA [m²]	VOLUME [m³]	# OF CORES	HECTARE #	HUMAN REMAINS	SHAPE
1	20×20×4.30	400	1,720	27	XVII	cremated corpses	
2	20×25×4.0	500	2,000	28	XVII	cremated corpses	irr.
3	20×12×5.80	240	1,392	17	XI-SW/ XVII-NW	cremated & saponified corpses	irr.
4	70×20-25×5.0	1,575	7,875	78	XI-S/ XVIII-N	cremated & saponified corpses	
5	10×12×4.90	120	588	7	XVIII-NW	cremated & saponified corpses	irr.
6	15×25×3.05	375	1,143.75	22	XVIII	cremated & saponified corpses	irr.
7	10×3×0.90	30	27	6	XVIII	cremated remains	
	Total:	3,240	14,745.75	185			

ters. The average depth could not have been greater than that of Section 15 of Pit No. 8/15, hence 2.5 meters.

Therefore, the total area of the pits results in (3,240 m² + 300 m² =) 3,540 m², which can be rounded up to 3,500 m².

The total volume is (14,745.75 m³ + [300 m² × 2.5 m =]) 15,048.25 m³, in round figures 15,000 m³.

However, in the above-mentioned maps, the pits are not regular geometric figures, such as rectangles or squares, as Jules Schelvis sensibly represented them (Document 79), but silhouettes with odd and uncertain contours. One cannot seriously believe that those were the real contours of the pits, nor that they had been dug without criteria and almost at random, which would also be contrary to any rational management of the camp's space.

In order to interpret this fact, it is necessary to know what happened in the period immediately after the war.

In July 1944, the Red Army occupied the territory of the former Sobibór Camp. In 1945, the Polish authorities used the barracks of the camp near the railway, left untouched by the Germans, as a sorting center for Ukrainians who were to be deported. Their deportations took place in the years 1945-1947. The Ukrainians who were waiting for the trains dismantled the remaining camp barracks in order to obtain wood for heating. The work of destroying the traces left by the Germans was most likely completed by undocumented "excavations on the grounds in search for hoped-for 'precious objects left behind by the Jews,'" which was carried out by the population of the surrounding area. A witness, Jan Doliński, recalled that he went there about a hundred times, and that there were about a hundred people looking for precious objects; the sand was sifted through with large sieves measuring 1.5 m × 1.5 m. Among other things, he saw a large pit two meters deep in which a person was at work (Bem/Mazurek 2012a, p. 24).

Therefore, just as the grounds of the former Bełżec Camp, the grounds of the former Sobibór Camp had also been disrupted by wildcat diggings, which favored the scattering of ashes and human remains even to areas that had not been mass graves.

More information on the activities of these wildcat diggers was gathered by Thomas Kues (Graf/Mattogno/Kues, pp. 130f.).

It can therefore be safely assumed that random excavations by "gold diggers" devastated the original, probably orthogonal margins of the mass graves, creating the irregular contours indicated by archaeologists.

In Document 80, which is Mazurek's map of the pits, I superimposed a vertical and horizontal scale bar of 50 meters each (oddly divided into eight segments of 6.25 meters each) onto Pit No. 4. The length of this pit is therefore less than 55 meters, its width less than 20. The total area is therefore less than 1,100 square meters. Since this pit is credited with at least (70 m × 20 m =) 1,400 square meters, it exceeds the presumed effective area by 300 m², which represents a 21% increase.

From this it may be reasonably inferred that the real area of the pits was at least 20% smaller, so it amounted to about 2,850 square meters; the order of magnitude of the volume was therefore about 12,000 cubic meters.

However, this assumes that the mapping of the mass-grave areas is accurate. Kola surveyed the first six pits, which comprise the vast majority of the total surface area and volume of all the pits: 3,210 m² and 14,718.75 m³, respectively. During the preliminary investigations, Kola carried out only ten soundings in Hectare XVII, west of the former monumental mound. Of these, five were positive, meaning that the contents of these core samples led him to conclude that they contained traces of mass graves. To the east of the mound, he took fifteen core samples, six of which were positive, two others contained human hair (Kola 2000c, pp. 90f.). Kola published a map (Document 81), in which the soundings related to the pits are represented by a small square with a black dot in the center. Comparison with the map of mass graves he published in 2001 (Document 82) and with the corresponding map by W. Mazurek (Document 83) shows that the easternmost core sample, which was positive, is outside the area of Pit No. 4, and the southernmost sample, negative, is at its lower limit.

Kola subsequently identified Pit No. 3 with 17 soundings and No. 4 with 78. Since the boreholes were drilled according to the 5 m × 5 m grid I reproduced in Document 83, they were all arranged orthogonally. It is not explained how he could trace asymmetrical, irregular contours of these pits with such a sampling pattern. Nor is it clear how he could distinguish Pit No. 3 from Pit No. 4, since they are represented as a single figure.

In the two short articles mentioned earlier, Kola merely published the results of his investigations, or rather his conclusions, without providing any data that allowed any kind of verification, as he had done in the case of Bełżec.

Therefore, we are asked to have blind faith in his claims about his core-sample data and the correctness of his interpretations and conclusions.

But there is also another issue. Thomas Kues pointed out that Sobibór Camp was located in a vast marshy area to such an extent that, according to J. Schelvis, railway traffic between Chełm and Włodawa (a little more than 10 km north of Sobibór Station) was interrupted from the end of July to October 1942 because the railway tracks had sunk into the marshy ground at several points. A Polish map of 1933 shows that the station was located 167 m above sea level, and the surface of Lake Spilno, about 1 km to the west, was 164 m above sea level. In this lake, the water table of the area surfaced. According to a map published by Kola, the area of the mass graves was at a height of 170 m above sea level, so there the water table was at most six meters below ground level (Graf/Mattogno/Kues, pp. 133-138).

A 1:100,000 Polish map of the area around Włodawa was used by the Wehrmacht for military purposes. It contains multiple German annotations and various symbols, plus detailed explanations on the right-hand side, including about the local climate (Document 84). On this map, the territory is described as a depression with the River Bug in the center and sandy flatlands surrounding it. The marshes (*Sümpfe*) usually froze from mid-December to mid-March. The bogs (*Moore*) froze starting at temperatures of -6 to -8°C, in case of snow cover starting at -12 to -16°C. Heavy rainfall and snowmelt placed "vast areas under water." Average temperatures ranged from -4°C (January) to +18°C (July). Frost generally took over from mid-October to late April; streams were frozen from mid-December to mid-March. Average rainfall was 30 mm in January, February, and March, 40 in April, 50 in May, 80 in June and July, 60 in August, 50 in September, 40 in October, 30 in November and December; a total of 550 mm of rain in a year. Snow fell an average of 45 days per year. The snowpack persisted from mid-November to mid-March. Thawing at the end of February, soil consolidation after 3-4 weeks, dry soil after another 14 days.

Next to the railway station near Sobibór, the map has a cogwheel drawn in, which is the symbol of a sawmill (Document 85). The elevation of the station is again 167 m above sea level, and that of Lake Spilno again 164 m. Next to Lake Spilno, to the west, is a large dotted area with the annotation "flooded in spring." This flood zone is bounded by elevation entries 168 (east of the lake) and 166.9 (northeast, near the top of this area), so during spring, following the snow melt, the water level almost reached the elevation of the railway station.

Thus, the climatic conditions set forth above show that the water table varied throughout the year, rising during the period of heavy rainfall and spring melt. From this picture it appears that the area in question was certainly not optimal for the establishment of an extermination camp requiring the excavation of huge mass graves.

In particular, it does not seem very likely that the camp SS had dug mass graves up to 5.8 meters deep. The putrid runoff inevitably would have polluted

the groundwater. That the Germans were not insensitive to such sanitary issues is apparent from the relevant observations found in the above-mentioned map:

> *"Healthcare*
> *Supply of aseptic water adequate. Water wells are monitored. Dairy products not hygienically safe; milk must be boiled. Typhoid fever and dysentery remediated (about 80% of population vaccinated against these), malaria and Wolhynia fever*[258] *possible but not endemic; no typhus."*

As for Kola, his statement that most of the pits he identified had a depth of 4 to 5.8 meters is at odds with what he himself wrote in reference to the well mentioned earlier (Kola 2001, p. 119):

> *"The further archaeological investigation was therefore continued not within the indicated excavation, but inside the well, reaching a depth of 5.00-5.10 m. At this stage, the exploration was terminated due to the rapid inflow of ground water, which appeared from a depth of about 3.60 m* [*Na tym etapie eksplorację zakończono z uwagi na gwałtowny napływ wody gruntowej, która pojawiła się już od głębokości około 3,60 m*]*."* (Emphasis added)

On Kola's preliminary survey map (Document 81), the quadrangle in which the well and the alleged gas chambers were located is bounded by elevations of 169.83 (NW, the closest point to the well), 170.07 (NE), 169.86 (SE), and 169.75 (SW). The mass graves are located in an area with elevations of 170.30 to 169.70 meters. In practice, the difference in elevation between the two areas is a few decimeters.

Hence, if the water table in the well was at 3.60 m from ground level, Kola should have encountered groundwater starting at about 4 m in the area of the mass graves; but then, why did he never mention any groundwater intrusion during his drillings down to depths of 4.30, 4.90, 5.00 and even 5.80 m?

5.6. Comparing Archaeological Data with Testimonies

Such a comparison is not easy, because the testimonies are mutually contradictory. Former SS *Oberscharführer* Heinz Kurt Bolender, who arrived at Sobibór on April 22, 1942 and remained there until July, stated during an interrogation on June 5, 1961:[259]

> *"A mass grave may have been about 60 m long, 20 m wide and 6 – 7 m deep. The side walls were sloped to avoid the danger of collapse. In response to an interposed question, I explain that, at the time of my stay in Sobibor, no cremations of corpses have taken place. I know this for a fact. During my time, the corpses were layered in order to be able to accommodate as many as possible in one grave."*

---

258 Also called trench fever and quintan fever.
259 ZStL 252/59, Vol. II, p. 1322.

During an interrogation of February 24, 1964, former SS *Unterscharführer* Hubert Gomerski stated in reference to *Lager* 3:[260]

> *"There were a total of three large corpse pits there. I estimate the length of the pits to be about 30 – 40 m, the width to be 8 – 10 m, and the depth to be about 2 – 3 m. The dimensions may have been different in each case; I cannot say that exactly anymore today.*
> *There were three corpse pits in Lager 3, which were located in the order of their construction at the rear end of the camp (as seen from the entrance to Lager 3), and to the right of the fence behind the guard tower, and to the left of the fence diagonally behind the gas chamber. Of these three pits, the last one was no longer used, because in the meantime an incineration facility had been built in the area behind the watchtower.*
> *This consisted of a row of iron girders, over which the corpses were placed. Then a large fire was lit under this row of girders. Subsequently, both the Jews who had just been killed and the corpses from the two pits mentioned first were burned in this manner."*

During his December 2, 1966 interrogation in Hagen, Gomerski returned to the matter in the following terms:

> *"In the pit, a small projection, a kind of jetty, was built of wood, and the dead were dumped from the carts from there into the pits. The pits had a dimension of 25 x 40 x 2-2 1/2 meters.*
> *The earth consisted of sandy soil; the walls were sloped."*[261]
> *"After about 2-2 1/2 months, the first transports arrived. A total of three pits were made; the third pit was not used. When the first transports arrived, the first pit was not yet completely excavated. The second pit was dug only when the first one was almost full. The third pit was dug with an excavator; it was not filled."*[262]
> *"I witnessed the digging of Pit 3, as well as the beginning of the burnings. When Bolender left the camp, there were no burnings yet."*[263]

During an interrogation of December 10, 1962, Erich Bauer spoke of "two pits of at least 30 m × 30 m base area each and about 5 m deep."[264]

With an erroneous reference to the summer of 1943, *Oberwachtmeister* Erich Lachmann stated:[265]

> *"The Jews who worked in the death camp were busy digging a large pit for the bodies."*

In this regard, he specified:[266]

---

260 Landgericht Hagen, XXXVII Sobibor, pp. 16f.
261 Staatsanwaltschaft Dortmund-XII1965, p. 705.
262 *Ibid.*, p. 709.
263 *Ibid.*, p. 710.
264 ZStL, 208 AR-Z 251/59, Vol. VIII, p. 1666.
265 Interrogation of Erich Gustav Willi Lachmann dated June 21, 1961. ZStL, 208 AR-Z 251/59, Vol. VIII, p. 678.
266 *Ibid.*, p. 680.

> *"The mass graves I saw in Lager 3 were about 60 to 70 meters from the gas chambers. I myself saw a mass grave that was still open. The corpses lay naked on top of each other in several layers. However, even with the most superficial estimate, I cannot state how many corpses lay in this mass grave. This mass grave was about the size of 60 x 60 meters. In any case, there must have been several thousand Jews lying in this pit. The corpses were sprinkled with chlorinated lime. It stank terribly."*

To recap, the mass graves had the following dimensions:

– Bolender: 60 m × 20 m × 6-7 m
– Gomerski: 30-40 m × 8-10 m × 2-3 m, or
40 m × 25 m × 2-2.5 m
– Bauer: 30 m × 30 m × 5 m
– Lachmann: 60 m × 60 m

According to these defendants, a total of three pits were excavated, but only two were used. These conflicting data are in turn at odds with the archaeological findings set forth above, both in terms of the number and size of the mass graves. The only compatible data is for the first pit, 60 m × 20 m for Bolender, 70 m × 20 for the archaeologists.

The German courts gave still different measurements, without explaining, on what this is based. The verdict of the Hagen Jury Court of December 20, 1966 devotes a few lines to the mass graves of Sobibór:[267]

> *"From the outer cell doors of the gas-chamber building, a field railway led to large pits. During the first extermination phase of the camp lasting some six months, these were gradually excavated, due to the sandy soil with sloping side walls, in order to accommodate the corpses; each was about 50-60 meters long, 10-15 meters wide, and about 5-7 meters deep."*

The court's map of the camp shows two mass graves.[268]

The verdict of the Frankfurt District Court of July 8, 1977 concerning the appeal proceedings in the case against Hubert Gomerski adds the following clarification (Rüter/de Mildt 2011, p. 662):

> *"The external wall of the individual cells was closed with large iron doors. From them, a field railway led to two large pits created within Camp III, which, during the first extermination phase lasting some six months, were gradually excavated with a length of about 40-50 m, 10-15 m in width, and a depth of about 5-7 m, and which were gradually filled with corpses of gassing victims."*

6. Treblinka

6.1. Soviet and Polish Investigations (1944-1946)

In 2010, Caroline Sturdy Colls, at that point a PhD student, but currently associate professor of forensic archaeology and genocide investigation at Staffordshire University (Great Britain), began a series of archaeological investigations on the grounds of the former Treblinka Camp over several years. In order to properly evaluate her discoveries, it is necessary to know what had happened in this area before, starting in 1944. I have already dealt extensively with this subject in another study, to which I refer.[269] In the present study, I will reprise and expand only on what is useful within the perspective of this chapter.

As already mentioned in Subchapter 3.6., the Investigation Committee of the Soviet Union's 65th Army, in the presence of the local Polish authorities, carried out an inspection in the area of Treblinka I Camp between August 22 and 23, 1944, which led to the discovery of three mass graves and 13 graves containing only one corpse each. The results of the investigations carried out in the three mass graves were as follows:

1. A grave measuring 10 m × 5 m × 2 m, covered with a soil layer of 45 to 50 cm, with 105 bodies randomly buried in 5 to 7 rows.[270]
2. A grave measuring 10 m × 5 m × 2 m, covered with a soil layer of 45 to 50 cm, with 105 bodies randomly buried in 5 to 7 rows.[271]
3. A grave measuring 10 m × 5 m × 2.5 m, covered with a soil layer of 50 cm, with 103 bodies randomly buried in 5 to 6 rows.[272]

I have already mentioned the report of August 24, 1944, of which I quoted the "historical" part; but it also mentions findings on the ground:[273]

> *"A huge area of the camp was covered with cinders and ashes. The road, which connected the two camps and is three kilometers long, was covered with cinders and ashes to a height of 7 – 10 cm. One could recognize the presence of lime in large pieces of cinder with the naked eye. It is well known that lime is a product of burning bones. There were no production sites in the camp, but cinders and ashes were brought out of the camp every day by the ton. This*

270 Akt No. 1, undated, but from August 22, 1944. GARF, 7021-115-11, p. 1.
271 Akt No. 2, August 23, 1944; *ibid*., p. 2.
272 Akt No. 3, August 23, 1944; *ibid*., p. 3.
273 Akt, August 24, 1944. GARF, 7021-115-9, pp. 103-110.

freight was loaded onto railroad cars, and 20 to 30 peasant carts distributed them and poured them onto the road. (Witness testimony of Lucjan Puchała, Kazimierz Skarzinski. Stanisław Krym inter alia).
The statements of the witnesses, the book 'A Year in Treblinka' [by Jankiel Wiernik]*, the presence of a large quantity of ashes and cinders, the presence of personal belongings and documents strewn on the grounds as well as excavated from the pits confirm that there were furnaces in the camp where people were cremated. In the beginning, the Germans buried the bodies of the murdered. After Himmler had visited the camp, the bodies were dug up with an excavator and cremated.*
At present it is difficult to uncover the traces and secrets of this furnace for the cremation of people, but based upon the available data, one can picture it.
The furnace – this was a large trench 250-300 m in length, 20-25 m in width and 5-6 m deep, excavated by an excavator. Driven into the bottom of the ditch were three rows of reinforced-concrete posts, one-and-a-half-m in height each. The posts were connected to one another by cross-beams. On these cross-beams rails were placed at intervals of 5 to 7 cm. That was a gigantic furnace grill. A narrow-gauge spur track led down to the edge of the trench. (Witness testimony of Abe Kon, Hejnoch Brenner, Samuel Rajzman, and the content of the book 'One Year in Treblinka'). […]
The Germans attempted to erase the traces of their atrocities. After the revolt of the Jews, they destroyed all camp buildings that were still intact after the fire. Oats, rye, and lupines were then planted on the grounds of the former 'death camp.'
What remains are the walls of the burned residential building and of the cattle stall of the colonist Strebel, who was settled on the territory of the camp. Remaining as marks of the existence of the camp are: an abatis of barbed wire, ashes, cinders, and a great number of pits, where household possessions of the cremated Jews have been buried."

As mentioned at the beginning of Subchapter 3.7., on November 6, 1945, Polish Investigative Judge Łukaszkiewicz prepared a "Protocol on The Judicial Activity Carried out on the Ground in the Course of the Investigation in the Case of the Treblinka Death Camp" concerning his visit to the former camp.[274] I report his observations on the state of the grounds of the former camp:

"The entire terrain of the camp is currently covered with holes, pits and craters [*dołkami, dołami i lejami*] *of various sizes. They can be found everywhere, even in places covered by the forest, however they are grouped more densely in the hill described in Point 2, where, in an area of about 2 hectares, every part of the ground is literally covered with them. The depth of some craters reaches 7 meters, the diameter to 25 meters. Near the craters there are unexploded airplane bombs and artillery shells, as well as numerous pieces of shrapnel. The mayor of the village of Wólka Okrąglik explains that the holes and pits were made by the local population in search of gold and jewelry, while the craters*

[274] AGK, NTN 69, pp. 90f.

were caused by the bursting of airplane bombs and shells by Red Army soldiers, who were stationed at the Kosów Lacki Railway Station. In the described part of the terrain, covered with excavations and craters, there are numerous human remains /crania and other bones/; some bones still have remnants of tissue, skulls remnants of hair. In addition, all this ground is covered with ashes, mixed with sand and gravel /since in this area there are no real layers of sand and gravel/. In the ashes, one can see remains of human bones. The witnesses Rajzman and Romanowski [Reichman] *explain that this is the very place where the pits were located in which the people were buried and then the furnaces* [*paleniska*] [were operated].*"*

In January 1946, Rachel Auerbach made the following report on the inspection of the Treblinka area that had been conducted on November 7, 1945 (see Subchapter 3.7.):[275]

"All kinds of scavengers and marauders come here in droves, shovels in hand. They dig, search, and ransack; they sift the sand, they drag parts of half-rotten corpses from the earth, bones and scattered refuse in the hope that they may come upon at least a coin or a gold tooth. These human jackals and hyenas bring along live artillery shells and unexploded bombs. They explode several of them at once, tearing huge craters into the desecrated, blood-drenched soil which is comingled with the ashes of Jews.

The Sandy Soil Yields Up Its Secret. *Our car came to a stop. We got out: this was where the camp area began. According to our measurements, it is 15 hectares. A well-paved road runs parallel to the railroad tracks for about 1½ kilometers and then comes to a dead end. Another road branches out from it and comes to an end even sooner. The surface of both roads contains a weird mixture of coal and ashes from the pyres where the corpses of the inmates were cremated. The second road leads in the same direction as the 'Road to Heaven' of which no trace is now left. Just a bit of the concrete foundations of a horses' stable – this is all that is left today of the camp buildings, the barbed wire fences, the barracks, the watchtowers, the gas chambers. Some of the buildings were burned down by the uprising, and the rest were carried off by human scavengers from neighboring villages after the arrival of the Red Army.*

While the Germans were still here, the whole area had been plowed up and sown with lupine grass. And the lupine grass really grew and covered the whole surface with a green mask. It looked as if all the traces of the crimes had been wiped away. But since then, during the past year, the human jackals and hyenas have been coming to the burial ground and here is the picture that we saw:

Here and there, like patches of grass near the seashore, half-covered by the shifting sands, there were still little clumps of withered lupine. Not one level place in the whole area. Everything had been torn up and dug up, little hills and holes. And upon them, beneath them and among them, all sorts of objects.

---

275 Donat, pp. 69-72. Donat writes that the trip took place on November 7, but Judge Łukaszkiewicz mentions November 6 (see below).

> *Aluminum kettles and pans, enameled tin pots – blackened, dented, full of holes. Combs with teeth broken off, half-rotted soles from ladies' summer sandals, broken mirrors, leather briefcases. All this is near the station platform where the camp's first barbed wire fences had been.*
> *We began our tour at the place where the transports had been unloaded and we continued on the road which the Jews who were brought here had followed. What we saw here was the remnants of the Treblinka 'Werterfassung'. Remnants of the huge piles of Jewish property, which had been packed up and sent away, incinerated, cleared off, and yet still could not be completely cleared away. It was not possible to clear away every trace of what the hundreds of thousands of people who had passed through here had experienced. Here was the physical evidence, here were the corpora delicti* […]
> *But the physical evidence was not limited to objects. As we moved farther into the grounds, we walked over a field which was sown with human bones.*
> *The bombs had revealed the contents of the desecrated soil. Leg bones, ribs, pieces of the spine, skulls big and small, short and long, round and flat.*
> *Skulls!…*
> *If only we could get an ethnologist to come here!*
> *He could have made the most accurate anthropological measurements on the racial features of the Jewish people.* […]
> *We were now standing where the gas chambers had been, the huge mass graves and the pyres. In some places, the smell of death was still mingled with the odor of fire. Indeed, here and there we could see little piles of white ashes along with blackened bones, heaps of soot. All this had been buried several meters deep in the soil, mixed with sand and covered with more sand, but the explosions had brought it to the surface again. In one place the simultaneous explosion of several bombs had created a huge crater. Deep down in the hole, some outlines could be dimly seen through the fog.*
> *'Those aren't just bones,' explained the District Attorney. 'There are still pieces of half-rotted corpses lying there, bunches of intestines.'*
> *By now, the district attorney and the judge knew every nook and cranny here. They had been conducting their investigations for some time. They had examined both Jewish and non-Jewish witnesses, taken measurements and carried out minor excavations."* (Underlinings added)

Judge Łukaszkiewicz had gone to Treblinka in order to perform an official investigation of the alleged crime scene. As he later explained, he acted

> *"*[…] *at the request of the state prosecutor of the District Court in Siedlce of September 24, 1945, further induced by a letter of September 18, 1945, of the Main Commission for the Investigation of the German Murders in Poland."*[276]

After bidding farewell to the visitors, Łukaszkiewicz set to work with a group of workers. Between November 9 and 13, he undertook a thorough examination of the grounds as well as a series of excavations. Afterwards he composed

[276] USSR-344, GARF, 7445-2-126, p. 319 (p. 1 of the report).

an official protocol, which in view of its significance I reproduce in full (Wojtczak, pp. 183-185):

> *"Protocol of the Tasks Performed on the Grounds of the Death Camp Treblinka, Which Forms the Object of the Judicial Examination.*
>
> *From November 9 to 13, 1945, the examining magistrate of Siedlce, Z. Łukaszkiewicz, together with the state attorney for the District Court of Siedlce, J. Maciejewski, performed the following tasks on the camp grounds:*
>
> *1) November 9, 1945*
> *Excavations were begun on the grounds using the services of 20 workers who had been mustered by the village administration for carrying out roadwork. The excavations began at the location described by the witness Rajzman on November 6, where the so-called 'camp hospital' had stood and where, according to the witness, a mass grave is supposed to exist. Since a bomb crater 4.5 meters deep is present at the said location – two bombs still lie at a slight distance from this crater – the digging was begun in this crater. In the course of this work numerous Polish, as well as Russian, German, Austrian, and Czech coins and broken pieces of various kinds of containers were discovered. At the end of the work, at approximately 3 pm, at a depth of 6 meters, we encountered a layer which had not been reached previously. No human remains were found.*
>
> *2) November 10, 1945*
> *The work was continued, with 36 workers who had been commandeered for roadwork. At a depth of 6 meters begins a layer which has never before been uncovered by anyone. It consists partly of all sorts of kitchen utensils and different kinds of household objects; there are also pieces of clothing. At a depth of 7 meters, we reached the bottom of the pit – a layer of yellow sand which is not mixed with gravel. By additional digging we succeeded in determining the shape of the pit. It has sloping walls, and the bottom measures about 1.5 meters* [sic!]. *The pit was presumably dug out with an excavator. During the course of the excavations, numerous more-or-less-badly damaged Polish documents were discovered, in addition the badly damaged personal identity card of a German Jew, as well as several more coins: Polish, German, Russian, Belgian, and even American. After we had made certain that this pit, filled with broken pieces of the containers already mentioned, ran in a north-south direction on the grounds of the camp area – 2 meters more* [in a northerly direction] *had been excavated – the workers started work at this location.*
>
> *3) November 11, 1945*
> *A series of test excavations was performed at the place where the* [gas] *chambers had to have been located, in order to find their foundation walls if possible. Pits 10 – 15 meters in length and 1.5 meters deep were dug, uncovering undisturbed layers of earth.*

The largest of the craters produced by explosions – from this emerges numerous pieces of shrapnel –, which is 6 meters deep and has a diameter of about 25 meters, its walls give recognizable evidence of the presence of a large quantity of ashes as well as human remains – was further excavated in order to discover the depth of the pit in this part of the camp. Numerous human remains were found by these excavations, still partially in a state of decomposition [*w stanie rozkładu*]. *The soil consists of ashes interspersed with sand, and is of a dark-gray color, granular in form. During the excavations, the soil gave off an intense odor of burning and decay. At a depth of 7.5 meters the bottom was reached, which consisted of layers of unmixed sand. At this point the digging was stopped.*

4) November 13, 1945
With the assistance of 30 workers employed for roadwork, the opening of a pit was begun – a site where refuse was deposited in the northeastern section of the camp. In this location, as the workers from the nearby hamlets explained, a very large number of documents had been found so far. Work was begun at this location, where the people [of that area] *had dug a three-meter-deep pit in a search for gold. During the course of the digging, broken pieces of all sorts of kitchen containers as well as a large number of rags were found. Aside from the coins discovered so far, Greek, Slovakian, and French ones were found, as well as documents in Hebrew and Polish and remnants of a Soviet passport. At a depth of 5 meters the work was stopped due to the steadily worsening weather conditions.*

The Examining Judge *The State Attorney*
Łukaszkiewicz *Maciejewski*

Decision:
The Examining Judge of Siedlce, on November 13, 1945, rules in consideration of the fact that with great probability no mass graves are any longer to be found on the grounds of the former camp today, as is to be concluded from the witness testimonies examined so far and from the results of the work carried out at the site, and in consideration of the oncoming autumn, the present rainfall and the necessity of a rapid conclusion of the judicial preliminary investigations, in view of all these facts that work on the territory of the former death camp Treblinka is to stop.

The Examining Judge
Łukaszkiewicz." (Emphases added)

On December 29, 1945, after the conclusion of his preliminary investigations, Łukaszkiewicz issued a protocol with 14 paragraphs, which – as already mentioned – was presented by the Soviets at the Nuremberg Trial as Document USSR-344. In the third paragraph, which bears the title "Current condition of the camp terrain", it says the following:[277]

[277] *Ibid.*, pp. 319a-320 (pp. 3f. of the report).

> *"With the assistance of an expert surveyor and witnesses, I made an exact inspection of the terrain. According to the measurements, the area of the camp is approximately 13.45 hectares and had the shape of an irregular quadrilateral. No remnants of facilities of the former death camp exist any longer. The only things that remain of the structures are: a ditch with remains of burned wooden poles protruding up, which lead into the cellar, wall bricks from the foundations of the camp's housekeeping building and the site of the well. Here and there one finds traces of the burned-out wooden poles of the fence and remains of barbed wire. There are still a few sections of paved walks. Nonetheless, there are still other traces that hint at the existence and functions of the camp. In the northwestern section of the area, the surface is covered for about 2 hectares by a mixture of ashes and sand. In this mixture, one finds countless human bones, <u>often still covered with tissue remains, which are in a condition of decomposition</u>. During the inspection, which I made with the assistance of an expert in forensic medicine, it was determined that the ashes are without any doubt of human origin (remains of cremated human bones). The examination of human skulls could discover no trace of wounding. At a distance of some 100 m, there is now an unpleasant odor of burning and decay. In the southwestern direction, a portion of the camp terrain is covered by aluminum – enamel – glass and porcelain dishes – kitchen utensils – hand luggage – rucksacks – pieces of clothing, etc. <u>There are innumerable holes and craters on the property.</u>"* (Emphases added)

Łukaszkiewicz summarized the investigations carried out a month earlier at that location as follows:[278]

> *"During the work on the terrain, I found no mass graves, which, in connection with the statements by the witnesses Romanowski and Wiernik, leads to the conclusion that nearly all of the bodies of the victims were burned, all the more so since the camp was liquidated early and the murderers had much time. The ground of the camp was ploughed and sown. Ukrainians were settled there; they fled before the arrival of the Red Army (witnesses Kucharek and Lopuszyński)."*

On August 9 and 10, 1946, Łukaszkiewicz, along with the surveyor Trautsolt and the court physician Wakulicz, searched for mass graves in the area of the camp Treblinka I. In the forest by the village of Maliszewa, about 500 m south of the camp, a total of 41 mass graves were found, of which 40 had been desecrated; many bodies were strewn around them. One grave was only partially violated, and from it 10 corpses were able to be recovered. The court physician examined 112 skulls and determined that in only two cases had a shot in the head been the cause of death. The entire surface area of the graves amounted to 1,607 m². Concerning the number of the bodies discovered, Łukaszkiewicz wrote:[279]

---

[278] *Ibid*., p. 324a (p. 12).

[279] Łukaszkiewicz 1947b, p. 120; Wojtczak, p. 135. Wojtczak claims that the graves contain 10,000 bodies according to the expert Piotrowski.

> *"Due to the destruction of the graves, it is not possible to count the bodies which have been there. The medical expert Mieczysław Piotrowski affirms, however, that one grave of 2 × 1 × 1 m (without taking into consideration the upper level of earth which covers the bodies) contains at least 6 nude bodies. Considering the size of all 41 graves, and under the assumption that the levels of corpses reach only up to 1.5 m in depth (the depth of the graves is up to 3 m), one can calculate that at least 6,500 people were buried there."*

On this occasion, the surveyor Trautsolt drew a map of the area of Treblinka I, on which he indicated the exact position of the graves (Mattogno/Graf, Doc. 6, p. 332). Of these, 17 were aligned in a row on a north-south axis; their total length was approximately 510 m.

The Soviets found 318 corpses, Łukaszkiewicz discovered another 122, totaling 440. 10,000-12,000 deaths are attributed to the Treblinka I Labor Camp (see below), but no other mass graves or evidence of mass cremations were found there. It is unknown what happened to the approximately 9,500-11,500 purportedly missing bodies.

Although Rachel Auerbach wrote pompously of "physical evidence" and "*corpora delicti*," neither the Soviets nor the Poles uncovered even the slightest scrap of proof that Treblinka II had operated as an extermination camp. As we have seen, the Soviets were compelled to make the following admission in their report of August 24, 1944 as quoted earlier:

> *"At present it is difficult to uncover the traces and secrets of this furnace for the cremation of people, but based upon the available data, one can picture it."*

Even the investigations performed by Łukaszkiewicz proved to be a complete failure in terms of this central issue. He arranged excavation at a definite spot in the camp where, according to the witness S. Rajzman, a mass grave was located, but discovered nothing of the kind. He had trenches dug, 10 to 15 m long and 1.5 m deep, at the places where, according to witnesses, the two alleged gassing buildings had stood, yet merely encountered "undisturbed layers of earth." To be sure, he did find skulls, but in insignificant quantity. Photographer Jakob Byk's most gruesome image shows about fifteen of them lying on the surface of the ground (see below). All the evidence he examined (coins, documents, rags, containers, remnants of various objects) shows merely that there was a camp at that place, and the human remains as well as the ashes prove only that bodies were buried or cremated in the camp. Nothing produced even a trace of evidence for mass murder, to say nothing of such a crime against *several hundred thousand* people.

Among the objects discovered, the skulls as well as the human body parts found in a state of decomposition deserve particular attention. From whom did they come? If we subscribe to the official historiography, this question remains unanswered. According to the official version, the cremation of the bodies exhumed from the mass graves was finished by August 2, 1943, the day of the prisoner revolt. During this revolt, at least 300 to 400 prisoners are supposed to

have been killed within the camp or in the vicinity of the wire fence (Arad 1987, p. 298). However, on August 18-19, 1943, 7,600 Jews from the Białystok Ghetto were allegedly gassed at Treblinka (*ibid.*, p. 396), whose bodies neither the Soviets nor the Poles discovered. If there were such killings, these victims therefore must have been cremated. The same is true for the bodies of those killed in the revolt. The surviving prisoners were not killed on the spot, rather they were transferred to Sobibór on December 20, 1943, as can be gathered from a corresponding Wehrmacht bill of lading (Łukaszkiewicz 1946b, p. 61). If decomposing body parts were found in November 1945, this discovery is also inconsistent with the thesis that the victims involved had been murdered more than two years before. Finally, it is strikingly problematic that no single *complete* body was discovered. From whom, therefore, did the skulls and body parts come?

On his inspection of the area of the former camp Treblinka II of November 9 to 13, 1945, Łukaszkiewicz was accompanied by the sworn surveyor K. Trautsolt. With the help of witnesses, Trautsolt drew a detailed plan of Treblinka II as it was at that time (Document 86). The plan, whose directional axes are transposed,[280] shows an irregular quadrilateral whose sides have the following lengths

– north side (actually the east side): 376.5 m
– east side (actually the south side): 471.5 m
– south side (actually the west side): 490 m
– west side (actually the north side): 240 m

On the plan the ruins that existed in the camp area are also entered: a burned-out cellar ("*piwnica spalona*"), designated by the letter "e," as well as the destroyed house of a settler ("*dom burzony kolonisty*"), marked with the letter "f."

On another, typographically identical map, Surveyor Trautsolt added the facilities that had allegedly been located in the camp area according to witness testimony. Łukaszkiewicz published two versions of this map, of which the first is quite poor (Document 87), the second of a higher quality (Document 88). In the latter, the exact area where the corpses are said to have been cremated is indicated: it is a trapezoid (No. 10) whose sides, when using the sides of the camp for scale, can be calculated as follows:

– north side (east): 188 m
– east side (south): 110 m
– south side (west): 174 m
– west side (north): 52 m

The total area is approximately 14,500 m². This was the purported death camp, Camp II, which contained the two alleged gassing installations.

This plan, as far as the shape and size of the camp are concerned, corresponds quite well to what can be gleaned from aerial photographs of the former

[280] The north-south line on the map actually corresponds to the east-west line.

Treblinka Camp from May and October 1944, and can therefore be considered the closest to reality. It was taken up by the witness Samuel Willenberg for "his" plan of the camp, in which the structures are depicted in three dimensions. In "Camp II," he drew three mass graves (burial pits), labeled with the No. 9, which measure – biggest to smallest – 120 m × 60 m (7,200 m²), 60 m × 15 m (900 m²) and 65 m × 10 m (650 m²; Documents 89f.; Willenberg, p. 6).

6.2. Caroline Sturdy Colls's Archaeological Investigations

The background and preliminary results (2010-2012) of the archaeological research of Caroline Sturdy Colls were discussed by Thomas Kues in a study first published in 2013 (Mattogno/Kues/Graf, pp. 939-952). By that time, she already had identified with non-invasive techniques, *i.e.*, without excavating the ground, the contours of ten probable mass graves/cremation sites – the largest of which measured 26 m × 17 m – and two brick structures, which she considered to be the probable gas chambers. She drew these findings on an aerial photograph of the site, as discussed at the time by T. Kues (*ibid*., p. 943).

In the following years, Sturdy Colls published several articles and books, but they did not add much to the initial data. I examine in chronological order the most-important ones.

The first article in the series is "Gone But Not Forgotten: Archaeological Approaches to the Site of the Former Treblinka Extermination Camp in Poland," published in 2013. Despite its length, it presents very little useful data:

> *"Eleven pits, the largest in excess of 34 m in length and the smallest in excess of 10 m, were recorded using geophysical survey in areas suggested by witnesses as having housed mass graves and cremation pits (Figure 2)."* (Sturdy Colls 2013a, p. 261)
>
> *"Given that only a small portion of the camp was examined during fieldwork to date, it is anticipated that further remains will be located in other areas not yet surveyed. In light of these findings, and based on a re-evaluation of historical material and recent developments in forensic and archaeological investigation, several important points require consideration with regards to the ability by the Nazis to totally eradicate all traces of the 800,000 people murdered at Treblinka, which will be discussed in more detail below.*
>
> *The first transport arrived at Treblinka from Warsaw on the 23 July 1942 and from this date until mid-August, Arad has estimated that between 5,000 and 7,000 people were sent to the camp each day, under the illusion that it was a transit camp. By the end of August 1942, it was reported that the death toll in the camp had reached 10,000 to 12,000 people a day, yet only three gas chambers existed. This meant that not all victims were sent to the gas chambers; some were shot, beaten or thrown alive into the so-called "eternal flame" located behind a false hospital (the Lazarett).*

> *Witnesses place the Lazarett and associated burial pit in close proximity to the southern end of the railway platform. This was confirmed when the results of topographic and geophysical survey were compared with, and overlaid onto, witness plans and contemporary aerial images. During this early period, the main method used to dispose of the victims' bodies was burial in mass graves. Body disposal groups were assigned, their sole responsibility being to dig large pits in the south and east portion of the camp.*
> *However, as more victims were sent to Treblinka, large 'kopachke' (*kopaczka*) or excavators were used to dig larger pits. Some witnesses talk of pits as large as 60–70 m in length, whilst some allude to the presence of smaller ones, measuring approximately 25 m which were either dug in the early phase or still by hand later on."* (*ibid*., pp. 263f.)
> *"As confirmed by topographic and geophysical techniques, two areas of structural debris appear to represent the remnants of the gas chambers, whilst the locations of three further structures were located immediately adjacent to the railway platform."* (*ibid*., pp. 272f.)

The article also contains two photographs from 1945 showing a few skulls and bones (*ibid*., pp. 268f.).

In none of her writings does Sturdy Colls mention the book on Treblinka written by Jürgen Graf and me, here quoted several times, but it is certain that she knew it. Indeed, from it she drew the information about the Soviet investigations in August 1944, for which she provides the incomplete source "GARF [State Archive of the Russian Federation], 7021," which refers to documents we found in this archive (Mattogno/Graf, p. 77).

Also dating from 2013 is the article "Archaeological Assessment on the Area of the Former Death Camp in Treblinka," which contains somewhat more detailed information:

> *"Death Camp*
> *Witness accounts suggest that the gas chambers are likely located to the south-east of the memorial obelisk. Two features consistent with structural remains and debris were recorded in this area, measuring 44 m x 20 m and 22 m x 15 m. Witness accounts suggest that the gas chambers were the only structures in the Death Camp that were made of brick (pers. comm. Edward Kopówka) and bricks were visible on the surface in this area. Therefore, the archaeological and historical evidence presents a strong case for the afore-mentioned features being the old and new gas chambers."* (Sturdy Colls 2013b, p. 202)
> *"Pits and Potential Graves*
> *Geophysics cannot detect bodies, but historical data and experience of other grave sites can aid interpretation. A number of pits were identified across the site, many of which were bisected by the memorial.*
> *This confirms that only limited investigations were carried out in advance of the memorial's construction. Some of the pits likely represent post-war looting but a number of larger pits were recorded in areas suggested by witnesses as having housed mass graves and cremation pits.*

The use of electrical imaging in conjunction with resistance and GPR survey allowed the construction of a large pit (26 m x 17 m) to be determined. Although the depth of this feature could not be determined, as it was greater than the three metre range of the electrical imaging and four metre range of the GPR, it was demonstrated that this feature had a ramp at the west end and a vertical edge to the east. This feature is also visible from the air and on the ground as an area of defined vegetation. Another feature, located adjacent to the memorial in the south-west of survey Area B, represents a substantial anomaly. This feature is bisected by the memorial, which was purportedly sited according to the location of mass graves in this part of the camp. Post-abandonment aerial images confirm the presence of this feature as an area of significant ground disturbance." (*Ibid*., pp. 203f.; emphasis added)

"Main Extermination Area

Much of the area believed to have contained the pits in the main extermination areas is now masked by the modern memorial or by the forest.

Whilst it has often been argued that the mass graves themselves were all destroyed when they were exhumed, several important points require consideration. Firstly, although initial attempts were made to mix the ashes with soil, this was quickly abandoned and the cremated remains were put back into the original ditches from which they came; thus if any such remains survived outside of the area of the monument, the grave cuts would still be detectable (Arad 1987: 176). Secondly, popular misconceptions can be seen to exist regarding cremation, in terms of the belief that a body will totally be reduced to ash. Recent work in forensic cremation demonstrates total eradication of bones requires extremely high temperatures (Thompson 2004) and the observation of burnt bone fragments in the topsoil and in the cracks of the monument itself confirms this hypothesis. Finally, considerable evidence exists to suggest that not all the bodies were exhumed and cremated, thus mass graves are likely to survive. All of these features would present detectable anomalies in the archaeological record.

Five pits were located with the GPR to the far east of the memorial. Although the GPR survey was unable to achieve a large enough depth range to determine the full extent of these pits, it is possible to say that they were all deeper that four metres and that they were all of considerable size in plan (G50 was visible to an extent of 34 m x 12 m, G51 – 19 x 12 m, G52 – 22 m x 15 m, G53 – c. 18 m x 7 m and G54 was visible to 20,8 m x c. 14 m). Given their location in the area thought to contain most of the mass graves and their proximity to the memorial, there is a strong case for arguing that they represent further burials. Similarly, they appear too large to be a result of post-war looting activity." (*Ibid*., pp. 204f.; emphasis added)

In 2015, a 350+-page book by Sturdy Colls titled *Holocaust Archaeologies: Approaches and Future Directions* appeared, in which she mentions her Treblinka investigations occasionally as a mere example to illustrate general methods. Every now and then, short paragraphs appear that summarize some

specific problems. Regarding the actual research, the author limited herself to these brief remarks (Sturdy Colls 2015a., pp. 184f.):

> *"After 6 years of non-invasive research, the landscape of Treblinka extermination camp was mapped, buried remains were identified and areas containing mass graves were located. In order to identify the nature of some of the apparent buried structures in extermination camp, it was necessary to carry out small-scale excavations. Because the locations of several mass graves had been determined in previous field seasons using geophysical survey methods, it was possible to avoid excavating in the areas known to contain the remains of Jewish victims. This meant that the work could be carried out in accordance with Halachic Law.* […] *Small-scale excavations were instead carried out in the area believed to contain the Old Gas Chambers, as indicated by archival research and geophysical survey.* […] *Specifically, GPR survey had indicated the presence of buried structural remains measuring 22 x 15 m.* […]
> *Given its rectangular shape in plan, it seemed likely that this feature was in fact the foundations of a structure. In order to confirm the nature of its construction materials, and thus hopefully its exact nature, minimally invasive excavations were undertaken. This approach confirmed the presence of the Old Gas Chambers and allowed the bricks, tiles and other materials used to build them to be confirmed.* […] *This minimally invasive approach also prevented considerable disturbance to the remains* [sic]*."*

Among other things, the book contains a disparaging remark about Holocaust revisionists, which I will address in the following subchapter.

Also dating from 2015 is her article "Archaeological Investigations at the Extermination and Labor Camps at Treblinka," in which the British researcher wrote gross nonsense regarding the alleged gas chambers, which I will address below.

She starts by stating that 10,000-12,000 victims are attributed to the labor camp, and 800,000-1,000,000 to the alleged extermination camp (Sturdy Colls 2015b, pp. 86f.). Her method of investigation had allowed the identification of mass graves "without the need to disturb their remains, thus allowing Halacha Law to be respected," and without ground disturbance at the other sites (*ibid*., p. 87). She then provides an explanation of one of the most effective methods she had adopted (*ibid.*, pp. 88f.):

> *"A LiDAR survey was recently undertaken at Treblinka, covering an area of 3.75km² that encompasses both the extermination and labour camps. LiDAR allows depressions, earthworks and above-ground features to be recorded in three dimensions (Corsi et al. 2013). The ability of this technology to propagate the signal through vegetation such as trees means that it is possible to record features that are otherwise invisible or inaccessible using ground-based survey methods."*

This method confirmed the presence of three mass graves measuring 7.4 m × 6.5 m, 9.2 m × 6 m and 19.2 m × 17.6 m in the area of the former Treblinka I

Camp (*ibid*., p. 89). Sturdy Colls then discusses the alleged extermination camp in general (*ibid*., p. 90):

> *"In 2010, a programme of non-invasive archaeological work was undertaken at Treblinka extermination camp that consisted of geophysical, topographical, and forensic survey. In total 111 features were identified, the majority of which likely relate the former death camp, its deconstruction or post-war investigations. The presence of these features confirmed that, contrary to popular belief, Treblinka was not completely destroyed by the Nazis when they abandoned the site in August 1943, nor has any of the post-war activity on the site removed all trace of the former camp. The features identified were divided into probable boundaries, structural remains, pits and other features."*

She then examines in detail the question of the alleged gas chambers (*ibid*., pp. 90f.):

> *"Of central importance to our understanding of the layout of Treblinka extermination camp and how it functioned are the gas chambers. Many questions still remained about where these chambers were located and how they functioned. In 2010, I identified a structure measuring 22 x 15m in the death camp using Ground Penetrating Radar (GPR). Archival research and witness testimonies suggested that this structure could be the remnants of the Old Gas Chambers. In order to confirm this, a small test trench was excavated in the centre of the feature in 2013.*
>
> *A large amount of building material was recovered from this area. Of particular note were several orange and yellow ceramic tiles bearing a star and the letters D and L on their base. Large sections of brick walling, brick fragments, white ceramic tiles, concrete, plaster and cross-shaped wall supports were also found in abundance.*
>
> *Witnesses allude to the fact that the Old Gas Chamber building was modelled on a bathhouse/Jewish mikveh with white tiled walls and a floor that was 'covered with orange terracotta tiles' (Krzepicki 1979, 104). The discovery of the orange and yellow floor tiles appears to corroborate these witness accounts. Having noted that the tiles bore a star and, in some cases the letters D and L, it was possible to source their manufacturer. The tiles were made by a company called Dziewulski and Lange. Their headquarters is based in Opoczno and the company still trades under the name Opoczno. This company may also have had an office in Warsaw during the Second World War. The same tiles have been observed in a mikveh in Lublin, a synagogue in Wyszków and in the ruins of the Warsaw Ghetto. It is not yet known whether the tiles at Treblinka were taken from an existing structure (most likely in the Warsaw Ghetto) or whether the tiles were transported directly from one of the Dziewulski and Lange factories. Further research is being conducted to determine this.*
>
> *It is believed that gas was delivered to the Old Gas Chamber by way of a diesel engine (possibly from a Russian tank). Following the discovery of sections of wall and bricks, samples were sent for tests in order to confirm whether carbon monoxide was present. These tests confirmed that high concentrations of car-*

bon monoxide were present in the samples and that these were likely as a result of exposure to carbon monoxide, rather than its natural absorption from the air. Further tests are being carried out in order to confirm this theory.
It is clear from the nature of the material found and the in situ foundations that the Nazis attempted to demolish the walls of the building but left much of the building materials in the vicinity. The discovery of building materials in trench Treb03, which was outside the area of the foundations, revealed this material was spread over a large area. The depth of the foundations (0.85m) suggests that a large amount of redeposited sand was placed over the top of the foundations to mask them from view. This explains why, after the war and since, it was believed that the camp was entirely destroyed. It is also possible that some of the building materials found closer to the surface could also belong to the New Gas Chamber building which is believed to have been located in the vicinity."

Sturdy Colls finally reports on the human remains found (*ibid.*, p. 92):

"In the course of the excavations carried out in the death camp area, a considerable amount of human remains were encountered. These remains were not buried in mass graves but were rather scattered remains that had never been buried in a grave. As per the advice of Rabbi Michael Schudrich, the remains were reburied by a representative from his Office. Although it was not possible to carry out scientific analysis due to the stipulations of Jewish Halacha Law, it was possible to observe that many of the remains found were not cremated. All of the remains found were fragmented and disarticulated. Some of the remains did exhibit evidence of burning to varying degrees; some were white in colour suggesting prolonged exposure to flames, whilst others were superficially charred, suggesting a short period of exposure at low temperatures. This demonstrates that not all of the remains of the victims at the extermination camps [sic] *were cremated as documentary sources suggest. A concentration of gold and silver teeth, and dentures were also discovered in the area of the Old Gas Chambers, suggesting that they were removed from victims somewhere in the vicinity. This is consistent with witness accounts. As these remains are also bodily remains, they were also reinterred with the bone fragments that were found."*

In 2016, the article "'Earth Conceal Not My Blood': Forensic and Archaeological Approaches to Locating the Remains of Holocaust Victims" appeared, which provides the following data (Sturdy Colls 2016, pp. 180f.):

"The combined use of archival research, LiDAR survey and walkover survey allowed at least six potential graves to be identified in the area of the execution site to the south of the labour camp. Permission was granted for minimally invasive excavations at three of these sites. Here an approach was adopted that involved stripping the turf and topsoil away from the areas indicated in the LiDAR survey and digging small, minimally invasive test trenches at strategic locations within each feature. This approach was developed as a result of discussions with the museum, religious and archaeological authorities, and by drawing on the author's expertise as a forensic archaeologist. As victims from mul-

> *tiple faith groups may have been present, and given that the aim of the excavation was to confirm that human remains were present so that the grave could be marked, this minimally invasive approach was deemed most appropriate. It was also carried out in such a way that it would be possible to go back to each site to conduct a full exhumation in the future if this was deemed necessary. The excavations revealed the presence of disarticulated human remains belonging to multiple individuals in all three areas. Shoes and bullets were also recovered. The human remains were reinterred into the graves. As a result of this work, the museum authorities immediately erected markers on these three graves, which have already become the focus of commemorative activities at the site. This represents the first time that these graves have been marked and the first time since the post-war investigations that unmarked graves have been found and examined."*

Information about the alleged gas chambers is very nebulous (*ibid.*, p. 184):

> *"The excavations that were permitted at Treblinka in the terrain of the gas chambers resulted in the recovery of personal belongings including hair clips and jewellery. These items, alongside the scattered remains, dentures, teeth and other items that were recovered, provided the only evidence of individual and collective experiences in the absence of complete corpses. Through detailed research, including the analysis of witness testimonies, it has been possible to highlight some of these experiences and to explore some of the actions of the perpetrators."*

The final two sentences regarding the "collective experiences" are a verbal smokescreen to hide the absence of corpses.

Also in 2016, a 90-page booklet titled *Treblinka: Archaeological Investigations and Artistic Responses* appeared, which Caroline Sturdy Colls had written in collaboration with Michael Branthwaite. The contents of this booklet are announced with great rhetorical emphasis in the back cover:

> *"This book presents the major findings of the archaeological work, which included the discovery of the gas chambers, personal effects of the victims and mass graves."*

It should therefore expose an essential treatment of archaeological discoveries, but in fact it is quite disappointing. I report the most significant points.

The two authors confirm the discovery at Treblinka I of three mass graves of 7.4 m × 6.5 m, 9.2 m × 6 m and 19.2 m × 17.6 m.[281] In the chapter "The Gas Chambers," they write (p. 50):

> *"One of the key aims of the achaeological investigation at Treblinka was to determine the exact location of the gas chambers and how they functioned.* […]
> *A topographic survey of Treblinka revealed the presence of two depressions in a grassy area to the south-east of the memorial obelisk. Ground Penetrating Radar Survey (GPR) was then undertaken in this area and* [which] *revealed*

[281] Sturdy Colls/Branthwaite 2016, p. 28; all subsequent page numbers in the text from there unless stated otherwise.

structural remains measuring 22 x 15m. Based on the size and orientation of these remains, it seemed likely that they could be the old gas chambers building. An area of debris measuring 44 x 20m was also recorded. It seemed possible that this could be the remains of the new gas chambers.
In 2013, excavations were carried out to confirm the location and overall form of the remains identified in the GPR survey. This revealed that the 22 x 15m structure was made of brick and that it had in situ foundations. It also revealed that the old gas chambers had a tile floor, consistent with witness testimonies.
The discovery of these tiles proved that this building was modelled on a bathhouse, seemingly to deceive the people being sent there about their fate. The same tiles have been observed in a Jewish ritual bath (mikveh) in Lublin, a synagogue in Wydzków and in the ruins of the Warsaw Ghetto. It is not yet known whether the tiles at Treblinka were taken from an existing structure (most likely in the Warsaw Ghetto) or whether they were transported directly from one of the factories of the manufacturer, Dziewulski and Lange. Further research is being conducted to determine this. However, it is possible that the tiles were specifically chosen by the Nazis because they were already commonly used in Jewish ritual baths."

On mass graves, Sturdy Colls and Branthwaite state (p. 70):

"Topographic and geophysical surveys in the terrain of the extermination camp allowed eleven potential mass graves to be located. These non-invasive techniques respected Jewish Halachic Law by not disturbing the ground. The graves varied in size – the largest were 34m x 12m and 26m x 17m. However, some were bisected by the modern memorial so their overall dimensions could not be determined. It is likely that further graves exist under the monument since it was built to protect the areas believed to contain mass graves. The graves appear to be located in two distinct areas; some at the rear of the death camp area and some nearer to the reception camp area, consistent with witness accounts concerning the different methods of body disposal. […]
The forensic achaeological research has also shown that, contrary to popular belief, not all of these bodies of the victims at Treblinka were cremated and reduced to ash. In the course of the excavations carried out around the gas chambers, a considerable amount of human remains were encountered. These remains were not buried in mass graves but were rather scattered remains that had never buried in a grave. Many of these remains were not cremated at all. Other exhibited various degrees of burning. The majority were only superficially charred. A concentration of teeth and dentures were also discovered near the old gas chambers. This seems to confirm witness testimonies that suggest that the bodies were searched and dental implants were removed following the gassing. As per the advice of the Office of the Chief Rabbi of Poland, all of these remains were reburied within the grounds of the extermination camp."

The book is lavishly illustrated and features some sixty photographs and drawings, most of them rather insignificant. However, none of them documents in any way the claims about gas chambers and mass graves. Thus, there is a suc-

cession of large photographs on two pages showing the sifting of sand by an archaeologist (pp. 30f.), a shoe (!; pp. 32f.), a single blade of a pair of scissors (p. 45), two combs and a comb remnant (p. 46), two tiles (pp. 54f.), brick and concrete fragments (pp. 56f.), two pendants (pp. 60f.), miscellaneous items (pp. 64f.), to which I will return below.

Among the very few useful illustrations are two photographs of a survey excavation – the same excavation portrayed from two different angles – showing a small pit measuring approximately one meter by two, less than half a meter deep, in each of which Sturdy Colls is about to work wearing the same clothes and gloves (pp. 17, 29). The captions inform that these were "minimally invasive excavations" in the area of the mass graves. The most important images, to which I will return below, are a LiDAR survey map of the camp area (p. 52) and a map of the finds (p. 71).

In 2018, the article "'This is Proof'? Forensic Evidence and Ambiguous Material Culture at Treblinka Extermination Camp" by Caroline Sturdy Colls and Michael Branthwaite appeared. In it, the two authors provide some additional information about the survey excavations (Sturdy Colls/Branthwaite 2018, pp. 434f.):

> *"The latter* [her 2013 research] *specifically focused on the area where the gas chambers were thought to be located. A 1 m × 1 m trench (Trench 4) was excavated within a 22 m × 15 m anomaly recorded by the GPR survey, which appeared consistent with a building foundation. A further trench (Trench 3), measuring 2 m × 1 m, was excavated to the west of this area in an area of scattered debris identified in the GPR results.* […]
> *The excavation of Trench 4 confirmed that the 22 × 15 m anomaly in the GPR results did in fact represent the foundations of the first gas chambers built by the Nazis at Treblinka (known as the old gas chambers), which existed at a depth of 0.85 m below the ground."*

Regarding the "discovery of the tiles and building materials" which supposedly confirm "the location of the old gas chambers and the testimonies of witnesses that stated that the floor was covered with red/terracotta tiles," Sturdy Colls and Branthwaite rely "for example" on Krzepicki and Wiernik (*ibid.*, p. 441). Feigning a critical mindset, they add (*ibid.*, p. 442):

> *"In contrast, the discovery of personal belongings in the gas chamber area appears to challenge the accepted history of the site, which states that people were stripped of these items when they arrived at the camp. Upon discovering these items, further archival research was undertaken which did in fact reveal testimonies that stated that people were sometimes sent clothed into the gas chambers when the camp was operating to full capacity. In fact, a testimony written by Rudolf Höß, the camp commandant of Auschwitz-Birkenau, stated that this was common practice when he visited the camp in 1943 (Notes of the former camp commander Rudolf Höß, 1.1.2.0/ 82344521, ITS Digital Archive, USHMM). Likewise, although women sometimes had their hair cut prior to entering the gas chambers, witnesses allude to the fact that haircutting sometimes*

> *took place within the gas chamber building, prior to gassing, or even after people were killed (Bomba 1996; Rajchman 2011). This offers a viable explanation as to why large numbers of hair clips and combs were found in the rubble directly above and adjacent to the gas chambers' foundations (see Fig. 2)."*

Their Figure 2 shows photographs of two combs and twelve clips (*ibid*., p. 436): a truly significant sampling of this alleged "large numbers"!

In the 2016 book, the two authors had published as many as eight photographs of it on two pages, one for each object (including three objects equal to those in Figure 2), including a medal, an object resembling a belt buckle, and even a hexagonal bolt (Sturdy Colls/Branthwaite 2016, pp. 64f.).

Caroline Sturdy Colls' so far last major paper, written in collaboration with Dante Abate, appeared in 2018. It is titled "A Multi-Level and Multi-Sensor Documentation Approach of the Treblinka Extermination and Labor Camps." It contains information on the various methods used, but practically nothing concrete about the results of the archaeological investigations. In their brief historical paragraph, the authors repeat that the death toll of the alleged extermination camp amounted to 800,000-1,000,000, and that of the labor camp to about 10,000, "as a result of the Nazi 'death through work' policy and executions between autumn 1941 and spring 1944" (Abate/Sturdy Colls, p. 130).

6.3. Analysis of the Results of Archaeological Investigations by Caroline Sturdy Colls

6.3.1. The Mass Graves

The archaeological investigations of Sturdy Colls appear superficial and amateurish despite her use of the most advanced technology. As for the results, they are clearly far inferior to those obtained at Bełżec and Sobibór by Kola using a simple hand auger.

The Jewish law concerning burials (*halakhah*) was evoked by her in an almost superstitious way to the point of avoiding "disturbance to the remains" and even any "ground disturbance"![282] This seems to be a pretext for not carrying out large-scale excavations such as those authorized and carried out in Sobibór, but also in Bełżec, where Andrzej Kola had all the archaeological objects he had found in his surveys unearthed and photographed.[283] He also published many photographs of utensils and personal effects,[284] from which it appears that there were far more objects than those documented by Sturdy Colls. I will return later to Sturdy Coll's so-called test trenches.

---

[282] But she still reserved the right, in violation of this law, "to conduct a full exhumation in the future if this was deemed necessary"!

[283] Kola 2000a, Photos 60, 61 (p. 48), 63 (p. 50), 65 (p. 51), 67 (p. 53), 71 (p. 55), 72 (p. 56), 73 (p. 57), 76 (p. 59), 77 (p. 60), 78 (p. 61).

[284] *Ibid.*, Photos 84-118, pp. 71-84.

The methods of detection adopted by the British archaeologist are Electrical Resistivity Imaging, Ground-Penetrating Radar (GPR) and Light Detection and Ranging (LiDAR).

With the first two methods, she claimed to have identified eleven mass graves. In reality, as shown by her own plans of these surveys (Document 91), she did not identify defined geometric figures, but rather shapeless areas of ground disturbance, colored in yellow (here changed to white due to this being a b&w print; the numbering is mine) which she interpreted as mass graves and to which she arbitrarily assigned exact geometric shapes and dimensions.

Document 91a shows 10 yellow areas (white in Document 91b) representing the probable mass graves; since Sturdy Colls later increased their number to 11 ("eleven pits"), without giving any explanation, it is assumed that she considered the pit between Nos. 5 and 8 as two pits, which I therefore numbered 6 and 7.

Sturdy Colls states that a "number of pits were identified across the site, many of which were bisected by the memorial," and that it is "likely that further graves exist under the monument,"[285] but this is belied by her maps, particularly Document 92, from which it appears that no areas of ground disturbance intersect the monument, which I have marked with "M," nor the "symbolic cremation pyre," which I have marked with "P."

In three of these eleven areas of ground disturbance, Sturdy Colls performed mini-invasive excavations – that is, an excavation of about one meter by two, less than half a meter deep, in which she found human remains (Document 93). She describes the finds as "a considerable amount of human remains" and "a concentration" of gold and silver teeth and dentures. However, this does not mean anything, because Judge Łukaszkiewicz ascertained already in 1945 that human remains were scattered over a large area. The only thing that is certain is that Sturdy Colls, in her writings mentioned earlier, did not publish any photographs of these remains, which she said would have been immediately reburied. She surely had found *some* remains (compatible with an excavation the size of 2 m × 1 m), which she attempted to amplify with a rather silly rhetorical emphasis. This also applies to the claim that "considerable evidence exists to suggest that not all the bodies were exhumed and cremated, thus mass graves are likely to survive" – which of course will never be ascertained for the sake of not causing any "ground disturbance."

From the orthodox perspective, her statement makes little sense, because "a considerable amount of human remains" would have to be related to the number of alleged victims of the camp – at least 800,000 – so that even the discovery of *thousands* of whole corpses could not constitute a *considerable* amount.

She also greatly underestimated the excavation activity of the post-war "gold diggers," which she dismissed with a few lines here and there:

---

[285] The monument measures approximately 8 m × 6 m (= 48 m²), so even if there were another mass grave underneath it, the total volume of the pits would remain virtually unchanged.

> *"Some of the pits likely represent* [the result of] *post-war looting but a number of larger pits were recorded in areas suggested by witnesses as having housed mass graves and cremation pits."*
> *"Similarly, they appear too large to be a result of post-war looting activity."*

In her most voluminous book, the British archaeologist devoted a specific paragraph to this problem ("Case Study 11.5: Looting at Treblinka, Poland"), but even here she treated it with extreme superficiality. Her most significant statements are these (Sturdy Colls 2015a, p. 305):

> *"In the area of the Treblinka extermination camp in particular, looters have continued to dig at the site since the war. On the one hand, these activities allude to belief that Jewish gold exists at the site."*

In Chapter 3, I quoted detailed descriptions of the devastation of the former Treblinka Camp's grounds which began as early as 1944. I repeat what Rachel Auerbach stated about this in a book known to Sturdy Colls, since she referred to it:

> *"These human jackals and hyenas bring along live artillery shells and unexploded bombs. They explode several of them at once, tearing huge craters into the desecrated, blood-drenched soil which is comingled with the ashes of Jews."*

I also remind the reader that Judge Łukaszkiewicz found a bomb crater 4.5 meters deep in the area of the "camp hospital," as well as other craters in various places, the largest one with a diameter of about 25 and a depth of 6 meters, and he himself had excavations made in the so-called "death camp" which were 10-15 meters long and 1.5 meters deep. Finally, I would like to remind the reader that the looters' activity was so intense the following year that it was even echoed in the *Daily News Bulletin* of the Jewish Telegraphic Agency of November 24, 1946, which I have already quoted about Trawniki ("Jewish Mass Graves…"):

> *"Warsaw, 22 November (JTA). Police authorities today launched a campaign to put an end to looting of mass graves of Jews in the areas of Treblinka, Majdanek, Sobibor and Trawniki where Nazi extermination camps formerly existed."*

In an article published in 2008, Piotr Głuchowski and Marcin Kowalski described the devastation of the grounds of the former Treblinka Camp since 1944 by hordes of grave looters searching for valuables (Głuchowski/Kowalski):

> *"Jackals in human form cut holes in the sacred ground. In the autumn of 1944, Ukrainian and Russian guards appeared again in Treblinka – this time in the service of Stalin. With their arrival, the village excavations turned into an industry. The Soviets brought mines and unexploded shells from the airport located 10 km away in Ceranów. The charge was buried in a mass grave, the Soviets detonated it, and Jewish corpses flew through the air."*

Then the statement of a certain Karol Ogrodowczyk, a member of the Polish Commission of Inquiry mentioned earlier, is quoted as follows:

> *"The area has been dug and searched, the pits are 10 meters deep, there are human bones and scattered objects, shoes, spoons, forks, candlesticks, hair from wigs brought by Jews. The air is filled with the stench of rotting corpses.* […] *The stench stunned us so much that my colleagues and I began to vomit and felt an extraordinary burning sensation in our throats.* […] *Openings* [holes] *had been dug under each tree by gold diggers, diamond diggers.* […] *In the midst of the trees, the local peasants bustled about eager to find treasures. Questioned by us. 'Why do you do this?' they answered nothing."*

It is therefore clear that a part – if not a large part – of the areas of ground disturbance (Sturdy Colls's eleven pits) can be traced to the aforementioned bomb craters and manual excavations.

Since the 25-meter-diameter crater found by Judge Łukaszkiewicz had a surface area of about 490 square meters (but for Rachel Auerbach this was only one of the "huge craters"), the largest disturbance identified by Sturdy Colls, with its 442 square meters, could comfortably fit inside it, so that the British archaeologist's claim that the pits "appear too large to be a result of post-war looting activity" is blatantly fallacious.

In the following table I summarize the results of Sturdy Colls's investigations of the ground disturbances in the area of the former Treblinka camps, the labor camp (Treblinka I) and the alleged extermination camp (Treblinka II):

Treblinka I		Treblinka II		
Dimensions [m]	Area [m²]	Dimensions [m]	Area [m²]	Sturdy Colls's Label
7.4 × 6.5	48.1	34 × 12	408	G 50
9.2 × 6	55.2	19 × 12	228	G 51
19.2 × 17.6	337.9	22 × 15	330	G 52
		18 × 7	126	G 53
		20.8 × 14	291	G 54
		26 × 17	442	?
		10 × ?	?	?
Total:	441.2	Total:	1825+	

As for the alleged extermination camp, according to Sturdy Colls's drawing (Document 91), the three largest pits (with 442, 408 and 330 m², respectively) were the pits to which I assigned the numbers 1, 3 and 2. Based on the surface area of the drawings, it can also be assumed, that the pit measuring 19 m × 12 m (228 square meter) concsists of the two merged pits I numbered 6 & 7, and the pit measuring 20 m × 8 m (160 square meter) is my No. 4.

Of the eleven mass graves Sturdy Colls claims to have identified, she provides the complete dimensions of only six; for one she mentions only the length of one side (10 meters).

The remaining (11-6=) five pits, of which Sturdy Colls did not give the dimensions (including the one with one side of 10 meters), were on average no larger than Pit No. 4 (Documents 91 and 92), so that for all five one can assume an area of (160 m × 5 m =) 800 m²; the total area of all pits is therefore about (1825 m² + 800 m² =) 2,625 m², or about 2,600 m².

Already as early 2012, Sturdy Colls stated (Sturdy Colls 2012):

> *"The existence of mass graves was known about from witness testimony, but the failure to provide persuasive physical evidence led some to question whether it could really be true that hundreds of thousands of Jews were killed here.*
> *Although they lasted only a few days, those post-war investigations* [1945-1946] *remained the most complete studies of the camp until I began my work at Treblinka in 2010.*
> *This revealed the existence of a number of pits across the site.* […]
> *Some may be the result of post-war looting, prompted by myths of buried Jewish gold, but several larger pits were recorded in areas suggested by witnesses as the locations of mass graves and cremation sites.*
> *One is 26m long, 17m wide and at least four metres deep, with a ramp at the west end and a vertical edge to the east."*

So even then Sturdy Colls was well aware of the problem: if 800,000 to 1,000,000 people were killed in Treblinka, and almost[286] all of their corpses were buried in the area of the "death camp", she would have had to find a suitable number of mass graves with an appropriate total size. But already the comparison with the mass graves of Treblinka I, in her perspective, is shocking: here she claims to have found three mass graves of 441 square meters in all for 10,000-12,000 corpses, which amounts to a burial density of at most 27 corpses per square meter. In the presumed extermination camp, she claims to have found eleven mass graves of 2,600 square meters in all for 800,000-1,000,000 corpses. Taking the lowest claimed death-toll figures for both camps – 10,000 and 800,000, hence a factor of 80 difference – a simple arithmetic comparison shows that the British researcher should have found on the grounds of Treblinka II Camp at least a total surface area of (441.2 m² × 80 =) 35,296 square meters of ground disturbances in as many as 150 individual spots![287]

These figures are so disproportionate to what was actually found that Sturdy Colls's eleven areas with ground disturbances she calls "mass graves" are merely risible. She tried to overcome these insuperable difficulties with a lie. In a polemical note she wrote (Sturdy Colls 2015a, p. 347):

> *"Whilst uncovering and presenting the physical evidence of the Holocaust has a role to play in combating Holocaust revisionism and denial in all of its forms, it is important to acknowledge that it can also be utilised by those who deny these events. When the number of graves recorded within a survey area is an-*

---

[286] I will explain in Subchapter 7.2. this limitation, which is practically irrelevant in the present context.

[287] Assuming an average area of (2,600 ÷ 11 =) 236 m² per pit.

> *nounced, this may be used as 'evidence' that less victims died at the site in question. It will not be acknowledged that the area surveyed represented only a small proportion of a former camp area or a massacre site, and that further graves may exist elsewhere."*

In reality, when she wrote these lines in 2015, the mapping of the Treblinka area had already been concluded for some time, since it was thanks to this mapping that the British archaeologist had identified the eleven alleged mass graves and the areas of the alleged gas chambers. She knew perfectly well that no other mass graves existed, and she could not even make the excuse that "[m]uch of the area believed to have contained the pits in the main extermination areas is now masked by the modern memorial[285] or by the forest," because she herself explains that "[t]he ability of this technology [LIDAR] to propagate the signal through vegetation such as trees means that it is possible to record features that are otherwise invisible or inaccessible using ground-based survey methods."

Sturdy Colls was familiar with K. Trautsolt's plan and the one copied from it by S. Willenberg, since she published both (Sturdy Colls 2015a, pp. 123, 121), but without indicating – and without acknowledging – that in both plans the mass graves are located within the trapezoid of about 14,500 m² that I described above, which must have also contained the two alleged gassing buildings and, for Willenberg, also a cremation grate and a barracks for the inmates. She compared the Willenberg plan with a recent photograph of the Treblinka area (*ibid.*, p. 121),[288] so she knew where to look.

Therefore, the alleged mass graves are the 11 mentioned above and "elsewhere" there is no other grave.

No-less-devastating is the comparison with the indications of the witnesses. C. Sturdy Colls did not directly address this problem; he simply tried to evade it by adducing contradictory testimony:

> *"Some witnesses talk of pits as large as 60–70 m in length, whilst some allude to the presence of smaller ones, measuring approximately 25 m* […]*."*

The most-important witnesses are Jankiel Wiernik, Abraham Isaak Goldfarb and Eliahu Rosenberg.

In his manuscript report, Wiernik wrote:[289]

> *"The mass grave was 100 m long, 25 m wide, 15 m deep = 37,500 m³.* [*Masowy grób miał 100 m długości 25 m szerokości 15 m głębokości = 37.500 m³.*]*"*

In the typewritten report, he changed these measurements to 50 m × 25 m × 10 m:[290]

---

288 On this page, Willenberg's map appears at the top, the aerial photograph at the bottom.

289 J. Wiernik, "Relacje Żyda, uciekiniera z Treblinki, Janika Wiernika, zamieszkałego w Warszawy przy ul. Wołyńskiej 23, lat 53." Ghetto Fighters House Archives, Catalog No. 3166, Collection 11261, p. 1.

290 Wiernik 1944, p. 3; cf. Wiernik in Donat, p. 153.

> *"The size of each was approximately 50 x 25 x 10.* [*Wielkość każdego była około 50 x 25 x 10.*]*"*

Goldfarb stated the following:[291]

> *"From March 1943 until the first half of July, a methodical cremation was carried out of all newly arrived corpses and of the corpses burned* [had been buried] *in 14 large pits. At the end of July, it one more pit was successfully dug, in which corpses were burned. Thus, until the day of the prisoners' uprising on August 2, corpses were burned in 15 pits. 6 pits remained untouched. In order to imagine this huge quantity of killed and burned people, it is necessary to say that in the smallest pit there were not less than 100,000 corpses."*

Finally, Rosenberg asserted:[292]

> *"Now, our task was to drag the dead on wooden stretchers at a run to a pit about one hundred-and-twenty meters long, fifteen meters wide, and six meters deep, in which tens of thousands of corpses were already lying when I arrived at the death camp."*

Sturdy Colls should also give credit to Chil Rajchman, a witness she mentioned, who wrote (Rajchman, p. 60):

> *"The pits were dug by a bulldozer (later on there were three of them). The pits were enormous, about 50 metres long, about 30 wide and several storeys deep. I estimate that the pits could contain about four storeys* [8-12 m]*."*
>
> *"In June* [1943] *fewer transports arrive. The new oven is ready. Corpses are speedily thrown into it. The work of clearing out the pits likewise proceeds at a rapid pace. Ten pits have already been entirely cleaned out. The last, the eleventh, pit is one of the four biggest, where a total of a quarter of a million people lie."* (*ibid*., pp. 83f.)

Assuming an average pit depth of six meters and a density of ten bodies per cubic meter (see Subchapter 7.2), Goldfarb's smallest pit had an area of 1,667 m², one of Rajchman's largest had an area of 1,800 m².

Keep in mind that the largest area of ground disturbance located by Sturdy Colls had an area of 442 square meters. In the following list I compare this with the data contained in the testimonies of the aforementioned witnesses:

- Sturdy Colls 442 m²
- Wiernik 1,250 m²
- Goldfarb 1,667 m²
- Rosenberg 1,800 m²
- Rajchman 4,166 m²

In essence, Sturdy Colls has demonstrated with her archaeological research that these witnesses were shameless liars.

6.3.2. The "Gas Chambers"

Thanks to her LiDAR survey, Sturdy Colls obtained a mapping of the area of the former Treblinka Camp in which she identified

> *"the presence of two depressions in a grassy area to the south-east of the memorial obelisk. Ground Penetrating Radar Survey (GPR) was then undertaken in this area and* [which] *revealed structural remains measuring 22 x 15m. Based on the size and orientation of these remains, it seemed likely that they could be the old gas chambers building. An area of debris measuring 44 x 20m was also recorded. It seemed possible that this could be the remains of the new gas chambers."*

The LiDAR image she published (Document 94) shows something like craters without geometrically regular contours and clearly shows that these possible remains are only a forced interpretation of the ground disturbances found. On their detection with the GPR system, Sturdy Colls only says that thanks to this system she identified merely an "anomaly," not defined masonry foundations, which she later transmogrified into "structural remains measuring 22 x 15m." A comparison with the claimed shape and location of the two buildings (Document 95) clearly excludes that these ground disturbances were outlined and measurable geometric figures. The presence of a structure "made of brick" was only a supposition, which the British archaeologist wanted to "verify" by digging an evaluation trench at the center of the relative area, which she called Trench 4 or Trench Treb04, measuring just 1 m × 1 m! She is very evasive about this excavation, but apparently it is the excavation depicted in one of the photographs she published (Document 96), with an equally evasive caption:

> *"The large sand deposits that were dumped over the top of the Old Gas Chambers by the Nazis."*

Another image (Document 97) shows the "Evaluation Trench Treb04." It represents the horizontal section of the aforementioned excavation of 1 m × 1 meters with an indication of its contents: "structural remains (stone and brick)" and "structural debris (brick, tile and stone)."

This 1 m × 1 m excavation is evidently the deepest square hole in Document 96, the one from which an unfolded two-meter stick emerges.

With the usual hyperbolic exaggeration, often bordering on the ridiculous, the British archaeologist claims that a "large amount of building material was recovered from this area." She documented this with images, presenting, as I noted above, photographs of two tiles and a few brick and concrete fragments!

The discovery of bricks and rubble in an area where years of bomb blasting and excavation of the ground by "gold diggers" had littered what had previously been under the sand, only proves that the rubble found by Sturdy Colls was located in that 1 m × 1 m excavation area – nothing else. No one can say that they were already there in 1942-1943, and no one can say that the anomaly in question was originally a building. To obtain at least this certainty, it would be

necessary to carry out real excavations as in Sobibór and unearth any foundations in their entirety.

Here an enormous inconsistency must be pointed out: how is it possible that the same political authority (the Ministry of Culture and National Heritage) and Jewish-religious authority (the Office of the Chief Rabbi of Poland), in the same years, authorized the excavation of the ruins of the alleged gas chambers at Sobibór, but vetoed it in Treblinka? In fact, for Treblinka it, only permissions "for minimally invasive excavations at three of these sites" was granted.

The fact that Sturdy Colls never even touched on this issue raises the suspicion that the decision not to excavate was made locally, in an understanding between the museum authorities and Sturdy Colls herself. She was well aware of the absolute inanity of her discovery, and feared that this would be exposed even more by more-extended archaeological excavations.

Regarding this alleged discovery, the British archaeologist in fact reasons as if the soil she found in Treblinka in 2010 was the same soil that had been left there by the SS after their departure. In reality, at the beginning of 1946, the state of the soil was completely different. As mentioned in Subchapter 6.1., the terrain's state was described by Rachel Auerbach's succinct observation ("Not one level place in the whole area. Everything had been torn up and dug up, little hills and holes."). A photograph from the time (Document 98) fully confirms this observation. In 1997, when I visited the camp together with Jürgen Graf, the ground was leveled and flattened, as can be seen in a photograph of mine showing the area of Pit No. 3 and the alleged gas chambers (Document 99).

Basically, all Caroline Sturdy Colls has "discovered" is merely that there is an anomaly in the ground, at one point of which there is some scattered building debris. Her claim that her "approach confirmed the presence of the Old Gas Chambers" is therefore a pathetic logical fallacy.

As for the alleged building containing the new gas chambers, the British archaeologist's demonstration is even more fallacious and inconsistent. At the relevant site there was only an "area of debris measuring 44 x 20m," which is even less of an actual building ruin than the claimed "structural remains" measuring 22 x 15 meters, even though C. Sturdy Colls calls them both "areas of structural debris" in her 2013 paper:

> *"As confirmed by topographic and geophysical techniques, two areas of structural debris appear to represent the remnants of the gas chambers* […]*."*

In the related follow-up excavation, Sturdy Colls found personal effects that "appears to challenge the accepted history of the site, which states that people were stripped of these items when they arrived at the camp." As the only witness, she thoughtlessly names Rudolf Höss, the former Auschwitz commandant, who she claims "visited the [Treblinka] camp in 1943." This is false. In his contradictory (and far-fetched) statements, Höss said that he visited Treblinka in 1941 or, at the latest, in the spring of 1942, when the Treblinka Camp

did not yet exist, and that he found there ten gas chambers of about eight square meters, each capable of containing 200 people (25 people per square meter). In the interrogation of April 1, 1946, Höss asserted that the relevant building was "built next to a ramp and the train drove right up to it. The people were unloaded right into the chambers," and in his essay "The 'Final Solution' of the Jewish Question in the Auschwitz Concentration Camp," he confirmed that these were "built directly by the railway track. The Jews went straight into the gas chambers without undressing, by way of a platform which was level with the tracks" (see Mattogno 2020, pp. 200-204). So, if we generously ignore the blatant anachronism of his alleged visit, the alleged Treblinka gas chambers were located in Camp I, close to the railway track according to Höss!

Sturdy Colls's reference is therefore intentionally fallacious: Höss's testimony not only does not eliminate the contradiction of finding personal effects where they were not supposed to be, but it also contradicts the orthodox narrative regarding the location of that building and how the victims are said to have entered it.

Two issues related to the findings deserve special consideration. The British archaeologist adduces a kind of "chemical evidence" with which she perhaps wished to mimic – in a rather foolish way – Fred Leuchter's findings at Auschwitz. In 2015 she wrote:

> *"It is believed that gas was delivered to the Old Gas Chamber by way of a diesel engine (possibly from a Russian tank). Following the discovery of sections of wall and bricks, samples were sent for tests in order to confirm whether carbon monoxide was present. These tests confirmed that high concentrations of carbon monoxide were present in the samples and that these were likely as a result of exposure to carbon monoxide, rather than its natural absorption from the air. Further tests are being carried out in order to confirm this theory."*

Germar Rudolf, a chemist by education and an authoritative revisionist historian and publisher, when I queried him on this issue, replied (I summarize and simplify) that carbon monoxide, under normal conditions, cannot bind to a wall element for the long term. A compound between iron oxide (Fe_2O_3) and CO is certainly possible, but it is not stable for long periods of time. Unlike cyanide, which reacts with iron salts already at low concentrations and under normal conditions, CO is essentially inert. For Sturdy Colls's assertion to be acceptable, two things need to be demonstrated:

a. The chemical pathway leading to the formation of any kind of chemical component containing carbon monoxide and iron; and
b. that this compound can persist for decades under the sand.

Rudolf is known to be an expert on the formation of ferric ferrocyanide, or Prussian Blue, from hydrogen cyanide acting on masonry. As he has amply demonstrated, this Prussian Blue is a long-term-stable compound (see his exhaustive study Rudolf 2020). Sturdy Colls, however, speaks of the presence in masonry samples of *carbon monoxide*, which is a gas! She implies that this gas

penetrated into these samples during the years 1942-1943, and that it then remained trapped in these samples for over seventy years!

Unfortunately, the British researcher is silent about the type of analysis performed on these samples, the laboratory that is said to have performed them, and the quantitative results of them.

After this impromptu and ignorant foray into the area of analytical chemistry, she completely abandoned this fable and wisely never spoke of it again.

The other, apparently more-serious, issue is that of the discovery of tiles (presumably two), in the famous 1 m × 1 m excavation. She shows those tiles in two full-page color photographs (Sturdy Colls/Branthwaite 2016, pp. 54f.). She twice quotes a phrase by Abram Jakub Krzepicki from Alexander Donat's oft-cited book, in which the tiles strangely change their color:

> *"Witnesses allude to the fact that the Old Gas Chamber building was modelled on a bathhouse/Jewish mikveh with white tiled walls and a floor that was 'covered with orange terracotta tiles' (Krzepicki 1979, 104)."*

And in her 2018 paper, she wrote that "the testimonies of witnesses that stated that the floor was covered with red/terracotta tiles," with the same reference to Krzepicki and also to Wiernik.

As quoted in Subchapter 3.5., Krzepicki had stated:

> *"The walls were very nice and carefully covered with white tiles. The floor was made of red-yellow terracotta tiles."*

One of the two tiles photographed by Sturdy Colls is in fact red, and the other one of a pale-yellow color. With another daring paralogism, she came to the conclusion that these tiles confirm a) that the place where they were found was the structure with the old gas chambers, and b) that this structure was disguised as a bathhouse.

In her mythomania, she launched into a series of inane lucubrations (Sturdy Colls 2015a, pp. 348f.):

> *"Although conveniently ignored by deniers, the archaeological results at Treblinka actually disprove many long-established revisionist theories about the camp. Based on the GPR survey mentioned above, revisionists argue that the ground was not disturbed, but geophysical survey by the author has confirmed the presence of considerable disturbance across the entire former camp area and has resulted in the identification of many camp structures and mass graves. The discovery of the tiles and foundations of the gas chambers definitively disproves denier theories that the site was only a transit camp and confirms witness testimonies that these buildings were modelled on bathhouses. In fact, the archaeological evidence has confirmed various witness descriptions which state that 'the floor was covered with orange terracotta tiles' (Krzepicki in Donat 1979, p. 104) and demonstrated how the Nazis tried to hide the traces of their crimes by demolishing* [and] *burying the gas chambers under almost a metre of sand. The discovery of human remains and personal belongings of victims attest to the brutality of the camp."*

This quoted text dates back to 2015. The book on Treblinka compiled by Jürgen Graf and myself appeared in its first English edition in January 2004, and contains no mention of the thesis that "the ground was not disturbed." On the contrary, it exposed for the first time the "disturbance" of the terrain carried out by Judge Łukaszkiewicz's investigations (Mattogno/Graf, pp. 82-89) that I discussed above. Since this was (and remains) the only revisionist book on this camp, Sturdy Colls was tilting at windmills.[293]

Her claim that the "discovery of the tiles and foundations of the gas chambers definitively disproves denier theories that the site was only a transit camp and confirms witness testimonies that these buildings were modelled on bathhouses" is precisely another formulation of the paralogism I alluded to earlier.

It is all-too-easy to argue, based on "eyewitness" testimony, the opposite point:

1. These terracotta tiles originated literally from the "steam chambers," as I documented in Section 3.9.1.: "the floor in the [steam] chambers is covered with a terracotta flooring."
2. They then were adopted for Wiernik's "gas chambers", who mentioned a "terracotta floor" (*ibid.*)
3. Krzepicki described an "ordinary bathing hall" (see Subchapter 3.5.):

   > *"I cast a glance inside through one of the two sturdy iron doors painted white that was open. I saw a not very spacious hall – an ordinary bathing hall with all the normal equipment of a public bath. The walls were very nice and carefully covered with white tiles. The floor was made of red-yellow terracotta tiles. From the ceiling hung showers ... and ... nothing else. A cozy, well-cleaned bathhouse in the middle of the green woods. There was nothing else to see there."*

   Therefore, the discovery of the two tiles in question could only prove that they belonged to a bathing establishment, which would be a *confirmation* of the revisionist thesis.
4. There is no certainty that these two tiles were in that exact spot since 1942. It is possible, and even probable, that they ended up there because of the explosions that were set off in the area of the camp or excavations by looters (or both).
5. Sturdy Colls's claim to have found the foundations of a building is a further paralogism, because she merely brought to light – in an excavation of just

---

293 Editor's remark: Sturdy Colls's remarks were probably aimed at a brief news article by Australian engineer Richard Krege about his 1999 ground-penetrating-radar research at Treblinka as published in a German-language revisionist magazine in 2000, which states (Krege, p. 63):

> *"The comparison of this* [GPR] *image with* [GPR] *images of areas where the soil is known to be untouched and essentially free of disturbances shows that the radar images taken by the Australians in the Treblinka Camp show an almost perfect soil untouched by man."*

However, Krege managed to scan only a small part of the former camp area. Due to a lack of funding and time, he was unable to scan the rest of the camp. As a result, Krege refused to publish his entire dataset, because he considered it highly incomplete and inconclusive. See Neumaier/Rudolf, p. 505.

one square meter! – a little rubble, which, like the tiles, could have originated from another location.

6. According to Wiernik, "Along the chambers was the electric power station, almost the same size as the chambers, but higher than the height of the ramp." Sturdy Colls does not consider it at all. If we were to follow Wiernik, the rubble in question could also have come from this structure.
7. It is unclear how she inferred from the LiDAR and GPR surveys of the ground that the two anomalies found had the exact measurements of 22 m × 15 m (first building) and 44 m × 20 m (second building). The fact is, however, that these measurements contrast with those indicated by the witnesses:
   - Wiernik:
     - first building: three chambers of 5 m × 5 m = a building of 15 m × 5 m;
     - second building: five chambers of 7 m × 7 m on two sides = a building of 49 m × 16 m (with a central corridor of 2 m width);
   - Goldfarb:
     - first building: three chambers of 5 m × 4 m = a building of 15 m × 4 m or 12 m × 5 m;
     - second building: five chambers of 6 m × 6 m on two sides = a building of 36 m × 14 m (with a central corridor of 2 m width).

For the Israeli historian Yitzhak Arad, highly regarded by Sturdy Colls, the chambers in the first building measured 4 m × 4 m (Arad 1987, p. 31) = a building of 12 m × 4 m; those in the second building measured 4 m × 8 m (*ibid*., p. 119) = a building of 40 m × 10 m (with a central corridor of 2 m width) or 20 m × 18 m (with the same corridor).

Summarized:

	Wiernik	Goldfarb	Arad	Sturdy Colls
old chambers	15 m × 5 m	15 m × 4 m or 12 m × 5 m	12 m × 4 m	22 m × 15 m
new chambers	49 m × 16 m	36 m × 14 m	40 m × 10 m or 20 m × 18 m	44 m × 20 m

Sturdy Colls and Wiernik's order of magnitude regarding the "new chambers" is almost compatible – 880 m² vs. 784 m² = 112% – but that regarding the "old chambers" is absolutely incommensurable: 75 m² vs. 330 m² = 440%! How could she seriously believe that a 75-square-meter building had left a footprint of "structural remains" of 330 square meters in the ground?

These inconsistencies add to the fact that the British archaeologist's own investigations into the mass graves have shown that the witnesses were liars: and if they are demonstrably untrustworthy about the mass graves, why should they be trustworthy about the alleged gas chambers?

But what defeats all of Caroline Sturdy Colls's fanciful lucubrations on the alleged gas chambers already by itself is her pretentious historical ignorance.

By the ineffective and inconclusive methods I have described above, particularly on the basis of a few tiles and a bit of rubble, she claimed to have determined "the exact location of the gas chambers and how they functioned" and that they were disguised as a "bathhouse", but at the same time she was unable to distinguish a real shower room from an (alleged) gas chamber, since she published a photograph of the real shower room in Barracks 41 ("*Bad und Desinfektion I*") of the Majdanek Camp with the following caption (see Document 100):

> *"The gas chambers at Majdanek, which were modeled on showers."*

6.3.3. Conclusion

From an orthodox Holocaust perspective, Sturdy Colls's archaeological research proves to be a total failure with regard to both the mass graves and the alleged gas chambers. She realized this well back in 2015, when she at least tried to mitigate the chasm that exists between her archaeological findings and the testimonies with superficial methodological remarks (Sturdy Colls 2015a, pp. 342f.):

> *"However, it should also be borne in mind that archaeological findings may conflict with witness testimonies and this can present new challenges to investigators. This is a trend that has recently been identified in the context of forensic archaeology* […]. *Witnesses may be adamant that a particular building was situated in a particular location or that it was of a specific size, details which may be disproved by the use of geophysics or the excavation of a particular feature. They may recall the size of mass graves and account for the number of bodies that they believe to be in that grave. In some cases archaeological investigations may prove these accounts to be accurate but in others they may show that the grave was larger or smaller, or that the number of bodies was different. Where the size of a grave is shown to be smaller, this will* [of] *course likely to result in revisionists suggesting that the witnesses have lied and that crimes were not as severe or did not take place at all.* […]
>
> *It will rarely be the intention of archaeologists to discredit witnesses (unless of course accounts are found to be deliberately falsified). Rather, it will be the intention to demonstrate that archaeological work can supplement and complement witness testimonies, the accuracy of which will have undoubtedly been influenced by the oppressive situations people found themselves in and the ability of individuals to recall information about events that occurred decades ago."*

This means that, when the archaeological investigation is in agreement with the testimonies, this is a confirmation of their truthfulness and the reality of the gas chambers; when it is in disagreement, this is only because they were "influenced" by adverse conditions and their difficulty in remembering events that happened "decades ago." With this, Sturdy Colls shows that she has no idea that all the most-important testimonies about Treblinka were rendered between 1944 and 1947.

According to this further paralogism, archaeological investigation can only confirm the testimonies, never refute them.

Sturdy Colls's historical-methodical ignorance is equal only to her arrogance. Her entire archaeological project is a huge bluff; she cannot even claim originality of the idea, which was copied by her from the ground-penetrating-radar research carried out in October 1999, also at Treblinka, by the Australian engineer Richard Krege in the company of Jürgen Graf, in whose initial phase at Birkenau I also participated (Document 101; see Krege 2000).

The British archaeologist mentions this in reference to "a GPR survey supposedly undertaken in 2000 [recte: 1999] by Richard Krege" (*ibid*., p. 348).

With incredible conceit and self-delusion, she instead considered her vacuous surveys of immense value, such that she could counter revisionism by simply disseminating her meager results (*ibid*., p. 349):

> *"Although Holocaust denial cannot be prevented, attempts can be made to combat it by the widespread dissemination of the archeological surveys through education programmes, archaeologists also have a role to play in tackling the prejudices that are at the root of many denial arguments."*

In reality, the dissemination of these "archaeological surveys" can only deal a lethal blow to archaeological-historical prejudices and exterminationist delusions about Treblinka.

The concluding sentence might also betray the actual essence of her real agenda, which lies far not only from archeology, but apparently also from objective truth itself.

Part Tree:

Expected Material Evidence

7. Exhumation and Cremation

In this chapter, I will examine whether the results of the archaeological investigations on the grounds of the former Operation-Reinhardt Camps Bełżec, Sobibór and Treblinka as set out earlier are compatible with the burial of the enormous number of corpses as declared by witnesses and orthodox Holocaust historians, as well as whether their claimed incineration on outdoor fires is consistent with the actual conditions. To begin with, I lay out the baseline data.

7.1. The Number of Alleged Victims

In 2001, Peter Witte and Stephen Tyas reported the discovery of an important document, a German radio message that had been intercepted and deciphered by the British. This message had been sent on January 11, 1943 by SS *Sturmbannführer* Hermann Höfle to SS *Obersturmbannführer* Willi Heim (Witte/ Tyas, p. 469). It concerned the intake ("*Zugang*") of deportees in the camps of the "*Einsatz Reinhart*." The figures, as of December 31, 1942, were: 24,733 for Lublin, 434,508 for Bełżec, 101,370 for Sobibór, and 713,555 for Treblinka, for a total of 1,274,166 deportees.[294]

The figure for Bełżec was accepted as definitive by Western Holocaust historians, but Robert Kuwałek tweaked it slightly upward and set the minimum number of alleged victims at 440,823 and the maximum at 453,021 (Kuwałek, p. 170).

In the discussion that follows, I therefore assume the minimum figure of 440,823 presumed victims, which I round up to 441,000.

With regard to Sobibór, the figure given by the most-competent orthodox historian of this camp, Marek Bem, is approximately 300,000 victims.[295] For Treblinka, Polish historian Jacek Andrzej Młynarczyk gives the exact figure of 780,863 victims (Młynarczyk, p. 97), which I round up to 781,000.

To summarize:

---

[294] The figure 71355 appears for Treblinka; the correct one, 713,555, results from subtracting the other partial figures from the total. The camps are indicated by their respective initial letters.

[295] Bem 2015, pp. 40, 222, 304, 355, 356, 372. Oddly, this figure is scattered throughout the book but does not appear in the paragraph where the author discussed in detail the deportations to the camp, and the number of victims (Chapter IV.9., "Transports from the General Government. The total number of victims of the German extermination centre in Sobibór", pp. 161-182).

Bełżec:	441,000
Sobibór:	300,000
Treblinka:	781,000
In Total:	1,522,000

7.2. Mass Graves

In the chapters on the archaeological investigations carried out in the individual camps, I noted that the data on the mass graves in Bełżec given by Kola – about 5,490 square meters and 21,310 cubic meters – are inflated by a good 50%, so that the more-realistic values are about 3,000 square meters and 10,800 cubic meters, respectively. In the pertinent chapters, I have shown that the figures for Sobibór and Treblinka are also exaggerated. To this should be added that the pits had to have sloping side walls in order to prevent their collapse (see below), so their actual volume is further reduced.

In the following table I summarize the official archaeological data:

Camp	Area [m²]	Volume [m³]
Bełżec	5,490	21,310
Sobibór	3,550	15,050
Treblinka	2,600	15,600

Sturdy Colls did not indicate the depth of the pits at Treblinka. The average depth of those at Bełżec was about 3.60 meters, that of Pits Nos. 1-6 at Sobibór (the deepest) about 4.60. In Treblinka, the depth of the pits found by Judge Łukaszkiewicz was 7-7.5 meters, but the British archaeologist noted that the alleged gas chambers were buried "under almost a metre of sand," and claimed that this was done by the "Nazis [who] tried to hide the traces of their crimes." In Bełżec and Sobibór, the findings were made also after digging through a layer of soil, so these areas were also covered with a layer of sand or soil. This layer clearly reduces the mass graves' effective depth for containing human remains, cremated and otherwise. In addition, at war's end, the grounds of the former Treblinka Camp were not level, but completely uneven, full of craters, holes and knolls, so the Łukaszkiewicz's measurements do not reflect the original state of the ground. I therefore assumed the depth of 6 meters, almost identical to the maximum depth attributed to the pits at Sobibór (5.8 meters) and, for what it is worth, identical to that stated by E. Rosenberg.

Before examining the issue of the mass graves' capacity, some clarifications must be made.

According to orthodox Holocaust historiography, the corpses of the victims allegedly gassed were all buried in mass graves in Bełżec Camp, then later exhumed and cremated. The number of buried corpses is therefore 441,000.

In Sobibór, cremation is said to have begun as early as the beginning of October 1942, when approximately 80,000 deportees had arrived at the camp. (Graf/Kues/Mattogno, pp. 123-126). This is therefore the number of bodies interred.

In Treblinka, cremation is said to have been carried out from April to July 1943 (Mattogno/Graf, p. 147). According to Arad, the total number of victims was 881,390, 824,170 of whom by December 31, 1942, and a total of 866,790 by March 1943, hence 42,620 from January to March 1942 (*ibid*., pp. 102f.).

Manfred Burba calculated a total of 912,000 victims, of whom 837,000 were killed up to December 31, 1942, and 893,000 up to March 1943, hence 56,000 from January to March 1943 (*ibid*., p. 104).

For 1943, Arad considered 57,220 victims, Burba 75,000. Since the "Höfle telegram" attests to 713,555 deportees at the end of 1942, Młynarczyk's figure is compatible with Burba's: 780,863 – 713,555 = 67,308, a figure that represents the deportees in 1943. It constitutes almost 90% of Burba's (75,000), so the number of deportees from January to March 1943 can be considered to be (56,000 × 0.9 =) about 50,500. The total figure is therefore (713,555 + 50,500 =) about 764,000, which refers to the corpses buried in mass graves. For the thickness of the layer of soil covering the mass graves, I assume the figure for the pits at Treblinka I discovered by the Soviets: 0.5 meters.

I summarize the data in the following table:

Camp	claimed no. of buried corpses	volume of mass graves in m³	number of bodies per m³ of grave	effective[1] grave volume [m³]	number of bodies per m³ of grave
Bełżec	441,000	21,310	20.7	~ 18,565[2]	~ 23.8
Sobibór	80,000	15,050	5.33	~ 13,275[3]	~ 6.0
Treblinka	764,000	15,600	50.0	~ 14,300[4]	~ 53.4

[1] with a cover layer of 0.5 meter of sand deducted
[2] Bełżec: 5,490 m² × 0.5 m = 2,745 m³; 21,310 m³ – 2,745 m³ = 18,565 m³
[3] Sobibór: 3,550 m² × 0.5 m = 1,775 m³; 15,050 m³ – 1,775 m³ = 13,275 m³
[4] Treblinka: 2,600 m² × 0.5 m = 1,300 m³; 15,600 m³ – 1,300 m³ = 14,300 m³

The disproportionately different data about the claimed packing density of bodies in the graves constitutes the first insuperable contradiction.

It remains to be established how many corpses can be deposited in one cubic meter of mass grave. Marek Bem addressed this issue as follows (Bem 2015, p. 215):

> *"In order to establish the approximate number of victims buried in one grave (which was of a specific size), it is possible to make an attempt to estimate how much space one body took up. Since among the murdered were both men and women, children and adults, I have limited this analysis to the 'overvalued average', which means the body of an adult man. If we use this ratio in calculating the number of bodies buried by the Germans in the burial pits, this, still has to be a very careful calculation on account of the fact that small women and*

> *even smaller children will be omitted. Also, it is not possible to measure the empty space between the bodies, but if we consider the average height of a man to be 173 cm, we might accept, then, that the space taken up by the human body is 0,093 m³.*
> *The Germans aimed at the most effective utilisation of the burial pits; it seems plausible, therefore, that they must have made sure that the burial commando arranged the corpses as carefully and effectively as possible.*[296] *If we assume the average volume of a human body to be 0,093m³, any calculations of the size of a typical burial pit will be a realistic estimate. Normally, burial pits are described as cubic in shape. In Sobibór, however, the huge graves must have been the shape of an isosceles upside-down trapezium, with the shorter base at the bottom of these graves. The deeper a given pit was, the more sloping it* [its walls] *had to be, in order to prevent its sides from sliding inwards.*
> *The soil in the area of former camp III is sandy, which, on the one hand, made it easier to dig burial pits, but, on the other, made the graves less stable. Following these lines, we may accept the notion that the edges of all the pits were cut at an angle.*
> *However, the precise angle of inclination of the sides of the pits remains unknown, and it obviously depends on the size of each particular pit. In my calculations of the volume of the graves uncovered in the area of the former camp, I put forward that the slope indicator had to be about 60 degrees. As the total volume of the four pits uncovered so far (these were the pits made in the first phase when Sobibór was in operation, i.e. the corpses were buried there) amounts to 15,000m³, it can be assumed that if filled up to the full, they could have accommodated more than 120,000 human corpses."*

The purely conjectural number of 120,000 corpses subsequently becomes real (*ibid.*, p. 218):

> *"Soon afterwards, it was decided that the dead bodies should be burnt, hence, the Nazis brought to Sobibór an excavator with the aim of digging up those more than 120,000 corpses in order to burn them."*

If assuming a volume of 0.093 cubic meters per corpse, 10.7 corpses could fit into one cubic meter of pit.[297] This purely theoretical figure is contradicted by practical experience. In Katyn, the Germans discovered seven mass graves with a total area of about 478 square meters and an average depth of about 2.30 meters, which were filled with corpses to a height of 1.5 meters (= 717 m³). In these graves, 4,143 bodies were found, an average of (4,143 ÷ 717 m³ =) 5.8 per cubic meter (Auswärtiges Amt, pp. 39f., 47).

The "Report of the Medico-Legal Examination of the Mass Graves in the Vicinity of the Town Žagare" in Lithuania and the "Report of Medico-Legal

---

296 This was explicitly stated by Bolender, but according to Gomerski, the corpses were dumped into the pits directly from the carts from a kind of jetty (see Subchapter. 5.6.); Rudolf Reder, on the other hand, repeatedly stated that at Bełżec the corpses were "thrown into the pits haphazardly" ("*bez porządku*," "*w nieładzie*"); see Mattogno 2021a, pp. 19, 22, 26.

297 Although Bem's numbers – 120,000 corpses in 15,000 m³ of space, "filled up to the full" – amount to eight corpses per cubic meter only.

Visual Examination of the Site of the Mass Graves in the Vicinity of Žagare," compiled by the Soviets on September 24, 1944 (Jakovlev, pp. 50-54), mention three mass graves with corpses of Jews shot by the Germans, the largest of which measured 122 m × 4 m × 2 m and contained 2,402 corpses. Of these, 20 were subjected to autopsy, the remaining 2,382 to visual forensic medical examination. This group included 1,213 corpses of women, 524 of men, 622 of children and young people up to 15 years of age, and 23 of infants. Since the cover layer of the pit was 30 centimeters, the actual volume of the pit was (122 m × 4 m × 1.7 m =) 829.6 m³, so the density of the corpses in it was (2,402 ÷ 829.6 m³ =) 2.9 per cubic meter. It is true that the corpses were placed there "without order," but it is also true that women accounted for 51% of the visually examined corpses, men for only 22%, and children and young people up to 15 years of age, including infants, for 27%.

In our Treblinka study, we assumed a packing density of eight corpses per cubic meter (Mattogno/Graf, p. 137), which I also adopted for Bełżec (Mattogno 2016, p. 85) and for Sobibór (Graf/Kues/Mattogno, p. 131). However, to prove *a fortiori* the absurdity of the orthodox Holocaustic thesis, one can also assume a maximum density of ten bodies per cubic meter of small, medium, and large men and women, as well as children of all ages.

However, this does not help much to support Bem's calculation.

First of all, the first four pits, which are also the largest, had a surface area of 2,715 square meters and a total volume of 12,987 cubic meters (see Subchapter 5.5.). Moreover, if we assume that all sides of the pits were inclined by 60°, the actual volume is further reduced.

Secondly, one cannot pretend that the "Höfle telegram" for Sobibór contained only a portion of the deportees. As noted earlier, the figure of 101,370 deportees is used to calculate the approximately 80,000 bodies exhumed. Following the reasoning of M. Bem, the pits in question would have contained (80,000 ÷ 15,000 =) 5.33 bodies per cubic meter.

For the rest, it is obviously not possible that the density per cubic meter of victims had been roughly 24 at Bełżec, 6 at Sobibór, and 53 at Treblinka.

Considering a maximum density of ten bodies per cubic meter, the values would be as follows:

Camp	claimed no. of buried corpses	mass-grave area in m²	volume of mass graves in m³	required volume in m³ at 10 corpses/m³ with 50 cm layer of covering
Bełżec	441,000	5,490	21,310	44,100 + 2,745 = 46,845
Sobibór	80,000	3,550	15,050	8,000 + 1,775 = 9,775
Treblinka	764,000	2,600	15,600	76,400 + 1,300 = 77,700

The data for Sobibór would therefore be the only one commensurate with the findings. Those for Bełżec and Treblinka are completely incommensurate. In these two camps, the mass graves could have contained only part of the bodies

of the presumed victims, about 42% in Bełżec, about 19% in Treblinka, as shown in the following table:

Camp	claimed no. of buried corpses	effective grave volume [m³]	corpses buried at 10/m³	corpses unburied
Bełżec	441,000	18,565	185,650	255,350
Treblinka	764,000	14,300	143,000	621,000

Let me emphasize that all the data used in the calculations are theoretical maximums. It should also be noted that, by changing perspective, the factors and coefficients also change. If mass extermination was not practiced in these camps, but there was a low mortality rate, there was no need to save space by cramming the pits with corpses. As a normal density, the experimental figure for Žagare may be valid: three corpses per cubic meter. The actual volume of the pits at Bełżec (or rather, a volume closer to reality) is about 10,800 cubic meters, and their surface area 3,000 square meters, which, with a covering of the pits with 50 centimeters of sand (without taking into account the layer of sand of a few decimeters with which the former camp area was later covered) becomes about (10,800 m³ – 3,000 m² × 0.50 m =) 9,300 m³. The fact that this volume includes the excavations carried out by the Polish judicial investigators and those of the "gold diggers" further reduces the original volume. In addition, the pits had to have sloping walls, which leads to a further reduction. But even taking into account the above figure, the real order of magnitude would be (9,300 m³ × 3 =) about 27,900 bodies. As a percentage, this is about 6% of the detainees deported to that camp.

Orthodox historian Dieter Pohl estimates that up to 5% of the deportees in the Reinhardt Camps perished during the journey from suffocation, dehydration, crushing caused by panicked deportees, etc. (Pohl, p. 194).

As for Treblinka, even taking into account the alleged 15,600 cubic meters of pits, the order of magnitude would be (15,600 m³ × 3 =) 46,800, roughly 6% of the total number of deportees.

The figure for Sobibór is also anomalous in this perspective: the 12,000 cubic meters mentioned in Subchapter 5.5. (see p. 232) would have contained 36,000 bodies, 12% of the total deportees.

However, the anomaly of Sobibór does not affect the general conclusion, since Bełżec, Sobibór and Treblinka either were *all* extermination camps in the terms described by the orthodox Holocaust historiography, or *none* of them was: *tertium non datur*. And since these data clearly demonstrate that Bełżec and Treblinka cannot not have been extermination camps, neither can Sobibór.

On the other hand, as I will show below, the supply of the wood that would be needed to cremate the corpses of the numbers of alleged gassing victims in the time available according to the orthodox narrative would have been impossible even for Sobibór.

7.3. Cremation of Corpses: Time Constraints

7.3.1. Bełżec

The most-detailed information on the cremation of exhumed corpses was provided on January 7, 1963 by former SS *Scharführer* Heinrich Gley in the course of the investigations leading up to the Bełżec Trial (Rückerl, pp. 142f.):

> *"According to my memory, the gassings were stopped at the end of 1942, when there was already snow. Then the general exhumation and cremation of corpses began; it probably lasted from November 1942 to March 1943. The cremations were carried out continuously day and night, first at one, then at two incineration sites. One incineration site offered the possibility to burn about 2000 corpses within 24 hours. About 4 weeks after the start of the cremation campaign, the second incineration site was set up. On average, 300,000 corpses were burned at one incineration site for about 5 months, and 240,000 corpses were burned at the second for about 4 months. These are, of course, average estimates."*

However, during an earlier interrogation of May 8, 1961, he had stated:[298]

> *"At the end of 1942, the mass gassings of Jews at the Belcec* [sic] *Camp were stopped. In response to an interposed question, I say that I know for certain that no bodies were being burned when I arrived. At the beginning of 1943 – I can no longer say whether it was in January, February, or March – I was assigned with a unit to bring in railroad tracks and field tracks, as well as large stones. This equipment was to be used for the construction of large grates, on which the bodies were burned that had first been buried. I was not part of the cremation detachment itself."*

Since the last Jewish transports arrived at the camp on December 11, 1942 (Kuwałek, p. 251), cremation could not begin until the middle of that month. As early as April 11, 1946, the prosecutor of the Zamość District Court concluded that Jewish transports had ceased in December 1942, and that the cremation of corpses was completed in March 1943 (Libionka, p. 235).

Therefore, the cremation lasted three and a half months, from mid-December 1942 to March 1943, or 105 days in rounded figures.

From Gley's statements, it can be deduced that the first pyre was erected in mid-December 1942, the second in mid-January 1943; the first cremated about 55% of the total number of corpses,[299] hence about 242,000 – if assuming a total of 441,000 corpses – and the second about 199,000.

---

[298] Interrogation of Heinrich Gley dated May 8, 1961. ZStL, 208 AR-Z 252/59, Vol. IX, p. 1286.

[299] H. Gley stated that the total number of bodies cremated was 540,000.

7.3.2. Sobibór

The cremation of corpses, as noted above, began in early October 1942 and presumably lasted until the prisoners' uprising, which occurred on October 14, 1943, so it can be assumed to last about a year or 365 days.

7.3.3. Treblinka

The cremation of corpses lasted from April to July 1943, or about 122 days (Mattogno/Graf, p. 147).

7.4. The Green-Wood Consumption for Cremation

In our study on Sobibór, I had assumed, based on experimental data, that a woodcutter can cut 0.55 tons of wood per day (Graf/Kues/Mattogno, p. 152). I later found other data that better fit the claimed Holocaust context.

In the *Ereignismeldung* (Report on Events in the Occupied Eastern Territories) No. 171 of February 20, 1942, we read:[300]

> *"Currently, 25263 people are employed in the large-scale forestry operation, which covers the whole of Estonia and serves to procure firewood for the cities. The transport of the wood, for which 9000 horses are available, has already begun. The daily output per forest worker averages about 1.5 solid cubic meters."*

A "Headquarters Special Order" from the "Local *Wehrmacht* Headquarters Riga" dated 16 June 1944 bearing the subject "Supply with Heating Material 1944/45" forwarded the order by the *Kommandant* of the Security Region Latvia that all units of the *Wehrmacht*, with a few exceptions, had to "cut their own firewood." Major General and *Kommandant* Ruff, who signed the document, issued the following detailed orders in this regard:[301]

> *"2.) Logging*
> *It does not appear practicable for every unit and agency to log their own wood requirements independently. At least the small users must be pooled together into logging squads professionally supervised by trained forestry personnel and equipped with the necessary working equipment and power saws.*
> *The local Wehrmacht headquarters has been assigned to form such logging squads for the Riga garrison. Those units and agencies which do not log their own wood, but rather wish to participate in pooled logging squads, report their anticipated logging totals, and the numbers of soldiers, volunteers, POWs and other manpower to be deployed for this by 25 June to the 4th Detachment of the L.W.H. When calculating the necessary workforce, it is to be assumed that one soldier or volunteer can prepare 1.5-2 stacked cubic meters per day, a*

300 NARA, T 175-234-2723884.
301 LVVA, P-752-2-1, pp. 221-221a.

POW or other workers 1 stacked cubic meter, and for now that the logging must be carried out by the end of September. For this, one week is to be considered to consist of 5 full working days.
Logging sites favorably located for hauling off the wood are to be selected with the approval of the forestry administration. Quantities up to 200 stacked cubic meters can be released for logging by the chief forest ranger's office based on an order from a billeting administration office (see 3). Any quantities in excess will require the approval of the general commissar in Riga, FoHo [Logging] *Division. Applications for this are to be filed with the headquarters of the Security Region Latvia via the billeting administration office in charge. In urgent cases, application by phone directly with the Kommandatur Latvia suffices.*
3.) Release
Chief foresters are instructed to release prepared firewood and wood for self-logging only based on an order from the billeting administration office […]*."*

There are two units of measurement mentioned in these documents: the *Festmeter* (*fm*), which is a cubic meter of solid wood (without any gaps), and the *Raummeter* (*rm*), which is a cubic meter of neatly stacked wood (with gaps in between). According to established equivalence tables, 1 m³ of solid wood (*fm*) is equivalent to about 1.43 m³ of stacked wood (*rm*), and vice versa, 1 *rm* equals 0.70 *fm* (Wenzl, p. 321).

The average weight of a solid cubic meter (*fm*) of freshly cut wood (green wood) of the types of trees prevalent in Latvia (pine, fir, birch, alder) is about 900 kg, that of a stacked cubic meter (*rm*) about (900 kg/m³ × 0.7 =) 630 kg. The first document therefore shows a daily production of 1.5 solid cubic meters per worker, or (1.5 m³ × 0.9 =) 1.35 metric tons. In the case investigated here, however, we are dealing with civilians forced to work under awful conditions. Due to their living and working conditions, the productivity of inmates in the alleged "extermination camps" was necessarily lower, as shown by the second document, which indicates a daily productivity of 1.5-2 stacked cubic meters or (1.5~2 *rm* × 0.9 kg/m³ × 0.7 m³/*rm* =) between 0.945 and 1.26 metric tons of wood for soldiers or civilian volunteers, and only one stacked cubic meter or (1 *rm* × 0.9 kg/m³ × 0.7 m³/*rm* =) 0.63 metric tons for a prisoner of war. For the camps of Operation Reinhardt, we will assume this value.

In another study, I have devoted a long chapter to a detailed and documented study of open-air cremation in the camps of Operation Reinhardt.[302] The amount of wood – dry and fresh – necessary to cremate a human body (according to the various possibilities: gender, age, size, condition [fresh or decomposed] etc.) was calculated by me on the basis of experimental data. As the weight of the bodies, I assumed those proposed by an orthodox Holocaustic polemicist. The relative values are definitely too low, so that the corresponding wood requirement is also too low, but these are the only Holocaustic data

[302] Mattogno/Kues/Graf, Chapter 12, pp. 1169-1332; see in particular Point 75, pp. 1288-1293.

available, and by using them, my line of argument resulting from this will be valid for more-likely scenarios as well *a fortiori*.

On the basis of the complicated reasoning on the initial weight of the deportees and the decomposition times of the corpses as proposed by the polemicist in question, it is therefore assumed that the average mass of the bodies exhumed and cremated in Bełżec was 23.65 kg, 36.43 kg in Sobibór, and 18.95 in Treblinka. The differences depended on the greater or lesser time the bodies had been in the ground before being exhumed. For each type of body, I calculated a dry-wood requirement ranging from 132 to 134 kg. The values are almost equal, despite the difference in average mass of organic material to be incinerated, because of the differing chemical compositions of the bodies (water, fat and protein) indicated by the polemicist.[303]

For the alleged extermination camps, however, it is necessary to consider green wood, since, according to the orthodox narrative based on testimonies, inmate forest units are said to have been sent into the surrounding woods in order to cut trees and branches destined to fuel the cremation pyres. In another study, we explained that one can assume a conversion factor of 1.9, meaning that, based on their respective net calorific values, 1 kg of dry wood corresponds to 1.9 kg of green wood (Graf/Kues/Mattogno, p. 151).

The following table summarizes this data:

Camp	number of corpses	average corpse mass in kg	dry/green wood requirement to cremate one corpse in kg	total dry wood requirement in metric tons	total green wood requirement in metric tons
Bełżec	441,000	23.65	132 / 250.8	58,212	110,602.8
Sobibór	300,000	36.43	133 / 252.7	39,900	75,810.0
Treblinka	781,000	18.95	134 / 254.6	104,654	198,842.6
Totals	1,522,000			202,766	385,255.4

The procedure by which these camps are said to have procured the necessary wood (the deployment of inmate forest units in the surrounding forests) is rather simplistic and does not take into account the regulations in force at that time.

In the General Government, the management of forests depended on the "Main Department Forestry" of the local government. In the Warsaw District, it was represented by the Forestry Department headed by District Forester Küchler. Each of the 10 counties (*Kreishauptmannschaften*) of this district, with the exception of the capital Warsaw,[304] had a main forestry (*Oberförsterei*) that dependent on the above-mentioned office, which was in charge of wood supply. The wood was first cut (*Holzeinschlag*, wood cutting) and then transported little by little to the recipients (*Holzabfuhr*). Each county was

[303] *Ibid.*, pp. 1292f.; this explains how to arrive at the above values.
[304] As a city, Warsaw was a *Stadthauptmannschaft*, in contrast to a rural *Kreishauptmannschaft*.

assigned a certain amount of wood to be cut, which in some cases was even slightly exceeded. These activities were documented in detail. Some documents have been preserved and show exactly how much wood was cut and transported at various dates.

A chart on "Wood Cutting for the Economic Forestry Year 1944" ("*Holzeinschlag des Forstwirtschaftsjahres 1944*") shows the situation as of January 31, 1944 for the Warsaw District (Document 102). The amount of wood to be cut (*Einschlagsoll*) was 279,730 solid cubic meters (*fm*); the amount actually cut (*Einschlagist*) was 187,173 *fm*. The graph regarding "Wood transport of the wood cut 1943-1944" ("*Holzabfuhr des Holzeinschlages 1943-1944*"), with reference to the same date, gives the amount of wood that had been taken away: it amounted to 90,929 *fm* (Document 103).

It is worth mentioning that, according to Arad, in Treblinka "the entire cremation operation lasted about four months, from April to the end of July 1943" (Arad 1987, p. 177).

Now, at the Warsaw District, the wood cutting of 1943 until 31 January 1944 had produced 187,173 *fm* (=m³), or about 168,500 tons, of which 90,929 m³, or about 81,800 tons, had been taken away.

Treblinka Camp was located in Sokołow County, bordering on Ostrów County, to which nearby Małkinia belonged. The charts show that the actual wood production of these two counties had been 16,500 and 56,570 m³, respectively, or about 14,850 and 50,900 metric tons, of which 4,867 and 15,205 m³, or about 4,400 and 13,700 metric tons, had been delivered as of January 31, 1944.

All in all, the amount of wood hauled away from the two counties was about (4,400 + 13,700 =) 18,100 metric tons. This was the wood cut in 1943 and January 1944, available and therefore usable as of January 31, 1944.

As of March 1, 1943, the territory of the Warsaw District had an area of 17,168 km², and a population of about 2,699,000 people. In it, Sokołow County had an area of 2,565 km² and about 172,000 inhabitants, and Ostrów County 1,366 km² and about 109,000 inhabitants (Staatliches Amt…, pp. IXf.).

The total projected wood production of 279,730 *fm* (about 251,800 metric tons) covered the entire Warsaw District. Not all of the wood was firewood; some of it – *Stammholz*, wood for lumber; *Grubenlangholz*, mining shoring timbers; *Holzwollenholz*, wood for wood shavings; *Generatorenholz*, wood for producer-gas generators – was delivered to sawmills and private firms that processed it.[305]

On November 3, 1943, when the cremation of the bodies of those presumably gassed at Treblinka, Sobibór and Bełżec had been completed for months, Hans Frank issued an order valid for the entire General Government, stamped "Secret State Matter" ("*Geheime Reichssache*"), in which he launched a large-

[305] *Oberförsterei Ostrow. Verteilungsplan der Holzabfuhr für Monat Januar 1944*. APW, Zespół 489 II (*Kreishauptmannschaft Ostrow*), Sygn. 648, p. 186.

scale "mobilization for wood", because wood was considered a strategic asset. The operation mainly concerned the collection and transport of wood that had already been cut in execution of the 1943 wood-supply plan.[306]

In practice, in 1943, the Treblinka inmate forest unit would have had to cut almost 199,000 tons of wood on its own in the vicinity of the camp within just four months, while the amount of wood cut in the entire Warsaw District during that entire year was only 168,500 tons!

In 1944, the amount of wood cut was 260,940 *fm* (about 234,850 tons); for Sokołow County, the figure was 21,572 *fm* (about 19,400 tons), for Ostrów County, it was 93,759 *fm* (about 84,400 tons; Document 104).

7.5. The Wood Supply for Cremation: The Forest Units

Nothing is recorded about an inmate forest unit at Bełżec. According to Schelvis, the forest unit at Sobibór consisted of just 30 inmates (Schelvis, p. 134), but Bem states that there were 40 inmates (Bem 2015, p. 71).

No precise information is available about the strength of the forest unit at Treblinka Camp. Richard Glazar describes the task of this group of inmates as follows (Glazar, p. 115):

> *"To clear the woods around the perimeter of the camp—that's our main task now. Felled trees are hauled into camp and chopped into firewood. As spring becomes summer without transports, the greatest concentration of activity in the first camp moves down to the grounds behind the Ukrainian barracks, to the lumberyard. Those of us from Barracks A work there, along with other commando units who had previously worked at the sorting site. Idyllic mounds of freshly sawn and split firewood grow up and shine out from among the towering pines that have not been felled. A path runs along one side of the lumberyard and leads up to the main gate of the second camp. Though it is some seventy meters away, the gate is clearly visible from our work site. Here we deliver what wood is needed in that part of the camp. No one from over there is allowed out to work by the SS. The main work in the second camp still consists of digging up and incinerating the bodies from old transports."*

A few pages later, Glazar speaks of 25 inmates assigned to "forestry work," but in the context of camouflaging the camp (*ibid.*, pp. 127f.). Chris Webb and Michal Chocholatý, authors of a book on Treblinka, write that the local forest unit, also called woodcutter's unit, was "small in number, probably only a few dozen prisoners" (Webb/Chocholatý, p. 90).

Pretending that there is a logic in all of this (which there isn't), I assume as the "real" figure the maximum one mentioned for Sobibór, and based on it I calculate the strength of the forest units of Bełżec and Treblinka in proportion to the number of the claimed corpses cremated, *i.e.*:

---

306 APW, Zespół 891, pp. 2-4.

– Bełżec: 60 inmates
– Sobibór: 40 inmates
– Treblinka: 100 inmates (for Webb/Chocholatý only "a few dozen").

In Bełżec, 60 detainees would have been able to cut (60 × 0.63 tons/day/man =) 37.8 tons of wood per day. In order to achieve the necessary amount, they would have had to work for (110,602.8 tons ÷ 37.8 tons/day =) 2,926 days, or a little over eight years, but they actual had only 105 days.

The 40 inmates at Sobibór would have had a daily capacity of (40 × 0.63 tons/day/man =) 25.2 tons of wood. To cut the required amount, they would have had to work for (75,810 tons ÷ 25.2 tons/day =) 3,008 days, or eight years and three months, but they only had about a year for this work.

As for Treblinka, the 100 inmates of the forest unit would have cut (100 × 0.63 tons/day/man =) 63 tons of wood each day; to reach the required amount, it would have taken them (198,842.6 tons ÷ 63 tons/day =) 3,156 days, or more than eight and a half years, but they had only 122 days in which to do it.

I summarize the results of these calculations in the following table:

Camp	green wood needed in tons	number of inmates in forest unit *Waldkommando*	fresh wood per day in tons	days needed	days available	missing days
Bełżec	110,602.8	60	37.8	2,926	105	2,821
Sobibór	75,810.0	40	25.2	3,008	365	2,643
Treblinka	198,842.6	100	63.0	3,156	122	3,034
Totals	385,255.4			9,090	592	8,498

In practice, the time required to complete the overall cremation work would have been more than 15 times longer than the time available. To give an idea, cremations at all three camps would have been completed only at some point in 1951!

No. 50 of the *Einsatzgruppen* "Reports from the Eastern Territories", which is dated April 16, 1943, offers another concrete reference point especially for Bełżec. The section on forestry sets out the forestry plan that had been prepared for Belarus (Mallmann *et al.*, p. 792):

> *"For the old Soviet area of White Ruthenia with about 400,000 hectares of forest, about 700,000 cubic meters of lumber and firewood are planned for cutting in the forestry year from October 1, 1942 to September 30, 1943. With an average work standard of 20 solid cubic meters of logging and 20 solid cubic meters of hauling per head and team, about 35,000 workers and 35,000 team members would be needed for 3 to 4 weeks. Distributed over the 5 winter months from November to March – the felling has to occur in these months mainly due to climatic conditions – a monthly average of about 7000 workers and 7000 teams* [horse-drawn cart + driver] *would be necessary."*

As I explained earlier, the 700,000 solid cubic meters mentioned in this document correspond to about 630,000 metric tons, to be cut in a forested area of 400,000 hectares. A daily productivity of 0.95-0.71 solid cubic meters, or 0.85-0.64 tons, per day was calculated for that work. This fully confirms the figure assumed in the calculations for an inmate (0.63 tons).

Each month, 100,000 solid cubic meters (about 90,000 tons) were expected with the use of 7,000 lumberjacks and 7,000 teams (horse-drawn carts).

For Bełżec, with a requirement of about 110,600 tons of green wood, such a project would have required about 8,600 lumberjacks to be completed within a month, but if the work was stretched out over three and a half months, the labor force would have had to encompass (8,600 ÷ 3.5 =) about 2,460 lumberjacks (and an equal number of horse teams for transport).

It should be remembered that Rudolf Reder, the quintessential witness to Bełżec Camp, had claimed that there was a total of 500 inmates working at the camp.[307] The required wood-cutting feat would not have succeeded even if they all had been employed to cut and haul wood.

As can be seen from the graphs mentioned earlier, hauling the cut wood also required the deployment of large numbers of men and animals, in this case about 2,460 horse-drawn carts with drivers. Nineteenth-century studies established that a man pulling a cart produces a "useful effect" of 2,500 kg, yet a horse produces 26,029 kg, so that the workforce of a horse is equal to that of more than 10 men (Majocchi, p. 140). Therefore, the aforementioned 2,460 teams (in the likely case of two-horse teams, this amounts to 4,920 horses) are equivalent to the work force of (4,920 × 10 =) 49,200 men! No witness or document has ever come to light that mentioned the deployment of huge pools of horse-drawn carts (or alternatively large pools of trucks) to transport massive amounts of wood, so this work evidently would have had to be performed by inmates – tens of thousands of them!

To obtain the required 198,842.6 tons of green wood needed at Treblinka Camp within a month, 13,900 lumberjacks would have been needed; doing the work within four months would have required (13,900 ÷ 4 =) 3,475 lumberjacks and as many teams of horses – or another 69,500 men. Note that Glazar claimed that the logs were dragged to Treblinka Camp by inmates.

7.6. The Invisible Logging

A 50-year-old spruce forest yields 496 solid cubic meters of wood per hectare (about 446 tons).[308] The wood requirements for Bełżec thus correspond to the

---

307 See Mattogno 2021a, where I reported this witness's nine statements, interrogations, and writings, in which he repeatedly mentions this figure (pp. 13-16, 19f., 22, 36f., 45, 51f.).

308 Colombo, p. 161. The value shown is the highest of the five tree varieties shown in the table (pine [452 m³], spruce, fir, beech, oak).

total logging of (110,602.8 ÷ 446 =) 248 hectares, for Treblinka of (198,842.6 ÷ 446 =) 446 hectares.

In a well-documented article, Thomas Kues showed that the wooded areas cut around Treblinka Camp amounted to a maximum of 10 hectares (Kues 2009a). During construction, the camp, which had an area of 13.45 hectares, was completely cleared except for an area of about 2 hectares in the northern part. Comparison of the 1:100000 map from 1936 with the aerial photograph from May 15, 1944 shows that the forested strip to the north, east, and south of the camp remained virtually untouched: the deforested area inside and outside the camp was approximately 22 hectares, as opposed to the 446 required by the alleged mass cremations.

For Bełżec, a comparison of 1940 and 1944 aerial photography shows that the forest was cut – but not completely – only in the camp area (about 6.2 hectares) and simply thinned out beyond the northern, eastern, and southern borders of the camp (Rudolf 2020a, pp. 138-143). The total area, cleared and thinned, was on the order of 10 hectares. According to the "Minutes of the Inspection of the Bełżec Death Camp" by the Zamość investigating judge dated October 10, 1945, there was still a group of pine trees (*sosny*) over twenty years old in the area of the camp, towards the center. Another group of similar pine trees extended towards the south side, and a third group of 31 pine trees was located in the northwestern corner (Libionka, p. 122).

Again, the hectares cleared – about 10 – are a pittance compared to those needed: 248.

Two aerial photographs of Sobibór, the first dated July 11, 1940, the other May 30, 1944 (Rudolf 2020a, pp. 147f.), make it possible to establish that the area cleared was practically only that of *Lager* III, the equivalent of about 30 hectares, as opposed to the (75,810 ÷ 446 =) 170 hectares needed.

In order to visually render the idea of the order of magnitude being discussed, I take as a point of reference a photograph I took in June 1997 in an area south of the former Sobibór Camp (Document 105). It shows several piles of pine logs. The central pile, about 20 meters long and about 2.5 meters high, consisted of logs about 2 meters long with a diameter of about 12 centimeters. The estimated weight of this pile is about 100 tons, enough for the cremation of about 400 corpses. In Bełżec, about 1,106 similar piles would have been needed for the cremation of the corpses of the alleged gassing victims, in Sobibór about 758 and in Treblinka about 1,988!

7.7. The Cremation Procedure

Orthodox Holocaust historians imagine that cremation took place day and night for the above-mentioned periods, so that on average (441,000 ÷ 105 =) 4,200 corpses were cremated per day at Bełżec and (781,000 ÷ 122 =) 6,400 at

Treblinka. However, no one ever considered that this procedure would have encountered an insurmountable obstacle due to weather conditions. This is especially true for Bełżec. It should be remembered that cremation would have taken place there in the middle of winter, from mid-December 1942 to March 1943.

In the following table and chart, I report the minimum temperatures (first column) and precipitation in mm of water (second column) that were recorded during those months at the meteorological station in Tomaszów Lubelski, only 8 km away from the alleged "death camp"[309] (Documents 106f. and 108f.).

Starting on November 22, 1942, temperatures dropped significantly. From November 22 to 30, the average minimum temperature was -6.3°C, with a low of -10.3°C on the November 22. Therefore, the ground was solidly frozen by mid-December.

In total, from mid-December 1942 to March 1943, there were 31 days of precipitation, which brought down about 60 cm of water – some as rain, some as snow. The camp and the forests were covered with snow.

Under these conditions, it is hardly imaginable that each inmate of the camp's forest unit could cut 0.63 tons of wood each day. I will pass over the transport of the wood to the camp for the moment, and will merely observe that burning the huge piles of green, frozen, snow-covered wood, more or less like the one in Document 110, would have been an impossible task in itself without enormous quantities of oil or gasoline to light the fire, the supply of which is not documented in the slightest. For this reason, I do not even consider the possible but utterly unsubstantiated objection that the wood requirement for the cremation was relatively small because the cremation could have been accomplished with even-more-enormous quantities of oil or gasoline. If we allow the writing of history with mere unfounded speculations, it would be more serious to assert that the extermination was carried out with electrocution plants, chlorine and steam chambers, and that the corpses were eliminated with a "corrosive powder" – fables that at least have a basis in propaganda texts.

At minimum temperatures of -10°C, reached for 21 days, with 5 days between -21 and -25.3°C, the wood would have been frozen. Given that fresh wood contains at least 50% moisture by weight, 1 kg of wood contains 0.5 kg of moisture. The heat needed to melt ice is about 80 Kcal/kg, so 40 Kcal for 1 kg of wood. If even only 20% of the water contained in the 108,974.6 tons of fresh wood had frozen (*i.e.* the water contained in the wood needed for 21 days out of 105 days), the caloric requirement for melting the wood water would

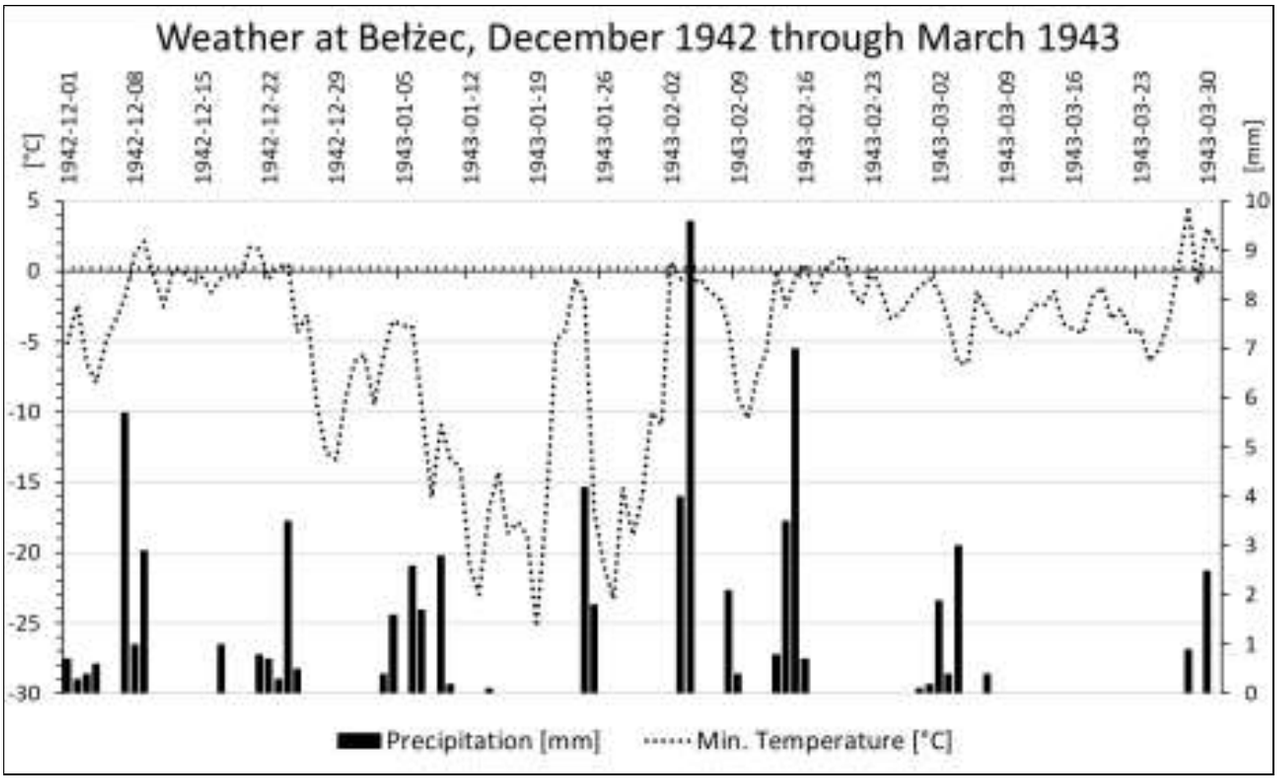
have been (108,974,600 kg × 40 Kcal/kg × 20% =) 871,976,800 Kcal, equal to about 83,028 liters of gasoline (two full tankers) with a calorific value of 10,500 Kcal/liter!

Temperatures were particularly severe during the second and third weeks of January. On some days, daily minimum temperatures dropped as low as -25°C (-13°F). At such temperatures, it is virtually impossible to do any work outdoors. And it is almost certainly impossible to dig up any soil or exhume any

[310] 1 mm of rainwater corresponds to 1 liter per square meter and roughly to 1 cm of fresh powder snow.



bodies, because the ground would have been so severely frozen that it would have required the use of jackhammers or explosives to break up the ground.

To make the task even more unfeasible, there was rain- and/or snowfall on 31 days out of 105, as I pointed out earlier. The snow accumulated on top of what had already fallen since the second half of November 1942 (about 5 cm of water, or 50 cm of powder snow, on Nov. 17, the same on Nov. 24, a few centimeters of water or decimeters of powder snow in the intermediate and subsequent days). In December 1942, about 18 cm of snow and rain fell, in January 1943 about 15 cm of precipitation, mostly as snow (in the case of powder snow, this amounts to 1.5 m of snow accumulation over the entire month!). In February there was about 28 cm of precipitation (rain and snow), and in March about 9 cm. Therefore, during the above-mentioned 31 days, (4,200 × 31 =) 130,200 corpses would have been cremated in one or two "hearths", on each square meter of which a total of 59.7 cm of precipitation would have fallen, equivalent to 597 liters of water.

According to the orthodox narrative, cremations at Treblinka took place between April and July 1943, on 122 days, and an average of 6,400 bodies were cremated each day. During this period, the meteorological station at Ostrów Mazowiecka, which was located about 20 km NNE of the camp as the crow flies, recorded 49 days of more-or-less-heavy rain: in April 27.5 millimeters of rain fell, in May 20.2, in June 65.3 and in July 167.1, a total of 280.1 mm (Document 111).[311] This is 280 liters of rain per square meter of cremation

[311] "Dobowa suma opadu atmosferycznego [mm] z okresu od 1 lipca 1942 do 31 lipca 1943 roku na podstawie pomiarów na stacji meteorologicznej Ostrów Mazowiecka" ("Daily total precipitation [mm] from July 1, 1942 to July 31, 1943 based on measurements at the Ostrów Mazowiecka weather station"). Instytut Meteorologii i Gospodarki Wodnej. Państwowy Instytut Badawcy, Warsaw.

grate. If there were two grates of 90 square meters each, as the orthodoxy has it (Mattogno/Graf, pp. 147f.), they would have received a total of (90 m² × 2 × 280 L/m² =) 50,400 liters of rain!

For Sobibór one can consider the climatic and meteorological data shown on the map adopted by the Wehrmacht that I described in Chapter V. At Sobibór, the woodcutting and cremation are said to have taken place over the course of one year, from October 1942 to October 1943. The average annual rainfall was 550 mm, or 550 liters per square meter of soil. The monthly rainfall was distributed as follows:

JANUARY	FEBRUARY	MARCH	APRIL	MAY	JUNE
30 mm	30 mm	30 mm	40 mm	50 mm	80 mm
JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER	DECEMBER
80 mm	60 mm	50 mm	40 mm	30 mm	30 mm

Snowfall lasted for an average of 45 days, from mid-November to mid-March. This means that an average of 120 mm of rain or about 1.2 m of snow fell during this period. Finally, the marshes were frozen from mid-December to mid-March. This also applies to any wood cut during that period.

These were undoubtedly average values, but they could not deviate too much from the actual ones.

That 300,000 corpses were actually cremated under these conditions (an average of 822 every day for 365 days) can only be believed by those who have renounced any critical sense.

7.8. The Duration of Cremation

The experience gained in England during the incineration on pyres of livestock that had died in masses due to "mad-cow disease" (bovine spongiform encephalopathy, BSE), which began in 2001, showed that the capacity of these pyres, built according to technical guidelines of efficiency and economy, was about 8 kg of carcass in one hour per 1 square meter of cremation surface (Mattogno/Kues/Graf, pp. 1293-1296).

At Treblinka, the only camp for which orthodox historiography provides precise indications, the cremation of corpses is said to have been carried out on two grates of 90 square meters each, meaning that in 24 hours they would have been able to burn (2 × 90 m² × 8 kg/hr × 24 hr/day =) 34,560 kg of organic substance, or (34,560 kg/day ÷ 18.95 kg/corpse =) about 1,820 bodies per day. Therefore, the burning of 781,000 bodies would have required (781,000 corpses ÷ 1,820 corpses/day =) 429 days of uninterrupted burning, i.e. without allowing any time for the preparation of the two pyres (arrangement of wood and bodies) and for the removal of the ashes. However, the time available was only 122 days.

For Bełżec, assuming that the two hearths mentioned by Heinrich Gley were the same size as those at Treblinka, it would have taken (441,000 corpses ÷ [34560 kg/day ÷ 23.6 kg/corpse] =) about 300 days of uninterrupted burning to incinerate the alleged 441,000 victims, but only 105 days were available.

Whichever way one looks at it, the eradication of the bodies of 1,522,000 Jews in the camps of Operation Reinhardt proves to be completely impossible. This also applies to the total figure of 1,249,433 deportees mentioned in the so-called Höfle telegram (the figures for Bełżec – 434,508 people – Sobibór – 101,370 – and Treblinka – 713,555 – are no-less-impossible than those considered above), which represents the lower limit below which orthodox historiography cannot fall without contradicting one of its fundamental postulates.

A realistic, meaning at-least-feasible, order of magnitude can be deduced from the following observation: if the 40 inmates of the forest unit at Sobibór had cut 0.63 tons per day each, every day, for 365 days straight, their production would have been (40 × 0.63 tons/day × 365 days =) about 9,200 tons, enough to cremate about 36,400 corpses, which is roughly the number of corpses that could fit in the mass graves discovered by the archaeologists, as I have shown earlier. Even this is undoubtedly an excessive figure, but at least it gives a good understanding of a maximum possible order of magnitude.

I summarize the main data I have just shown in the following table.

Camp:	Bełżec	Sobibór	Treblinka	Totals
claimed number of victims	441,000	300,000	781,000	
claimed no. of buried bodies	441,000	80,000	764,000	
disturbed-soil volume [m³]	18,565	13,275	14,300	
needed mass-grave volume for claimed corpses [m³]	44,100	8,000	76,400	
total need of green wood [t]	110,603	75,810	198,843	385,256
wood forest units Waldkommandos could cut [t]	3,969	9,198	7,686	20,853
available cremation time [days]	105	365	122	
min. cremation time needed [days]	300	/	429	

The pairs of figures in bold clearly demonstrate the absurdity of the extermination activities claimed for the camps of Operation Reinhardt.

7.9. Cremation Ashes

In another study, starting out from the data presented by the orthodox holocaustic polemicist mentioned earlier, I derived the average ash weight resulting from the outdoor cremation of a presumed gassing victim for all three camps, and explained that the mass of pure ashes must be increased by the experimental factor of 1.67 due to the presence of unburned body tissue. For a human

body, this corresponds to approximately 3.7 kg of body-residue mass (ashes and incompletely or unburned tissue). The theoretical ash content of dry wood (8%) must also be increased by a factor of 1.67, determined experimentally, due to the presence of unburned or incompletely burned wood, resulting in (8% × 1.67 =) 13% wood-residue mass (Mattogno/Kues/Graf, pp. 1313-1316). I present the respective data in the following table:

Camp:	Bełżec	Sobibór	Treblinka	Totals
number of bodies	441,000	300,000	781,000	1,522,000
body-residue mass per body [kg]	3.7	4.0	3.7	
total body-residue mass [t]	1,631.7	1,200.0	2,889.7	5,721.4
total dry wood needed [t]	58,212	39,900	104,654	202,766
percentage of wood residues	0.13	0.13	0.13	
total wood-residue mass [t]	7,567	5,187	13,605	26,359
total residue mass [t]	9,198.7	6,387	16,494.7	32,080.4

An archaeological "confirmation" of this presumed immense cremation would therefore consist in the discovery in the area of the above-mentioned camps of a quantity of ashes in the order of magnitude of tens of thousands of tons. But this order of magnitude is categorically excluded by the results of the investigations on the grounds that I set out in Chapters 4 through 6.

Conclusions

No records are known to exist on the planning, construction, administration and actual use of the camps at Bełżec, Sobibór and Treblinka, and even less-so on their alleged function for the mass extermination of Jews. This function was invented by Polish-Jewish black propaganda in the ways illustrated in Part One of the present study, where I outlined the literary genesis of the gas-chambers lore, and documented that the historical "truth" currently in vogue for Bełżec and Sobibór is only an arbitrary selection by Polish investigators from the various propaganda "truths" circulating in the immediate post-war period. For Treblinka, they relied on Jankiel Wiernik's reckless plagiarism, who transformed the original "steam chambers" into "gas chambers" – and on copycat plagiarists such as Abraham Isaak Goldfarb.

The examination of archaeological research into these camps as presented in Part Two revealed fallacious methods in the detection of mass graves and even more so of alleged gas chambers. In Bełżec, excavations were performed without finding any traces of the gas chambers; in Treblinka, traces were allegedly found, but without performing excavations. In Sobibór, the foundations of the alleged gas chambers that had already been found in 1945 and were purposefully buried under an asphalt square in the early 1960s, were re-discovered in 2014. These foundations have elements not explained by archaeologists (such as semi-circular walls and extremely irregular wall patterns) and are at odds with anecdotal evidence, which itself is mutually contradictory.

The mass graves identified by archaeologists – most prominently at Bełżec and Treblinka – are also in total contradiction with the relevant testimonies.

The study of the feasibility of mass exhumations and cremations as required by the orthodox narrative (Part Three) leads to the inescapable conclusion:

1. At Bełżec and Treblinka, the ground disturbances detected by the archaeologists could have accommodated only a portion of the claimed gassing victims. At Bełżec, over 257,000 bodies would have remained unburied, and at Treblinka over 626,000.
2. At Bełżec, Sobibór and Treblinka, just cutting the wood needed for the cremations (without considering its transportation to the camps) would have lasted more than eight years under the most-favorable circumstances, against the respective times available according to the orthodox narrative: 105, 365 and 122 days, respectively.

KEY TO GENERAL PLAN OF CAMP

TREBLINKA EXTERMINATION CAMP – GENERAL PLAN

1 The railway track and the platform (ramp).

2 A small wooden sign attached to the gate, with an arrow indicating the direction of Bialystok and Wolkowysk.

3 A long barrack with a large painted inscription 'OBERMAJDAN'. On this outer wall a fake clock and on the barrack door the inscription 'CASH', a locked door with an inscription: 'To the first class waiting room'; a locked door with an inscription: 'To the second class waiting hall'; a locked door with an inscription 'To the third class waiting hall'. The barrack served as a storeroom for more valuable objects taken away from the victims.

THE ASSEMBLY AND UNDRESSING AREA (YARD)

4 On left, the women's barrack, where they had to undress. At the end of the barrack, behind a partition-wall worked the barbers. Behind the women's barrack – a sorting place for bottles and kitchen appliances ('Flaschensortieren').

5 On right, a barrack serving as storeroom. It also served as prisoners' night quarters until the escape of four of them.

X A well.

7 Path to the gas chambers.

SORTING AREA

6 'Lazarett' – execution site.

3 Two barracks where more valuable objects were stored. On the wall facing the ramp were signs for deceiving the victims.

12 Five-metre high wall.

ADMINISTRATION WING AND STAFF LIVING QUARTERS

15 Stables and pigsty.

16 Bakery.

17 Barrack containing: Ukrainian women's quarters; dental clinic of the SS men and Ukrainians; general clinic of the SS men and Ukrainians; room of the 'Goldjuden'.

18 Barracks of the Ukrainian guards.

19 Zoo ('Tiergarten').

20 SS men barracks connected by a corridor with the armory.

21 The armoured car.

22 Chairs on which relaxed the SS men. Above them were sun shades.

23 Ukrainians' guardroom.

24 Administration rooms, including the quarters of the camp commander Stangel.

25 Garage.

26 Gasoline and lubricating oil depot.

27 Timber yard.

28 Vegetable garden.

29 Watchtowers.

30 Anti-tank obstacles.

31 Barbed wire camouflaged by pine branches.

32 Main entrance gate.

33 Latrines.

34 Railway track.

EXTERMINATION CAMP

8 Ten new gas chambers; three old, small gas chambers.

9 Burial pits.

10 Rails on which victims' bodies were cremated.

11 Barrack prisoners' living quarters.

ROLL-CALL GROUNDS

33 Latrines.

BARRACK – PRISONERS' LIVING QUARTERS

13 On left, barrack; kitchen; capos' and specialists ('Hofjuden'); tailor and furrier shop; next to the window stood the painter's easel, carpentry and locksmith's shop; smithy.

14 On right – barrack divided into latrines, washroom and on its sides prisoners' living quarters.

Introduction

The alleged extermination camp at Chełmno (German: Kulmhof), a town in Poland in the region of Warta, called Warthegau by the Germans during the Second World War, is of major importance in orthodox Holocaust historiography, because it is claimed to be the first "death camp" built to serve the genocidal agenda of which the Germans are accused. Unlike other camps established afterwards, it is not said to have been equipped with stationary gas chambers, but with "*Gaswagen*" (gas vehicles),[1] mobile gassing trucks which allegedly used engine-exhaust gas to kill human beings. The camp is said to have operated, with occasional periods of inactivity, in two phases: from 8 December 1941 – the day it opened – to 7 April 1943, and again from April 1944 to January 1945, killing a total of 152,000 to 340,000 people (Jäckel *et al.*, vol. I, p. 280; see Chapter 11).

Documentation about it is almost nonexistent, which is why the picture outlined by orthodox Holocaust historiography is based almost exclusively on court records, which is to say, it is in fact based entirely on testimony. But even these data are rather limited: until 2007 they have only permitted the preparation of the odd leaflet by some Polish historians and a few articles by Western historians. As Israeli historian Shmuel Krakowski, who is currently the world's leading Holocaust expert of the orthodox persuasion, wrote (Krakowski 1995, p. 55):

> *"Research on the extermination camp at Chełmno upon Ner occupies a very small place in Holocaust historiography."*

His 2007 study of this camp, despite its stated intention to "expand the state of knowledge" and to "try to complete what has not been taken into account in the existing literature" (Krakowski 2007, p. 10) actually reflects the accumulated historical-documentary inconsistency of the orthodox Holocaust historiography about Chełmno. He reaffirms, among other things, that "sources on the Chełmno camp are extremely few, hence the insignificant number of publications on the topic" (*ibid.*, p. 11).

In the revisionist school, the most important historiographic contribution is the 2003 article by Ingrid Weckert "What Was Kulmhof/ Chełmno?"

---

[1] This term became commonplace only after the war.

These studies have inevitably left many gray areas, and the history of the Chełmno camp is still in many aspects enigmatic. One of the most important issues, raised in 1999 by Bertrand Perz and Thomas Sandkühler, concerns the relationship between Chełmno and "Aktion Reinhardt," but even more important is the relationship between the "field incinerators" of Chełmno and cremation at Auschwitz (see Mattogno 2008).

The existence of "gas vans" during the Second World War is very controversial and is disputed by revisionist scholars (see Marais 1994; Weckert 2003; Alvarez 2011). However, the interpretation of documents relating to the alleged "gas vans" (called *Sonderwagen*, *Sonderfahrzeuge*, and *Spezialwagen*) is not the subject of this study, which restricts the scope of its investigation to determining whether such vehicles might have actually been used for the purpose of extermination at Chełmno. Yet even in this limited scope, it is important to initially examine the decision-making process and technical development that would be required to lead to the existence and use of the "gas vans."

1. The Orthodox "Gas Van" History

In a paper setting out the conclusions of Holocaust historiography on the origins of the "gas van," Mathias Beer notes that the first document on this issue dates from 26 March 1942, so that

> *"the path of decisions leading to the construction and the operation/usage of these vans remains obscure."* (Beer 1987, p. 404; all subsequent page numbers from the German version unless stated otherwise)

He claims that the well-known trials held since 1945 can remedy this lack of documentation, although he warns (*ibid.*):

> *"However, the historian is not entitled to use court verdicts without examining them, because justice and historiography pursue different ends. For him* [the historian] *primarily witness testimonies are important, because they help to fill the gaps in the sources. But due to their peculiarities testimonies can be treated on an equal footing with documents, for example, and be used profitably by historical research only if certain principles are observed. The basic requirement is not to abandon the link between witness statements and documents which have been subject to thorough source criticism, that is to say, to always connect the probable with a certain fact.* [But] *even in this way we cannot respond satisfactorily to every question."*

As there are no documents which can be used as a basis of comparison, this means that for Chełmno the testimonies cannot constitute historical sources, so that there cannot even exist a genuine historiography for this camp.

Beer follows the technical development of a euthanasia "gas van" through the intermediate stage of the *"Kaisers-Kaffee-Wagen"* ("Kaiser's Coffee Cart" (pp. 404f.):

> *"Testimonies exist which report that during the evacuation of nursing homes for the mentally ill in Poland in 1939-1940, a hermetically sealed trailer was used with the words 'Kaiser's Coffee Shop'* [*Kaisers-Kaffee-Geschäft*] *on it, which was towed by a tractor. In the trailer sick persons are said to have been killed with pure carbon monoxide (CO) injected from steel cylinders. Precisely because there are no documents, the provenance of this vehicle cannot be clarified. However, there are indications that allow us to answer the*

> *question whether there is a link between 'Kaiser's Coffee' van and gas vans."*

Then he sets out the Holocaust thesis on euthanasia (p. 405):

> *"In a letter dated 1 September 1939, Hitler authorized his personal physician Dr. Karl Brandt and Reichsleiter Philipp Bouhler of the 'Führer's Chancellery' to carry out the 'euthanasia.' The Institute for Criminological Technology (Kriminaltechnische Institut, KTI) in the Reich Security Main Office (Reichssicherheitshauptamt, RSHA) was charged with testing suitable killing methods, which concluded that the most appropriate method was killing with CO. After an experimental gassing was conducted in early 1940 in the former prison of Brandenburg/Havel – mentally ill persons were killed using CO in an airtight room – this procedure was also used in all other 'euthanasia' institutions. The Führer's Chancellery received the necessary CO under the aegis of the KTI on the basis of a conversation between Head of the Office* [Viktor] *Brack and* [Albert] *Widmann, head of section V D 2 (chemistry and biology). On the orders of* [Arthur] *Nebe, head of the Amt V (crime fighting unit) of the RSHA, SS Untersturmführer* [August] *Becker collected the steel cylinders at the IG Farben plant in Ludwigshafen and brought them to individual institutions."*

It must be emphasized here that the claim regarding the use of carbon monoxide bottles for homicidal purposes is based *exclusively* on testimonies (note 14-18, p. 405), which moreover were made rather late.[2] But since, as M. Beer rightly points out, justice and historiography pursue different ends, these legal testimonies have no historiographic value due to the total absence of documents. In fact, there is *no documentary evidence*:

1. that the euthanasia centers were equipped with *carbon-monoxide gas chambers*,
2. that *cylinders of carbon monoxide* were used for homicidal purposes by the euthanasia centers,
3. and that the IG-Farben plant in Ludwigshafen supplied *bottled carbon monoxide* to the euthanasia centers.

In addition, there is *no documentary evidence* either that the *KTI*, the Institute for Criminological Technology, had experimented with killing

[2] The sources are statements made by German defendants in 1959 and1960 in connection with investigations by the *Zentrale Stelle der Landesjustizverwaltungen* in Ludwigsburg.

procedures, that it had chosen carbon monoxide as a means of killing and that at the beginning of 1940, in the former prison of Brandenburg upon Havel, an experiment was carried out with a CO gas chamber.

M. Beer then returns to the "Kaiser's Coffee" vans (p. 405f.):

> *"The 'Kaiser's Coffee' vans operated on the same principle as the gas chambers of the 'euthanasia' institutions. In a trailer, CO was released through pipes from a steel cylinder placed in the towing vehicle. Hence it was a gas chamber on wheels. Testimonies state that, from December 1939 on, mentally ill persons in nursing homes in Pomerania, East Prussia and Poland were killed in these vehicles by the Sonderkommando Lange. The name of the Kommando derived from its leader SS Obersturmführer and police adviser Herbert Lange. The letter from Higher SS and Police Leader* [Wilhelm] *Koppe to SS Gruppenführer* [Jakob] *Sporrenberg explains the use of this Kommando at Soldau:*
>
> > *'The so-called Lange Sonderkommando for special tasks subordinated to me was seconded to Soldau, East Prussia, during the period of 21 May to 8 June 1940 in accordance with the agreement made with the RSHA, and in that time has evacuated 1,558 patients from the Soldau transit camp.'*
>
> *Lange brought along one of these vans either from the RSHA (as is implied by the statements of Gustav Sorge and the important role of the Group II D, technical matters, within the RSHA in the progressive development of the gas van), or he himself had it fabricated in collaboration with the RSHA."*

Beer expressed the suspicion that Lange had "the task of field-testing this vehicle" and adds that immediately after this task his Soldau *Sonderkommando* was disbanded, and from this moment "there are no more reports on the use of such vehicles." (p. 406)

The connection between the alleged "Kaiser's Coffee" vans and the alleged CO gas chambers at the euthanasia institutions is in fact totally inconsistent, since there is no documentary evidence that either actually existed. Koppe's letter quoted above neither demonstrates the existence of a "Kaiser's Coffee" van nor its homicidal use. And strictly speaking it doesn't demonstrate either that the Lange *Sonderkommando* had killed 1,558 persons, because it speaks simply of an evacuation from a transit camp.

Before describing the alleged technical development from "Kaiser's Coffee" vans to the "gas van," it is necessary to explain the decision-

making process that would have motivated it. In this connection, M. Beer writes (p. 407):

> *"On 15 and 16 August 1941 Himmler was in Baranovichi and Minsk and witnessed a shooting in the area of Einsatzgruppe B. The Higher SS and Police leader of Central Russia, von dem Bach-Zelewski, who was present, later reported that Himmler was visibly shaken. Then Himmler visited a nursing home for the mentally ill and subsequently ordered the head of Einsatzgruppe B, Nebe, to seek ways to end as soon as possible the suffering of these people, because after experiencing the shooting he had concluded that 'shooting was certainly not the most humane way.' He was to submit a 'report' on this. Himmler turned to Nebe, because the KTI, which answered to Amt V, had already distinguished itself in experimenting with killing methods in the context of 'euthanasia,' so that now its experience could be utilized."*

But no document exists for this anecdote either. Its sole support allegedly comes from former SS *Obergruppenführer* Erich von dem Bach-Zelewski in a statement published on 23 August 1946 in the New York Jewish newspaper *Aufbau* and repeated in 1960 by Karl Wolff, Himmler's adjutant (note 30, p. 407). It concerns an interrogation record drawn up for the Nuremberg trials. Before introducing the story, the German official declared that the extermination of the Jews "had been deliberately planned *before* the war by Heinrich Himmler" and that "Himmler had consequently focused on war in order to fulfill his plans" (Bach-Zelewski, p. 1). These are nonsensical claims to which not even the most-obtuse intentionalist would subscribe. This is followed by a description of the alleged Jewish shooting, without even an indication of the year! (Bach-Zelewski, p. 2)

M. Beer's narrative continues (p. 407):

> *"Nebe was at the same time head of Amt V of the RSHA. In this function he sent Widmann to Minsk with explosives and two metal hoses in early September."*

They allegedly used the explosives to blow up a bunker which the mentally ill were forced to enter, but the result was not satisfactory, so a gassing experiment was carried out in a nursing home in Mogilev by cutting two holes into the wall of a sealed room, to which the exhaust pipes of two vehicles were hooked up using the metal hoses. Beer concludes (pp. 408f.):

> *"The two experiments convinced Nebe that the only feasible idea was killing by exhaust gas, which most probably is to be attributed to him. But for the Einsatzgruppen, for whom the new 'more humane' killing method was sought, a stationary gas chamber, in which people could be killed with exhaust gas, was of no use. In order to fulfill its purpose, it had to be mobile. Based on these considerations and the experience so far gained, the KTI project to build gas vans was born. Nebe and* [SS *Sturmbannführer*, head of the *KTI* Walter] *Heess suggested such a proposal to their superior Heydrich, head of the Security Police and Security Service."*

Here we need to examine the account by Widmann, on which M. Beer relies, in order to examine the reliability of these later anecdotal sources. The premise of the two killing "experiments" mentioned above is that it was not possible to transport cylinders of carbon monoxide (CO) to Russia. Why was it not possible? Widmann does not explain this. He received from Nebe, through his deputy Werner, an order to procure 250 kg of explosives. In an excess of zeal, Widmann bought 400 kg. To say the least, an exorbitant amount for a killing "experiment," certainly more suitable for a mass extermination. The idea of the "experimental" gassing allegedly came to Nebe, who is *rumored* to once have fallen asleep in his car in the garage (with the engine running!) and thus had nearly died! Widmann then also obtained two metal hoses. With these materials he went to Minsk. The first "experiment" was performed in a forest near the city, where there were "two shelters" 3 m × 6 m. In one of the two, explosive charges were placed, and the mentally ill persons brought from a mental hospital in Minsk were made to enter. Then the charges were detonated. Since not all were dead after the first time, they reloaded more explosives and pulled the trigger once more. Result: 250 kg of explosives used to kill 18 people, but unfortunately their body parts had been scattered all over the place, some of them hanging in the surrounding trees! Smart as the Germans were, they subsequently concluded that blowing up people was messy and inefficient.

Widmann then moved to Mogilev. In a mental hospital, among other buildings, a laboratory was chosen to carry out the gassing. The window was walled up, leaving two holes for inserting two metal hoses. Initially only one was inserted into a hole and was connected to the exhaust pipe of a car. Then 5 to 6 mentally ill persons were made to enter the room. At this point, "Nebe entered the building, where the

inside of the laboratory could be seen through a glass window in the door." So a room with a door and with a "glass window" had been chosen as a "gas chamber"!

Because after 8 minutes no effect could be observed, Widmann and Nebe came to the conclusion that the gas flow was insufficient, so the second hose was inserted into the hole and connected to a truck; after "a few minutes," the victims became unconscious. Widmann says nothing about the type of engine of the two motor vehicles. Leaving aside the absurdity of the "5-meter-high flames" which came out of the chimney of the crematorium of the Pirna Euthanasia Institute (which in his opinion was caused by the fact that too many corpses were cremated together),[3] I note only that such massive disorganization, such ridiculous incompetence, such gross carelessness is utterly irreconcilable with the procedures of the Institute for Criminological Technology of the *RSHA*. Hence the testimony is totally unbelievable, the witness utterly untrustworthy.

Let's go back to Beer's story. In October 1941 Heydrich allegedly turned to SS *Obersturmführer* Walter Rauff, head of Group II D 3, technical issues (*Technische Angelegenheiten*), whose Section II D 3a, Automotive Division of the Security Police (*Kraftfahrwesen der Sicherheitspolizei*), was directed by SS *Hauptsturmführer* Friedrich Pradel, who, according to Beer (p. 410),

> *"gave* [Harry] *Wentritt* [head of Section II D 3a, repair workshop] *the task of verifying whether it was possible to inject the exhaust gases into the enclosed body of a van. After Wentritt had confirmed this, Pradel ordered Rauff to get in touch with Heess. They explained to him how such a truck had to be modified in order to work. Then, on Rauff's orders, Pradel and Wentritt visited the Gaubschat Company in Berlin-Neukölln, which specialized in the construction of truck bodies, pretending to need vehicles to carry away the bodies of victims of typhus epidemics."*

As soon as the first van was ready, it was taken to the workshop of the Office II D 3 a, where it was allegedly converted into a "gas van" by connecting a metal hose to the exhaust pipe, which piped the exhaust gases into the van's cargo box. This "gas van" was then brought to the *KTI*, where analyses of the exhaust gas taken from the van's loadspace were carried out. Beer continues (p. 411):

---

[3] Interrogation of Albert Widmann on 11 January 1960. ZSL, Az. 202 AR-Z 152/59, pp. 44-53.

> *"A short time later an experimental gassing took place at the Sachsenhausen concentration camp (where the KTI had a workshop), which also involved SS officers in addition to Heess and the two chemists Leiding and Hoffmann."*

In this way, according to Beer, the prototype of the "gas van" was built and tested. Regarding their use, he states (p. 412):

> *"If we start from the time of the experimental gassing in Sachsenhausen and given the time required for the modification of vehicles, between eight to fourteen days or so, plus the time required to drive the vehicles to their operational area, it seems that the first gas van could have been used only starting in late November early December 1941. The first use of a gas van can be documented in the operational area of Einsatzgruppe C at Sonderkommando 4a at Poltava."*

The conclusion of this labored story takes us to the specific theme of this study (*ibid.*):

> *"The use of gas vans is attested to for 8 December* [1941] *at Chełmno by the previously mentioned Sonderkommando Lange."*

In this scenario, *nothing* is documented: the experimental gassing at Mogilev, the transformation of a van into a "gas van," the experimental gassing in Sachsenhausen, the first use of gas vans; all that is left to mere testimonies.

In conclusion, of the origin of the "gas van" of orthodox Holocaust historiography, *in documentation*, nothing is known.[4]

As noted by Friedrich Paul Berg, in the years between the two world wars and in particular during World War Two, so-called "producer-gas" vehicles were in use in many European countries. In Germany these vehicles were called "*Generatorgaswagen*" (producer-gas vehicles) or simply "gas vans" (*Gaswagen*). Although such gas generators, fired with wood or coal, produce a mixture rich in CO – from 18 to 35% – the CO content emitted by a gasoline engine is usually less than 10%. Oddly enough, the evidence does not suggest that the *KTI* ever thought of using gas generators for homicidal purposes (Berg 2003, pp. 459f.).

According to a document first mentioned by Christian Gerlach in 1997, but which has apparently remained unpublished – the "Report on the Activities and the Situation of *Einsatzgruppe B* for the Period 16 to

---

[4] In 2011, Beer had a new, slightly shorter paper published on the same topic, which does not contain any new information relevant in this context (Morsch/Perz/Ley 2011, pp. 154-165). I discuss this paper in Mattogno 2016, pp. 55-62.

28 February 1942" of 1 March 1942, this unit had received two "gas vans" (*Gaswagen*; Gerlach 1997, p. 68, and note 83, p. 77). But considering the above-mentioned wartime terminology, I posit that these were *Generatorgaswagen* rather than homicidal "gas vans," a term, moreover, which does not appear in any other wartime document as far as I know and which began to circulate as a designation for homicidal vehicles using exhaust gases only after the war.[5]

The "gas vans" were allegedly created primarily to facilitate the homicidal activities of the *Einsatzgruppen* and were then deployed precisely for this purpose. According to Beer, of the six alleged "gas vans" of the "first series" (Diamond brand or some generic "small" van) converted in 1941, one was assigned to *Einsatzgruppe* C, one to *Einsatzgruppe* D, two to Chełmno (p. 413); also in 1942, thirty other "gas vans" of the second series (Saurer brand) were produced, 20 of which had already been delivered by April 1942 (p. 415), one to Chełmno, the rest apparently to the *Einsatzgruppen*.

It should be noted that the *Einsatzgruppen* have left an enormous quantity of documents on their activities. The "*Ereignismeldungen UdSSR*" (Information on Events in the USSR) amounted to "more than 2,900 typewritten pages" (Krausnik/Wilhelm 1981, p. 333). "There are 195 numbered reports ranging from 23 June 1941 to 24 April 1942 (*ibid.*, pp. 650ff.). The "*Meldungen aus den besetzten Ostgebieten*" (Communications from the Occupied Eastern Territories) are 55 weekly reports numbered from 1 May 1942 to 23 May 1943 (*ibid.*, pp. 652f.). Finally there are 11 "*Tätigkeits-, Lageberichte der Einsatzgruppen der Sicherheitspolizei und des SD in der UdSSR*" (Reports on the Activities and Situation of the *Einsatzgruppen* of the Security Police and Security Service in the USSR) that are dated from 31 July 1941 to 31 March 1942 (*ibid.*, p. 654).

In spite of this huge volume of documents, in these reports "gas vans" never appear (with the one exception mentioned above) and no victim is ever listed as killed with a "gas van." Apparently no one has addressed this enormous contradiction so far.

---

[5] Although the term "gas lorries" appeared in an article of the British weekly *News Review* on 16 July 1942 (Sharf 1963, p. 187), and "gas lorries" as well as "gas vans" were one main focus of the Krasnodar show trial in 1943 (*The Peoples' Verdict* 1944, pp. 49f., 53, 65, 78, 89f., 110). On the document mentioned by Gerlach see also my elaborations in Mattogno 2016, pp. 112-114.

2. The Alleged Hitler Order, Zyklon B & CO

Orthodox Holocaust historiography attributes to the Chancellery of the Führer not only the design of the "*gas vans*," but also of the alleged eastern extermination camps. In 1976, Ino Arndt and Wolfgang Scheffler noted in this regard (Arndt/Scheffler 1976, p. 114.):

> *"The successful testing of human extermination by carbon monoxide, and 'experience' therein acquired by the staff in relation to the technical apparatus of mass destruction, formed the immediate background to, and a precondition for, the killings of incomparably greater size (for which the aforementioned definition of mass extermination has become customary) that began immediately after the end of 'Action T4' outside the Reich in the territories of occupied Eastern Europe, especially the 'Final Solution of the Jewish question,' which was carried out in the gas chambers of the extermination camps and gas vans used by the Einsatzgruppen of the Security Police and Security Service."*

This thesis has become a kind of dogma of Holocaust historiography.

Heinz Peter Longerich, in his report in support of Deborah Lipstadt in the libel trial of David Irving (January-April 2000), reaffirms in this regard (Longerich 1999, Chapter III.B):

> *"1. Parallel to the beginning of the deportations, the transfer of gas-killing technology into the Eastern European region was begun. This technology had been under development in the context of the 'euthanasia' programme since 1939.*
>
> *2. This transfer was initiated after the programme of 'euthanasia' had been stopped on 24 August 1941.* […] *Only a few weeks later, the first preparations can be documented for the construction of gas chambers in Eastern Europe.*
>
> *3. The decision to build the first extermination camp in Bełżec was made in mid-October. The killing was to proceed by means of exhaust from a permanently installed motor. Construction started at the beginning of November, and the killing experts of Operation T4 were ordered to Bełżec in December 1941."*

Such a transfer would of course also have involved Chełmno (*ibid.*):

> *"9. Around the same time, from October/November 1941 onward, the gas vans were also deployed by the SK Lange in the Warthegau*

> *to murder of Jews. On 8 December, the killing began in Chełmno, where a permanent location of gas vans was established – that is, a further variant of an extermination camp."*

But this primary function of the killing system using engine-exhaust gas contrasts sharply with that allegedly adopted at Auschwitz. Longerich mentions this contradiction almost as a matter of compliance with record, without however attempting to explain it (*ibid.*):

> *"10. While the mass murders were being prepared or already executed in Bełżec, the Warthegau, and in the occupied eastern territories with the help of exhaust fumes, the Commandant of the Auschwitz concentration camp took another course. In September or December 1941, 600 Soviet prisoners of war, as well as a selected 250 sick prisoners, were murdered in the basement of Block 11 of Auschwitz by means of a high concentration of the extremely poisonous disinfectant Cyclon B. At a later point, in December 1941, a further 900 Soviet POWs were murdered by means of gas.*
>
> *11. In his writings from the Krakow prison after the war, the former Commandant of Auschwitz Höß described how he had discussed the question of the most suitable poison gas to be employed, on the occasion of a visit by Eichmann. The date of this visit is still not certain – some of his comments indicate the autumn of 1941, others point to a later date somewhere in early 1942. Höß further states that during the time that he was not in Auschwitz himself, his deputy used Cyclon B to kill Soviet POWs on his own initiative."*

The question is actually even more complex than it appears at first sight, because here comes into play not only the agent of killing – Zyklon B as against CO – but also the hierarchical path of the alleged extermination order. On this point, in fact, orthodox Holocaust historiography has an irresolvable dichotomy: on one hand the following path:

> Hitler → Führer's Chancellery → *KTI* (Technical Criminal Institute) → euthanasia → "gas vans" → the alleged extermination camps in Chełmno and the east

and on the other the path:

> Hitler → Himmler → Eichmann → Höss → Auschwitz → Majdanek.[6]

---

[6] According to orthodox historiography, the camp Lublin-Majdanek was equipped with a homicidal Zyklon B gas chamber since October 1942. Marszałek 1986, p. 140. See in this regard Graf/Mattogno 2003.

In his manuscript "*Die Endlösung der Judenfrage*" ("The Final Solution of the Jewish Question"), completed in November 1946 in Krakow, Höss explained the origin of the alleged extermination of the Jews at Auschwitz as follows (Broszat 1981, pp. 157-160):

> *"*[Höss] *In the summer of 1941 – at the moment I cannot say the exact date – I was suddenly summoned to Berlin to the Reichsführer* [Himmler]*, through his adjutant office.*[7]
> [Himmler] *'The Führer has ordered the final solution of the Jewish question, and we – the SS – must carry out that order.* […] *You will learn further details from Sturmbannführer Eichmann, of the RSHA, who will contact you in the near future.* […] *You are to maintain absolute silence regarding this order, even with your superiors.'*
> *Shortly thereafter Eichmann came to me to Auschwitz.*[8] *He apprised me about the plans for the operations in the individual countries.* […] *Furthermore we talked about implementing the extermination. Only gas would be an option* […]*. Eichmann wanted to inquire and then inform me about a gas which could be procured easily and which did not require any special devices. We drove into the area in order to determine the suitable location. We considered the farmhouses* [the future Bunker 1] *to be suitable which were located at the northwestern corner of the later Construction Sector III* [at] *Birkenau.* […]
> *Eichmann drove back to Berlin in order to report to the RFSS* [Himmler] *about our conversation.* […]
> *At the end of November, a conference of the entire section on Jews took place at the Eichmann office, to which I was called as well.* […] *I could not yet find out about the beginning of the operations. Also, Eichmann hadn't managed to locate a suitable gas yet.*
> *In the fall of 1941, by means of a secret special order, the Gestapo separated all* [Soviet] *political commissars and special political functionaries in the PoW camps and sent them to the closest concentration camp for liquidation. Smaller transports of that kind arrived continuously at Auschwitz, which were killed by shooting in the*

---

7 The claim is not confirmed by any document.

8 Eichmann's visit to Auschwitz is not confirmed by any document. At Nuremberg Höss declared that this visit was "about 4 weeks after having received that order from the *Reichsführer*" (IMT, vol. 11, p. 399), *i.e.* in July 1941, given that the meeting with Himmler had taken place in June. Höss's affidavit of 5 April 1946 (PS-3868), p. 2.

> *gravel pit close to the Cartel Building*[9] *or in the courtyard of Block 11. On the occasion of a business trip, my deputy, Hauptsturmführer Fritzsch, had used gas on his own initiative for the killing of these Russian PoWs; he did this in such a way that he cram-packed the individual cells located in the basement with Russians and threw in Cyklon B* [Zyklon B] *while using gas masks, which caused immediate death.* […]
> *During Eichmann's next visit I told him about the use of Cyklon B, and we decided to use this gas for the future mass extermination.* […]
> *I cannot say anymore at what time the extermination of the Jews began. Probably still in September 1941, but maybe only in January 1942."*

So here is involved a direct line Hitler → Himmler → Eichmann → Höss, which, precisely because it implies a presumed general order by Hitler for the extermination of the Jews, of which Höss was to be the main executor, precludes the parallel line via the Chancellery of the Führer, unless you assume a kind of schizophrenia in the top Nazis in charge of the implementation of the alleged extermination of the Jews.

Raul Hilberg inadvertently exacerbates this contradiction by describing the genesis of the alleged homicidal gas chambers as follows (Hilberg 1995, p. 951):

> *"During the summer of 1941, when Himmler began to consider the physical destruction of the Jews throughout Europe, he consulted the chief SS doctor (SS und Polizei Reichsarzt), the Gruppenführer Dr.* [Ernst Robert] *Grawitz, to find out what the best way would be to carry out this mass extermination. Grawitz advised the gas chamber."*

He refers to the affidavit of Konrad Morgen of 13 July 1946, which says (IMT, vol. 42, p. 559; Document SS 65):

> *"In order to implement the mass extermination as ordered by Hitler, Himmler asked him* [Dr. Grawitz] *at that time to suggest a killing method which would be both painless and would spare the victims any fear of death. Hence one had chosen a method which left the victims in complete ignorance of their fate up to the moment of the unexpected application of a fast-acting, highly volatile gas."*

---

9 A former building of the Polish Tobacco Cartel, later incorporated into the camp.

The initiative in finding the most-appropriate system of extermination was therefore assumed by Himmler through Grawitz, not by the Chancellery of the Führer through the Institute for Criminological Technology. But even with this in mind, it is absolutely incredible that, while the Institute for Criminological Technology would carry out the alleged dilettante experiments referred to above, Himmler, instead of awaiting the results of the above killing experiments, is said to have delegated the search for a "fast-acting, highly volatile gas" to Eichmann. Eichmann's performance, however, was so dismal that at the end of November 1941, four months after he was sent to Auschwitz, he had still not found the most-appropriate gas. Instead, this is said to have been found *without great effort* at Auschwitz by a mere SS captain and then used on large scale.

In reality, it would have been very simple to find an appropriate gas. During the First World War both sides used aggressive chemicals of all kinds.[10] At that time, the aggressiveness of the various substances was indicated by the product of mortality or toxicity index that is derived from the Haber Equation and given in "milligrams of toxic substance per m^3 to be inhaled in one minute to obtain the death of the individual." The most-toxic substances found are given in Table 1. As is clear from this table (Izzo, pp. 45f.):

> *"The most dangerous war gas, according to the Haber index, is phosgene, followed soon after by diphosgene."*

It is noteworthy that CO, with its high index of 70,000, was considered the least-effective gas: 150 times less effective than phosgene, from 17.5 to 70 times less effective than hydrocyanic acid: Who would have ever chosen it for mass extermination?

At that time, Germany was at the forefront of chemistry, and these data were in any reference book, such as *Schädliche Gase, Dämpfe,*

[10] Here is the list for the curious reader: chlorine, bromine, phosgene (carbon oxychloride), thiophosgene (carbon sulphochloride), hydrogen cyanide, cyanogen chloride, cyanogen bromide, methyl chloroformate, monochloride chloroformate, dichloride chloroformate, trichloride chloroformate (diphosgene), ethyl iodoacetate, bromoacetone, iodoacetone, bromomethyl ethyl ketone, dimethyl sulphate, methyl chlorosulphate, ethyl chlorosulphate, chloropicrin (trichloronitromethane) dichloro methyl arsine, dichloro ethyl arsine, vinyl chloride dichloro arsine, ethyl sulfide dichloride, acrolein (allyl aldehyde), benzyl chloride, benzyl bromide, bromo benzyl cyanide, phenylimino phosgene (carbil phenyl amine chloride), chloroacetophenone, chlorinated diphenyl arsine, cyan diphenyl arsine, amino diphenyl chloro arsine, N-ethyl carbazole. See Izzo, "Principali aggressivi chimici," table outside of text.

Table 1: Toxicity of poison gases used in WWI		
SUBSTANCE	TOXICITY INDEX†	
phosgene	450	Most toxic
diphosgene	500	
mustard	1,500	
ethyl iodo-acetate	1,500	
chloropicrin	2,000	
chloro ethyl sulfate	2,000	
hydrogen cyanide*	1,000-4,000	
ethyl bromo-acetate	3,000	
perchloro methyl mercaptan	3,000	
chloro acetone	3,000	
bromo acetone	4,000	
xylene bromide	6,000	
chlorine	7,500	
carbon monoxide	70,000	Least toxic

† using the Haber toxicity equation; *depending on the concentration

Nebel, Rauch- und Staubarten, Ferdinand Flury and Franz Zernik, one of the best, which had appeared as early as 1931.[11]

The story of the origin of the alleged homicidal gas chambers is therefore not only documentarily unfounded, but also internally inconsistent.

[11] Similar data can be found in an Italian book by Michele Giua (1933). Another important work on this topic, likewise published in 1933, was Mario Dartori's *Chimica delle sostanze aggressive* (German 1935).

3. The Construction Order for the Chełmno Camp

On the design of the alleged extermination camp at Chełmno, Krakowski stated the following (1983, p. 110):

> *"A letter, written on 16 July 1941 by SS Sturmbannführer Rolf-Heinz Höppner, on the staff of the Höherer SS und Polizeiführer in the Warthegau, to SS Obersturmbannführer Adolf Eichmann, mentions for the first time that 'the Jews* [must] *be eliminated with some quick-acting poison.'"*

In his book published in 2007, Krakowski sees in this letter a wider and more-systematic murderous intention (p. 21):

> *"By this memorandum, as well as by events that happened on the ground, we can assume that already at this early stage there were debates on the extermination of the Jews of the Warthegau, although the manner and pace of implementation of this massacre had not yet been decided upon."*

The text of the letter, as we shall see later, belies this interpretation, which extrapolates and emphasizes a proposal that is at odds with a general policy of extermination.[12] This document fits seamlessly into the National Socialist policy of Jewish deportation to the east, which renders extremely problematic the orthodox claim of a planned extermination of the Jews and the establishement of the alleged extermination camps, beginning with Chełmno, which is said to have been the first to become operational.

In another study I have documented this policy, which resulted in the deportation of more than 56,000 Jews from the *Altreich* (Old Reich), the Protectorate of Bohemia and Moravia and the *Ostmark* (Austria) to the eastern territories (Riga, Kaunas, Raasiku, Minsk, Baranov, Maly Trostinec) and more than 69,000 Jews from those three countries and Slovakia to the Lublin District (Mattogno/Graf 2004, Chapter VI and VIII). Auschwitz had an important role in this policy of deportation because – as was established on 15 September 1942, at a meeting between the Minister Albert Speer, SS *Obergruppenführer* Oswald Pohl

[12] The quotation is furthermore inaccurate, as the original text does not say "by some quick-acting poison (*durch irgendein schnell wirksames Gift*)," but "by some quick-acting substance" (*durch irgendein schnellwirkendes Mittel*). See below.

and other officials of the Reich – this area was the center for the assembly of forced-labor units that were selected during the deportation of Jews to the eastern territories, referred to in the "*Ostwanderung*" document:[13]

> *"The Jews fit for work destined for migration to the east will therefore interrupt their journey* [at Auschwitz] *and shall have to perform armaments work."*

Götz Aly has documented that from January 1941 onward the SS planned to transfer to the ghetto of Łódź in the General Government[14] the majority of Jews unfit for work, who would be replaced by Jews fit for work (Aly, pp. 264f.). He then sums up the plans of the SS (*ibid.*, p. 267):

> *"In the spring of 1941 officials in the RSHA dealing with Jewish affairs and in the General Government considered employing Jews fit for work in 'work columns'; due to new forced labor projects they would have to create 'space' in the ghettos of the General Government, into which Heydrich, Eichmann and Höppner wanted to deport Jews unfit for work from the regions of Łódź, Dombrowa and Zichenau."*

Aly notes that the Jews were divided into two groups – those fit and those unfit for work – who were to be treated differently (*ibid.*, pp. 267f.). These measures, however, were regarded as temporary only in view of an impending "total solution (*Gesamtlösung*) of the European Jewish question," which in the spring of 1941 took account of the future "potential of the east" (*ibid.*, p. 268).

In this respect, Aly makes it clear that in early 1941 the plans of the SS, to which he assigns undocumented intentions of extermination, were to concentrate Jews unfit for work in reservations or ghettos for the elderly on the eastern outskirts of the General Government and to transfer them later, after victory, to Soviet territories bordering the marshes of eastern Poland and present-day Belarus, while Jews fit for work reclaimed those marshes starting in the summer of 1941 (*ibid.*, p. 273).

---

[13] Pohl Report to Himmler of September 16, 1942 on the subject of armament work and bomb damage, BAK, NS 19.14, pp. 131-133. See Mattogno 2004c, pp. 52-54.

[14] The General Government (German: *Generalgouvernement*, Polish: *Generalne Gubernatorstwo*) was the German term for the part of Poland not incorporated into the Reich or annexed by the Soviet Union during World War II. It was governed by a German occupational administration.

Aly later documents that "the plan to deport the Jews to the Pripyat marshes, which used to be located in eastern Poland but later were part of White Russia," was taken very seriously by the SS, and in this context he mentions, among other things, two studies that appeared in December 1941 and June 1942 in the *Zeitschrift für Geopolitik* (*Journal for Geopolitics*) entitled "*Die Pripjetsümpfe als Entwässerungsproblem*" authored by Richard Bergius, and "*Pripjet-Polesien, Land und Leute*," by Hansjulius Schepers (*ibid.*, pp. 275f.). On 19 July 1941, the Governor General of Poland Hans Frank, in a paper to Hans Lammers, head of the Reich Chancellery, suggested the annexation of the "swamp lands of Pripyat" into the General Government (*i.e.* wartime Poland) in order to move there "elements of the population (especially Jews)" in order to use them for productive activities useful to the Reich (*ibid.*, p. 317).

Into this context fits the activity report allegedly written by SS *Sturmbannführer* Rolf-Heinz Höppner[15] on 16 July 1941, of which I provide a translation:[16]

"The L HÖ/S Posen, 16 July 1941

File Memo

Subject: solution of the Jewish question.

In meetings [held] *at the provincial government of the Reich, the solution of the Jewish question in the territory of the Warthegau has been addressed from various aspects. The following solution is proposed:*

1. All the Warthegau Jews will be assembled in a camp for 300,000 Jews which will be built in the form of barracks as close as possible to the railway line carrying coal and which contains equipment for industrial workers, tailors, cobblers and so on.

2. Into this camp will be brought all the Jews of the Warthegau. Jews fit for work, on request, can be organized into working groups and allowed outside the camp.

3. Such a camp, in the opinion of SS Brigadeführer Albert,[17] *can be guarded by much smaller police forces than is now the case. Moreo-*

---

15 Adalbert Rückerl wrote in this regard (1979, p. 257, note 38): "In both the criminal proceedings before the District Court of Posen and subsequently in a preliminary investigation against him by prosecutors in Bonn Rolf H.[öppner] denied that the letter to the *Reichssicherheitshauptamt* and the note attached to the documents had reached him."

16 T/219. Reproduction of the document in Leszczyński 1977, pp. 60f.

17 Wilhelm Albert was head of the police (*Polizeipräsident*) in Łódź.

ver, the danger of epidemics, which in Litzmannstadt [=Łódź] *and other ghettos is always present for the surrounding population, is limited to a minimum.*

4. This winter there is a danger that not all Jews can be fed any longer. We must seriously consider whether the most-humane solution is not to eliminate the Jews by some substance with rapid effect insofar as they are unfit to work.

5. For the rest a proposal was made to sterilize all the Jewesses in this camp who can still be expected to bear children so that with this generation the Jewish problem will indeed be solved completely.

6. On this matter the Reichsstatthalter [Arthur Greiser] *has not yet ruled. One gets the impression that Regierungspräsident*[18] *Übelhör does not want the Litzmannstadt ghetto to disappear, as he has a lot to gain from it. As an example of how much profit can be made from the Jews, I was told that the Reich Ministry of Labor pays 6 RM from a special fund for every Jew employed in work, but the Jew only costs 80 Pfennigs.*

SS Sturmbannführer."

The proposal attributed to Höppner is therefore not consistent with a plan of systematic extermination. That conclusion was also reached by Aly on the basis of an activity report from Höppner for Eichmann on 2 September 1941 (1995, p. 339):

"So Höppner from early September stated for a fact that 'the final solution of the Jewish question' was a first essential part of the general program of evacuation of all Jews who were 'under German influence.' He did not yet consider that systematic murder had been decided upon"

This is incontrovertibly confirmed by the rest of the letter from Himmler to Arthur Greiser, governor of Warthegau, of 18 September 1941:[19]

"The Führer wishes that the Old Reich and the Protectorate be emptied and cleared of Jews from west to east as soon as possible. For this reason I have worked hard to transport, possibly even this year, the Jews of the Old Reich and the Protectorate, primarily as a first step, into the new eastern territories obtained two years ago by the Reich, and to expel them farther east next year.

---

18 President of the administrative district.

19 Letter from Himmler to Greiser of 18 September 1941. BAK, NS 19/2655, p. 3; reproduction in Witte 1995, p. 50.

> *I plan on deporting about 60,000 Jews from the Old Reich and the Protectorate to the Litzmannstadt ghetto, which, as I have heard, has the space to accommodate them. I beg you not only to understand this decision, which will certainly create difficulties for your Gau, but to support it with all your strength in the overall interest of the Reich.*
> *SS Gruppenführer Heydrich, who has to carry out this Jewish emigration, will approach you in due course directly or through SS Gruppenführer Koppe."*

While this document reflects perfectly the guidelines of the National Socialist policy of Jewish emigration, Holocaust historian Peter Witte found a way to twist the sentence, claiming that its "further transfer to the east" contains

> *"already, in its essentials, the death sentence of the Jews to be deported, regardless of the fact that at that time there were not yet any death camps ready to receive Jews and that their construction had not yet been ordered, although the ground for the extermination had already been prepared,* […]*"* (Witte 1995, p. 53)

where the last sentence refers to Höppner's alleged letter of 16 July 1941!

Unexpectedly – and mysteriously – a few weeks after the above-mentioned letter, in October 1941, Himmler allegedly ordered the construction of the "killing fields" of Chełmno and Bełżec. However, the documents continued to speak of evacuation to the east. I have cited many of them in a previous work (Mattogno/Graf 2004, pp. 181-193). Aly also mentions others (1995, p. 274):

> *"On 23 September 1941, Heydrich assured Goebbels, who approached him in his capacity as Gauleiter of Berlin, that, once the military situation would allow it, the Jews would have to be sent to the Communist camps on the Arctic Ocean. Immediately after the Wannsee conference, Heydrich returns to the 'Arctic Ocean' option: there they wanted to 'get hold of the Russian concentration camps'; the territory – which, despite what one might suppose to the contrary, had a sound, concentrated agriculture and an excellent base of raw materials – was an 'ideal future home for the 11 million Jews of Europe.'*[20] *In 1946, Frank's secretary of state, Josef Bühler, during his interrogation at Nuremberg, declared that Heydrich had told him*

[20] This refers to a secret speech by Heydrich in Prague on 4 February 1942.

> *at the beginning of 1942 that Himmler had the order from the Führer to gather all the Jews of Europe and evacuate them to the north-east of Europe, to Russia."*

The Jewish deportations to Minsk and Riga began on 8 and 15 November 1941, respectively (Mattogno/Graf 2004, pp. 200f.), but these were temporary locations only, because, as Heinrich Lohse, the *Reichskommissar des Ostlandes* (Imperial Commissioner for the Eastern Lands[21]), wrote on 9 October 1941, to Alfred Rosenberg, *Reichsminister für die besetzten Ostgebiete* (Imperial Minister for the Occupied Eastern Territories), that "since Jewish camps must be shifted considerably farther to the east" (*ibid.*, p. 197) which is also consistent with the Arctic Ocean option.

The use of former Soviet prisoner-of-war camps to imprison Jews followed a general directive issued in Galicia as early as August 1941:[22]

> *"In almost all towns of some size in the district of Galicia there are said to be prisoner-of-war camps set up by the Russians. These are said to be equipped with the necessary facilities and are said to be especially well-suited to serve as camps for Jewish forced laborers. All existing camps are to be surveyed and immediately reported. At the same time their capacity and their condition is to be determined."*

But then suddenly, just when the policy of deportation to the east began to be realized, for mysterious reasons the SS began to build not transit camps, but "extermination camps." But what about the subsequent documents that continue to speak of deportation to the east? All that is left to orthodox Holocaust historiography is the subterfuge of "coded language," according to which one merely has to swap terms like "emigration" and "deportation" with "annihilation" so that the sources suddenly document the creation of the alleged extermination machine since October 1941. Here, for example, is how Aly addresses these difficulties of interpretation (p. 358):

> *"The minutes of the meeting in Prague on 10 October 1941 document how little difference there was in these days and in these weeks between the ideas of murderous deportation and immediate extermi-*

---

[21] The territories of the Baltic countries, Belarus, Russia and the Ukraine temporarily occupied by the Germans.

[22] Letter of *Oberst der Schutzpolizei und Regimentskommandeur* Worm to Police Battalions 315, 133 and 254 as well as to the *Kommandos der Schutzpolizei* in Lemberg, Tarnopol, Stanislau of 14 August 1941. RGVA, 1323-2-292b, p. 158.

> *nation, with as little fuss as possible, of the European Jews, as the term 'evacuation' became synonymous with killing."*

But the document of 10 October 1941 speaks explicitly of deportations to the east and reception of the deportees in the appropriate camps:[23]

> *"Because of the evacuation, difficulties arose. It was planned to begin with it roughly on 15 October 1941, in order to let the transports take off one by one until 15 November, up to the number of some 5,000 Jews – from Prague alone. For now, one still has to be considerate of the Litzmannstadt* [Łódź] *authorities. Minsk and Riga are to obtain 50,000.* […] *During the following weeks the 5,000 Jews are now to be evacuated from Prague. SS Brif.* [Brigadeführer] *Nebe and Rasch can include the Jews in the camps for communist inmates in the area of operation. According to SS Stubaf. Eichmann this has already been initiated."*

Theresienstadt was considered to be a "provisional assembly camp (*vorübergehenden Sammellager*), albeit with a high mortality, from which evacuation was then to continue "to the eastern territories" (*in die östlichen Gebiete*; *ibid.*). Nothing in this document suggests any intention on the part of the SS to exterminate the Jews.

About the genesis of the Chełmno camp, Krakowski states (2007, p. 27):

> *"It is neither known when exactly the decision was made to establish the Chełmno camp, nor at which moment and under which circumstances the respective orders were issued."*

He repeatedly asserts that it was inaugurated on 8 December 1941 (*ibid.*, pp. 31-32, 35), but does not provide any documentary evidence, not even a single testimony.[24] Despite this, he even claims that "on that 8 December 1941 the gas vans made their awful journey three times" (*ibid.*, pp. 34f.), but this statement too is devoid of any documentary evidence. This applies also to the connection which Krakowski sees between the camp's alleged date of opening and the original date of the Wannsee Conference. He notes that the latter was initially convened for 9 December 1941, but was later postponed to 20 January 1942, because

---

[23] *Notizen aus der Besprechung am 10.10.41 über die Lösung der Judenfrage*. T 37/299. Transcription in Kryl 1983, pp. 38-41.

[24] According to the testimony of Andrzej Miszczak, the first transport of inmates (700 Jews from Koło) arrived at the camp on 9 December 1941: Blumental 1946, p. 241. This is a simple claim without any documentary confirmation.

of the Japanese attack on Pearl Harbor and the subsequent entry of the U.S. into the war, and he concludes (*ibid.*, pp. 31f.):

> *"While the conference date was postponed, the opening date of the Chełmno extermination camp was not changed, and the massacre commenced – as planned – on 8 December 1941."*

But that unfounded conjecture does not turn this purely fictitious date into reality.

Furthermore, the guidelines set out by Heydrich at the Wannsee Conference are in sharp contrast to the alleged establishment of a death camp at Chełmno in early December 1941. Krakowski is forced to completely distort them. He writes (*ibid.*, p. 77):

> *"*[…] *already during this conference it was agreed to leave a small percentage of Jews alive in order to use their strength for forced labor. Working conditions would then gradually bring about the killing of all the forced laborers, according to the Nazi program called 'extermination through work.'"*

The truth is, however, that at the Wannsee Conference Heydrich announced the change in the National Socialist policy toward the Jews which had evolved a few months earlier:[25]

> *"In the meantime, the Reichsfuehrer SS and Chief of the German Police* [Himmler] *had prohibited emigration of Jews due to the dangers of an emigration in wartime and due to the possibilities of the east. Another possible solution of the problem has now taken the place of emigration, i.e. the evacuation of the Jews to the east, provided that the Fuehrer gives the appropriate approval in advance."*

That here was a genuine plan to deport the Jews to the east is admitted even by Hilberg, who comments (1995, p. 428):

> *"Heydrich explained what would be done with the evacuees: they were organized in huge labor columns; by using their labor, many of them would no doubt 'perish due to their physical weakness' (wobei zweifellos ein Grossteil durch natürliche Verminderung ausfallen wird).*[26] *The remainder (Restbestand) of this process of 'natural selection' – that is, the more resistant core of the Jews – would have to be 'treated accordingly' (wird entsprechend behandelt werden müssen), since history had shown how these Jews carry within them*

---

25 NG-2586-G, p. 5 of the original.

26 The expression "*durch natürliche Verminderung*" does not mean "due to their physical weakness," but instead "by natural attrition," that is: by natural mortality.

> *the seeds of a new Jewish revival. Heydrich does not dwell on this 'according' treatment, but based on the language of the Einsatzgruppen reports we know that he alluded to their death sentence."*

But Hilberg himself distorts the final destiny of the remaining Jews, omitting the words "in case of liberation" (*bei Freilassung*), which categorically excludes both the "death sentence" he posits and the gradual "extermination through work" alleged by Krakowski, making clear that "*entsprechend behandelt*" probably simply meant that these Jews were not to be released.[27]

But if, as late as 20 January 1942, the National Socialist policy toward the Jews still provided for a *genuine* evacuation of the Jews to the east, then how can this be reconciled with the establishment of a camp at Chełmno? In this context Chełmno could only have been a transit camp for the evacuation of Jews from the Warthegau to the east.

Greiser's letter to Himmler of 1 May 1942, from which Krakowski infers that the Nazis intended "giving up – at least for a certain period of time – the total extermination of the entire Jewish population of the Warthegau in order to admit a certain percentage of them for the implementation of forced labor" (2007, p. 78) should be interpreted precisely in this sense.

The passage of the document relied upon by Krakowski says:[28]

> *"Reichsführer!*
> *The operation of special treatment of some 100,000 Jews in my governmental area, as approved by you in agreement with the Head of the Imperial Security Main Office, SS Obergruppenführer Heydrich, will be finished within the next 2-3 months."*

This "special treatment" was merely an extension to the Jews in Warthegau of the order that Himmler had sent to Greiser on 18 September 1941 concerning the expulsion of the Jews of the Reich proper and the Protectorate via the ghetto of Łódź during "next year," that is 1942.

But if the alleged establishment of the Chełmno "extermination camp" remains inexplicable and contrary to the sources, the report of the first alleged systematic extermination in this camp, as discussed in Chapter 5, is likewise contradictory and inexplicable.

---

[27] As in the Madagascar project, the deported Jews were under the supervision of the SS in the eastern settlements as well.

[28] NO-246.

4. "Gas Vans" in Chełmno?

According to orthodox Holocaust historiography, the alleged extermination of the Jews at Chełmno was carried out solely by means of "gas vans."

The only document that links vehicles called "*Spezialwagen*" to Chełmno is a file memo (*Vermerk*) of 5 June 1942 apparently from the *Referat II D 3a* of the *RSHA* 8.[29] This is said to be an official document drawn up in a very peculiar "'unique-est' copy" ("*einzigste Ausfertigung*"), although in German, the superlative of the adjective *einzig* does not exist (just as in English with its translation "unique"). It concerns "technical changes to the special vehicles [already] in service and which are [still] in production" and opens with an incomprehensible "for example":

> *"For example 97,000 were processed since December 1941 with 3 deployed vehicles without any defects in the vehicles becoming apparent."*

The reference that we are interested in is in the following sentence:

> *"The known explosion at Kulmhof* [=Chełmno] *has to be assessed as a single case."*

But the document in question contains so many anomalies and absurdities that Ingrid Weckert, Pierre Marais and Santiago Alvarez, who have researched it carefully, came to the conclusion that this is a back-dated fake along the lines of the memo from the Chief of Police and Security Service of 23 June 1942, addressed to the Fahrzeugewerke Gaubschat company in Berlin, to give the latter a criminal significance which it does not have.[30]

To assess the validity of this interpretation just one observation is sufficient. The memo of 23 June 1942, in Paragraph 1 says:[31]

> *"The cargo box is to be shortened by 800 mm in length. The protrusion at the door is omitted. The objection is herewith acknowledged that the shortening would result in a disadvantageous weight distri-*

[31] Facsimile of the document in: Alvarez 2011, pp. 323-325.

bution. The Gaubschat company will not be held liable for any disadvantages resulting from this."

And here is how it is interpreted in the memo of 5 June 1942:

"The vans' load usually amounts to 9 to 10 per m² [10 sq ft]. *Although no overloading occurs thereby for the spacious Saurer special vehicles, utilization in that form is not possible, because their off-road capability is highly reduced by this. A reduction of the load area appears to be necessary. This will be achieved by shortening the body by approximately 1 m* [39"]. *The above difficulty is not to be solved, as has been done so far, by reducing the number of units* [of payload]. *This is because a reduction in the number of units necessitates a longer operation time, since the empty spaces* [left by omission of the payload units] *also have to be filled with carbon monoxide. In contrast to this, a substantially shorter operation time suffices in case of a shorter load area and a completely filled loading space, since empty spaces are missing.*[32] *"*

According to the note of the *RSHA* on 27 April 1942, the cargo boxes of these special vehicles were 5.8 m long and 1.7 m high, and their load capacity was 4,500 kg.[33] Since the normal load was allegedly nine to ten – we assume people – per square meter, if the truck's floor was 2.5 meters wide (see further below), this would result in an area of 14.5 m^2 and a volume of 24.65 m^3. In this case, it would have held no more than (4,500 kg ÷ 14.5 m² =) 310 kg/m². Hence the permissible average weight of each person would have amounted to (310 kg/m² ÷ [9 to 10 m^{-2}] =) 34.4 to 31.0 kg, an unrealistic value for groups in which adults had to be relatively numerous. For the alleged gas chambers at Birkenau, Robert Jan van Pelt took a more-reasonable average weight of 60 kg per victim (van Pelt 2002, pp. 470, 472).

In other words: Loading nine to ten average people of 60 kg into such a truck would have amounted to (14.5 m² × [9 to 10 m^{-2}] =) 7.8 to 8.7 metric tons, which is almost twice the permissible load of 4.5 metric tons. Hence the above-quoted memo's claim is utterly wrong that "no overloading occurs."

The memo's claim that merely reducing the number of payload units led to "a longer operation time, since the empty spaces also have to be filled with carbon monoxide" is just as ridiculous. Even though shortening the load area by 1 m (or 17%) while maintaining the load density

32 German: "*weil freie Räume fehlen*." This is awkward German as well.

33 Facsimile of the document in Alvarez 2011, pp. 299-305.

would reduce the air volume accordingly, reducing the load density instead has hardly any effect on the air volume. To show this, I assume first of all that the vehicle's maximum load of 4,500 kg (≈ 4.5 m³ of bodies) was not exceeded. That would amount to (4,500 kg ÷ 60 kg) 75 persons, or 5.2 persons (or 310 kg) per square meter. We now reduce the payload by as many persons as would result from shortening the box by one meter. This amounts to (1 m × 2.5 m × 310 kg/m² =) 775 kg or roughly 13 people, or an additional air volume of 0.775 m³. Hence decreasing the load by 775 kg would increase the empty volume merely from (24.65 m³ – 4.5 m³ =) 20.15 m^3 to (20.15 m^3 + 0.775 m^3 =) 20.925 m^3, or just 3.7%. Even if we assume a higher load density as suggested by the memo, this would still not be more than a 7.2% increase in air volume. And if, as stated in the verdict of the Bonn Jury Court of 30 March 1963, the death of the victims occurred within about nine to ten minutes after starting the engine,[34] this marginal increase of free space would have resulted in an equally marginal change of the execution time, which would have been in the order of 20 to 40 seconds. This shows that the analysis presented in this memo of 5 June 1942 is ludicrous.

This memo also claims that, according to the company that was to carry out the work, the shortening of the body would have had a negative effect on weight distribution, resulting in an overload of the front axle of the vehicle:

> *"In a discussion with the manufacturer it was pointed out by the latter that a shortening of the cargo box would result in a disadvantageous weight displacement. It was emphasized that an overloading of the front axle occurs. In fact, however, an unintended balancing in weight distribution occurs, because during operation the load striving toward the back door always predominantly lies there. Due to this an additional load on the front axle does not occur."*

In other words, the victims would move toward the door of the "gas vans" and their weight on the rear axle of the vehicle would offset the overload on the front axle due to shortening of the vehicle body and rebalance the vehicle. This "solution" ignores the fact that the load of

[34] Rüter *et al.* 1979, pp. 232, 279; during this trial eleven defendants who had been officials of the Chełmno/Kulmhof camp were accused of various acts of homicide. It started on 26 November 1962 and lasted until 30 March 1963. After a partially successful appeal the case was retried and ended with a final verdict on 23 July 1965. Three of the defendants received 13 years, one 7 and one 8 years, and three others 13½ months of imprisonment. Cf. Alvarez 2011, Paragraph 3.7.4.1.

the "gas vans" is said to have been nine to ten victims per square meter and that just to maintain this density they wanted to shorten the box. But with such a packing density, the victims could not have moved at all.

Besides, the "special vehicles" described in the memo of 27 April 1942 could not have been homicidal "gas vans," as has been stressed by the revisionist authors mentioned above. This becomes clear from the fact that in relation to the design of a removable grate to be installed in the cargo box this document states:

> *"In order that the load does not fall over the last grate* [section] *toward the rear wall of the driver's cab, it is to be equipped with an angled gridwork of 3 – 400 mm height."*

But if the load consisted of people, standing nine to ten per square meter in the cargo box, how could a trellis just 30-40 cm [1' to 1'4"] high prevent the dying victims or their corpses, after the gassing, from falling or resting against the cab? Such a device could possibly be compatible with the transport of corpses, loaded and arranged neatly in the cargo box, but not with the transport of living people who became corpses inside the cargo box.

Apart from the reference mentioned above, the only documentary evidence of the use of a gassing van at Chełmno for homicidal purposes would be two photographs taken in 1945. The first photo, the best-known, is on display at the Chełmno Museum.[35] The second depicts the same alleged "gas van," which was in 1945 at the former Ostrowski Company in Koło,[36] a town located about 10 km northeast of Chełmno.

The photograph on display at the Chełmno Museum was published in 1982 by Gerald Fleming with this caption:[37]

> *"Mobile gas chamber in which Jewish men were murdered in the Chełmno (Kulmhof) extermination camp and at Konitz (Archives of the Polish Ministry of Justice)."*

This "gas van" was, however, not recognized as such by witness Bronisław Falborski, who was interrogated at Koło on 11 June 1945 by the

---

[35] See Documents 1, 1a. The photograph's Polish caption reads: "Vehicle found after the war at Koło on the grounds of the Ostrowski factory." Supprisingly, whether this was in fact a "gas van" and how it would have operated is left to the visitor's imagination.

[36] See Document 3, taken from http://www.deathcamps.org/occupation/pic/bigChelmnovan.jpg.

[37] Fleming 1982, between pp. 128 and 129; see Document 2.

investigating judge Władysław Bednarz.[38] In his deposition he stated the following:[39]

> *"During the German occupation I worked as a mechanic for the German company 'KRAFT' in Koło, Asnyk Street. I worked for said company from April 1942 to 1943. I don't remember the exact dates. Our company repaired vehicles of the SS Sonderkommando from Culmhof. Once I was ordered to repair a vehicle which served to poison with gases. I cannot exactly remember when this happened. I think that it was in the summer of 1942. The vehicle was roughly 2.50 m high. Its length was 6 m, but its width*[40] *probably 2.50 m. The vehicle's color was black and had the shape of a box. The roof was flat and perpendicular to its walls. I believe that it was lined with sheet metal, but I am not certain about it. I did not look at the engine, and I have not paid attention to the make of the vehicle. The vehicle's doors could be locked with latch and keys."*

After the description of the vehicle, the witness spoke of repairs:

> *"The repair consisted of replacing a part between the flexible part of the exhaust pipe and the part which led into the vehicle's interior."*

He pointed out that the exhaust pipe consisted of three parts, of which the middle one was "flexible, like a hydraulic hose," and added that it

> *"could be connected to a pipe located in the floor of the vehicle, with the result that the exhaust gases flowed into the vehicle's interior."*

But the most important part of his deposition is this:

> *"Immediately before my employment at the 'Kraft' workshop I had been a driver at the forester Maj. In that connection I was frequently in the forest of Chełmno. In that period of time I frequently saw vehicles driving into the Chełmno forest and back. These were vehicles like those which I repaired later on in the 'Kraft' workshop. I had the impression that there were only two vehicles of the same size which encountered each other on their way.* […]

---

38 The investigation of Judge Bednarz is archived in the collections "Ob-271" (9 volumes) and "Ob-19" (2 volumes) of AGK.

39 Deposition by Bronisław Falborski of 11 June 1945. Facsimile of the original text in Alvarez 2011, Appendix 9.

40 The text reads "*wysokość*" – "height," but as height has been mentioned before, this is evidently an erroneous replacement for "*szerokość*" – "width."

Three times I saw a converted moving truck van [*z wozu meblewego*] *which is currently in the courtyard of the former 'Ostrowski' Company. Once I had already seen this vehicle in the forest, the second time on the road and the third time when it was just coming out of the courtyard of the Chełmno Castle. This was in spring 1943. I saw this vehicle repeatedly at intervals of several days. Recently I saw this truck in the courtyard of the Ostrowski factory, and I am absolutely certain that it is the same vehicle (size – shape – color)."*

The two photographs mentioned above come from the Commission of Inquiry into German Crimes in Poland, which apparently inspected the vehicle, including transcribing everything written on it (see Document 4):

"on the back door: Otto Köhn Spedition /Ruf 516 Zeulen da i Th
on the left door: 40 km
on a metal plate on the engine:
'Humboldt-Deutz AG' Magirus-Werke 'Ulm / Donau
Baujahr 1939 Lieferdat 739 Abn-Stempel
Fahrgestell Nr. 9282/38 Nutzlast kg 2700
Fahrgestell-Baumuster 023. Eigengewicht 4980 kg.
Motor-Baumuster FoM 513 zul. Ges. Gew. 7900
Leistung P.S. 105 cm^3 7412 Zulässige Achsendrücke vorn kg 2400 hinten 5500."

From a comparison of the two photographs we see that they portray the same vehicle from different angles and on two different dates. With regard to the position of the vehicle, in both photographs we see on the left a dome-shaped shed with a window that appears in perspective at the same height as the top of the vehicle windows; on the right, in the Fleming photo, we see a low building of which in the Ostrowski photograph we see a part of the wall and its shadow. The vehicle has the same shape and details (*e.g.* the metal plate fixed on the hood between the two windows, the white disc [containing the characters "40 km"] drawn on the left door, the two parallel bars in relief on the same door between the disk and the window).

Regarding the alleged "gas vans" Chełmno, Jerzy Halbersztadt, a member of the faculty of the University of Warsaw and of the Holocaust Museum in Washington, wrote a note of interest:[41]

[41] J. Halbersztadt, "Enquires on the Killing of the Gombin Jews," in: http://pages.ucsd.edu/~lzamosc/chelm00.htm.

"The case of Chełmno death camp was investigated by the Main Commission for the Investigation of German Crimes in Poland (it was the commission's name at the beginning of its existence) starting from May 1945. The commission received the information that in the town KOLO (ca. 12 km from Chełmno) in the former factory of Ostrowski there was a van which, according to the witnesses, was used in the death center at Chełmno. The van was found, photographed and researched.

The photos taken then are available in the Main Commission's Archives in Warsaw (signatures 47398, 47396, 47397, 47399; the best one is 47398). The captions of these photographs are still today: 'a car for killing people by the exhaust fumes at Chełmno.' One of these photos was reproduced in Fleming's book 'Hitler and the Final Solution' with the information that it is a photograph of a 'gaswagon' used in Chełmno.

Despite of their captions, the photographs do not show the gas van used in the Chełmno death camp. It is clear from the testimonies of Polish witnesses kept in the same archives of the Main Commission (collection 'Ob,' file 271 and others). Witnesses to whom the van photographed in Koło was shown did not confirm that it was one of those used in Chełmno for killing people. Some of them only said that it was similar to those described in their testimonies, but not the same. The most common answer was: 'I didn't see this one.'

The inspection of the van in Ostrowski factory, done on 13 November 1945 by the judge J. Bronowski, did not confirm the existence of any elements of system of gassing of the van's closed platform. The witnesses called this van 'a pantechnicon van' (a van to transport furniture). It was produced by 'Magirus-Werke' with a diesel type engine of 'Deutz.' The plate on the engine stated: 'Humboldt-Deutz A.G. 'Magirus-Werke' Ulm (Donau) Baujahr 1939 Lieferdat739 Abn-Stempel. Fahrgestell Nr. 9282/38 Nutzlast kg 2700 Fah[r]*gestell-Baumuster 023. Ei*[ge]*ngewicht 4980 kg. Motor Baumuster FoM 513 zul. Gesamt gew. 7900 Leistung P.S. 105 cm3 7412. Zulaessige Achsendruecke vorn kg 2400 hinten 5500.' The thickness of the car's wooden body was 7 cm, of the door – 8 cm. The walls, door, ceiling and floor were covered from the inside with the 2 mm sheet iron. The car was painted in grey-lead color. Under this paint the inscription was seen on the door of the cab: 'Otto Koehn Spedition Ruf 516 Zeulen… da i.TH.'*

I cite all these details to make possible the further comments to the story of this van. It is my feeling that there are some unclear points in this story. Nobody explained for what purpose this van was used. Its door was tightened with an impregnated canvas. What for? Some witnesses had seen this car in the area of the forest of Chełmno starting from the spring of 1942. It is possible that it belonged to the SS Sonderkommando Kulmhof, too. I came across a version that this van was used for a disinfection of victims' clothes but there are no grounds for it.

In 1945 the prosecutors came to the conclusion that this van was not a gas van of Chełmno. The van was left incomplete and not serviceable in Ostrowski's factory at least till 1950. The last known documents (a correspondence between the Association of Combatants 'ZBoWiD' in Koło and the Main Commission) of April 1950 inform that there was an idea to move this van to the museum in Auschwitz or Majdanek (till 1990 there was no museum in the Chełmno forest; [the] *first monument was erected there in 1964). Those plans were not accomplished and the van was scrapped, probably.*

Thus, there is no reliable graphic illustration of the gas vans used in Chełmno. However, the testimonies of witnesses contain many important data on these vehicles. In 1945 and later Polish authorities examined some Poles who stayed in the area of Chełmno after the removal of the vast majority of the Polish population to the GG in 1939-1940. The witnesses were able to identify gas vans very well. They declared that there were three or four gas vans, one of them was a bit bigger. All of them were black. The cars' bodies were boxes made of boards. The length of a biggest vehicle was 5.5-6 m. It was ca. 2.5 m high and 2.5 m wide. Each vehicle was guarded all the time (even during the repair in the local factories) by two watchmen, who did not give anybody the access to the van and, especially, to the chassis and the closed box (platform).

However, at least three witnesses were able to see the vehicles from the short distance. Mr. Jozef Piaskowski (b. 1908) was employed in the Reichsstrassenbauamt in Koło (former Ostrowski factory). In the winter 1941/42 he was ordered to repair the damaged cooler in the biggest of Chełmno vans. Piaskowski was an experienced driver. He declared later that he has never seen the motor of this type. 'The motor was a bit odd.' 'It was enormous.' The most interesting [thing] *in his report is the description of the exhaust system. He has noticed*

that the exhaust pipe was divided into three parts. First and third were done of metal as in normal cars. But the central part was done of the elastic, 'hydraulic' pipe which could join both standard tubes or could be screwed to the hole in the van's floor. After the repair of the cooler, when the motor was tested, so much exhaust fumes were produced that the air in the garage (size 30 m x 12 m) started immediately to be blue. The German bosses ordered to open all windows and doors. The workers who spent a very short time in the polluted air have got headache. The witness heard later their comments that the motor of this car uses 75 liters of petrol per 100 km, so twice more than normal motors do. Piaskowski stated that he had seen two military type gas-masks in the driver's cab. Piaskowski's colleague, Mr. Bronisław Mańkowski (b. 1882) confirmed his story and added that he had seen the van when the middle part of the exhaust tube was join[ed] *to the hole in the car's floor. Mańkowski declared that he looked inside the box when the watchmen left their posts for a while. He had seen a hole covered with a perforated sheet* [of] *iron in the middle of the wooden floor.*

Another witness, Mr. Bronisław Falborski (b. 1910), was employed in the 'Kraft' company in Koło, where the vehicles of the SS Sonderkommando Kulmhof were repaired, starting from 1942. In summer 1942 he received the order to repair one of the gas vans. His description of the exhaust pipe is in general the same as done by witnesses cited above. The only (but important) difference is the description of the connection of elastic pipe with the hole in the car's floor. According to Falborski (who made even a picture) they were join[ed] *by two fasteners tightened by four screws. It seems that this connection was permanent, quite difficult to change and only optionally substituted by the standard connection of both metal parts of the exhaust pipe as in normal cars. Falborski's report seems reliable as his task was to make this connection air-tight by the change of the packing between two fasteners.*

The cases of the repair of gas vans in the local workshops of Koło seem to be rare and exceptional. Probably it happened only in necessity when it was impossible to use military- or SS motor services.

The Chełmno death center stopped to operate many months before the liberation of this site. The gas vans were very easy to move from the area of Chełmno-Koło and to change into standard vans with very little signs of their previous function. It is very difficult to think

> *that* [the] *SS murder*[er]*s (who tried to destroy all evidences of genocide, like crematoria, camps, corpses, etc.) could simply forget a gas van near to Chełmno or elsewhere."*

J. Halbersztadt states that the Central Commission of Inquiry into German Crimes in Poland inspected the vehicle which was located at the former Ostrowski Company on 13 November 1945 and confirmed that it was *not* a "gas van." Nevertheless, according Halbersztadt the Polish authorities decided in 1950 to transfer the vehicle in question to the Museum of Auschwitz or Majdanek, apparently to show it as a real "gas van." However, this vehicle was traveling regularly between Chełmno Palace and the forest, because it necessarily belonged to the SS *Sonderkommando* Kulmhof.[42]

In his report of 7 January 1946, the investigating Judge Bednarz wrote as follows (1946d, p. 5):

> *"The camp's Sonderkommando didn't have a car repair shop, so that vehicles requiring repairs were brought very quickly to the workshop of the company Kraft- und Reichsstrassenbauamt in Koło. Eight Polish mechanics of this workshop described these vehicles' technical design as follows: the vehicles' dimensions were 2.5 to 3 m in width and 6 m in length; the smallest were 2.3 to 2.5 meters wide and 4.5 to 5 m long. The cargo box was made of narrow boards bolted together. Inside the vehicle was covered with sheet metal. The door was airtight, so any flow of air from the outside was absolutely impossible. The vehicles were dark gray. The exhaust pipe was under the vehicle and was connected in the middle of its length* [in the middle of the back]. *The opening of the exhaust pipe inside the vehicle was fitted with a perforated sheet which prevented the tube from being clogged. On the floor of the vehicle was a wooden grate. The engine was probably from the Sauer company. The driver's cabin bore the inscription 'Baujahr 1940 – Berlin' (built in 1940). Near the driver's seat were gas masks."*

This description – except for the words "*Baujahr 1940 – Berlin*" also fits the Ostrowski vehicle well (even though Magirus trucks never had Saurer engines). Its picture shows clearly that "the body was built with narrow planks bolted together," and in particular in the part of the body above the windows of the cab, where some boards had been removed. The presence of gas masks in the cab refers to the deposition of one

[42] Only one vehicle of the SS *Sonderkommando* was permitted to move freely in the off-limits area.

witness ("Piaskowski declared that he saw two military-type gas masks in the cab").

At that time two types of masks against carbon monoxide existed in Germany: the CO-Degea mask produced by the Auer company and the CO-Draeger mask. Because the adsorbents used in the filters absorbed humidity from the air, the filters had to be stored in airtight boxes in order to prevent their premature failure due to moisture (Izzo 1935, pp. 181-187). There is no evidence that the masks allegedly seen by witnesses were masks for carbon monoxide and not the normal gas masks issued to the army, which in Auschwitz members of the SS had to have with them even when they were admitted to the SS infirmary (SS *Revier*)![43]

As far as the alleged "gas vans" are concerned, any use of masks against CO would be entirely unnecessary if the manufacturers of these alleged gas vans had taken the elementary precaution of installing a sealable opening at the front of the body, above the cab, whereby, after the alleged homicidal gassing, by opening this and the back door and by driving the vehicle at low speed, a stream of air would have been produced in the body that would have eliminated the toxic gas in a few minutes. But, as is well-known, this would be asking too much of German "technical genius"!

In a revised edition of the report mentioned above, W. Bednarz added further details on the issue of the Polish mechanics (Bednarz 1946a, pp. 23f.):

> *"Three vehicles operated at Chełmno. The largest had a capacity of about 150 people. (The witness Ross stated that he had heard someone say to a man of the Sonderkommando that 150 people fit into the vehicle, but 'with the whip' 175 people. The witness Kozanecki said the vehicle contained 150 adults (or 200 children). The two smaller vehicles contained 80-100 people (according to similar statements by other witnesses). Some witnesses also spoke of a fourth vehicle. As for the possibility that there was a fourth vehicle of a similar shape (which is currently at the former Ostrowski factory at Koło) and which was used to disinfect clothing or which was a closed vehicle for transporting Jewish workers to the forest, the statements that a fourth gassing vehicle had allegedly existed should be consid-*

[43] *Standortbefehl Nr. 19/44* of 14 July 1944, in: Frei *et al.* 2000, p. 469; see also p. 49 (*Kommandanturbefehl Nr. 13/41* of 13 June 1941) and p. 353 (*Standortbefehl Nr. 46/43* of 14 October 1943).

ered with some skepticism, as it is possible that there is an error due to the reasons mentioned above.

The [gas] *vehicles were often damaged, and the Sonderkommando made the mistake of not having their own repair shops. So the vehicles, including the gas vans,*[44] *officially called by them* [the SS] *'Spezialwagen,' had to be brought to the workshops at Koło (of said Kraft- und Reichsstrassenbauamt), whose staff was composed almost entirely of Poles. This enabled simple mechanics such as Piaskowski – card 16,*[45] *Falborski – card 28, Rossa – card 43, Mańkowski – card 30, Fójcik – card 222, Junkiert – card 320, Lewandowski – card 189, Jankowski – card 117, to get to know the configuration of the vehicles.*

All these witnesses were examined at different times and even in different locations. Each of them made a sketch with their own hand of the exhaust pipe and of its entrance to the inside of the vehicle."

From the above, these are some clear conclusions:

1. The Ostrowski vehicle was not a "gas van."
2. No photograph of a "gas van" exists.

Precisely because it was not a "gas vans," the Ostrowski vehicle – the only one documented – raises doubts regarding the existence of "gas vans" at Chełmno. Since it certainly belonged to the Kulmhof *Sonderkommando* and was seen to travel between the palace and the forest, yet obviously without any homicidal purpose, why then would the other two or three similar trucks necessarily be "gas vans"? Everything is down to testimonies. I will deal with these in detail in Chapter 7. Here it is important to note that according to the defendant Bruno Israel, an ethnic-German police officer who was transferred to Chełmno in July-August 1944,[46] in addition to two gassing "special vehicles" at the camp "there was also a third vehicle that was used to fumigate clothes." He pointed out in this regard (Bednarz 1946a, p. 72):

"The photographs shown to me (the accused was shown the photographs on pages 397 and 398 of the documents) precisely depict the vehicle described by me."

---

44 "*Komory gazowe*," literally "the gas chamber."

45 Reference to card numbers of the respective depositions within the investigation, reference no. III 13/45 NT (Bednarz 1946a, p. 12, footnote).

46 Krakowski writes that B. Israel was tried and convicted in October 1945, but soon was back at large (2007, p. 177).

But the only existing photographs of a vehicle used in Chełmno were those of the vehicle that was found in the former Ostrowski works in Koło.

Incredibly, Krakowski believes that this vehicle was a real gas van. Criticizing Poles for their anti-Semitic attitude after the war, he states (2007, p. 194):

> *"No one thought it necessary to keep one of the gas vans that the Germans had left behind in their flight. Thus an important object and many traces disappeared that attested to the existence of an extermination camp in the village of Chełmno."*

As pointed out by Weckert (1985, pp. 14f.), while the alleged use by the Germans of Saurer trucks as the "gas vans" is at least understandable, because this company, although Swiss, had a branch in Vienna, which in 1941 was part of Greater Germany, the choice of Diamond trucks is absolutely inexplicable, since it was an American company that, after Pearl Harbor, about the time of the alleged entry into service of Chełmno, obviously no longer supplied trucks or spare parts to Germany.

In 1941 the Diamond Company produced two series of army trucks, Models 967 and 968. The second was designed in 1939, adapted for production in 1940 and produced from 1941 to 1945. This vehicle was 6.83 meters long and 2.44 wide, powered by a Hercules RXC 6-cylinder 8,668 cm^3 gasoline engine.[47] The body of the vehicle was not much longer than the cab, which is less than 4 meters (see Document 4a). The Diamond truck was therefore not the most-suitable vehicle for special use as a "gas van," but it is more likely that, if the Chełmno *Sonderkommando* had one, it was used for normal purposes like the truck that was found in the courtyard of the Ostrowski Company.

As part of the documentary evidence on the alleged gassings at Chełmno, the height of absurdity is reached by the famous work *Faschismus – Getto – Massenmord*, published by the Jewish Historical Institute in Warsaw. Here is published an invoice of *Kopernikus-Apotheke* (Copernicus Pharmacy) of Posen dated 31 March 1942 "to the Reich Commissioner for the Strengthening of the German National Character" (*für den Beauftragten Reichskommissars des für die deutschen Festigung Volkstums*) for 1,641 kg of "chlorinated lime" (*Chlorkalk*). The document bears the stamp in the lower left of the administration of the Litzmannstadt ghetto (*Getto-Verwaltung Litzmannstadt*;

[47] "Diamond T Models 967, 968," in: www.thewheelsofsteel.com/diamond-t-models-967-968; https://en.wikipedia.org/wiki/Diamond_T

see Document 5). And here is the incredible caption that accompanies it (Jüdisches Historisches… 1960, p. 279):

> *"Chloride of lime was strewn inside the wagons which served to transport the Jews to the Kulmhof death camp."*

Clearly reminiscent of the propaganda stories of Jan Karski about Bełżec! (See Mattogno 2004b, pp. 22-33)

Another alleged proof is an invoice from the Heyne Motors Company (Heyne-Motoren) of Leipzig addressed to SS *Sonderkommando* X for the attention of the SS *Hauptsturmführer* Police Detective Bothmann, Kulmhof (*an das* SS *Sonderkommando* SS *X* (*z. H. Herrn* SS *Hauptsturmführer Krim.-Kom. Bothmann Kulmhof*) concerning "1 used diesel engine guaranteed operational" (*1 Stck. gebrauchter betriebssicherer Dieselmotor*) amounting to RM 1,400 (see Document 6). The book's caption accompanying the document is an outrageous lie (Jüdisches Historisches… 1960, p. 282):

> *"Supply of a diesel engine to the SS Sonderkommando Bothmann for the gassing of Jews in the death camp of Kulmhof."*

Here the commentator has forgotten that, according to the official thesis, the gassing took place using "gas vans" and not by means of a stationary diesel engine, a method of extermination that Holocaust historiography attributes instead to the camps of Bełżec, Sobibor and Treblinka.

It is all too obvious that the "chloride of lime" was used for the purpose of disinfection and the diesel engine was to drive an electricity generator.

5. The "First Systematic Extermination of Jews in the Warthegau"

G. Aly writes (1995, pp. 354f.):

> *"Already on September 26* [1941] *Krumey*[48] *had sent 900 Jewish women and children at a time from the Łódź ghetto via Leslau (Włocławek) by rail. Three days later there was another transfer from the same location with more than 1,000 persons – 'again almost exclusively women and children.' And a third transport followed.* […]
>
> *The first systematic extermination of Jews in the Warthegau fits into this context also. Neither the exact date nor the instrument of extermination is known – gas vans or shooting? However, there is agreement on the fact that it took place in late September/early October.*
>
> *If we consider the principles upon which Höppner, Krumey and the like acted, this crime took place exactly when it was certain that, after the ghettoization of the Jews of Loslau and Łódź, further deportations would be impossible because of the resistance of the local authorities. According to the report of Isaiah Trunk,*[49] *the following happened:*
>
> *'(Then) the entire Jewish population of the Konin district, about 3,000 persons, was concentrated in Sagurawe (Hinterberg in German). First, all men between 14 and 60 years and all women between 14 and 50 years had to undergo a medical examination and pay four marks each for this. In this way, as it is said, suitability for work was determined. Finally the transfer began, which is claimed to have been by truck to the nearby city of Koil and thence by rail to Łódź. In fact, the people, 60 at a time on a truck, were taken out into the nearby woods at Kazimierz (Biskup), where they were killed.'"*

The alleged "agreement" of the sources, which supposedly ascertains this alleged crime of which "neither the exact date nor the instrument" is known, is actually a single source, which for the most part was concocted by Isaiah Trunk. This source is a clandestine report called "Mass

---

48 Hermann Krumey, SS *Obersturmbannführer*, official at the Litzmannstadt station of the State Police.

49 That is a report quoted by I. Trunk. See below.

executions of Jews in the district of Koło" dated 25 March 1942, from which we have this passage from Trunk:[50]

> *"In October 1941 the whole Jewish population of the district of Koniń – about 3,000 people – was concentrated in Zagórów (Hinterberg). First they had to pay a 'poll tax' of 4 RM per person and undergo a medical examination – the examination included men from 14 to 60 years and women from 14 to 50 years and was apparently intended to establish suitability to work, after which the so-called 'transfer' began. The Jews were transported in trucks, 60 at a time, and each could take a package of 1 kg. The journey ended in the Kazimierz woods on the outskirts of Zagórów, where the Jews got out and were taken into the woods. From that moment all trace of them was lost, and nothing is known; neither inquiries in writing nor by messengers sent either to the Reich or to the General Government yielded any results.*
>
> *Halfway through December, a similar 'transfer' took place in the Koło district (Wartebrücken). The destination was the village of Chełmno (Kulmhof). The entire Jewish population of Koło (2,000 persons) and Dąbie upon Ner (1,000 persons) was sent there (also after payment of a tax of 4 RM and after medical examination), then in early January, in succession, the Jews of Kłodawa (January 2 and 4), of Izbica Kujawska (January 6 and 9), and of Bugaj (January 9)."*

A later report in the *Oyneg Shabbos* (clandestine archive of the Warsaw Ghetto, also known as the Ringelblum archive), clearly derived from the aforementioned source, says with regard to this (Sakowska 1993, p. 186):

> *"In the second half of November 1941, in the city and district of Koło (district of Warthbrücken), news began to spread that the entire Jewish population of these areas had been transferred to the region of Pinsk or to Eastern Galicia. The German authorities imposed a poll tax of 4 RM on the entire Jewish population, and all men aged 14 to 60 years and women up to 50 years underwent a medical examination to ascertain their suitability for work. Concerned by these facts, the Jewish community endeavored to obtain information on the matter of the transfer, but their efforts were in vain. All that can be established is the fact that, after this prelude,*

[50] Report entitled "*Masowe egzekucje Żydów w pow. kolskim*" (mass execution of the Jews of the Koło district) of 25 March 1942, in: Tyszkowa 1992a, p. 52.

> *the Jewish community of Zagórów in the Konin district was transported by truck to the Kazimierz woods, located near the city, where all trace of it was lost."*

Hence neither report claimed that the deported Jews had been killed. But the most surprising thing in this story is that the SS would have made a "selection" in reverse (men 14 to 60 years, women 14 to 50 years) in order to exterminate those able to work – after a medical examination to confirm their ability to work! Maybe the SS were afraid of killing any Jew incapable of work? – while at the same time they sent the transport of Jews unable to work to the Łódź ghetto!

Krakowski states that Jews from the district of Konin were killed in two places, the Niesłusz-Rudzica Woods and the Wygoda Woods. He then reports a long testimony given on 27 October 1945 by the Polish veterinary surgeon Mieczysław Sekiewicz on the alleged massacre in the Wygoda Woods. The Germans had allegedly prepared two pits in those woods and had forced the Jews to strip naked and get down into the larger pit, whose bottom was covered with lime (Krakowski 2007, p. 24):

> *"Then – the witness continues – a truck appeared on the side of the road which stopped on the path at the edge of the clearing. I noticed that there was something on the truck, like tubs for washing. The Germans then started up a small engine, which was clearly a pump, and connected it via a tube to one of the tubs. Two Gestapo agents held the pipes and began to sprinkle the Jews herded into the pit with a liquid. I think it was water, as it appeared to be, but I cannot be sure. During the pumping operation, they connected the tubes to each of the other tubs. People began to cook while still alive, and this was certainly due to the boiling fresh lime.* […] *This all went on for two hours."*

A truly original execution system: Death by showering with water and a disinfectant! To be sure, up to the 1940s the vast majority of the eastern European population had never seen a shower in their lives, so the witness's consternation is comprehensible. But how could the more-cosmopolitan western historians interpret this as a method of extermination?

6. The First Testimony: The "Szlamek" Report

6.1. Origins of the Report

Krakowski wrote in this connection (1983, p. 131):

> *"Only a few Jews managed to flee from the 'Arbeitskommando' (labor squad). The first was Jakov Grojanowski, who then contacted Dr. Emanuel Ringelblum in the Warsaw ghetto, who was director of the clandestine archive 'Oneg Shabbat,' and was able to deliver to him in 1942 a report written in his own hand on the Kulmhof death factory. Grojanowski died in the ghetto, but his report was found in the ruins of the ghetto among Ringelblum's documents."*

This report is a long document written in Yiddish and allegedly based on the account of a Jew from Izbica Kujawska known as "Szlamek," whose identity is uncertain.[51] Ruta Sakowska rejects the name of Yakov Grojanowski (or Jakub Grojnowski or Yakov Grojanowski) and identifies it with Szlojme Fajner, one of the three who escaped from Chełmno,[52] stating (Sakowska 1993, p. 184):

> *"In the catalog of the archive of the ghetto that was drawn up after the war on the basis of Hersz Wasser's information, his report is also registered under the name of Jakub Grojnowski, but it is unknown whether this is the real name of the author; the narrator figures in the text as 'Szlojme' ('Szlamek' is a diminutive of this name), not as Jakub."*

Krakowski writes that Jakov Grojanowski was a pseudonym and considered it likely that the person in question was Schlomo Winer, an alleged fugitive from Chełmno. However, he makes no mention of the name "Szlamek" (Krakowski 2007, pp. 61f.).

It is unclear whether the report was written by "Szlamek" personally or by Hersz Wasser, secretary of *Oyneg Shabbos*, based on the state-

[51] A German translation of the report can be found in Sakowska 1993, pp. 159-182, entitled: "[Februar] *1942, Warschau, Ghetto. Als Totengräber im Vernichtungslager. Augenzeugenbericht über die Ermordung von Juden und Zigeunern in der Gaswagenstation Chełmno am Ner vom 5. bis zum 19. Januar 1942, mitgeteilt von 'Szlamek,' der von dort fliehen konnte* [aufgezeichnet von Hersz Wasser]"; an English translation can be found in Gilbert 1985, pp. 252-279. Gilbert attributes this report to Yakov Grojanowski.

[52] The other two, who survived the war, were Abram and Michał Roj or Mordka Podchlebnik; see Subsection 7.2.3.

ments of the witness. What is certain is that Wasser later, on 25 March 1942, drew up a summary of the report "on the basis of what Szlamek said."[53]

Both reports come from the archive *Oyneg Shabbos*.

6.2. General Characteristics of Report

The witness affirms that he was arrested on 5 January 1942 and that he worked from 6 January until the day of his escape, 19 January, at Chełmno, where, as we shall see, Jews and Gypsies were allegedly murdered with "gas vehicles." The report is drawn up as a diary in which events are recorded each day with an extraordinary wealth of detail when you consider that the witness wrote down or recounted these events from memory. I summarize, as an example, the entry for 9 January. We should first note that, as soon as they arrived at Chełmno, the "diggers," including "Szlamek," had to hand over "all money and valuables" (Sakowska 1993, p. 160), and therefore watches. How could he then always be so sure about the time? I quote (*ibid.*, pp. 169-171):

> *"On Friday, 9 January, at seven o'clock in the morning we were again brought some bitter coffee.* […] *At eight o'clock the SS arrived.* […] *The courtyard was already surrounded by some 20 policemen with submachine guns.* […] *In the courtyard we saw two open trucks full of Gypsies, men, women and children with their belongings.* […] *We were in the front of the vehicle and behind were seven policemen armed with submachine guns ready to fire.* […]
> […] *another eight persons were selected* […]. *An hour later the first truck arrived with Gypsies, and forty minutes later the next one.* […] *Among them* [the 8 gravediggers] *were: Abram Zielinski from Izbica, 32 years old, Brawman from Izbica, 17 years of age, Zalman Jakubowski from Izbica, 55 years of age, and Gerszon Praszker from Izbica.* […] *Around three* [in the afternoon]*, when there was not much work* […]. *That day we had lunch at one thirty* […]. *That day eight or nine transports of Gypsies were buried. We finished work at five thirty* […]. *In the Chełmno Castle, we saw to our painful surprise a new group, possibly gravediggers: 16 men from Izbica and 16 men from Bugaj. Among the men from Izbica were: Mojsze Lepek, about*

[53] Sakowska 1992, p. 23. Polish text in Tyszkowa 1992a, pp. 52-54. German translation in Sakowska 1993, pp. 186-189.

40 years of age; Awigdor Polański, about 20 years of age; Sztajer, about 55 years of age; Król, about 45 years of age, Icchak Prajs, about 45 years of age, Jehuda Lubiński, 31 years of age, Kalman Radziejewski, 32 years of age, Menachem Arcichowski, about 40 years of age, and from Bugaj my companion and friend Izbicki, 33 years of age. Twenty old gravediggers and five new ones, 25 in all, were pushed into another cellar, a little smaller than the earlier one. We found bed linen, personal linen, shirts, jackets and basic food-stuffs (bread, sugar and lard).”

The story goes on and on like this – indeed, even more detailed – for fifteen days: a truly prodigious memory.

6.3. Structure and Function of a “Gas Van”

The witness provides this detailed description of a “gas van” (*ibid.*, pp. 162f.):

“The vehicle had a special design. It looked something like this: It was as large as a normal truck, of gray color, but at the back it was closed hermetically with two doors. Its interior was lined with sheet metal, it had no seats, on the floor was a wooden grate, like in a bathroom, and on it was a straw mat. Between the cargo box and the cab were two small windows through which, with [the help of] *electric lights, it was checked whether the victims were already dead. Under the wooden grates were two 15-cm-diameter pipes leading to the cockpit. They were connected to the openings through which the gas flowed. The gas apparatus was in the cab, in which only the driver was sitting, who was always the same, in uniform with the SS death’s head. He was maybe 40 years. There were two vehicles of this kind.*

When a truck arrived, it stopped about five meters away from the ditch. The head of the group of guards, a high-ranking SS man, was a sadist and a hard-boiled gangster. He ordered the eight men to open the doors of the vehicles. Immediately we were struck by a deep and pungent smell of gas. They had killed Gypsies from Łódź. Their belongings were still in the vehicle: harmonicas, violins, duvets, even watches and gold jewelry. After about five minutes of

waiting with open doors, the SS man shouted: 'You Jews, inside and throw out everything!'"

The witness gave further details (*ibid.*, p. 166):

"As the companions of the eight gravediggers told us, there is a special device with buttons in the driver's cab that is connected by two tubes to the interior of the cargo box. The driver (there were two for the two execution vehicles, always the same persons) pressed a button and got out of the vehicle. Then you could hear screams from the vehicle, desperate cries and banging against the outside wall. This lasted about 15 minutes; then the driver got into the cabin, where he shone an electric lamp into the interior through a glas pane in order to see whether the people were already dead, and then he approached the pit with the truck up to a distance of about five meters. After another five minutes, 'bull's pizzle' ordered four gravediggers to open the doors. A strong smell of gas came out. After waiting another five minutes, he shouted: 'You Jews, you go to put tefilin' – meaning to throw out the corpses. They lay clinging to each other in the dirt of their excrements."

And here is what happened then (*ibid.*, p. 167):

"Four gravediggers threw out the corpses, of course encouraged by beatings and screams. The corpses were thrown together in a pile; two other [prisoners] *dragged the corpses to the grave and threw them in there. Down there were two more who piled the corpses on the instructions of an SS man. When the vehicle was empty, the gravediggers started cleaning up the excrements and other dirt. The straw mat and wooden grate were taken out of the truck and* [they] *cleaned the truck with their own shirts* [sic] *before putting the grate and the mat back in place. The exterior double door was hermetically sealed with a bolt."*

How did these vehicles of death work? And did these "gas vans" operate with engine-exhaust gas? It is not known. What is certain is that the description of the witness is in stark contrast to the orthodox version on two essential points. First, according to this orthodox version, the victims were loaded into the "gas vans" at Chełmno Castle and murdered on the way to the camp, whereas the testimony reviewed here claims that the assassination was carried out directly at the camp in a hermetically closed "gas van" and even in the absence of the driver.

Second, according to the orthodox version it was necessary to connect the exhaust pipe of the engine with a special flexible pipe to the interior of the cargo box, an operation that was performed outside the vehicle. This witness, however, speaks of a "gas system" equipped with "buttons" that was "in the cab" and was linked to "two 15-cm-diameter pipes" that ran along the floor of the cargo box "under the wooden grates." In order to inject the gas into the body of the truck, all that was needed was to press a "button" of the "gas apparatus." It remains undetermined whether the engine was switched on or off and whether the killing was done by means of engine-exhaust gas or another gas. The first hypothesis of a running engine is in contradiction to the statement about the "gas apparatus," because it was not possible, simply by pressing a "button" in the cab, to tightly connect a pipe or hose to the exhaust pipe which would have connected it to the two pipes that were allegedly located in the vehicle's cargo box.

The witness further stated that the two rear doors were "hermetically" sealed and that, when the van was opened, he smelled "a strong smell of gas." Now, in the history of the "gas vans," if one thing is certain it is that the system of piping engine-exhaust gases into a hermetically sealed cargo box cannot work, because the pressure inside the sealed cargo box would either shut down the engine or burst the cargo box (see Alvarez 2011, Subsection 1.3.2.). Hence the witness could not have described a real fact.

6.4. The Color of the Corpses[54]

About the corpses the report states:

> *"What was the appearance of the corpses? They were neither burned nor black. The complexion of their faces was unchanged. Almost all the dead were lying in their excrement."* (Sakowska 1993, p. 163)
>
> *"It seemed that they were only put to sleep; their cheeks were pale, and they maintained their natural skin color."* (*ibid.*, p. 166*)*

The color of the corpse of a person dead by asphyxiation from carbon monoxide is known to be "cherry red" or "pink" (Berg 2003, p. 439, esp. note 22).

[54] For a profound treatment of this see: Mattogno/Kues/Graf 2013, pp. 945-949, 964-976.

Charles D. Provan has challenged this finding, citing some examples of medical literature which *also* mention a bluish color in cases of carbon-monoxide poisoning. Provan cites a 1970 medical source on a group of suicides by carbon-monoxide poisoning which had the following colors: 51 normal color; 7 bluish, 14 red, 5 cherry pink, 4 pale. Another group of people poisoned accidentally had the following colors: 44 normal color, 5 bluish, 3 red, 4 cherry pink, 2 pale. According to these examples the prevailing color is normal, but another medical source proffered by Provan explains (2004, pp. 160-162):

> *"At autopsy the most striking appearance of the body is the color of the skin, especially in areas of post-mortem hypostasis. The classical 'cherry-pink' color of carboxy-hemoglobin is usually evident if the saturation of the blood exceeds about 30%. Below this, familiarity and good lighting are needed and below 20%, no coloration is visible. As these low concentrations are rarely fatal, however, little is lost."*

So the color "cherry pink" usually manifests itself when the carboxy-hemoglobin level in the blood "exceeds 30%." Since the "gas vans" supposedly were instruments of murder which killed the victims in 20 minutes (Sakowska 1993, p. 166), the victims must have had a much higher percentage than 30% of carboxy-hemoglobin in their blood. According Flury and Zernik, in fact, a percentage of 40-50% produces "headache; a state of confusion; in case of stress, collapse and fainting," and a percentage of 60-70% "loss of consciousness, for prolonged exposure respiratory arrest" (Flury/Zernik 1931, p. 202; see also Berg 2005; Kues 2008).

A study on the forensic autopsy reports of 182 bodies of people who died accidentally from carbon-monoxide poisoning in Vienna between 1984 and 1994 resulted in (Risser/Bonsch/Schneider 1995, p. 596):

> *"We found a strong association between the carboxyhemoglobin level and the cherry-coloring of pink livor mortis. In 98.4% of unintentional carbon-monoxide-related deaths livor mortis were clearly cherry-pink."*

The study confirmed that

> *"fresh corpses with carboxyhemoglobin levels greater than 31% show a clear cherry-pink coloring of livor mortis."*

So the alleged victims of "gas vans" murdering with carbon monoxide should normally have a "cherry-pink" color, but, as we have seen, according to the witness, they had a "natural skin tone."

Therefore, if the witness described a reality in this case, the corpses he witnessed had not died of poisoning by exhaust gas.

6.5. The Mass Graves

The corpses of the alleged victims were buried in very peculiar mass graves which the witness describes as follows (Sakowska 1993, p. 170):

> *"We took up hoes and spades and began to work. The pit bottom was about one and a half meters wide; the hole became wider at the top, reaching a width of five meters at the surface, and it was five meters deep. The mass grave proceeded as a long line. When a tree was an obstacle, it was cut down."*

And here is how the burial of corpses took place (*ibid.*, p. 163):

> *"A layer contained 180-200 corpses. After three trucks had arrived, twenty gravediggers were employed to bury the bodies. At first they had to fill two graves each time. Then, when the number of vehicles grew to nine (nine times 60 corpses at a time) we had to fill three graves a day."*

According to the first description (entry of 9 January 1942), there was only one pit with a cross section of a regular inverted trapezoid with a lower, smaller width of 1.5 m, a height of 5 m and an upper, larger width of 5 m. The length is not given because the pit, which looked like a "long line," was extended from day to day. In the course of this work, if there was a tree on the route of the trench, it was "cut," which is not very rational, because the roots had to be uprooted (which the witness does not mention). The second description cited above (entry of 7 January) instead presupposes the presence of several graves – we must assume of the shape indicated above.

According to the witness, in these pits there was "a layer containing 180-200 corpses," and every day three pits were filled. Here the term "layer" should not be understood in the strict meaning (in which case the sentence would make no sense), as is clear from the term that appears in the English translation of the report presented by Martin Gil-

bert: "batch" (1985, p. 256). This means that each grave contained 180-200 bodies.

From the measurements given by the witness, the following data ensue:

– Assuming a packing density of eight bodies per cubic meter, a section of a mass grave is of 13.5 m^2 (assuming a depth of 4.5 m, with a layer of 0.5 m of soil on top of the corpses);
– 200 corpses occupy 25 m^3;
– so the length of a pit was a mere (25÷13.5 =) 1.85 meters!

It was therefore quite an unusual pit, both in shape and size. The testimony suggests that the pits were dug by hand by "gravediggers," because it says, "We took up hoes and spades and began to work," and suddenly afterward it talks about a pit. However, leaving aside the difficulties of digging a pit by hand in the shape mentioned above, the work would have a much more serious impediment. In fact, the witness says (January 9): "The cold reached 20 degrees [below zero]" (Sakowska 1993, p. 170) and confirmed on 13 January, "we worked until six in the afternoon in intense cold" (*ibid.*, p. 176).

The ground was therefore frozen; so how could they dig by hand three pits (or sections of pits) per day?

No less problematic is what the witness adds about the state of the corpses (*ibid.*, p. 179):

> *"On Friday* [16 January] *they began to sprinkle the graves with chloride of lime, because the rotting corpses gave off a strong smell."*

But if the temperature was 20 degrees below zero, how could the bodies decompose? Here too, then, the witness could not have been describing any reality.

In conclusion, the report "Szlamek" does not correspond to reality and is therefore totally unreliable.

Perhaps that is why Krakowski, in his 2007 book (pp. 62-64), preferred not to mention it at all, merely referring generally to its content according to the story of Yitzchak Zuckermann, a member of *Oyneg Shabbos*.

7. Postwar Witnesses

7.1. The SS

7.1.1. Walter Piller

Krakowski quotes a report written by SS *Hauptscharführer* Walter Piller (Chełmno camp Deputy Commander in 1944) "during his Russian imprisonment in May 1945" in which, in relation to the second phase of the camp, he wrote (Krakowski 1983, pp. 138f.):

> *"I think it was at the beginning or end of May when the extermination of the Jews of the Łódź ghetto began, and it lasted until mid-August 1944.* […] *According to my calculations, the number of exterminated Jews amounted to 25,000. I am unable to state the exact figure. But the number of Jews above or below this figure should be small. To arrive at this figure, I use the following calculation: Each transport of Jews from the Łódź ghetto contained 700 people (some were fewer, even 300). But I want to take 700 as a base. Each week three transports arrived, making 2,100 people a week. The Kommando worked continuously month by month as follows: two weeks in May, in June and July continuously, therefore eight weeks, and in August another two weeks. This results in a total in 12 weeks of* [12 × 2100 =] *25,200 Jews. In mid-August the ongoing transport of Jews was stopped completely."*

However, as Adalbert Rückerl writes, the first Jewish transport supposedly sent from the Łódź ghetto to Chełmno left on 23 June 1944 (Rückerl 1979, p. 284), not in mid-May. The deportations stopped "in July 1944" (*ibid.*, p. 283), more precisely on 14 July (*ibid.*, p. 293), not in mid-August.

On the other hand, as discussed in Chapter 13, the Bonn Jury Court (erroneously) recognized only 10 transports for 1944 instead of 36, which means that there is not even a vague indication in favor of Piller's allegations; moreover, these 10 transports left one per day for 10 consecutive days, but Piller said that three transports came to Chełmno each week. His testimony is therefore absolutely unreliable.

7.1.2. Bruno Israel

Bruno Israel, as I mentioned earlier, was assigned to the Chełmno police in July/August 1944. On 29 and 30 October 1945 he was interrogated as a defendant by Judge Bednarz, who published the interrogation (Bednarz 1946a, pp. 67-74). Krakowski writes in this regard (1983, p. 177):

> *"Israel was interrogated and sentenced already in October 1945 by Judge Bednarz, but he was released already a short while afterwards."*

Israel stated that during his stay at the camp two transports arrived from Łódź of 700-800 Jews each. The victims came from Koło to Chełmno in a train of 15-17 train cars, two of which were loaded with luggage. This luggage was transferred by truck to the camp into a large shed where they were sorted. The Jews were transported to the camp in three covered trucks, each carrying 40-50 people. Each vehicle made two, three or maybe four trips per day, and in some cases only half of the transport was killed on that same day and the other half the next day. The killing activities began at 7 a.m. and stopped at 4 p.m. The Jews transported to Chełmno undressed in a shack which bore the inscription *Durchgangslager* (transit camp), men and women separately. Then they climbed into a "*Spezialwagen*." They were told that they had to take a bath, and soap was also given to them. How the SS could have hoped that the victims would confuse the back of a truck with a shower system remains a mystery. Then the doors were closed (*ibid.*, pp. 70f.):

> *"Before starting the engine, the exhaust pipe was secured to the pipe that went to the engine* [sic]. *I noticed that the exhaust pipe went through the floor to the center of the vehicle, so that, after the engine started, the exhaust gases went inside the vehicle poisoning those present."*

Here we have instead the description of Walter Piller (Krakowski 1983, p. 141):

> *"During the trip the driver Laabs opened a valve through which streamed the gas that killed the occupants in 2-3 minutes."*

Therefore, for Bruno Israel the gas was injected before the departure of the vehicle using two tubes; according to W. Piller, on the other hand, the gassing was carried out while the vehicle was moving by activating a "valve," which brings us back to the fanciful claims of "Szlamek."

But back to Israel's story. According to this, after a few minutes the "special vehicle" moved off in the direction of the furnaces. On arriving in front of them, it stopped, the doors were opened, and the corpses were thrown into the furnaces. The bodies burned "quickly" (*szybko*), which is nonsense (see Section 9.2.).

About the crematoria, Bruno Israel declared (Bednarz 1946a, p. 71):

> *"The shorter tracks formed the grid, but the longer ones were used to mask the crematoria* [making them invisible] *to aviators."*

But he added (*ibid.*, p. 73):

> *"Rags, paper and photographs were burned in a pit dug at the end of the park. They were burning day and night."*

This pit was clearly visible from an aircraft, but why then were the furnaces camouflaged?

Bruno Israel furthermore stated (*ibid.*, p. 72):

> *"In December 1944, the liquidation of the camp began. The crematoria were demolished. The bricks were taken away. I do not know exactly where. A special commission arrived that monitored whether the works were carried out accurately. It was noted that the reinforced concrete of one of the furnaces had remained in the pit; it was ordered to be brought away. Currently there is no trace of the furnaces."*

But the book itself which contains Bruno Israel's deposition has two photographs of the alleged ruins of a crematorium that belie this assertion (*ibid.*, pp. 8f.; see Documents 7 & 8).

Two other testimonies of former SS men will be discussed in Section 9.3.

7.2. The Inmates

The only self-styled survivors of Chełmno who have testified regarding its alleged exterminating activities in 1944 are Mordechai or Mordka or Mieczysław Żurawski, Shimon Srebrnik and Michał or Mordka Podchlebnik. At the 65th hearing of the Eichmann trial in Jerusalem, which was held 5 June 1961, the prosecutor, referring to these three people, said (State of Israel 1993, p. 1194):

> *"There are no other survivors of the extermination camp at Chełmno."*

This is also confirmed by Krakowski, who writes (1983, p. 145):

> *"Mordechai Żurawski, along with Michel Podchlebnik and Shimon Srebrnik, was one of three survivors of Kulmhof."*

7.2.1. Mordechai or Mordka or Mieczysław Żurawski

Żurawski was questioned by Judge Bednarz on 31 July 1945. In addition, on 5 June 1961 he was also heard as a witness for the prosecution at the 65th hearing of the Eichmann trial in Jerusalem.

Before Judge Bednarz he testified that in 1944 he was in the Łódź ghetto and worked at Radogoszcz Station, from where Jewish transports of 700-1,000 persons left for an unknown destination. In one of these transports he himself was deported (Bednarz 1946a, p. 61):

> *"On 10 May 1944 I went with the seventh transport"*

During the Eichmann trial the witness said instead (State…, p. 1194):

> *"Judge Halevi: You arrived at Chełmno in 1944?*
> *Witness Zurawski: In 1944, approximately in July."*

From the Łódź ghetto the transport was sent by rail to Koło and from there by a narrow-gauge railway to Chełmno. Upon arrival, six men were selected, including the witness, who was sent to the "*Waldkommando*" (forest team) to collect wood from another forest for the "cremation furnaces." Then he was assigned to a crematorium and was allegedly able to observe from a distance of 200 meters how the extermination of the Jews took place.

With regard to the transports, Żurawski said (Bednarz 1946a, p. 63):

> *"10 transports came to Chełmno in 1944. These transports contained from 700 to 1,000 persons. When a transport arrived with 700 people, it was completed using small transports by truck, so that a total of 10,000 people were killed at Chełmno. Heffele* [Häfele] *spoke of this."*

At the Eichmann trial the witness stated as follows (State…, p. 1193):

> *"While I was there, three transports of one thousand persons each came. Before that, some seven thousand persons had arrived. I heard this from the people who were there before me. All these persons were burned."*

The name *Zorawski Mordka* indeed appears in the seventh evacuation listing for the Łódź ghetto, which is dated 7 July 1944.[55] But that does not necessarily mean that the transport in question was actually sent to Chełmno, much less that the deportees were exterminated there. Indeed, as we shall see in Chapter 13, the story of the 10 aforementioned transports being sent to and exterminated at Chełmno is not only unsupported by documentary evidence, but it is unreasonable and contrary to the National Socialist policy of conserving Jewish labor.

Żurawski also provides a detailed description of the crematoria, which was then taken up by the Judge Bednarz (see Section 9.1.). In that regard, the witness pointed out (Bednarz 1946a, p. 63):

> *"In one layer (the lowest) you have 12 people. On the corpses were placed more pieces of firewood and then a*[nother] *layer of corpses. In this way, the pyre could hold 100 corpses at a time. As the bodies burned, space was created at the top that was filled with successive layers of wood and corpses. The corpses burned quickly. After about 15 minutes they were already burned."*

In Section 9.2. I will show that these claims are unsustainable. I will return to this witness in Subsection 7.2.4. in order to complete the picture of Żurawski's reliability.

7.2.2. Shimon Srebrnik

Srebrnik was interrogated by Judge Bednarz on 29 June 1945 at Koło. He stated that he had been arrested and sent to Chełmno in March 1944 (Srebrnik 1945):

> *"Up to March 1944 I had been in the Łódź ghetto, from where I was then driven off to Chełmno. In Łódź I worked in the ghetto in the so-called metal department. In March 1944, the Germans organized a round-up. They caught me while I was on a streetcar and led me to Balucki Square where there were some cars from Chełmno."*

But during the 66th day of the Eichmann trial (6 June 1961) he claimed to have been captured in the summer of 1943 in the Łódź ghetto and that he was brought to Chełmno, at the age of thirteen years (State…, pp. 1197f.):

> *"Q. In the summer of 1943, you were in the Łódź Ghetto?*
> *A. Yes.* […]

[55] "*Zur Arbeit aus Litzmannstadt-Getto am 7.7.1944 ausgereist*." APL, PSZ, 1309, p. 80.

Presiding Judge: How old were you at the time?
Witness Srebrnik: Thirteen. […]
Judge Halevi: On what date did you reach Chełmno?
Witness Srebrnik: In 1943, close to the year 1944."

It is unclear why the attorney general asked the witness the specific question about the summer of 1943, if this was not the date of his deportation; if it was only the date of his capture, it is not clear where the witness was from the summer of 1943 to the end of that year. What is certain is that there was at that time no one in Chełmno, as the camp was not in operation during that time. Indeed, Rückerl writes about this (1979, p. 283):

"In April 1944 Bothmann, with some ex-members of his Sonderkommando, left the SS 'Prince Eugene' division and returned to Chełmno."

Hans Bothmann, SS *Hauptsturmführer* and *Kriminalkommissar* (police detective), was commander of the Chełmno camp starting in March 1942 as Herbert Lange's successor.

The witness claimed instead that the first Jewish transport had come to Chełmno two or three months after his arrival, namely in February-March 1944 (State…, p. 1198):

"Attorney General: When did transports of Jews reach Chełmno, after your arrival?
Witness Srebrnik: About three months after my arrival. Perhaps it was two months after, I don't remember exactly.
Q. What did you do during those two or three months?
A. We put up huts, we put up tents, there was work in the Waldkommando and in preparing the crematorium."

He pointed out that these first transports came "from Łódź"! So the witness's story is entirely invented. On the other hand, how can you seriously believe that a child of thirteen years was first assigned to the *Waldkommando*, then the *Hauskommando* (internal team) and survived for at least 13 months in the "death camp"? Judge Raveh also had some doubts, since he asked the witness (*ibid.*, p. 1201):

"Judge Raveh: You said you were thirteen years of age. When were you thirteen? When you came to Chełmno?
Witness Srebrnik: When I came to Chełmno."

The presiding judge of the court also expressed some doubt, primarily about Bothmann's rank (*ibid.*, p. 1199):

"[Witness Srebrnik:] *Obersturmbannfuehrer Hans Bothmann, he did it on the Sabbath...*
Presiding Judge: Obersturmbannfuehrer [Lieutenant Colonel] *or Obersturmführer* [First Lieutenant]*?*
Witness Srebrnik: Obersturmbannfuehrer.
Presiding Judge: That is a very high rank.
Attorney General: Are you sure of his rank?
Witness Srebrnik: I once heard him speaking on the telephone, and he answered 'Obersturmbannfuehrer.'
Q. Is that how you know?
A. Yes.
Q. Actually, he was of a much lower rank, as far as is known to us. Please continue."

Bothmann was in fact an SS *Hauptsturmführer* (Captain). But another more-important point of this silly lie puzzled the presiding judge: the number of victims. The public prosecutor asked the witness how many people were taken to Chełmno for extermination from the start of the transports, and he replied (*ibid.*):

"About 1,000-1,200.
Q. Every day?
A. Yes."

Judge Raveh then asked the witness (*ibid.*, p. 1201):

"I understood that there were exterminations for about nine months while you were there?
A. Yes, but I don't remember exactly.
Q. You said that you arrived there at the beginning of 1944, and that you left at the beginning of 1945, and that they had ceased the extermination three months before that. According to this, I make it nine months. Is my calculation correct?
A. Correct."

Accepting the correctness of this calculation, the witness denied he had said shortly before that the gassing had begun two or three months after his arrival in Chełmno, that is, as we have already seen, in February-March 1944, so that the total would be reduced to six or seven months.

Subsequently, the presiding judge returned to the question (*ibid.*):

"Did they put 1,200 people to death every single day?
Witness Srebrnik: That was more or less every day. Sometimes they would have a break of one day, in order to grind the bones.

Q. From this it follows that they exterminated many tens of thousands there?
A. Yes, they exterminated many.
Q. One of the witnesses who preceded you gave much lower figures. Are you sure of your facts?
A. Yes.
Presiding Judge: Thank you, Mr. Srebrnik, you have concluded your testimony."

The reference was to the witness Żurawski, who had spoken of 10,000 victims in total. Instead, according to the statements of Srebrnik, in the alleged nine months' activities of the camp the number of victims would have been (9×30×1200=) 324,000!

Obviously, the presiding judge dropped any further inquiries; otherwise he would have had to accept the inevitable conclusion that the witness was a base impostor.

In contradiction to the above exorbitant death toll, however, Srebrnik had stated in 1945 (Srebrnik 1945):

"Transports arrived in Chełmno every second day. Each transport carried from 700 to 1,000 people. I estimate that in 1944 alone 15,000 Jews were brought to Chełmno. However, I did not count them – my assumption is based on what the policemen had said before the transports arrived. That is why I claimed that in 1944 15,000 Jews were killed in Chełmno."

The difference between 324,000 and 15,000 is not irrelevant.

In an undated Deposition No. 102 made immediately after the war before the Central Commission for Jewish History the witness, who then called himself Szymon Srebrny, claimed (Blumental 1946, p. 244):

"The whole time of my stay in the 'death factory' I worked cutting trees, with my legs shackled with chains to the belt so that I could not escape. I [also] *had to extract gold teeth or crowns from the jaws of the murdered people with pliers; I had to remove rings from their hands; I arranged the piles of logs and corpses; I was present at the burning of the bodies; and I broke up the human bones with a hatchet."*

It is very unlikely that the SS entrusted to a thirteen-year-old tasks such as extraction of gold teeth, the arrangement of bodies in the pyres and crushing bone residue, and in fact at the Eichmann trial the witness did not dare to repeat such statements. In fact, already during his deposition in front of Judge Bednarz of June 1945 Srebrnik did not claim that he

had been assigned to the *Waldkommando*, but to the *Hauskommando* (Srebrnik 1945).

At the end of this interrogation Srebrnik demonstrated that he is a false witness. In fact, he "recognized" the vehicle parked on the grounds of the Ostrowski Company as the "gas van" he claims to have seen. (*ibid.*):

> *"The Jews' clothes were stored in the other barracks in the woods. They had to be carried to the barracks rapidly before another truck arrived. (Here, the witness was shown a photo of a van found in the Ostrowski factory in Koło). This is the van used in Chełmno for gassing. This is the vehicle I mentioned in my testimony with the word 'Otto' on its door."*

But as we have seen earlier, the Central Commission of Inquiry into German Crimes in Poland, which had inspected this vehicle, had established that this was *not* a "gas van."

The witness lies also regarding the cremation facilities (see Chapter 9).

7.2.3. Michał or Mordka Podchlebnik

This witness appeared at the 65th day of the Eichmann trial in Jerusalem on 5 June 1961 under the name Michael Podchlewnik. He claimed he was arrested by German police and taken along with thirty people to Chełmno in 1941 (State… 1993, p. 1189). After a couple of days he was sent to work in the woods (*ibid.*, p. 1191):

> *"In the forest, the pits were being dug. There were twenty-five men, and all were digging pits. We went out at half past six in the morning in winter; this was two days before the New Year, at the end of 1941."*

The witness is said to have arrived in Chełmno on 27 December 1941. He told the film director Claude Lanzmann that he was captured "at the end of 1941, two days before New Year," that is 29 December, and the next morning, 30 December, was brought to Chełmno (Lanzmann 1985, p. 93). In a statement immediately after the war to a commission of the Jewish Historical Institute he claimed instead that he was taken to Chełmno on 3 January 1942 along with 40 people (Blumental 1946, pp. 239f.). Then he was sent to work in the woods, where he was used for the excavation of mass graves measuring 6 m × 8 m. While he was at work, he saw the trucks ("gas vans") which brought about 80 corpses, which were buried in mass graves (*ibid.*, p. 240).

During his interrogation by Judge Bednarz on 9 June 1945, Podchlebnik confirmed having arrived at Chełmno "in early January of 1942" and to have witnessed the unloading of various trucks. Here's how he described the corpses (Bednarz 1946a, pp. 42f.):

> *"The external appearance of the corpses was normal. I did not notice that the corpses had their tongues out; rather their teeth were gritted in an unnatural way. The bodies were still warm. I did not notice any characteristic smell of gas."*

As we have seen above, "Szlamek's" report also said that the color of the corpses was normal, which is impossible for a carbon-monoxide poisoning carried out under the conditions claimed. The absence of any smell is rather contrary to that report, in which we read (see Section 6.3.):

> *"Immediately we were struck by a deep and pungent smell of gas.* […] *A strong smell of gas came out."*

The witness also provided a detailed description of the mass graves and of the way the corpses were buried (*ibid.*, p. 43):

> *"The corpses were placed in such a way that they lay alternately with the head next to the legs of the next corpse. The corpses were bunched tightly face down. The bodies had not been stripped of their clothes. Each grave was six meters deep and about 6-7 meters wide (above). In the lowest layer the bodies of four or five people were laid, in the final top layer were placed up to 30 bodies. The corpses were covered with a layer of sand about a meter thick. I saw several times that at night, the sand was displaced and that, here and there, bodies surfaced which had been buried the day before. Apparently then, the site was not guarded at night. When we worked, the length of the excavation could have been fifteen meters. In the course of a day some 1,000 people were buried. This quantity of corpses occupied 4-5 meters of excavation."*

As in "Szlamek's" report, Podchlebnik also speaks of a grave with the regular section of an inverted trapezoid, but with different dimensions: height 6 meters (instead of 5), the longer leg 6-7 meters (instead of 5) and smaller leg about 1.20 meters.[56] In his statement to the Jewish Historical Institute he mentioned instead a depth of 8 meters and a width of 6 meters.

[56] This measure is derived as follows: 30 corpses are claimed for the larger base of up to 7 m, which equals 1.20 m for the five corpses claimed for the smaller base.

In practice, the pit(s) would have had the cross section of a large funnel, with steeply sloping walls, and it would have been very difficult to dig them manually, especially in winter with the ground frozen: Five meters in length of such a trench would have corresponded to 120 cubic meters of soil. But above all, it would have had no advantage over a normal rectangular pit, which would have been even easier to dig and would have held more.

At the Eichmann trial, the witness expounded in the following way the extraordinary story of his escape (State… 1993, p. 1191):

> *"Then there was New Year, and we did not work on those days. We started to think, some of my companions and I, how to get away from there. Anyhow, we could not stand it any longer. We thought we must try – either we would succeed in escaping or not. On the first day after the holiday, we went to work, after New Year."*

That was precisely the day of the escape, 2 January 1942. The witness stated that he stayed at Chełmno for 10 days (*ibid.*, p. 44: "I have worked at Chełmno for ten days"), but this cannot be reconciled with the dating of his arrival at the camp which he gave at the Eichmann trial: 27 December 1941. In this case his stay at Chełmno would have been a mere six days. Not to mention that in his statement to the Jewish Historical Institute Podchlebnik said he had arrived at the camp only on 3 January 1942, so he would have arrived at Chełmno on the day after his escape!

And after his escape, instead of alerting the local Jewish community and preparing a report on the alleged extermination camp, Podchlebnik remained totally silent for more than three years and spoke out only in June 1945. Yet his testimony does nothing but to repeat propaganda themes which were essentially taken from "Szlamek's" report, and hence it is equally implausible.

7.2.4. How Many and What Kind(s) of "Gas Vans" Operated in 1944?

Regarding the basic question of the number and type(s) of "special vehicles" allegedly used in 1944, the essential evidence is contradictory. Witness Podchlebnik said (Bednarz 1946a, p. 43):

> *"The truck in which the people were poisoned by gas held 80-90 people at a time. During my stay in Chełmno two trucks were used*

simultaneously. There was also a third larger truck, which was defunct and was at Chełmno in the yard (I saw a wheel removed).”

Witness Żurawski stated the following (*ibid.*, p. 62):

“They were operating two trucks: a larger one, which could hold about 130 people, and another smaller one, which could hold 80-90.”

The defendant Bruno Israel finally said (*ibid.*, p. 72):

“There were two death trucks at Chełmno. During the time I was at Chełmno essentially [*zasadniczo*] *a single truck was used. The second, smaller one with a capacity of 80 people was a spare vehicle at Chełmno. These two trucks were sent to Berlin.”*

According to the defendant, a third disinfestation truck existed besides these two, which “had the wheels removed” (*ibid.*).

It is important to note that these three people were in Chełmno during the same period.

According to Podchlebnik, two small “special vehicles” were operating, while a third, larger one, was inoperable. Żurawski said two trucks were in operation, a large and a small one. Finally, according to B. Israel, a single small truck was in operation, while another large truck was inoperable, whereas the third truck was a disinfestation vehicle. It is interesting to note that according to Podchlebnik the third “special vehicle” was missing a wheel and that according to B. Israel the third vehicle, which was used for disinfestation, had all wheels missing. Now, in the first photograph of the vehicle that was in the courtyard of the former Ostrowski Company, the left front wheel is seen to be missing indeed, while in the second picture it can be discerned that all four wheels are missing (which were removed by the Poles). It is therefore clear that Podchlebnik and B. Israel, to whom these photographs were shown during Judge Bednarz’s investigation, identified the Ostrowski vehicle with the third “special vehicle,” the other with a disinfestation vehicle.

7.2.5. The “Testament” of the Last Prisoners of Chełmno

This title is given a 17-page booklet originally written in Polish and translated into Russian by a certain Soviet individual named Eiseman, an interpreter of the 7th Section of the Central Political Bureau of the 1st Byelorussian Front. Apparently the original is missing. The Polish text by Krakowski (Krakowski 1996, pp. 45-57) is a retranslation from

Russian. Together with Ilya Altman, Krakowski has also edited an English translation. The booklet is a collection of writings by some of the last 47 prisoners at Chełmno, including Żurawski and Srebrnik, who have both authored short notes. In the introduction to the publication mentioned above, Krakowski and Altman provide valuable material for judging the value of this journal. With reference to these two witnesses they write (Krakowski/Altman 1991, pp. 107f.):

> *"In July 1945 both testified before the Commission chaired by the Polish Judge Władysław Bednarz, who was investigating German crimes at Chełmno. Subsequently they testified at the Eichmann trial in Jerusalem. For some reason they do not mention the document written shortly before the killing of Chełmno's last forced laborers."*

The final date of the diary is in fact 9 January 1945! This is just the first puzzle. Krakowski and Altman list others (*ibid.*, p. 108):

> *"The circumstances surrounding the composition of this document under the harsh regime of the camp remain a mystery. It is impossible to explain how its authors had found pieces of paper, a pencil and a place and time to quickly write their messages. We do not even know the identity of the persons who found the document and handed it over to a Soviet soldier who later passed it on to the headquarters of the First Belarusian Front. There it was translated into Russian with a preface of the Jewish Anti-Fascist Committee in Moscow."*

Logically, the people who must have delivered the booklet to the Russian soldier can only have been the allegedly only two survivors of that group of 47 prisoners, that is Żurawski and Srebrnik. But if that is so, why then did they not mention it during their interrogation by Judge Bednarz?

Apart from a list of garbled names of SS men allegedly present at Chełmno,[57] the booklet superficially deals with the ostensible extermination, digressing largely into personal matters. The first item recorded refers to a group of Jews from Łódź being sent to Chełmno on 15 September 1944. Next follows a description of the alleged extermination process (Krakowski/Altman 1991, pp. 110f.). But according to orthodox Holocaust historiography, the last convoy of Jews gassed at the camp allegedly arrived there on 14 July.

---

[57] Out of 28 names listed, 22 are garbled; see Krakowski 1996, pp. 55-57.

Then the book speaks of prisoners "belonging to the so-called '*Waldkommando*'" who "went into the forest to gather firewood for the furnaces where people were burned" (*ibid.*, p. 112). But who could be cremated after 15 September 1944?

Another gassing is said to have occurred on 31 August (*ibid.*, p. 113), and yet another "in August 1944" (*ibid.*, p. 120). From the few lines written by "Sewek Srebnik," but signed by "Srebnik Shmuel, Srebnik Sewek," presumably Shimon Srebrnik, we gather only that the author worked at Chełmno "as a shoemaker" (*ibid.*, p. 117). The record made by "Żurawski Mordke," that is Mordka Żurawski, says among other things (*ibid.*, p. 119):

> *"In July 1944 I was sent to 'Leipzig and Munich,' along with 7,000 people. I was picked out by the camp commander, and that day I worked there. All the* [other] *people of this transport who had left with me were wiped out."*

The dispatch of transports to "Leipzig and Munich" (allegedly a "camouflage" for Chełmno)[58] was never mentioned by the witness in his statements afterward, and this also applies to the "testament." On the other hand, of the 65,000 Jews who were in the Łódź ghetto in early August 1944, some 22,500 were deported to Auschwitz and the remaining 42,500 to labor camps in Germany (see Chapter 10). Hence the destination "Leipzig and Munich" is perfectly consistent for one or more of the 10 transports "for labor" (*zur Arbeit*), with which the about 7,000 Jews mentioned above were deported from the ghetto.

Krakowski and Altman say (*ibid.*, p. 107) that many of the 47 final prisoners at Chełmno

> *"were transferred from the Łódź ghetto during the months of May-June 1944. Consequently, they witnessed the entire process of mass murder of the Jews from the Łódź ghetto in gas vans during the period between 23 June and 14 July,"*

that is, the Jews of the 10 transports mentioned above. Apparently the "Testament" was written just to give credibility to this story. If the 10 transports had gone to labor camps in Germany, how could they hope to make the world believe in the almost total extermination at Auschwitz of the Jews from the ghetto of Łódź? Given this, the surprising fact is readily understandable that none of the notes, allegedly written by at least 12 different Jews, had been written in Yiddish.

---

[58] About the destination of Munich see Chapter 13.

8. The Cremation of the Bodies of the Alleged Victims

8.1. The Purpose of Cremation

As to the timing of the first cremation activity at Chełmno, orthodox Holocaust historiography presents two opposing and irreconcilable scenarios. One is essentially linked to the so-called "*Aktion* 1005," allegedly carried out by SS *Standartenführer* Paul Blobel on the orders of Gestapo chief Heinrich Müller. Concerning this Hilberg writes (1995, p. 392):

> *"In June 1942* [Himmler] *gave the order to SS Standartenführer Paul Blobel, head of Sonderkommando 4a, to 'destroy the traces of the Einsatzgruppen's executions in the east.' In this regard Blobel formed a special task force with the code name '1005,' which had the task to excavate the graves and burn the corpses."*

The link with Chełmno would consist in the following fact (*ibid.*, p. 1039; see next chapter):

> *"Hence Blobel and his 'Kommando 1005' went to Kulmhof in order to see there what could be done with the graves located there. He built numerous pyres and primitive furnaces and even used explosives."*

According to this interpretation, the first cremation at Chełmno resulted from the desire of the SS to remove the traces of their crime. Krakowski presents it as follows (2007, p. 119):

> *"Meanwhile the Germans in the camp focused primarily on the destruction of the traces of their murders, cremated the bodies and scattered the ashes of the murdered. These activities were directed by Paul Blobel, the commander of 'Aktion 1005,' who had specialized in eliminating the traces at massacre sites. Blobel chose Łódź as the seat of his office so that it would be as close as possible to the operations center, the Chełmno camp."*

Judge Bednarz knew nothing of all this. In his investigation, he simply established that the two crematoria were constructed in the spring of 1942. He explained in 1946 that the cremation of corpses began in the

summer of 1942 as a result of an outbreak of typhus caused by the fumes of the corpses (see Section 9.1.).

In this regard the verdict of the Bonn Jury Court pointed out (Rüter *et al.* 1979, p. 279f.):

> *"In summer 1942 a strong smell of decomposition became noticeable coming from the mass graves in the forest. It grew increasingly strong and covered the entire area. The corpse gases penetrated the covering soil, which was merely half a meter thick and planted with broom for camouflage reasons. Thereupon an incineration furnace was erected which consisted of a pit of a circumference of 4 × 4 m and a depth of 2 m, several iron railway tracks as a grate and an air duct cut horizontally into the soil."*

This interpretation attributes the beginning of cremation at Chełmno to sanitary needs, so that there is no place in this version for Blobel and his *Aktion* 1005. Indeed, in this perspective, Blobel's mission at Chełmno becomes pointless.

Jens Hoffmann tries to reconcile the two contradictory arguments by writing (2008, p. 11; also p. 81):

> *"During the summer of 1942 Blobel was frequently busy in the Chełmno 'Waldlager' in order to test procedures for the cremation of corpses. Even the local camp staff was interested in Blobel's experiments, who had learned something about flamethrowers and incendiary bombs already in World War I as an army engineer.*[59] *Due to the summer heat, the bodies of victims buried in mass graves had become a hygiene problem. The murderers were concerned about the quality of groundwater, some of them considered aesthetically unacceptable odors and liquids that escaped from the graves."*

8.2. The Alleged Mission of Blobel at Chełmno[60]

Hilberg writes (1995, pp. 1039f.):

> *"In 1942 the corpses were buried in mass graves at Kulmhof, in the camps of the General Government and in Birkenau.* [...] *Considerations of the same kind led the head of the Gestapo, Müller, to instruct Standartenführer Blobel, commander of Einsatzkommando 4a,*

[59] But that training did not turn Blobel into an expert on corpse cremation.

[60] This chapter briefly summarizes what I have documented elsewhere (Mattogno 2008).

to destroy the graves in the occupied territories in the east. Hence Blobel and his 'Kommando 1005' went to Kulmhof in order to see what could be done with the graves located there. He built numerous pyres and primitive furnaces and even used explosives. In addition to these techniques, Kulmhof had a special device – a bone mill (Knochenmühle). On 16 July 1942 the deputy chief of Gettoverwaltung [administration of the ghetto]*, Ribbe, sent a letter to the 'Jewish elder' Rumkowski asking him to look for a mill in the Łódź ghetto, 'hand-cranked or electric.' He added in no uncertain terms: 'The Sonderkommando of Kulmhof is interested in this machine.' The ghetto evidently did not have such a mill, since a few months later Biebow sent a requisition to the Gestapo in Łódź regarding the purchase of a bone crusher from the Company Schriever & Co. in Hamburg. Biebow asked the Gestapo to keep the purchase documents. 'For some reason' he did not want to keep them. When Höss, the commandant of Auschwitz, visited Kulmhof, Blobel promised that he would send a mill 'for substances.' But Höss preferred that the remains of the bones be destroyed with hammers."*

But if two properly operating crematoria had already been built at Chełmno for sanitary reasons (see Section 9.1.), what would have been the point of Blobel's experimental cremations? And what sense was there in assigning them specifically to him?

The problem of mass cremation for sanitary reasons due to epidemics or battles had been discussed by German specialists since 1875, when Friedrich Küchenmeister wrote about a project by Friedrich Siemens (the creator of the first hot-air crematorium) conducted at his specific request regarding a mass cremation installation for the corpses of soldiers fallen on the battlefield. The project was called "*Feldofen Leichenverbrennung System für Friedrich Siemens*" (Field incinerator for Cremation of Corpses, Friedrich Siemens System; Küchenmeister 1875, pp. 82f.).

By the end of the nineteenth century several scientific works on cremation contained discussions on mass-cremation furnaces for corpses from contagious diseases and casualties of war.[61] In November 1901, during a convention of the Chamber of Physicians for the Prussian province of Brandenburg, Dr. Weyl proposed cremating the victims of a typhus epidemic that was raging in the region. He turned to engineer Hans Kori (a future competitor of the Topf company for the supply of

[61] One of the first was Pini 1885, pp. 151-157.

crematoria to concentration camps), who, on 10 February 1902, proposed "the construction of temporary or portable furnaces" which could be assembled in 36 hours.[62]

The First World War rekindled the interest of German specialists to the extent that an apparatus for mass cremation was even patented.[63] The oft-cited patent application for a "continuously operating cremation furnace for mass use" (*Kontinuierlich arbeitender Leichen-Verbrennungsofen für Massenbetrieb*) which Topf chief engineer Fritz Sander filed on 26 October 1942 and then revised on 4 November 1942 arose from that tradition of research into mass cremations.

The engineer Kurt Prüfer, of the Topf & Sons Company of Erfurt, at that time supervisor of the construction of the crematoria at Auschwitz-Birkenau, was one of Germany's leading experts on cremation. So why then would Gestapo Chief Müller have assigned a layman like Blobel to carry out experiments in the field of cremation without even consulting a specialist like Prüfer or Sander?

The only certain fact is that the alleged activity of Blobel at Chełmno is not confirmed by any document, but only by a single testimony, that of Rudolf Höss, the commandant of Auschwitz, which was then "confirmed," long after the fact, by one of the architects of the Auschwitz crematoria, Walter Dejaco.

8.3. Höss's Visit to the *Aktion* Reinhardt Field incinerators

On 17 September 1942 SS *Untersturmführer* Walter Dejaco wrote the following "Report on the Mission to Łódź" (*Reisebericht über die Dienstfahrt nach Litzmannstadt*):[64]

> *"Purpose of Journey: Inspection of a special installation*
> *Departure from Auschwitz was on 16 Sept. 1942 at 5 a.m. by car of the headquarters of Auschwitz concentration camp.*

---

62 *An den Deutschen Reichstag. Eingabe vom 20.Februar 1902 wegen Verbrennung von Pestleichen*, Attachment II.

63 Deutsches Reich. Reichspatentamt. Patent no. 331628; class 24d. Issued on 11 January 1921. Adolf Marsch in Gera, Reuss. "*Schachtofen zur gleichzeitigen Einäscherung einer grösseren Anzahl von Menschenleichen oder Tierkadavern*." German patent valid as of 30 September 1915.

64 RGVA, 502-1-336, p. 69; see Document 9.

Participants: SS Obersturmbannführer Höss, SS Untersturmführer Hössler and SS Untersturmführer Dejaco.
Arrival at Łódź at 9 am. A visit to the ghetto took place, followed by a trip to the special installation. Inspection of the special installation and discussion with SS Standartenführer Blobel about the design of such an installation. The construction material ordered by special directive Staf. Blobel from the company Ostdeutsche Baustoffwerke, Posen [Poznan]*, Wilhelm Gustloffstr., are to be delivered immediately to Auschwitz concentration camp. The order results from the attached letter of the W.V.H.,*[65] *and the request and allocation of the ordered materials is to be effected immediately by the local Central Construction Office in agreement with Ostuf. Weber of Office C V/3. The required number of waybills is to be sent to the above company.*
With reference to the discussion of SS Staf. Blobel with the company Schriever & Co., Hannover, Bürgermeister Finkstr., the reserved ball mill for substances which has already been reserved is to be delivered to the Auschwitz concentration camp.
Return on 17 Sept. [19]*42, arrival at Auschwitz at 12 o'clock.*

8.4. Did Höss Visit the Chełmno Camp?

No document exists certifying that the "special installation" was in Chełmno; this is based only on Höss's notes (Broszat 1981, pp. 161f.):

"I drove with Hössler to Culmhof for an inspection. Blobel had ordered several improvised furnaces to be built, and he incinerated with wood and petroleum refinery byproducts.[67] *He also tried to destroy the corpses with explosives, but this succeeded only very incompletely. After having been pulverized in a bone mill* [Knochenmühle]*, the ashes were scattered in the expansive forest area."*

As I have noted elsewhere (Mattogno 2004c, pp. 17-25), the general context in which the Auschwitz commandant makes this claim is demonstrably false. This also applies to the specific point at issue, about which Höss made contradictory statements. He said in fact (Broszat 1981, p. 162):

"During the visit at Kulmhof I also saw the extermination installations with the trucks, which were adapted for killing with engine-exhaust gases. However, the local commander did not consider this method as reliable, because the gas is formed in a very irregular fashion and often did not suffice at all to kill."

In contrast to this, Höss said elsewhere (*ibid.*, p. 170):

---

67 In German: "*Benzinrückständen*," *e.g.* kerosene and naphtha.

> *"I personally have seen only Culmhof and Treblinka. Culmhof was no longer in operation."*

But if Höss had visited Chełmno on 16 September 1942, the camp was still in operation; if, however, it "was no longer in operation," the visit would have taken place after 7 April 1943 (see Section 12.4.).

On the other hand, the travel permit mentioned above refers to a journey to Łódź and back. Dejaco's report says that the Auschwitz SS came to Litzmannstadt (Łódź) and visited the local ghetto before the "trip to the special installation," where they had a "discussion with SS *Standartenführer* Blobel": if this was at Chełmno, why did the SS stop at Łódź and visit the ghetto first? And why does the travel permit not mention the alleged destination of "Kulmhof and back"? Chełmno is in fact about 60 km northwest of Łódź. Moreover, as reported by Gerald Reitlinger (1965, p. 170),

> *"during his interrogation in Nuremberg, Blobel described the site with great delicacy as 'an abandoned Jewish cemetery near Łódź,'"*

confirming that Höss did not visit the Chełmno camp on 16 September 1942, so the "field incinerators *Aktion* Reinhardt," whatever their function may have been, were not located in or near this camp.

Orthodox Holocaust historiography assumes the following premisses to be true:

– these "field incinerators" were located at Chełmno;
– they were built by Blobel;
– in June 1942 Gestapo chief Müller had given Blobel the order to remove the mass graves in which the victims of German shootings were buried (Spector 1990);
– Blobel decided to use the same method at Chełmno as well.

Hence one would have to assume that contemporary documents confirm both the claimed mass murders at Chełmno and the reality of the so-called "*Aktion* 1005." But neither of it is true, as I have documented elsewhere (Mattogno 2008).

8.5. "Bone Mill" or "Ball Mill"?

In his famous documentary collection on the Łódź ghetto, Artur Eisenbach published the transcript of the two documents relating to Chełmno offered by Hilberg as evidence of the criminal function of the camp in

connection with Dejaco's report of his trip to Łódź on 17 September 1942 (Eisenbach 1946, p. 279):

"To the
Eldest of the Jews[68]
Litzmannstadt
Ghetto letter no. 10195
027/2/Lu/R 16 July 1942

Re.: Machines in the ghetto

I ask to determine immediately whether there is a bone mill inside the ghetto, either with engine or hand-cranked.
On behalf of (Fr. W. Ribbe[69]*)*
The special command Kulmhof is interested in this mill."

On the same page Eisenbach also published the transcript of the second document, which does not explicitly mention "bone mill":

"To the
Secret State Police
c/o Mr. Commissar Fuchs
Litzmannstadt
027/1/Bi/Si 1 March 1943

Re.: Purchase for the special command Kulmhof

Attached I send back to you the documents about the purchase from the company Schriever & Co., Hannover. The matter has been concluded in the meantime, but for certain reasons I do not want to keep this file in my administration, and ask it to be taken into storage there.
On behalf of:
Attachment: 1 file
(Biebow[70]*) head of department."*

Ribbe's request of 16 July 1942 for a "bone mill" is recorded only in Eisenbach's transcript, without even an archival reference. No one has ever seen the original document. In addition, Biebow's letter of 1 March 1943 makes explicit reference to Schriever & Co. of Hannover, which is also mentioned in Dejaco's report, but relating to a "ball mill."[71]

---

68 "*Ältesten der Juden*," office held by Mordechai Chaim Rumkowski.
69 Friedrich Wilhelm Ribbe, deputy chief of the Łódź ghetto administration.
70 Hans Biebow, chief of the Łódź ghetto administration.
71 A ball mill is a type of grinder usually using steel balls in order to grind solid materials into fine powders.

Hence until proven otherwise – which means as long as the original document is not produced – it is more than legitimate to assume that the "special command Kulmhof" had requested a simple "ball mill," a machine which it subsequently actually received. In support of this a further argument can be made.

The "bone mill" was a machine that was designed to obtain fertilizer from animal bones. A similar machine still exists in Germany as a historical artifact:[72]

> *"Around the year 1837, the milling facility with a pounding de-vice for animal bones was built. The resulting bonemeal was used as organic fertilizer for the hardscrabble fields. If the bone particles were still too large after pounding them, they were placed in a drum full of stones that further pulverized them."*

The "bone mill" was normally used in industrial equipment for the processing of animal carcasses.[73] Hence, if the "special command Kulmhof," which certainly was not involved in the production of fertilizers from animal bones, had asked the Jewish Council of the Łódź Ghetto, of all possible addressees, for just such a "bone mill," it would surely have raised serious suspicions.

Finally, the fact that it could also have been hand-cranked (*Handbetrieb*) does not comport with the alleged grinding of bone residues from tens of thousands of corpses (for more see Mattogno 2008, pp. 37-40).

9. The Chełmno "Crematoria"

9.1. Construction and Operation

Not a single document exists on the alleged Chełmno crematoria; all we know about them is a simple summary of evidence compiled by Judge Bednarz. And even this merely applies to the second phase of the camp, because there were no witnesses to the first phase. In his first report on the camp he wrote (Bednarz 1946d, p. 6):

> *"Until spring 1940* [should be: 1942] *the bodies were buried in huge mass graves, one of which was 270 meters long, 8.10 wide and 6 deep. In the spring of 1942 two furnaces were built. As of this time all corpses were cremated. The corpses already buried earlier were cremated as well. We have no precise data about these furnaces, as the preliminary investigation could not rely on any witness who, in the years 1942 to 1943, had worked in the woods where the bodies were cremated. Witnesses living near the forest saw two chimneys located in a fenced-in area which were smoking all the time. During the first deactivation of the camp the furnaces were blown up by the camp authorities on 7 April 1943."*

In a later report Bednarz remarked (1946a, p. 20):

> *"In summer 1942 the large amount of rotting corpses that had accumulated led to a typhus epidemic. In addition, the odor was so intense as to render the admission of new transports impossible. It was therefore necessary to find means of mitigation. They then began to cremate the bodies. Subsequently the numerical strength of the Waldkommando was increased (testimony of witness Kozanecki, card 82) and new transports ceased to be admitted* [in a note: probably in June and July 1942]. *Two crematoria were built, whose chimneys towered above the forest (deposition of witnesses on Cards 13, 57, 61, 67 and others). However, in order to accelerate the cremation process of the accumulated corpses, timber was transported from the nearby forest of Kościelec, since the wood on site was not enough. Huge pyres were prepared, and the corpses were cremated on them. Working conditions were terrible. When a special commission came from Berlin to check the work status, the police said laughingly that 'die Herren aus Berlin'* [the gentlemen from Berlin]

could not stand the atmosphere and had already passed out after 5 minutes (witness statement by Rozalia Peham, wife of a member of the Sonderkommando, Card 160).

The ashes were dumped in trenches 4 meters deep and 8-10 meters wide. They were then covered with earth. On that site a stand of partly conifers and partly birches was planted. The bones were crushed with wooden pestles on a cement base prepared specifically for this purpose. For a certain time the bones were probably crushed by a machine for grinding (mill). The investigation has ascertained only the fact that this machine, coming from the Zawadka mill, was brought into the area of the Sonderkommando*, and the fact that it was returned after having been disinfected (deposition by witnesses Sokolnicki, Card 143, and Kruszczyński, Card 413).”*

The crematoria of the camp’s second phase, however, are extensively described by several witnesses. Bednarz summed up their statements as follows (1946d, p. 6):

“2 new furnaces were built in 1944, during the period when the camp resumed its activities. Witnesses Żurawski, Srebrnik and the policeman in custody Bruno Israel, who had seen the reconstructed furnaces, described them as follows: the furnaces were built into the ground and did not protrude above ground level. They had the shape of a cone with a base of equal angles and its apex in the ground. At the top the furnace measured 6 × 10 meters and had a height and a depth of 4 meters.[74] *At the bottom, where a grill was located, the furnace measured 1.5 × 2 meters. The grate was made up of railway rails. A channel through which air flowed and which at the same time served to remove the ashes and bones led to the ash compartment. The walls of the furnace were made of refractory bricks and cement. Alternating layers of wood and corpses were placed in the furnace in order to speed up the combustion process. The cremation capacity of the furnace was a hundred corpses at a time. When the bodies fell down* [through the grate] *during the combustion process, more could be added on top of them. Bone ash and debris removed from the ash compartment were placed in a pit after being crushed by a pestle, and then, in 1943, the bones and ashes were taken se-*

[74] According to Szymon Srebrnik, who claims to have seen them, the furnaces “were approximately three metres (10 feet) tall. The width was about the same” (Srebrnik 1945).

cretly at night to the village of Zawadka and were thrown into the river from the bridge."

And here is the description given by Bednarz in his second report on Chełmno (1946b, pp. 22f.):

"According to the investigation's results, the crematorium of 1944 looked like this: It was built in such a way that it did not protrude from the ground. At the top, it had the shape of a rectangle of 10 × 6 meters. The furnace tapered off like a funnel toward the bottom and ended with grates made of railway rails. The hearth had a dimension of 1.5 × 2 m. The furnace was 4 meters deep, the walls were brick covered with a layer of refractory cement. The ash compartment was under the stove, from which a narrow channel had been excavated. Through this channel the ashes were extracted.[75] *They used a custom-built poker in order to pull out the ashes. This work was so hard that the workers who performed it died after a few days (Card 342).* [Note: *After a few days they were so exhausted that they were killed as unfit for work.*] *When the furnaces were not in operation, they were camouflaged for fear of air raids, so that they could not be seen from above. On the furnace's opening, railway rails were placed of some 15 meters in length, and on top of them plates and branches were put (Bruno Israel, Card 394). Alternating layers of corpses and wooden logs were put into the furnace. They were arranged in such a way that they did not touch one another or hinder the airflow to successive body layers. 12 bodies were put in the lower layer. The furnace was ignited through the channel to the ash compartment. The corpses were not moistened with gasoline or other flammable substances. They burned rapidly, more or less within 20 minutes (cards 342, 170). As they burned, the layers of corpses sank toward the* [bottom of the] *pit, which made it possible to add a new load. A furnace contained up to 100 corpses. Thus, a transport carried by the gas-chamber truck was instantly cremated in a furnace."*

The system described by the witnesses (particularly by M. Żurawski) is nothing other than the so-called Feist apparatus, a furnace for burning the carcasses of animals which have died of infectious diseases. It was developed by Veterinarian Georg Feist in the second half of the nineteenth century. A book on cremation from the turn of the century ex-

[75] The witness Srebrnik stated that "there was neither a chimney nor a special trench for better draught." (Srebrnik 1945)

plains its structure and operation with the aid of a drawing (de Cristoforis 1890, pp. 125-128; see Document 11):

"This apparatus was originally designed by Dr. Feist for the sole hygienic purpose of destroying the carcasses of animals which had died of infectious diseases, but it is easy to understand that, with appropriate modifications, it could also be used to incinerate human remains in the case of a significant mortality, such as casualties of war or during an epidemic when the number of victims, the lack of time or money does not permit a crematorium to be built, and finally in all the circumstances that Captain Rey saw when he conceived his mobile crematorium.

The veterinarian Georg Feist had the idea of using cremation in order to render harmless the animal carcasses affected by a contagion; he was convinced that burial would serve only to create a diffusive hotbed of the contagion in the area where it already raged, a contagion which at the same time was the economic ruin of the country. The idea of Dr. Feist was immediately approved by his veterinary colleague Zündel and by the local authorities. The Strasbourg authorities granted permission to build a special furnace in each of the larger departments affected by the contagion, i.e. Johaness-Rohrbach and Canton Saaralben.

The first Feist furnace was built on the principle of the lime kilns situated on a hill just 20 km from the village of Rohrbach. The wind came primarily from the east-south-east; the mouth of the chimney opened in this direction. The vertical space for the carcasses is perfectly round: it is 1.75 m high and has a diameter of 1.60 m at the top and 0.90 m at the bottom at the level of the second grate. In this space at first some straw with dry branches and wood chips is introduced, then coal, to a total thickness of 40-50 cm. Next the carcass is introduced and the spaces between the carcass and the walls are well filled with coal; the space which may remain at the top is filled with more straw and kindling. Finally the whole is doused with 5-10 liters of oil.

On top of this a funnel of white sheet metal, 2 mm thick, is located; then the fire is lit with a suitable medium at the lower grate, which is about 65 cm above the ground. Under the furnace there is a trough of sheet metal in which fluids which may seep through due to the heat are absorbed by the ash. The complete combustion takes 5 to 6 hours for small animals and 8 to 9 for bigger ones, which weigh 250

to 500 kg, which amounts to 4-8 corpses of an average weight of 60 kg each. At this time, moreover, everything is reduced completely, leaving an ash residue of 1 to 2.5 kg.[76]

The employee responsible for conducting the cremation receives 20 Swiss francs per carcass, but is obliged to provide all the fuel, and thus earns about half the sum. Fuel consumption is about 500-600 kg of coal, 5-10 liters of oil and about 75 hundredweight of straw and firewood."

In summary, the Feist apparatus had the shape of a truncated inverted cone and a hearth grate of 90 cm in diameter with a surface area of ($\pi \times r^2 \approx$) 0.64 square meters; in eight to nine hours it could incinerate animal carcasses weighing some 250 to 500 kg, which is equivalent to four to eight corpses of 60 kg, while consuming about 500 to 600 kg of coal and five to ten liters of gasoline. Assuming average values, this results in 375 kg of organic matter (the equivalent of six corpses) incinerated in 8.5 hours using 550 kg of coal. In 24 hours, therefore, the cremation capacity of the furnace was 1,050 kg of load (the equivalent of 18 corpses) consuming 1,550 kg of coal. This amounts to an average of roughly 1.45 kg of coal per kg of combusted load.

In contrast to this, the Chełmno furnaces are said to have had a rectangular cross section and were allegedly equipped with a grate of 1.5 m × 2 m = 3 m². A system of this kind therefore would have had a combustion capacity (3÷0.6=) 5 times higher, therefore (18 × 5 =) 90 corpses in 24 hours, while consuming (90 corpses × 60 kg/corpse × 1.45 kg coal/kg corpse≈) 7.800 kg of coal.

Żurawski's claim that a layer of 12 corpses burned in 15 minutes[77] is therefore crazy. In such a case, one furnace alone would burn 1,152 corpses in 24 hours, which is absurd. Instead, the theoretical capacity of the two incinerators at Chełmno would have been 180 corpses in 24 hours. But in practice, since the two furnaces were fuelled with green wood according to witnesses, which has a calorific value much lower

[76] The real quantity should rather be 10-25 kg. This is probably a printing error.

[77] See quote on p. 63; W. Piller "confirmed" this absurdity by also asserting that the corpses were cremated within some 15 minutes (Krakowski 2007, p. 144); Srebrnik confirmed no less absurdly: "The capacity of one furnace was more or less the same as one van. […]. It took approximately one hour for the corpses to burn." Since he claimed that the smaller "vans" had a capacity of 100-120 persons, the furnace in turn could allegedly cremate at least this number of corpses within an hour (Srebrnik 1945).

than that of coal,[78] the actual combustion capacity would have been considerably lower.

But even the theoretical maximum capacity of 180 corpses in 24 hours would still have been inadequate for an ostensible extermination camp like Chełmno with its relatively limited influx of victims. This is particularly true for the claimed first phase of camp's activities, which saw many more victims than the claimed second phase.

According to orthodox Holocaust historiography, Blobel began his cremation experiments at Chełmno in June 1942. By mid-September he had developed a cremation system so satisfactory that his "field incinerators" were visited by Rudolf Höss and considered a model for Auschwitz.[79] Hence for the SS authorities their efficiency would have been indisputable. So when these authorities, in the second phase of the camp, are said to have had to reconstruct the two furnaces which had previously been dismantled, they apparently built the same furnace model as developed by Blobel. This is stated explicitly by Konnilyn G. Feig, who writes:[80]

> *"Blobel finally discovered an efficient method of body disposal. He constructed a vast pyre of iron rails and wooden sleepers, built in the form of furnaces. They were laid deep in the ground so they did not project above the surface. The furnaces measured at the top 6 by 10 meters and were 4 meters deep. A channel to the pit below facilitated the removal of ashes and bones."*

But in this case, cremation of the 145,301 alleged victims of 1942[81] would have required (145,301÷180=) about 807 days (2 years and 2½ months)!

Archaeological excavations carried out by the Poles in the late 1980s and early 1990s, however, disproved the report accepted by Judge Bed-

---

[78] Coal has a calorific value between 15 MJ/kg (moist lignite) and 34 MJ/kg (anthracite) (3,583 to 8,121 kcal/kg); www.engineeringtoolbox.com/fuels-higher-calorific-values-d_169.html. The values for wood are between 8 MJ/kg (green) and 16 MJ/kg (dry) (1,911 to 3,822 kcal/kg), van Loo/Koppejan 2008, p. 40.

[79] In reality Höss inexplicably is said to have introduced crude "cremation ditches"; see Section 9.4.

[80] Feig 1981, p. 271. The few pages dedicated to the events at Chełmno are utterly inconsistent ("Chełmno/Kulmhof: The Secret Camp," pp. 266-274).

[81] The number of Jews who, according to the Korherr Report, "*wurden durchgeschleust… durch die Lager im Warthegau*" ("were funneled… through the camps in the Warthegau"; NO-5194, p. 9) and who, according to orthodox historiography, were gassed in Chełmno. For instance, the Bonn Jury Court determined its minimum death toll of "at least 145,000" for the camp's first phase based on the Korherr Report (Rüter *et al.* 1979, pp. 285f.).

narz: they found only the ruins of a single crematorium, which had a maximum footprint of 6 m × 5 m, not 6 m × 10 m (see Chapter 10), and therefore had a grate in proportion of 1.5 square meters and a maximum cremation capacity of 45 corpses per 24 hours. This fact completely demolishes any claim that Chełmno was an extermination camp. Nevertheless, in the following section I will continue discussing Bednarz's report to show *a fortiori* its inconsistency.

9.2. The Furnace's Capacity and Wood Requirement

The data calculated in the previous chapter – the cremation of 90 bodies in 24 hours with a consumption of 7,800 kg of coal – are valid for corpses with an average weight of 60 kg, which is that of the alleged victims of gassing (see Graf/Kues/Mattogno 2010, pp. 130-133.).

As we have seen, the calorific value of coal varies from 3,583 to 8,121 kcal/kg, so the average value is 5,852 kcal/kg.[82] Freshly cut wood has a calorific value of 1,911 kcal/kg, equivalent to about (1,911÷5,852×100=) 33% or a third of that of 1 kg of average coal.

Hence, cremating a body of about 60 kg requires (1.45×60×3=) some 260 kg of fresh wood. Thus, in order to cremate the minimum number of alleged victims – about 152,000 bodies (see Chapter 11)[81] – (152,000×260≈) 40 million kg or 40 thousand metric tons of wood would have been required. In the woods around Chełmno we can assume a timber production of about 200 tons per hectare, as in the region of Lublin (*ibid.*, p. 144). Therefore 40 thousand tons of wood would have required the logging of about (40,000÷200=) 200 hectares of forest. In Chapter 10 we will see what consequences follow from this data.

9.3. Contradictions Surrounding the Activity of the Crematoria

Krakowski writes in his article about Chełmno (1983, p. 142):

> *"In August 1944 the Łódź ghetto was liquidated within three weeks, and the 70,000 Jews there were deported to Auschwitz-Birkenau to*

[82] That value is at the low end, since most types of coal have a value around 7-8,000 kcal/kg. The subsequent values are therefore very conservative. The actual fuel-wood consumption might be as high as 350 kg per average corpse.

be gassed. The capacity of Kulmhof would not have sufficed for killing tens of thousands of people in a very short time. The Sonderkommando Bothmann remained in Kulmhof for a little while in order to erase all traces that could have been created by the massacre. Hauptscharführer Walter Burmeister said before the investigating judge:

'During the last few months before we left Kulmhof transports no longer arrived at the camp. In this period the corpses were merely exhumed and burned.'

This statement was confirmed by Alois Häfele:

'[...] *In April 1944 a telegram arrived in Weimar from Bot*[h]*mann in Posen according to which we again were required at the extermination camp Kulmhof. We headed for Kulmhof. Here Bothmann greeted us and told us that this time, by order of the Reichsführer-SS Himmler, it was necessary to remove all traces at Kulmhof. The mass graves of the Waldlager* [forest camp] *were opened. The corpses found in these pits were cremated with the help of Jewish work details in a crematorium that had been built before.'"*

But if the bodies of the camp's first phase were cremated in a first pair of furnaces and those of June/July 1944 in the second pair (in two furnaces, not one as claimed by Häfele), which mass graves were reopened in 1944?

In Krakowski's 2007 book these contradictions are even more evident (pp. 122f.):

"After the liquidation of the ghettos in the Warthegau and the 'closure' days of the Łódź ghetto, transports to Chełmno were suspended. Throughout the autumn of 1942 and during the months of winter 1942/1943 the camp staff was busy removing the traces of their murder, a work which had begun already in the spring of 1942. In September 1942 these activities were further accelerated under the supervision of Paul Blobel. The Germans built two corpse-cremation plants in a clearing. The mass graves were opened, and work details were forced to exhume the bodies and to carry them to the crematoria."

He then states that in March 1943 it was decided to liquidate the camp and to assign its staff (the Bothmann *Sonderkommando*) to the SS Division "Prinz Eugen" which operated in Yugoslavia (*ibid.*, p. 123), adding (*ibid.*, p. 125):

> *"On 7 April 1944 the men* [the Jewish detainees] *blew up the crematorium and a part of the castle which had been used to receive the victims prior to their murder."*

But in November 1943 the SS staff was sent back to the camp "to complete activities in order to conceal the massacre that had been carried out" (*ibid.*, p. 127).

When the Bothmann *Sonderkommando* returned to Chełmno in April 1944 in order to resume the extermination activities, "two identical crematoria were built in the forest for the cremation of corpses" (*ibid.*, p. 132). All the corpses of the alleged victims from the camp's first phase (1941-1942) who had been buried in mass graves were exhumed and then cremated in the old crematoria; all the corpses of the second phase (1944) were cremated in the new furnaces. In contradiction to this, Krakowski states that in the fall of 1944 Jewish prisoners in the *Waldlager* were forced "to pull out the corpses of the dead from mass graves" (*ibid.*, p. 161) and explicitly reiterates:

> *"Incomparably worse was the situation of those prisoners who were brought daily to Waldlager in order to open up the mass graves and to cremate the corpses of the murdered."* (p. 162)
>
> *"The work to conceal the massacre continued until October 1944 – the corpses were pulled from the mass graves and burned, their bones crushed, the ashes scattered, the land cleared."* (p. 164)

These contradictions perfectly reflect the testimonies. In fact, they provide conflicting data also about the mass graves, which – it should be made clear – were used only during the first months of the camp's activity, until the first two crematoria were built.

Krakowski tells us in this regard that three clearings existed in the *Waldlager*; the largest of them contained two pits 30 m × 10 m and 2 m deep; the middle-sized clearing had a single pit of a similar size, and in the smaller clearing there was a pit of 12 m × 10 m, 3 m deep (*ibid.*, p. 34). However, with reference to another testimony he subsequently mentions a pit measuring 200 m × 5 m, another 50 m long and a third 150 m long (*ibid.*, p. 60). Another witness, Johann I. (his last name is not given), refers to two pits 20-30 m long, 6-8 m wide and 4 m deep (Rückerl 1979, p. 272).

9.4. The Chełmno "Crematoria" and "Field incinerators *Aktion* Reinhardt"

I have stated above that, according to orthodox Holocaust historiography, the "field incinerators *Aktion* Reinhardt" had been built by Blobel in Chełmno after several attempts as a result of his cremation experiments in connection with the alleged *Aktion* 1005. The explanations I have provided in the previous sections allow the reader to judge to what extent this assumption is based on historical fact.

Jean-Claude Pressac summarized Dejaco's witness statement about his report of 17 September 1942 during the hearing of 20 January 1972 in the Vienna trial, where he was charged together with his former colleague Fritz Ertl. Pressac commented (1993, pp. 57f.):

> *"According to Dejaco, the installation resembled a large circular charcoal kiln with a diameter of 4 to 6 meters, and backfilled on its periphery. Blobel insisted on arranging the corpses and the wood in layers, which always had to be alternated. Blobel was of the opinion that his installation was not convenient for a fast incineration, given that the combustion was slow. Nevertheless, the principle (alternated stacking) was to be preserved.* [...] *Blobel's installation was not reproduced in Birkenau, but its principle was applied: combustion of layers of wood and corpses stacked alternately on vast grates, consisting of railroad rails supported by small brick pillars."*

The cremation facility at Auschwitz described by Pressac is not based on reality nor on documents or testimonies,[83] so it is pure conjecture on his part. Besides, it would also have been technically very difficult, since large piles of alternating layers of wood and corpses burn unevenly. Hence the pile would sooner or later lean to one side or the other and would ultimately topple over, spilling burning wood, embers and corpse parts off the grate.

According to Höss, in fact, the outdoor cremation of corpses in Auschwitz was carried out in a completely different way from what he said he had observed at Chełmno (Broszat 1981, p. 161):

---

[83] Witnesses of open-air incinerations in Auschwitz usually talk about one layer of wood at the bottom of a trench (or pyre), followed by huge piles of corpses or alternately added layers of wood and corpses, on occasion sprinkled with corpse fat allegedly collected from the burning corpses. Railway grates are not part of the Auschwitz lore (cf. Mattogno 2005, pp. 13-23).

> *"We started with the cremation only toward the end of summer; first on a pile of wood with about 2,000 corpses, then in the pits with the exhumed corpses from earlier. First the corpses were doused with oil-refinery byproducts,*[84] *and later with methanol.*[85] *Cremation in the pits went on continuously, hence day and night. By the end of November all mass graves had been emptied. The number of corpses buried in the mass graves was 107,000. This figure not only includes the transports of exterminated Jews from the beginning up to the time when they began the cremations, but also the corpses of prisoners who had died in Auschwitz in the winter of 1941/42, when the crematorium next to the hospital was out of operation for a long time. All the prisoners who died in the Birkenau camp are included as well."*

This process has no resemblance to the "field incinerators" allegedly used by Blobel for cremations, nor did a "ball mill" exist at Auschwitz to crush the cremation residues. So what brought Höss to Chełmno? And if simple pyres or simple pits sprinkled with refinery byproducts or methanol sufficed to easily cremate tens of thousands of corpses, why did the *RSHA* order Blobel to carry out cremation "experiments" at Chełmno?

Dejaco's statements further complicate the story: the "experiments" carried out by Blobel would in fact lead to the creation of a "charcoal kiln" (*Kohlenmeiler*) which was, by its own creator's admission, totally inefficient for mass cremation!

As for the "principle" of the system – alternating layers of wood and corpses – allegedly brought to Auschwitz from Chełmno: it was a very primitive technique of cremation. The true "principle" of Blobel's system, however, was instead specified as a "charcoal pile," which has never been tried or even suggested in the history of modern cremation, and for good reason. The purpose of such a pile is indeed to produce charcoal by incomplete combustion of wood, therefore carbonization, not cremation or incineration (complete combustion), so it is obvious that such a system was quite inefficient for mass cremation of corpses, to put it mildly.

---

84 In German: "*Ölrückständen.*"

85 The only known Auschwitz document which mentions methanol (methyl alcohol) is the *Standortbefehl* (garrison order) no. 30/44 of 11 December 1944, with which the camp commander forbade the SS men to purchase vodka from Poles, because it contained methanol which had caused cases of blindness and death among the acquiring SS men (Frei *et al.*, 2000, p. 519).

10. Excavations and Archaeological Findings

10.1. Investigations of Judge Bednarz and the Koniń Museum

In 1945 the Chełmno camp was examined by Judge Bednarz, who briefly described the material findings (1946a, pp. 20f.):

> *"When the pits into which the ashes and crushed bones had been dumped were reopened in the course of the investigation, ashes, hair, traces of chlorine – apparently thrown in for the purpose of disinfection – bones and bone fragments as well as small objects were found, such as combs, buttons, purses, etc. (document of the protocol of investigations, Card 530). It should also be noted that, because of soil fertilization with human ashes, the vegetation in this area is much more lush and green in color."*

Further archeological surveys were conducted in 1951 and in 1986-1987. The latter, sponsored by the District Museum, at that time headed by Łucja Nowak, were summarized as follows by Janusz Gulczyński (1991, pp. 91-93):

> *"In the former camp in the woods of Rzuchów the Museum of Martyrdom is located, which is a branch of the museum district of Koniń. Upon its initiative, various works were undertaken in relation to the layout of the terrain. Investigations have been carried out to obtain the largest possible number of artifacts linked to the crime scene, in general to the martyrdom of the Jewish population during the last war.* […]
>
> *In 1986, archeological-documentary work began in the clearings of the Rzuchów forest by a group of staffers of the museum district of Koniń. The purpose of the excavations was to extract from the earth any artifacts and to validate all things where possible in order to develop information about Chełmno in relation to the years 1941-1945. The point of departure of the work was the data derived from interpretation of aerial photographs taken by the army in 1958. Photo interpretation allowed locating within the boundaries of the forest area the contours of mass graves, of four barracks and also of trenches whose function was not very clear. Another purpose was to verify the photo interpretations of and to discover the remains of a*

crematorium. Five excavations were carried out with a total surface area of 208 square meters. It was clear that the traces of the barracks were not preserved. They were probably removed during development in the Sixties and Seventies. It was found that burned human bones, in addition to being scattered around the Warta region, were also scattered in the woods. Even now they emerge on the surface. The function of one trench has been established: it probably served the Hitlerites to burn the victims' personal belongings which were unsuitable to be sent back to the Reich. Thus from the probing trench dug during this survey a large number of objects was retrieved – studded handbags, purses, suitcases, shoes, belt buckles, knives, clothes pins, prosthetic fittings, dentures, buttons – including those from Soviet uniforms – casings of rifle cartridges, pistols, etc.
Partial remains of one of the crematoria were identified. It is shaped like a big hole with dimensions of about 17 × 17 m with sloping walls. The furnace is filled with sand of a light gray color with ashes and a huge amount of crushed human bones. At a depth of 2 m under the excavation walls blocks of broken concrete and bricks were found, which are the remains of the blown-up crematorium. It was observed that the cement had been reinforced with parts of baby carriages. On each of the furnace's walls a system of drainage pipes [sic] *was discovered which probably led air into the furnace. These data are contained in a report by the archeological section of the museum district of Koniń, archeological excavations, Chełmno upon Ner, 1986. Research continued the following year. This time attention focused on two excavations. More debris of the crematorium was discovered: concrete blocks, broken bricks, etc. Within the ventilating drainage tubes a black layer was observed, like soot: traces of the smoke from cremating corpses. Everywhere minute human bone fragments were found, especially ashes and bone dust. At a depth of 3 meters the surface of one excavation trench was covered with a mass of tiny bones. All this made a particularly gruesome impression.*
In the second excavation, where concrete debris, bricks and drainage pipes were also discovered, other artifacts were found: the soles of shoes, broken prostheses, buckles, spoons, forks, etc. There were no human bones and bone dust, at least not in large amounts, in comparison with the excavation carried out at the location of the crematorium. The hypothesis was confirmed last year: that place

> *was probably used to burn various items of no value, hence inappropriate for sending to the Reich."*

In late November of 1988, the Koniń District Museum sent to the Institute of Forensic Medicine of the Medical Academy of Poznań a parcel containing four bags filled with earth mixed with ashes and bone fragments taken from the Chełmno camp. The Koniń Museum asked for a report on the samples sent in order to determine whether these fragments contained bones and human ashes and what their percentage was. The Institute of Forensic Medicine confirmed on 5 December 1988 that the bone fragments and ashes were human, adding that the percentage of residual bone in the material sent could be estimated "*na kilka procent*,"[86] – at a few percent.[87]

10.2. The Map of the Camp

In 1989 Zdzisław Lorek, on behalf of the Koniń District Museum, produced a map of the former Chełmno camp with a precise indication of the excavations and archeological findings,[88] which was updated in 1996, using the most recent findings.[89] Before analyzing this, it should be noted that the dimensions of the crematorium mentioned by Gulczyński – 17 m × 17 m – are clearly wrong, as the current architectural reconstruction of the furnace measures roughly 6 m × 5 m (see Documents 17-20). A plaque in Polish informs the reader:

> *"In this place the foundations of a furnace were discovered in which thousands of bodies of murdered Jews were cremated. Its contours have been reconstructed on the surface with authentic fragments of the furnace."* (See Document 21.)

This is confirmed by a photograph of yore showing the archeological excavation relating to the furnace (see Document 14).

The plan divides the above-mentioned camp into four quarters (*Kwatera* I to IV). Sector I (see Document 12a) is located behind the entrance to the camp (see Documents 22f.). The memorial for the victims and the small museum are located there. The irregular trapezoid that appears above the words "*Kwatera I*" represents an excavation

---

86 The indefinite pronoun "kilka" means "some," "several."
87 Letter reproduced in Gulczyński 1991; appendix outside of text.
88 The map was published in *ibid.*
89 This map can be found in Krakowski 1996, outside of text; see Document 12.

carried out in 1951. The small circle on the left with an inverted black triangle inscribed is the "presumed location of the fuel storage in 1944." Below this, on the right, the oblique H-shaped design with the inscription "w.s. I. II. III, 1991 r." indicates three excavation surveys carried out in 1991 ("w.s." stands for "*wykopy sondażowe*," excavation survey).

Sector II (see Document 12b) is defined as "location of killing and burial of the first group of Jews." From top to bottom, they show "the burning of old wood / June 1942," the symbol of the flames, the "Lapidarium" (see Document 24), the "symbolic grave of the children of Lidice" represented by the parallelogram with crosses inside (see Section 14.2.). On the left, the rectangular shape covered with "T"s, is a "mass grave discovered by the archeological survey." But the surveys, indicated by a dot accompanied by the initials "w.s.," are only 5 in number and very far apart: the nearest is about 14 meters away, and between the first and last is a distance of about 48 meters. The circle inscribed with a black triangle above the rectangle bears the inscription "[Here] were unearthed skulls and long bones of the murdered victims"; the circle underneath the parallelogram has this inscription: "[Here] were unearthed belongings of the murdered victims." Under the circle, the inscription "w.IV/86" indicates Excavation No. IV carried out in 1986.

Sector III (see Document 12b) contains a very narrow long rectangle with "T"s inside. The related caption for this symbol says, "*Uporządkowane mogiły żydowskie*," namely "arranged Jewish graves." It alludes to the fact that these areas were framed by a concrete wall and filled with sand (see Document 25) in what constitutes the "arrangement" mentioned above. But, as we shall see below, the "arrangement" has an alternative significance. Based on the scale of the map, the pit is approximately 190 meters long. The small circle at the bottom with the black triangle inscribed indicates "fragments of brick and/or slag." The shaded rectangle to the left indicates the "traces of a furnace / floor plan of 1951."

Sector IV (see Document 12c) is that of the alleged mass extermination. A concrete wall is dedicated "to the memory of Jews killed at Chełmno 1941-1945" (see Document 27). On the map it is called "*ściana pamięci*," "wall of remembrance." Under "*Kwatera IV*" is the inscription: "(1951 – outlines of three pits 150 m × 5 m and in the SE part a field crematorium)." The three pits are the three long narrow rectangles with the "T"s inside, designated in the caption, "arranged Jewish

graves" (see Document 26). At the northern end of the central pit is a Star of David. According to the caption, the shaded areas are the "presumed location of buildings or other objects" according to the interpretation of aerial photographs. An "a" indicates the two furnaces from 1942; the remaining symbols have the following meanings:

"b": "probably the wooden shed for the motorized mill to grind the unburnt bones to powder";

"e": "probably field crematoria, circular pits with a diameter of 4 meters with stone cladding, 1942";

"f": "probably 'undressing' cabins inscribed '*Durchgangslager*' and storage for clothes of the murdered victims, 1944."

The significance of the figure corresponding to "g" is not indicated. The caption states instead that these interpretations are based on witness statements.

At the bottom, in front of the "wall of remembrance," two black rectangles identified by the symbols "A/86" and "B/87" signify two excavations carried out in 1986 and 1987, like the symbols "wI/86," "WII (/86)" and "wV/87." The caption provides this explanation:

Excavation I: negative result
Excavation II: remains of a cremation furnace
Excavation III: negative result
Excavation IV: mass grave
Excavation V: pit used to burn belongings of victims

In the caption is also a rectangle with a double border as a kind of frame with the following explanation:

"Cremation furnace from 1944 located during archeological investigations."

It is located between the two black rectangles mentioned above and is mostly covered by them.[90]

10.3. Investigations of 2003-2004

The Konińi District Museum carried out further archeological investigations in 2003-2004. The results have been summarized on the related website by Łucja Pawlicka Kamiński (Pawlicka Nowak). A thorough examination of these investigations will be possible only when a scien-

[90] Julet Golden has also written about the first archeological survey, but his account is very superficial (2003, pp. 50-53).

tific study is published like that of Prof. Andrzej Kola on archeological investigations carried out in the former Bełżec camp (Kola 2000).

In Sector IV of the camp, the most important with regard to the alleged extermination activities, a mass grave 174 m long and 8 m wide was allegedly identified, plus a second, parallel pit, 182 meters long and 10 m wide, and furthermore 11 pits of varied dimensions between 9 m × 7.5 m and 8.5 m × 15.5 m, located alongside the second pit, 2-3 meters apart. The pits are said to have been discovered "by random testing and drilling," but it is not explained what criteria were used. The map which shows the new findings (see Document 12e) is not clear: it seems, for example, that for the first pit (174 m long) only four sample drillings were carried out (numbered VI to IX), which were very far apart, and maybe two unnumbered others in the final section at the bottom. For the second pit there are seven indications that could be drill sites. The map shows that the area of the first pit and the series of 11 pits partially overlaps that of the outer pits (B and D) indicated on the earlier map of Lorek (see Document 12 c), while the second pit is adjacent to the central one (C). In practice, the new surveys have "confirmed" the three pits defined earlier by arbitrary means, and this was to be expected.

Moreover six cremation sites have been detected, indicated in the map above with the numbers 2/03, 3/03, 4/03, 5/03, 20/03 and 21/03.

A comparison with Lorek's map shows, however, that the findings 2/03, 3/03, 4/03 and 5/03 had already been examined before, but at that time they had not been considered to be cremation sites so that here only the interpretation has changed. But for the findings 20/03 and 21/03 the function as a cremation site is only alleged. For good reason Pawlicka Kamiński (Pawlicka Nowak) concluded that "the results of the archeological investigation described above will not answer all questions and all doubts; the question of the crematoria remains particularly uncertain" (Pawlicka Nowak). The alleged cremation sites mentioned above were in fact temporary facilities (which are, moreover, not attested to by witnesses) and are unrelated to the two claimed brick furnaces, one of which – according to Pawlicka Kamiński (Pawlicka Nowak) – was discovered in 1986-1987, while the second was not found even in the course of subsequent investigations.

10.4. The Results of the Investigations

The only mass grave found in the first phase of archeological investigations is that in Sector II. However, as I said above, it was identified basically only by five drillings, which I have numbered from 1 to 5 in an enlargement of the map (see Document 12d). From this it can be seen clearly that Drill Sample no. 3 was taken from outside the area of the alleged mass grave, which is about 20 meters wide and about 60 meters long. This huge area was then allegedly identified on the basis of four drillings made at great distances from each other. This is neither scientific nor can it be taken seriously. Apart from the width of the trench – about 20 meters – it contradicts the testimony of "Szlamek" and Podchlebnik, who speak of 5 meters and 6.7 meters, respectively. I remind the reader that Sector II was the alleged "killing and burial place of the first group of Jews," *i.e.* of the first Jews to arrive at the camp, among whom also these two witnesses are said to have been.

The three long 150 m × 5 m "arranged" pits do not derive, in fact, from archeological surveys. In 1964 Edward Serwański published a map of Chełmno in which next to Sector D (= Sector IV of Lorek's map), referred to as "clearing with traces of the crematoria," is Sector C, which is explained as follows: "*polana z symbolicznymi mogiłami pomordowanych Żydów*," that is: "clearing with symbolic graves of murdered Jews." So the three graves in question are merely "symbolic" – just like the common grave of the Lidice children – and the same goes for the alleged mass grave in Sector III. These graves are therefore "*uporządkowane*," "arranged" in the sense that they are a symbolic museum reconstruction.

The second phase of archeological investigations (2003-2004) is said to have confirmed the presence of a grave in Sector II (8 to 3 m wide and 62 m long), a rectangular pit 254 meters long in Sector III, and especially the three graves in Sector IV mentioned above, all matching Lorek's map precisely. Thus the symbols were made reality.

Pawlicka Kamiński (Pawlicka Nowak) refers to the "aerial photograph of Chełmno of May 1942, very important in the search for graves" (see Document 13), asserting that "it shows both clearings [sectors II and III]; the pits were probably camouflaged," or else do not appear at all in the photograph, although they should have been present on the site since December 1941. Another aerial photograph of October 1944 allegedly shows clearly "the clearings with the pits and the place

where the wood was burned during the experimental cremation of corpses with thermite incendiary bombs during the first phase of the [murder] center" (Pawlicka Nowak). But despite its obvious importance, this aerial photograph was never published.

Excavations revealed the remains of only one crematorium (see Document 14). Because of its underground structure with a reinforced concrete base, it was extremely difficult to remove all the debris after it was destroyed using explosives. For this precise reason, the Poles have found many remains of this furnace. But of the other three claimed furnaces, there is no certain archeological trace. Yet the so-called eyewitnesses – Żurawski, Srebrnik and Podchlebnik – should have been able to indicate easily the precise spots where they were. From this flows the hard-to-deny conclusion that there was only one crematorium at Chełmno.

The alleged extermination area, Sector IV, has the shape of an irregular trapezoid with sides – clockwise from the north – of around 130, 190, 170 and 250 meters. The most interesting thing arising from Lorek's map is that this sector is surrounded on all sides by woods dating from a period prior to the creation of the camp; it is in fact bordered on the north by a pine forest (*las sosnowy)* dating from 1929, on the west by a pine forest from 1927, on the south by a pine wood from 1929 and on the west by a pine forest from 1927. To the south, across the road which leads to Majdany, extends another pine forest dating from 1932. The rest of the camp is also surrounded by pine forests from before the war: to the north of Sector II, there is a small pine forest dating from 1919, where the museum has been built, and in front of it an even smaller pine stand from 1929. Across the road, which marks the northern boundary of the field, there is a large forest of spruce and pine from 1919 stretching over 450 meters. South of Sector II, between Sector III and the camp's eastern boundary, extending for about 550 meters from north to south and about 250 from west to east, are three small pine woods from 1929 and a forest of spruce and pine also from 1929. Two other pine woods dating from 1929 and 1927 lie north of Sector III (see Document 12). So in 1944 the oldest woods were 17 years old.

Within the grounds of the camp, Lorek's map shows four small areas of reforestation: the first ("stand of spruce and birch / about 1942-1943") is located west of Sector II, the second ("spruce and birch stand / approx 1942") is located south of Area II and the third ("pine forest with admixture of birch / about 1942-43") is located at the southern end

of Sector III, and the fourth ("pine forest / about 1945") is in the southern Sector IV. The total area of these woods is about one hectare. From the dates it is clear that these woods (except perhaps the last) were planted by the SS, who apparently had previously cleared the respective areas.

Assuming that the felling had been carried out in order to obtain timber for the cremation of corpses of the victims, from this hectare of pine forest less than 20 years old, the SS would have produced about 200 tons of timber, enough to cremate (200,000÷260=) about 770 bodies. However, as we saw above, to cremate the bodies of the minimum number of alleged victims would have required clearing 200 hectares of forest. To get an idea of such an area, it is enough to consider that – as indicated in the key to Lorek's map – the actual surface area of the Chełmno camp is 8.92 hectares, so that the area to be cleared would have been more than 22 times larger than the entire camp! Because no witness said that the wood came by rail, we might suppose that it had been cut near the camp. But the logging of an area of two square kilometers around the camp would not have gone unnoticed, and Judge Bednarz would certainly have submitted it as evidence for the cremation of the bodies of the victims. However, he never mentioned any such thing.

On the other hand, as can be seen in the aerial photograph of the area of the camp from May 1942 (see Document 13), which shows a rectangle of about 1,200 × 1,900 meters (= 228 hectares, roughly the area to be cleared!), there was a lot of treeless, agricultural land around the wooded area of the camp. Hence the SS would have had to fetch the wood from even further away, using teams of inmate loggers and trucks. In order to transport 40 thousand tons of wood needed for the cremation of corpses, eight thousand trips of a 5-ton truck would have been required. This coming and going of trucks full of wood directly to the camp would have been noticed by the local Polish population, but Judge Bednarz does not say anything in this regard either.

On this Krakowski notes (2007, p. 123):

> *"Trees from the surrounding woods were used for firewood. The Pole Michał Radoszewski was one of those forced wood suppliers. According to his testimony, the supplied timber was unloaded in the area of the crematorium by Jewish forced laborers. Having their feet shackled, they could move only in small steps. The Germans beat*

them incessantly, goaded and mistreated them. Radoszewski also reported the smell of smoke that hovered over the area."

The Jury Court in Bonn ascertained that "the Jewish *Kommandos* working in the camp consisted at each instance of about 50-60 people altogether" and (Rüter *et al.* 1979, p. 280):

"The major part of the Jewish inmates, some 30 men, worked as 'Waldkommando' in the Waldlager [forest camp] *and had to empty the gas vans, rough-clean them, and put the corpses into the pits."*

Krakowski records the statements of witness Walter Piller according to whom (2007, p. 161)

"In the fall of 1944 there were 80-90 Jewish inmates in the Chełmno camp who were divided into two groups. A small part of them was brought to the forest camp each day, where they were forced to pull out the corpses of those murdered from the mass graves, to work at the crematorium and ultimately to dismantle these crematoria in order to erase the traces of this massacre."

So a "*Holzkommando*" (wood-gathering detail), which would have been absolutely essential for the cremation of corpses, is not even mentioned. It could be formed only from some of the 30 prisoners mentioned above, at most a few dozen prisoners, most-strikingly with their feet shackled. They would have had to cut trees for 40,000 tons of wood (and load and unload a truck more than ten thousand times) in a period of five months[91] or 150 days, averaging about 267 tons (or 53 full trucks) a day!

The cremation of 152,000 corpses would have produced at least 456 tons of human ashes, or approximately 940 cubic meters (Davies/Mates 2005, p. 134).

As Judge Bednarz established (see Section 9.1.):

"The ashes were dumped in trenches 4 meters deep and 8-10 meters wide. They were then covered with earth. On that site a stand of partly conifers and partly birches was planted."

Let us assume that the soil analyzed by the Institute of Forensic Medicine of the Medical Academy of Poznań was taken from one of these pits. The analysis shows, however, that the soil contained only small

[91] According to the orthodox version transports arrived at the camp during nine months, including December 1941; the two furnaces are said to have been built in the spring of 1942, therefore not before March, hence they cremated over no more than five months.

proportions of human bone fragments and ashes. This, too, contradicts the thesis of mass cremation.

The alleged cremation of 152,000 corpses has therefore no documentary basis and no support from material evidence.

11. The Alleged Number of Victims

The first official Polish surveys on the number of victims of Chełmno contradict each other. On 20 May 1945 the Commission for the Investigation of German Crimes in Poland, a delegation of the Central Commission for Investigation of German Crimes in Poland, fixed this number at 1,300,000! (Gulczyński 1995, p. 31 & p. 40, note 50.)

The witness Andrzej Miszczak was more precise (Blumental 1946, p. 242):

> *"After an exact and precise calculation, the number of people murdered by the Hitlerite cannibals amounted to 1,300,097"!*

The Polish War Crimes Office, however, while not mentioning a precise figure, advocated a much lower order of magnitude: a few tens of thousands. In its report we read:[92]

> *"The first transport was in December 1942* [should be: 1941]*, when the district of Koło was purged of Jews: so the Germans deported about 2,000 Jews from Koło and about 1,000 from around Dębie. Starting in mid-January 1943* [sic]*, even tens of thousands of Jews from the Łódź ghetto were brought to the Chełmno camp."*

These data were then included in the report of the Polish Government for the Nuremberg trials submitted to and accepted by the Soviets as Document USSR-93, which dedicated to Chełmno the few lines that follow:[93]

> *"This camp was a receiving station for Jews arriving from the Reich and the incorporated territories. The first transport arrived there in December 1942. At that time 2,000 Jews from Koło and about 1,000 Jews from Dębie were murdered."*

At the end of 1945 Judge W. Bednarz carried out a preliminary investigation into the camp. In his report, dated 7 January 1946, he devoted a whole chapter to the number of victims (Bednarz 1946d, pp. 6-8):

> *"There is no way of determining the number of those murdered in Chełmno, neither on the basis of the camp's reports nor based on reports relating to Jewish rail transports, because the camp authorities destroyed all documents, and all tickets were taken away during*

[92] Report by Dr. J. Litawski, officer in charge of the Polish War Crimes Office, 1945. AGK, MSW Londyn, 113, p. 626.

[93] USSR 93, p. 84 of the English translation.

the evacuation. Regarding direct transports to Chełmno the preliminary investigation had to restrict itself to testimonies. Because it wished to investigate the number of victims as accurately and authoritatively as possible, it interrogated the witnesses who were at various locations through which the transports of the Reich passed (Łódź, Koło, Powiercie, Zawadki, Chełmno). The testimonies are based on tickets seen (and other statements by the witness Lange, employee at the Koło train station), on personal observations (counted transports), and on figures given by German members of the Sonderkommando regarding the transports.

With regard to the number of Jews in each transport, the witnesses agree: the number was at least 1,000 people per train. There were periods when the number was higher, but in general it must be concluded that the number of about 1,000 is reliable, because it was constantly repeated by the witnesses at different stages [of the camp's history].

As this figure does not include transports by motor vehicles, the preliminary investigation has therefore all the more reason to take the minimum figure of 1,000 victims a day.

Transports with vehicles were particularly numerous during the liquidation of ghettos in small towns. If one considers the number of Jews throughout the territory, the number of victims who were brought to Chełmno in vehicles must have been considerable. So far precise calculations are still impossible, because until now no statistics exist about the population killed by the occupation authorities. When asked how many trains were brought to Chełmno during the time of [its activities]*, the preliminary investigation provides the following answer:*

The activities of mass murder in Chełmno lasted from 8 December 1941 to 7 April 1943. (In the period from April 1943 until the complete liquidation of the camp in January 1945 the camp was virtually inactive. In this period only 10 transports arrived, which are approximately 10,000 victims). Let us now consider the period from 8 December 1941 to 7 April 1943, that is a period of 480 days, from which we can subtract an interruption of two months in the spring of 1942, when no transports arrived, as well as short interruptions due to technical difficulties, i.e. 70-90 days in all. The camp had to work on Sundays and holidays, for example, the maximum activity there was during Pentecost 1942. So from the 480 days we want to sub-

> *tract 130-150. The number of 330 days of activity of the extermination camp Chełmno thus corresponds to reality. Assuming that each day 1,000 people were killed, we arrive at 330,000 murdered during the period of 330* [active] *days of the death camp. To this number must be added the 10,000 Jews who were killed in 1944. Overall one has to assume a minimum figure of 340,000 victims murdered at Chełmno – men, women and children (even infants).”*

This became the official number of victims for half a century and as such appeared in the authoritative *Bulletin of the Central Commission for Investigation of German Crimes in Poland* (Bednarz 1946b, p. 157). At the hearing on 27 February 1946 of the Nuremberg Tribunal, Soviet High Councilor of Justice Smirnov read an extract from the document USSR-340 containing the figure of 340,000 victims.[94]

The *Encyclopedic Informer*, published in 1979 by this Polish Commission (which had changed its name in the meantime), indicated a total of 310,000 victims, using Bednarz's calculation method, but with an unexplained reduction in the range from 330 to 300 days: 300 × 1,000 + 10,000 = 310,000 (Główna Komisja… 1979, pp.129f.).

During the criminal trial against former members of the Chełmno *Sonderkommando*, the Bonn Jury Court settled for an alleged minimum death toll of 152,000, consisting of 145,000 victims during the camp's first phase and 7,000 during its second phase. The court based its assumptions for the camp's first operational phase on the figure given in the so-called Korherr Report for Jews led "through the camps of the Warthegau…145,301." Korherr even appeared as a witness to confirm this number (Rüter *et al.* 1979, pp. 285f.). The figures of the camp's second phase are based on deportation lists compiled by the "Statistical Department of the Eldest of the Jews in the Ghetto of Litzmannstadt," according to which 7,176 Jews were deported from the ghetto in summer 1944, although with no destination given (*ibid.*, p. 286). Hence the court assumed a minimum death toll of 145,000 for the first and 7,100 or 7,000 for the second phase (*ibid.*, pp. 235, 241, 263, 286).

Polish historiography was subsequently adjusted to this order of magnitude. In 1995 Julian Baranowski wrote (1995, pp. 23f.):

> *"As a result of this process* [of mass extermination]*, which lasted from 10 December 1941 to 12 September 1942, more than 134,000 inhabitants of the ghettos in the region of Warta and more than*

[94] IMT, vol. 8, pp. 330f. Bednarz's name is misspelled there as "Wladislav Bengash," the camp as "Helmno."

Table 2: Victims of the Chełmno camp per Baranowski 1995, p. 24

DISTRICTS	NUMBER OF JEWS DECEMBER 1941	DATES OF EXTERMINATION	NUMBER OF MURDER VICTIMS	NUMBER DEPORTED TO ŁÓDŹ GHETTO

Total	*261,556**	/	*151,378***	*18,350*

* In the original erroneously 261,558; ** In the original erroneously 151,380

10,000 Western European Gypsies were murdered in the Chełmno camp. Among them, sharing this fate, were over 4,000 Gypsies from the Austro-Hungarian border region. The second phase of the liquidation of Jews in the Chełmno camp began in June 1944. The victims of this action were the inhabitants of the last European ghetto – the ghetto of Łódź. Until its closure on 14 July 1944, 7,200 more Jews perished in this camp. The tally of the extermination of the Jewish population in the Warta region and of the Jews deported from Western Europe to be liquidated comes close to 151,000. Even if adding approximately 4,000 Gypsies and assuming a figure of some 3,000 Jews from the labor camps liquidated by the Łódź district government, the death toll of the Chełmno extermination camp is far short of figures given so far. In light of the figures contained in the attached table, the data about the extermination of 200,000 and even more than 300,000 victims alleged in these publications are far from the truth, are highly exaggerated."

The data of the table in question, entitled "The extermination of the Jews from the territory of Warthegau and Western Europe at Chełmno

upon Ner during the period December 1941 to July 1944," is given in Table 2.

Hence the number of alleged victims posited by today's orthodox historians, including Polish historiography, is less than half the figure put forward by Judge Bednarz in 1946.

In this context it is perhaps interesting to note that the order of magnitude of the future alleged total death toll of the Chełmno camp was already anticipated in late November 1942. At that time the clandestine Polish periodical *Ziemie Zachodnie Rzeczypospolitej* (Western Territory of the Republic) wrote (Chrzanowski 1985, p. 100):

> *"From December 1941 to October of this year 250,000 to 300,000 Jews, mainly from the Łódź district and partly from Germany, have so far gone to this camp and have not returned."*

12. Jewish Deportation Transports to Chełmno

12.1. Transports from Warthegau to the Łódź Ghetto

The first three Jewish transports to arrive in the ghetto of Łódź from the Warthegau were made up as follows:

– First transport: 937 Jews from Leslau
– second transport: 762 Jews from Lubraniec and 316 from Chodecz
– third transport: 399 Jews from Brześć Kujawski and 668 from Kowal

The total of these three sets of deportees is therefore 3,082 Jews.[95] Concerning the third transport there is a report by the head of the Hygiene Section (*Gesundheits-Abteilung*) of the ghetto dated 10 October 1941:[96]

> *"Re. C h i l d r e n .*
> *Among the* [668] *Jews admitted on 9 October 1941 are*
> *374 C h i l d r e n .*
> *All those admitted from K o w a l had been housed in a church since 29 September 1941 together with their children, where many children have suffered through the measles. A measles epidemic raged in Kowal.*
> *Right now 193 children are incubating the measles, and the measles will most likely break out on 11 or 12 Oct. 1941.*
> *Since no case of measles exists here in the ghetto, a strict and absolute isolation of the admitted children is necessary in order to prevent spreading the measles."*

After referring to cases of other infectious diseases among these children, the report continues:

> *"Re.: A d u l t s :*
> *intensely louse-infested,*
> *several cases of blindness,*
> *one pneumonia,*
> *one open tuberculosis,*

---

95 "*Eingesiedelte im Jahre 1941 aus dem Altreich, Wien, Prag, Luxemburg und aus Leslau und Umgebung*." APL, PSZ, 863, p. 81.

96 "*Bericht des Vorsitzenden der Gesundheits-Abteilung, Herrn Dr. Miller, vom 10. Oktober 1941 über den Zustand der am 9. Oktober 1941 aus Leslau und Umgebung eingewiesenen Juden*." APL, PSZ, 1570, p. 1. At the end the report bears the stamp of Ch. Rumkowski, "*Der Älteste der Juden in Litzmannstadt*."

74 geriatrics,
Then also scabies and less-severe skin diseases."

In the first half of 1942 7,649 Jews were transferred to the Łódź ghetto from Warthegau in the following transports:

– from Zgierz: a transport (January) of 84 persons
– from Pabianice: 4 transports (17 and 18 May) of 3,652 people
– from Löwenstadt: 4 transports (19 and 20 May) of 2,927 people
– from Osorkow: a transport (22 May) of 741 persons
– from Belchatow: a transport (13June) of 115 persons
– from Zelow: a transport (13 June) of 96 persons
– from 14 unspecified cities: 1 transport (24 June) of 34 persons.

The total number of persons transferred included 1,436 children under fourteen years (including two infants born in 1941) and 171 older than sixty years (including 2 of 89).[97]

12.2. The Deportations to Chełmno

From the "Chronicle of the Łódź Ghetto" the following picture of the deportations of Jews from Łódź to Chełmno results, but is never mentioned:

MONTH	RESETTLED (*AUSGESIEDELT*)	SOURCE*
January	10,003	vol. I, p. 401
February	7,025	vol. I, p. 426
March	24,687	vol. I, p. 445
April	2,349	vol. I, p. 495
May	10,914	vol. II, p. 7
September	15,685**	vol. II, p. 278f.
Total:	*70,663*	

* Dąbrowska/Dobroszycki 1965;
** The deportations took place on 1, 2, and 7 to 12 September

A report from the ghetto's Statistical Office of 30 June 1942 shows the number of evacuees by date of birth, sex and "stages":[98]

97 "*Eingesiedelte aus dem Warthegau 1.I.-30.VI. 1942*." APL, PSZ, 863, pp. 86f.
98 "*Ausgesiedelte aus dem Getto 1.I.-30.VI.1942*." APL, PSZ, 863, pp. 57-59.

STAGE	PERIOD	NUMBER OF TRANSPORTS	NUMBER DEPORTED
I	16 to 29 January	14	10,003
II	14 February to 2 April	40	34,073
III	4 to 15 May	12	10,914
	Total:	*66*	*54,990*

Some transports are known in detail from the railway documents that have been preserved. For the period from 16 March to 2 April 1942 we can derive the following numbers:[99]

DAY	EVACUATED – "*AUSGESIEDELT*"	DAY	EVACUATED – "AUSGESIEDELT"
16 March	637	25 March	1,000
17 March	768	26 March	1,001
18 March	1,001	27 March	1,000
19 March	1,000	28 March	1,001
20 March	1,001	29 March	1,000
21 March	1,041	30 March	965
22 March	303	31 March	883
23 March	797	1 April	1,049
24 March	1,000	2 April	1,301
		Total:	*16,748*

The trains left from the station at Widzew-Radegast (Łódź) and arrived at Pryzbyłów and Warthbrücken (Koło) traveling the following distances:

– Widzew-Radegast-Przybylow = 147 km
– Warthbrücken-Widzew-Radegast = 146 km.

The guards of the first four transports traveled up to Przybylow, the others to Warthbrücken. There were always 13 guards, regardless of the number of deportees.

For the period of 4 to 15 May 1942 we have the following data:[100]

[99] "*Nachweis der in der Zeit 16.3 – 2.4.42 abgefertigten Juden – Sdz*," in: Hilberg 1981, pp. 145f.

[100] "*Nachweis der in der Zeit 4.5 -15.5.42 abgefertigten Juden – Sdz*," in: Jüdisches Historisches… 1960, p. 281.

DATE	EVACUATED – "*AUSGESIEDELT*"	EXPELLED – "*AUSWEISUNG*"[101]
4 May	1,008	1,002
5 May	914	909
6 May	1,000	1,000
7 May	952	952
8 May	954	949
9 May	952	952
10 May	1,005	950
11 May	949	949
12 May	947	947
13 May	1,000	999
14 May	706	706
15 May	606	599
Total:	*10,993*	*10,914*

These trains also left from the Widzew-Radegast station and traveled up to Warthbrücken. The escort was always 13 guards, except 4 May (12 guards).

The table below summarizes the data of orthodox Holocaust historiography concerning evacuations to Chełmno from individual locations each month:

MONTH/ YEAR	ŁÓDŹ	CIECHOCINEK	GOSTYNIN	KALISZ	SIERADZ	WIELUŃ	WŁOCŁAWEK	ŁĘCZYCA	ŁASK	KUTNO	KOŁO
12/'41											
1/'42	10,003										3,830
2/'42	7,025										
3/'42	24,687			972						10,700	
4/'42	2,349	1,580	4,400				2,557				
5/'42	10,914							8,760	15,859		
6/'42											
7/'42											
8/'42					9,589	9,498					
9/'42	15,685

7/'44											
Totals	77,859	1,580	4,400	972	9,589	9,498	2,557	8,760	15,859	10,700	3,830
Total evacuees: 145,604											

[101] "*Bevölkerungsveränderungen im Monat Mai 1942 nach Meldungen*." APL, PSZ 863, p. 52.

12.3. Who Was Evacuated and Why?

In a report by the Gestapo in Łódź on the deportations of 9 June 1942 we read as follows (Jüdisches Historisches… 1960, pp. 285f.):

> *"On order of the Gauleiter all Jews unable to work are to be evacuated and those fit for work of the entire Gau are to be concentrated in the Litzmannstadt ghetto. From here larger quantities of Jews are to be deployed for various works (construction of railroads and roads) in the Gau area, and after completion of the work they are to be led back into the ghetto. The Jews remaining in the ghetto are to be deployed for work there without exception. During the formation of the Gau's first ghettos it proved necessary to make room for the Jews to be settled in. For this purpose a larger number of Jews unable to work was evacuated from the ghetto and sent to the Sonderkommando. 44,152 of the Polish Jews have been resettled since 16 Jan.* [19]*42. Of the 19,848 Jews from the Old Reich, from Austria and the Protectorate of Bohemia and Moravia which were admitted to the local ghetto in October 1941, 10,993 have been evacuated, so that by now space for about 55,000 Jews has been created in the ghetto."*

So the Jews evacuated were those unable to work, and the reason for the evacuation was to create space for new arrivals fit for work. A later report, dated 2 July 1942, *i.a.* fixed the working-age limit as follows (*ibid.,* p. 292.):

> *"Due to the strong decrease in the Jews' hardiness, the work performance has decreased as well. In this context, the eldest of the Jews has now brought to work assignments all children over 10 years of age in order to ensure that the delivery dates of Army orders are scrupulously met."*

The verdict of the Bonn Jury Court stated:

> *"Since on the one hand emigration had failed, yet on the other hand space had to be created for the ethnic Germans to be resettled, the National Socialist leadership of the Warthegau decided in conjunction with Hitler and Himmler to 'evacuate' (which according to the terminology back then meant: to kill) all Jews unfit for work and to concentrate all those of the entire Gau* [district] *who were fit for work in the ghetto of Lodz."* (Rüter *et al.* 1979, p. 275)

> *"For the most part these were women, children and older men who were no longer fit for work."* (*ibid.*, p. 233; similar p. 281)

In this context Baranowski stated (1999, p. 94):

> *"Another tragedy took place between 3 and 12 September 1942: a deportation directed against children under the age of 10 and adults over 65."*

He published three excerpts from a list of "Jews evacuated from the Litzmannstadt ghetto" (*Evakuierte Juden aus Litzmannstadt-Getto*) dated 7 September 1942 (*ibid.,* p. 93) containing the names of 69 children born between 1939 and 1942 and further states that the Jews of the ghetto in the age group 10 to 65 years were forced to work (*ibid.,* p. 74). If we adopt this figure, the data from 30 June 1942 mentioned above means that of the 54,990 Jews evacuated from the ghetto and allegedly sent to Chełmno, some 46,572, that is almost 85%, were able to work!

Conversely, after the end of the evacuations the number of children under the age of 10 remaining in the ghetto and escaping the alleged gassing at Chełmno was still quite high. From a statistical report called "The population of the ghetto on 1 August 1943 based on year of birth and sex according to dispatches" (*Gettobevölkerung am 1. August 1943 laut Geburtsjahr und Geschlecht nach Meldungen*)[102] we have the following data:

YEAR	MALE	FEMALE	TOTALS	YEAR	MALE	FEMALE	TOTALS
1934	549	447	996	1939	464	439	903
1935	460	464	924	1940	283	279	562
1936	405	341	746	1941	148	112	260
1937	582	610	1,192	1942	88	119	207
1938	517	471	988	1943	39	37	76
				Totals	*3,535*	*3,319*	*6,854*

In addition to these 6,854 children under 9 years old, there were living in the ghetto 1,400 people older than 65 years, broken down by year of birth and sex as appears in the following table. The oldest person was a woman of 95 years.

[102] APL, PSZ, 863, p. 21.

YEAR	MALE	FEMALE	TOTALS	YEAR	MALE	FEMALE	TOTALS
1848	0	1	1	1865	12	5	17
1850	1	2	3	1866	22	18	40
1852	0	3	3	1867	9	1	10
1853	0	1	1	1868	13	45	58
1854	1	0	1	1869	13	49	62
1855	1	0	1	1870	29	25	54
1856	0	3	3	1871	37	83	120
1857	0	3	3	1872	31	57	88
1858	4	2	6	1873	41	114	155
1859	6	5	11	1874	21	74	95
1861	1	3	4	1875	104	176	280
1862	0	4	4	1876	55	107	162
1863	10	13	23	1877	67	117	184
1864	10	1	11	*Totals*	*488*	*912*	*1,400*

The total number of inhabitants of the ghetto unable to work was therefore 8,254 out of a total of 84,280.

From the last known data on the population of the ghetto, dating back to 1 March 1944, we have a total of 77,679 Jews broken down by age as follows:[103]

AGE RANGE	MALE	FEMALE	TOTAL
8	2,248	2,247	4,495
9 – 14	3,373	3,313	6,686
15 – 20	5,670	6,308	11,978
21 – 30	5,811	11,181	16,992
31 – 40	7,620	10,344	17,964
41 – 50	4,443	5,950	10,393
51 – 60	2,663	3,705	6,368
61 – 70	881	1,530	2,411
71 – 80	127	242	369
81 – 86	5	18	23
Totals:	*32,841*	*44,838*	*77,679*

Above I noted that on 30 June 1942, of the 54,990 Jews evacuated from the ghetto, 46,572 were able to work. Children under 10 and seniors over 65 therefore totaled 8,418. This fact, though incompatible with the thesis of extermination at Chełmno, fits perfectly with the thesis of transfer to the east. The evacuation lists in fact demonstrate indisputably that the deportations took place by family. The undated first list has 710

[103] "*Aufteilung der Getto-Bevölkerung per 1. März 1944*." APL, PSZ, 184, p. 13.

people, including 26 families consisting of five to eight members.[104] For example, the Januszewicz family consisted of Chana (1906), Mordka (1931), Małka (1933), Ester Bajla (1936), Abram (1934), Liba (1939) and Leew (1941);[105] the Beremblum family of Száma (1903), Sura (1909), Irena (1906), Beresz (1927), Mendel (1926), Abram Icek (1928), Roza (1911), and Luzer (1936);[106] the Wołch family of Kraut (1900), Sara (1897), Machla (1929), Perla (1930), Esther Gitla (1932) and Nechem (1939).[107]

Another 24 families had 4 members, 38 had 3.

The undated list no. 14 contains 586 persons, including 28 families from five to eight members, 19 of four members, and 50 of three members.[108] For example, the Piepszynski family consisted of Jadzia (1929), Cerka (1907), Estera (1927), Abram (1937), Rucha (1903), Zlata (1929), Menachem (1931) and Bencjon (1935).[109] The Zalcsztajn family included Szulim (1896), Chaja (1896), Chana (1921), Icek (1922), Rojza (1928), Ita (1934) and Moszek (1937).[110]

List no. 32, also undated, includes 1,000 people, among whom were 45 families consisting of five to seven persons, 45 of four and 62 of three.[111] For example, the Cukier family included Zyskind (1903), Tauba (1903), Dawid (1925), Juda (1927), Szmul (1933), Niece (1935) and Icek (1936),[112] and the Ber family, Idel-Lajb (1909), Masz (1906), the twins Fiszel and Kerszel (1934), Chaim (1939), Moszek (1870) and Perla (1874).[113]

12.4. Operations Ceased in 1943 and Resumed in 1944 – Why?

According to the investigations of Judge Bednarz, the first phase of the camp's existence lasted from 8 December 1941 to 7 April 1943 (Bednarz 1946d, p. 7). On this date the camp ceased its alleged extermination operation: the palace was blown up and the crematoria were destroyed. However, as shown in the summary table presented above (bottom of p. 116), the last alleged act of mass murder took place in September 1942, with the result that the camp would be left idle for more than six months. So why was it liquidated only on 7 April 1943?

The reopening of the camp in 1944 is even more incomprehensible. Krakowski writes (1983, p. 136):

> *"In early 1944 the National Socialists decided to resume the extermination activities in Kulmhof due to the impending liquidation of the Łódź ghetto."*

However, after 10 transports allegedly sent to Chełmno, the National Socialists allegedly realized that "Kulmhof's capacity did not suffice for the killing of tens of thousands [of people] in a very short time" (*ibid.*, p. 142). So after a year of operation the SS is said to still have been unfamiliar with Chełmno's extermination capacity?

13. The Alleged Gassings in 1944: Chełmno and Auschwitz[114]

Krakowski quotes a letter from Arthur Greiser to Oswald Pohl dated 14 February 1944 in which, among other things, we read (Krakowski 1983, p. 137):

> *"The reduction will be made by the SS Sonderkommando Hauptsturmführer Bothmann, who has worked previously in the Gau."*

In a telex to Himmler of 9 June 1944, Greiser reported *i.a.* as follows (Rückerl 1979, p. 284):

> *"Since I have finished the preparations for the ghetto's evacuation and as I have carried out the first evacuations of the same,…"*

Rückerl comments (*ibid.*, p. 284, note 83):

> *"Greiser's statement that the evacuation had already started in early June seems to have been a mere demonstration intended to express the urgency of his request. From other sources it can be inferred that the transports from Łódź to Chełmno started only at the end of June 1944."*

In fact, the "reduction" of the ghetto had already begun three months earlier with two transports that departed on 4 and 16 March 1944, one with 750 people and the other with 850.[115] As we learn from Eisenbach on the basis of documents kept in the Archives of the Jewish Historical Institute in Warsaw, these 1,600 Jews were sent to the arms factories in Skarżysko-Kamienna, a town about 45 km south-west of Radom (Eisenbach 1961, p. 568). This is confirmed by Krakowski (2007, p. 136). In this regard, there is also an essay by Hans Biebow of 18 March 1944 on the subject of "Transfer of 1,500 Jews to the General Government" (*Überführung von 1500 Juden in das Generalgouvernement*; Jüdisches Historisches… 1960, p. 461).

The transport list of 4 May was accompanied by a note saying:[116]

> *"Attached the C.P.* [=Central Prison] *sends a list of persons who have left the C.P. on 4 March of this year for work outside the ghetto."*

---

[114] This is a summary of my study Mattogno 2003.
[115] APL, PSZ, 1223, pp. 60-73 and 14-59 (list of names of transport).
[116] APL, PSZ, 1223, p. 74.

And the transport list of 16 March has this heading: "For work on 16 March 1944 from Litzmannstadt-Ghetto" (*Zur Arbeit am 16. März 1944 aus Litzmannstadt Ghetto).*[117]

In May there were other small transports of Jews "moved out for work outside the ghetto" (*zur Arbeit ausserhalb des Ghettos abgereist*), for example: 90 on day 4; 50 on day 17; 30 on day 27; 60 on day 30.[118] The bulk of transports, however, began on 23 June. The Łódź State Archives has preserved lists of names from ten Jewish transports – men and women – who left the Łódź ghetto between 23 June and 14 July 1944[119] according to the following table:

TRANSPORT	DATE	NUMBER OF DEPORTEES
1	23 June 1944	562
2	26 June 1944	912
3	28 June 1944	799
4	30 June 1944	700
5	3 July 1944	699
6	5 July 1944	699
7	7 July 1944	700
8	10 July 1944	700
9	12 July 1944	700
10	14 July 1944	699
	Total	*7,170*

These lists also bear the heading "*zur Arbeit ausserhalb des Ghettos ausgereist*" – moved out for work outside the ghetto.

The verdict of the Bonn Jury Court states in this regard (Rüter *et al.* 1979, p. 286):

> *"The statistical lists mentioned do not expressly state that these transports left for Chełmno instead of for Auschwitz, for example, as they did starting in August 1944. But this derives from the credible affirmations of the witness Z., who came to Chełmno with the 7th or 8th transport and who has given the total number of all transports carried out to Chełmno as 10 to 12. The Jury Court is therefore convinced that the ten transports mentioned went to Chełmno and that therefore at least 7,000 Jewish persons were killed in Chełmno during the camp's second phase."*

[117] APL, PSZ, 1223, p. 14.
[118] APL, PSZ, 1223, pp. 10-16,
[119] APL, PSZ, 1309, pp. 1-225.

"Witness Z" was Żurawski, and the Jury Court recklessly based the conviction for exterminating 7,000 Jews at Chełmno on a single, moreover extremely dubious, witness!

There is in fact not the least indication that the 10 transports were sent to Chełmno, and this is so evident that even Eisenbach wrote in his famous documentary collection on the Łódź ghetto, with reference to the evacuation of the ghetto (Eisenbach 1946, p. 265):

> *"The Chełmno camp had already been dissolved* [in the summer of 1944]*, and therefore the Jews were sent to Auschwitz and other camps."*

In this context, he mentioned the first three transports of the table which I quoted above (*ibid.*). It is therefore clear that he, who had studied the documents available to the Central Jewish Historical Commission (including witnesses), did not have even the slightest hint indicating that the 10 above-mentioned Jewish transports were sent to Chełmno.

Let us return to the 7,170 Jews transferred between 23 June and 14 July 1944. The lists of names are of fundamental importance in order to understand whether these Jews were actually deported "for work." In these lists, in fact, we have the dates of birth for 6,763 individuals, ranging from 6 to 70 years old, although such extreme ages are exceptions: there are only 3 children aged 6 years, 4 aged 7 years, 7 aged 8 years, 8 aged 9 years and 9 aged 10 years. In the same way, the lists contain only one person each of the ages 70, 69 and 66 years, 2 of 65 years, 6 of 64 years, 2 of 63 years, 7 of 62 years, 4 of 61 years and 17 of 60 years. The age distribution of the deportees is shown in the following table:

AGE RANGE	DEPORTEES	AGE RANGE	DEPORTEES
≤ 8	14	31 – 40	1,338
9 – 14	181	41 – 50	915
15 – 20	1,660	51 – 60	341
21 – 30	2,290	61 – 70	24
		Total	*6,763*

It is therefore evident that the vast majority of the deportees were people capable of work, most of whom had actually worked in various facilities in the ghetto. Numerous documents attest that, on the day of deportation, the ghetto administration regularly communicated to individual companies that they had lost the labor of the transferred Jews

who had worked there.[120] However, in the hypothetical case of a policy of extermination of Jews unable to work, it would be stupid to exterminate all 7,170 Jews, most of whom were perfectly capable of work. It would have been more logical instead to send to the alleged extermination camp at Chełmno those unable to work, *i.e.* the 4,495 children under ten years old and the 392 people over 70 who were still in the ghetto on 1 March 1944.

Another important fact helps us to understand why the transports also included small children: even in this case the deportees were not selected by age – at least not only by age – but by family, as is clear from the names and addresses of the deportees. For example, one of three six-year-old children, Johanna Dahl, born in 1938, was deported with the third transport along with Greta Dahl, born in 1912, presumably the mother: both had the same address, Krater 25.[121] The second child born in 1938, Dora Gerstel, was deported with the second carriage along with Edith Gerstel, born in 1904; both had lived at Siegfried 14.[122] The third six-year-old child, Moniek Sztycki, was deported in the fourth transport along with Gela Sztycka, born in 1900, who had too lived at Hohensteiner 13.[123]

In conclusion, the 10 above-mentioned transports of Jews were not sent to be gassed at Chełmno, but to concentration camps "for work."

This also follows from the "Chronicle of the Łódź Ghetto." On 16 July 1944 it stated (Krakowski 2007, p. 140):

> *"In fact this is not about an evacuation of merely 500 people which had to be concealed as a voluntary recruitment, but about numerous work consignments outside the ghetto. It is said that first of all the first group of about 500 people is bound for Munich, where they must perform clearance work* [of air-raid rubble]*. The same week, probably 23 Friday of this month, another group of about 900 people has to leave. Then for three weeks 3,000 people have to leave in transports of 1,000 people each. For each transport, a head of transport, two doctors, medical personnel and security services have to be appointed. The latter may not be formed by the ghetto's security services, but be taken from the same transport. We do not know where the large groups are headed. Even for these large transports*

[120] APL, PSZ, 1302 (lists of names).
[121] APL, PSZ, 1309, p. 58, nos. 136 & 137 of the list.
[122] APL, PSZ, 1309, p. 70, nos. 223 & 224 of the list.
[123] APL, PSZ, 1309, p. 201, nos. 589 & 590 of the list.

> *the same transport rules apply which are referred to in the above-mentioned notice. 15-20 kg of luggage may be brought along, but this baggage has to take up as little space as possible."*

An annotation a little later, dated 26 July, said:[124]

> *"Today came the first news from the ghetto people who left the ghetto for work during the last evacuation. 31 postcards arrived, all of which had been postmarked on 19 July 1944. From these cards it fortunately results that the people are well and above all that the families are together. One postcard says in simple Yiddish words: 'We laugh about your soup!' They are happy in the ghetto and hopeful that they will soon receive similar reports from other evacuees. It is therefore confirmed that the labor columns have actually been employed in the Altreich. We remember that before the departure of the first carriage it was said that they had to go to Munich. One group has probably arrived there. Also note that, as evidenced by the news, the people are housed in comfortable cabins."*

One final observation: As we have seen above, according to orthodox historiography, the SS used the term *Evakuierung* (evacuation) in order to camouflage the transfer of Jews to Chełmno for homicidal purposes. In the "Chronicle of the Łódź Ghetto" the participle *wysiedlono* = "displaced, evacuated" is used,[125] which translates into German as *Ausgesiedelte*.[126] But here those allegedly gassed in 1944 are no longer referred to as *evakuiert* or *ausgesiedelt* but instead as "*zur Arbeit aus Litzmannstadt-Getto ausgereist"* – moved out of the Łódź ghetto for work. Do we find ourselves faced with an "encrypted" term for murder within an encrypted expression, a kind of double encryption? Who can seriously believe such a thing?

The confirmation of the above conclusions is offered to us specifically by the deportation of the remaining Jews of the Łódź ghetto to Auschwitz. In this regard, Krakowski says (1983, p. 142):

> *"In August 1944 the Lodz ghetto was liquidated within three weeks; the 70,000 Jews there were deported to Auschwitz to be gassed. Kulmhof's capacity did not suffice for the killing of tens of thousands* [of people] *in a very short time."*

---

[124] Hoffmann 2008, p. 226. The author claims that the cards in question were written in Chełmno, but this is only an unproven conjecture.
[125] Dąbrowska/Dobroszycki 1965, vol. I, p. 495 & passim.
[126] *Ibid.*, vol. II, p. 477 & passim.

In fact, of the 65,000 Jews (maximum figure) deported in August 1944 from the Łódź ghetto, no more than 22,500 were sent to Auschwitz, of whom about 11,500 were then transferred from Auschwitz to Stutthof. Included in the transport of 3 September 1944 were also some forty children from 6 months to 14 years, who should have ended up in the "gas chambers" at Auschwitz, if orthodox "logic" had its way, but who were instead transferred with their mothers to Stutthof and properly registered there (see Documents 15, 15a, and Table 3, p. 149).

The two brothers Michael Salomonowicz (born 6 Oct. 1933, no. 1653 on transport list, registered at Stutthof with the number 83620) and Josef (born 1 July 1938, numbers 1654 and 83621 as above) traveled with their mother Dora Salomonowicz, born 28 August 1904, number 1652 on the transport list, registered under number 83619 at Stutthof. All three came from the Łódź ghetto, whither they had been deported on 3 November 1941, and all three survived the war (Terezínská Iniziativa 1995, vol. I, p. 138).[127] Michael and Josef therefore were 8 and 3 years old, respectively, when they were deported to Łódź, yet in spite of this they survived both the selection for alleged extermination at Chełmno and the selection for the claimed extermination at Auschwitz!

There is no doubt that the remaining children also came from Łódź. The transfer of these children shows that among the Jews of the Łódź ghetto there was no selection for the alleged gas chambers, otherwise how would they have remained alive?

Of about 11,000 male Jews deported to Auschwitz from the Łódź ghetto, around 3,100 were registered. The fates of the remaining 7,900 are not documented. Yet although their alleged gassing as unable to work cannot be ruled out *a priori*, in such a case the question would arise again, why the children mentioned above would have been left alive? The adults, like all non-registered Jews, were probably sent to the Birkenau *Durchgangslager* (transit camp), and from there they were probably transferred to other concentration camps.

As I noted above, on 1 March 1944 there were in the Łódź ghetto 4,495 children under 8 years old and 392 persons older than 70 years. In the 10 Jewish transports from the ghetto between 23 June and 14 July 1944 there were 14 children up to 8 years old and no persons over 70 years old. Since the 1,600 Jews moved from the ghetto in March 1944

[127] Interesting that all three appear in the Yad Vashem "Central Database of Shoah Victims' Names"!

were all able to work, being aged (with some exceptions)[128] between 18 and 45, it follows that the 65,000 Jews moved out of the ghetto in August 1944 included more than 4,800 inmates unable to work who were not gassed either at Auschwitz or elsewhere.

And if, as claimed by Krakowski, "Kulmhof's capacity did not suffice for the killing of tens of thousands [of people] in a very short time" (1983, p. 142), why would the alleged extermination camp at Chełmno have been reactivated, since the alleged extermination camp at Auschwitz was available?

On 15 August 1944 the head of *Amtsgruppe DIV (KL-Verwaltung*[129]*)* of the *WVHA*, SS *Sturmbannführer* Burger, sent to the head of *Amtsgruppe B*, SS *Gruppenführer* Lörner, a letter relating to a "*Häftlingsmeldung*" (communication concerning prisoners) and "*Häftlingsbekleidung* (clothing for prisoners). This says that on 1 August 1944 the population of the concentration camps was 379,167 male and 145,119 female prisoners, to whom were added "*angekündigte Neuzugänge*" (announced new arrivals). Among them are 60,000 prisoners "*aus Litzmannstadt (Polizeigefängnis und Getto*)" – from Łódź (police and ghetto prisoners). The list of "*Neuzugänge*" (new arrivals), 612,000 prisoners altogether, was closed with the following comment:[130]

> *"A major part of the inmates is already en route and will arrive in the concentration camps during the next days."*

Burger stated that there was not enough clothing for 612,000 new prisoners on arrival and therefore requested the allocation of "special textile quotas." The *Amt DIV/4* was indeed responsible for clothing (*Bekleidung*), so the *WVHA* genuinely expected these prisoners to arrive in the concentration camps and to be in need of proper clothes – a need which executees do not have. Therefore, also the 60,000 Jews from Łódź were expected to stay alive and be in need of clothing, whose evacuation to the concentration camps had already been under way for several days.

This document shows the claim to be historically unfounded that the Jews from the Łódź ghetto were sent to Auschwitz in order to be gassed there.

14. The Alleged Murder of Gypsies and the Children of Lidice

14.1. The Gypsies

In his report of 7 January 1946 Judge Bednarz wrote that the Germans had killed 5,000 Gypsies at Chełmno, among others (1946d, p. 2). This information was immediately transformed into a certain historical fact and as such was accepted even by the Jury Court in Bonn (Rüter *et al.* 1979, p. 284):

> *"To this total figure some 5,000 Gypsies have to be added which, according to the credible statements by witness G. (at that time active as the deputy of the Eldest of the Jews in the administration of the Łódź ghettos) and Fuchs (at that time police detective at the State Police Department Łódź), were evacuated from the Łódź ghettos and killed in Chełmno."*

Documentary information about the fate of the Gypsies in the Łódź ghetto is very limited. Anton Galiński informs us that the first transport of Gypsies – 1,000 people – came from Hartberg to Łódź on 5 November 1941, followed by three more transports of also 1,000 persons each: on the 6th from Fürstenfeld, on the 7th from Mattesburg and on the 8th from Rotenturm. The last transport of 1,007 individuals arrived on the 9th from Oberwart. These 5,007 Gypsies consisted of 1,130 men, 1,188 women and 2,689 children (Galiński 1995, p. 76). On the 4th or 5th of November 1941 the first cases occurred of what soon became a terrible typhus epidemic, which eventually led to the liquidation of the Gypsy Camp (*ibid.*, p. 78). In this respect Galiński writes (*ibid.*):

> *"In the absence of documents it is impossible to establish reliable data on the final liquidation of the Gypsies in the Łódź camp* [i.e. the Gypsy Camp in Łódź]. *The apex of their deportation to the extermination camp Chełmno upon Ner falls in the period between 5 and 12 January 1942. This can be seen from invoices issued by the ghetto administration for the rental of trucks needed by the Gypsy Camp. This is also confirmed by the Jew 'Szlamek' who escaped from the Chełmno killing center."*

In reality no document records that the Gypsies were transported to Chełmno. The "Chronicle of the Łódź Ghetto" provides the following

information on the fate of the Gypsy Camp. The bulletin of 1-5 December 1942 reads (Dąbrowska/Dobroszycki 1965, vol. I, p. 361):

> *"Mortality in 'Gypsy Camp.' Prior to the camp's liquidation. According to the data of the local funeral section, which, as the bulletin of the first day of last month noted, undertakes the burials of the dead from the 'Gypsy Camp' in the area allotted to the Jewish cemetery, during the month of December* [1941] *400 people were buried in this area (previously, since arrival* [of the Gypsies]*, 213), which is twice the deaths which had occurred among the 250,000 Jews who lived in Łódź before the war. Due to a typhus epidemic raging in the camp area, the funeral section put in place special measures of precaution. Ultimately the dead 'Gypsies' are brought to the cemetery not in hearses, but with a special vehicle built for this purpose, closed with boards and covered with a tarpaulin. For the transportation of corpses special containers are used as well. On this occasion it is worth noting that even an undertaker has fallen victim to his profession, a certain Boms who used to transport the corpses from the camp. As in the doctors' cases, he had probably been infected with typhus. Fortunately, however, a tragic end was avoided, as it had happened to a doctor and an official of the criminal investigation department. After several weeks of treatment, Boms recovered from the infectious disease and left the hospital on the 2nd of December. As affirmed by the inhabitants of the camp's immediate vicitnity, for 10 days the 'Gypsies' have been taken away by truck. This camp will have been completely cleared by the end of this week; that is absolutely certain. Already now the camp is almost uninhabited. The liquidation of the camp was probably dictated by the necessity to obviate the danger of the typhus contagion."*

The bulletin of 1 December 1941 reports that the Gypsies, numbering some 5,000, had arrived in Łódź on 8 November 1941, it and confirms the figure of 213 deaths. Therefore the liquidation of the camp took place in early January 1942.[131] This is indirectly confirmed by a letter with the heading "The Mayor of Litzmannstadt" (*Der Oberbürgermeister von Litzmannstadt*) dated 14 January 1942, which ordered:[132]

---

[131] The bulletin says that between 1 and 5 January 1942 the Gypsy Camp was liquidated with absolute certainty "by the end of this week," *i.e.* the week ending Sunday, 4 January.

[132] APL, PSZ, 110, p. 20.

"The former Gypsy Camp has been put under quarantine until 18 Feb. 1942. Hence I prohibit herewith any access to this area."

A previous letter, sent 5 December 1941 by Chaim Rumkowski of the ghetto administration, with the topic "Gypsy Camp – typhus" (*Zigeunerlager – Fleckfieber*), proposed implementing prophylactic measures against the spread of disease:[133]

"After conferring with my physicians I may suggest to you the following in the above matter:

In order to prevent a transfer of the typhus diseases detected in the Gypsy Camp to Litzmannstadt and the ghetto, the following might be suggested or recommended:

1. The installation of a bathing facility in the Gypsy Camp with at least ten showers.

2. Establishing a permanent disinfector.

3. It is necessary that the Gypsy corpses are undressed, washed, shorn, shaved and if possible placed in boxes or paper bags prior to being brought to the Jewish corpse cart.

4. The danger of an infection/body louse/ is reduced to a minimum, if each Gypsy is bathed and moreover his clothes are disinfected accordingly before getting in touch with German authorities or with the ghetto's health-care staff."

On the other hand, already on 12 November 1941 "the Mayor of Litzmannstadt" had ordered several measures to improve the Gypsy Camp, which included a hospital system and latrines, upgrading the kitchen and the construction of a disinfestation plant.[134] Therefore the liquidation of the Gypsy Camp was not premeditated, but due to the typhus epidemic which had broken out.

Whither were the Gypsies evacuated? No known document answers this question. The claim that they were transferred to Chełmno is based almost exclusively on the "Szlamek" Report. Even more explicitly than Galiński, Gulczyński admits (1995, p. 39, note 30):

"The information on the topic of the Gypsies can be found in reports of fugitives from the camp, for example AŻIH [archive of the Jewish Historical Institute in Warsaw]*, ring* [archive Ringelblum] *I, no. 412 (Szlamek report). This report has been published in: R. Sakowska…"*[135]

---

[133] APL, PSZ, 110, p. 42.

[134] APL, PSZ, 110, pp. 67-69.

[135] The reference is to the Polish edition of Sakowska's book (1993).

In Chapter 6 we have seen, however, that the "Szlamek" Report is totally unreliable. Not only that, but it does not justify the claim of the total extermination of the Gypsies of Łódź. In fact it contains only two references to gassing of Gypsies:

– on 8 January 1942: 7 "vehicles" (that is "gas vans")
– on 9 January 1942: 8 or 9 "vehicles."

Since each vehicle is said to have contained 60 people according to this witness, the total number of gassing victims would be at most [(7+9)×60=] 960 people.

On the other hand, as we have seen above, according to Galiński the extermination of Gypsies took place between 5 and 12 January 1942, but for the 5th, 6th and 7th "Szlamek" does not mention any gassings, and for the 10th, 11th and 12th it claims only two gassings of Jews from Kłodawa (7 "vehicles" on the 10th and 9 on the 12th), followed by a day of "repose" (11 January). However, 4,365 persons were transferred from the Gypsy Camp in Łódź,[136] while merely 960 are said to have been gassed according to the "Szlamek" Report. What then happened to the remaining 3,405?

14.2. The Children of Lidice

The story of the children of Lidice is even more nebulous. It was born from the usual rumors collected by Bednarz in the course of his preliminary investigation, but they did not relate at all to the children of Lidice (Bednarz 1946d, p. 3):

> *"In 1943 four trucks arrived at the camp with children aged from 12 to 14 years (no Jewish star). The witnesses are of the opinion that they were 'Aryan' children. This happened at a time when the German government drove out the Polish population from Zamość, regularly separating the children from their parents."*

Hence according to Judge Bednarz, the children who allegedly arrived at Chełmno in 1943 were Polish. In the following years, these alleged Polish children were transformed into (Czech) children of Lidice, but there is still confusion about this in orthodox Holocaust literature. The Polish historian Marek Budziarek writes about it (1995, p. 71):

[136] Of the 5,007 Gypsies admitted to the ghetto, 213 died in November 1941, 400 in December 1941, and 29 during the first two days of January 1942.

> *"Based on collected archival materials we can now say with certainty that in the summer of 1942 a transport of 88 Czech children (aged between 1 and 14 years) from Lidice and Lezak in Czechoslovakia arrived in the transfer camp, which was located in an old dormitory house of the Albertine Nunnery in Gneisenaustrasse 32 (currently 28 Infantry Regiment Kaniowski). A few days later another 12 children arrived."*

Seven of these 100 children were Germanized. About the remaining 93, Budziarek claims that they were subject to "special treatment," then adds (*ibid.*):

> *"We do not know the final decision of the Hitlerite authorities regarding the last moments of the lives of these small Czechs. However, it can be said with great probability that they were killed at Chełmno upon Ner. This probability was confirmed by the verdict of the Bonn Jury Court (27* [recte: 23] *July 1965),*[137] *which sentenced former SS officers of the Chełmno extermination center. It clearly states that 'a transport of about 50-75 children aged 4 to 14 years" arrived at the camp.' If they came to Chełmno, they were undoubtedly killed."*

In fact, in relation to 50-75 children, the verdict of the first instance (30 March 1963) states:

> *"Different than the usual transports of Jewish persons were in addition a transport of some 50-75 children aged 4 to 10, who were better dressed and fed than the Jewish children,* […]*"* (Rüter *et al.* 1979, p. 281)

The verdict of the later retrial states tersely (*ibid.*, p. 233):

> *"Moreover a transport of some 50-75 children aged 4-14 years arrived,..."*

Hence, the verdicts handed down by the Bonn Jury Court make no statements at all about the children's provenance. The word "Lidice" does not appear anywhere in either verdict.

Rückerl commented (1979, pp. 280f., note 76):

> *"According to Polish research, this transport of children had to be children from the Czech village of Lidice who could not be 'Germanized' and whose relatives were killed or deported in retaliation for the attack on Heydrich. In an investigation of the public prosecutor in Frankfurt against the former head of the emigration center in*

[137] The retrial took place between 5 and 23 July 1965.

> *Łódź, SS Sturmbannführer Krumey, a number of reference points turned up for the accuracy of this hypothesis. But so far no certain proof could be developed."*

In reality there is no evidence either that these children were deported to Chełmno: this story, dogmatically accepted as "likely" or "certain" by historians and the courts, is nothing more than the last echo of the rumors collected at the end of 1945 by Judge Bednarz, which, as I may stress once more, related to *Polish* children sent to the camp in 1943, not to *Czech* children of Lidice sent to Chełmno in the summer of 1942!

Krakowski writes nevertheless (2007, p. 122):

> *"As for the Czech children, there are documents that prove their deaths at Chełmno. Their fate is referred to in an exchange of letters between the Reich and its representation in Łódź. In one of these letters, dated 12 June 1942, it announces its intention to send 86 Czech children to Łódź who could not be "Germanized." The camp's staff members Fritz Ismer and Walter Burmeister, in their statements before the German court, also mention the arrival of three truckloads of non-Jewish children."*

Hence this is not based on documents, but on simple testimonies of the 1960s which inevitably reflected this propaganda theme developed during the preceding years.

A final observation. As seen above, the children of Lidice allegedly transferred to the Łódź ghetto numbered 100, of whom 7 were Germanized. Gulczyński published a list of 82 names of children with the following heading in Czech:[138]

> *"Children of Lidice who did not return, probably* [*pravděpodobně*] *gassed – transported to Poland, to Łódź."*

Hence here no certainty either. In a pamphlet representing an update to Bednarz's booklet, Edward Serwański claims as well that the alleged event occurred "very likely" (Serwański 1964, p. 31), which is an elegant way of masking the total lack of documentary evidence.

I must add that, if these 82 children "did not return" while the remaining 18 "returned," but only 7 were Germanized, how can we explain the survival of the other 11? Did they survive their gassing?

In conclusion, the story about the gassing of the children of Lidice at Chełmno has no historical basis either.

---

[138] Gulczyński 1991, appendix outside of text. The respective list originates from the Museum of Martyrs in Lidice (Gulczyński 1995, p. 41, note 66).

15. The Destination of the Deported Jews

Reitlinger reports that some Jews who had been deported to Łódź were transferred to an unknown destination with minimal luggage. From a letter of Rosenberg's office of 25 October 1941 we can glean that it was planned to use a greater number of Jews fit for labor for work in the rear of the Eastern Front (Reitlinger 1965, p. 115):

> *"Subsequently rumors had it that the Jews would be transferred from Łódź to the reclamation areas of the Pripyat marshes and the Jewish agricultural colonies near Krivoi Rog, Ukraine."*

In a clandestine report entitled "Mass Executions of Jews in the Koło District" of 25 March 1942 one reads:[139]

> *"Officially the purpose of this deportation is not revealed to the deportees, but in private the Germans have launched a different version: a center for the entire district will set up at Chełmno, which will be one stage of the transfer into the region of Pinsk or to Galicia."*

A report by the *Oyneg Shabbos* shortly thereafter stated (Sakowska 1993, p. 186):

> *"In the second half of November 1941 the news spread in the cities of the Koło district (Warthbrücken district) that the entire Jewish population of this area had to be transferred to the region of Pinsk or to eastern Galicia."*

In 1943 the Canadian demographer Eugene M. Kulischer mentioned the swamps of Pinsk (in the Pripyat) among the destinations of the Jewish deportations (Kulischer 1943, pp. 110f.):

> *"Since the summer of 1942 the ghettos and labour camps in the German-occupied Eastern Territories have become the destination of deportees both from Poland and from western and central Europe; in particular, a new large-scale transfer from the Warsaw ghetto has been reported. Many of the deportees have been sent to the labour camps on the Russian front; others to work in the marshes of Pinsk, or to the ghettos of the Baltic countries, Byelorussia and Ukraine."*

[139] Report entitled "Masowe egzekucje Żydów w pow. Kolskim" (Mass Execution of Jews in the Koło District) of 25 March 1942. Maria Tyszkowa 1992b, p. 52. The report was published in 1943 in: Apenszlak 1943, pp. 115-118.

As Aly has documented, draining the marshes of Pripyat was a project that the German administration had begun to seriously discuss in April/May 1941 (Aly 1995, pp. 275-279; see Chapter 1). Thomas Sandkühler confirmed (1996, pp. 110f.):

> *"Rosenberg's first position pager on the Soviet Union of 2 April* [1941] *shows that the Pripyat marshes were already under discussion in the spring of 1941.* [...] *Perhaps it was intended to concentrate the Jews of the General Government temporarily in eastern Galicia, and then push them into the swamps of Pripyat."*

The "Chronicle of the Łódź ghetto" contains several clues in favor of this plan. The report no. 6 of 10-13 January 1942 shows the first anticipation of the future evacuations (Dąbrowska/Dobroszycki 1965, vol. I, p. 385):

> *"The transports will comprise 700 people per day. The evacuees may carry with them baggage of 12.5 kg per person. All money possessed by the expellees must be changed to German marks at the assembly point."*

The "selection" criterion for the deportees, as we have seen above, was inability to work: Jews unable to work had to be transferred from the ghetto to make room for newcomers fit for work. But the bulletin no. 7 of 14-31 January 1942 describes the procedure as follows (*ibid.,* p. 392):

> *"The evacuees received their deportation orders in the mail, which called on all the individuals specified (as is known, during the entire period established for the deportation all family members are being evacuated, in certain cases even together with other resident persons* [in the same premises] *who were not part of the family) to report on the indicated day – more or less within three days after delivery of the order – at the meeting place, organized in no. 7 Szklane Road."*

So the policy of deportation essentially concerned families and households, rather than those unable to work, and extant evacuation name lists fully confirm this. The same report states that the deportation train consisted of 20 passenger coaches with 55 people per wagon (*ibid.*, p. 393).

The bulletin no. 14 of 10 to 14 April reported as follows about the first news from the deportees (*ibid.,* pp. 457f.):

> *"On 12 April, at Balucki Square, a senior officer of the Secret Police stopped briefly who was the head of the camp in which the deportees*

from the ghetto were. This is the first reliable source of information about the deportees; to be exact, it is worth adding that the version most persistently spread about [their] *whereabouts has been confirmed this time. Hence it has now been irrefutably established that the camp is located in the outskirts of the town of Koło, now called Warthbrücken. The camp contains 100,000 Jews, and from this it can be concluded that in addition to the 44,000 deported from the ghetto, Jews from other cities were concentrated as well. Earlier this huge camp had been the place of residence of Germans of Volhynia. Apparently 30,000 people used to live there. They left decently housed barracks and even furniture at the disposal of the Jews. The provisioning of the camp, it seems, is exemplary: those able to work are employed within the camp, for road repairs and for agricultural labor. In the near future workshops will be organized."*

The bulletin no. 24 of 1-3 May 1942 states (*ibid.,* p. 497):

"In the ghetto the word goes around persistently that the first two transports of evacuees were directed to occupied France, the other to Bessarabia."

The bulletin no. 25 of 5 May 1942 informs that the first two transports of western Jews from the ghetto included "even physicians and health-care staff" (*ibid.,* p. 504).

Jews from Łódź were also sent to the Baltic countries. Herman Kruk, a Polish Jew who fled to Vilnius in 1939 and subsequently became a resident of the local ghetto, wrote in his diary on 4 July 1942 (Kruk 2002, p. 319):

"Now I learn from two young people who were taken out of the Łódź Ghetto in March that Łódź has a ghetto. There is no shooting, and mass executions are unknown. The only thing is, people are taken off to work. They figure that about 10,000 Jews have recently been sent out of Łódź. […] *Both of the young men escaped from such a group* [of workers]*, and after a week of wandering, they were arrested in Vilna* [and taken to] *Lukiszki* [a prison] *and were released from there only two days ago. Here in the ghetto they were clothed, and soon they will be sent to forest work."*

On the same note, he added:

"Just received a message from Łódź. For us, Łódź is one of those cities from which you can obtain almost no information. Of course,

> *the rumors from there are crazy and wild, and according to them, it is already certain that there are no Jews in Łódź.*
> […] *Now the young people know what it is to be sent out to work. They are dragged around from place to place; they don't know where they are or what they are doing. From time to time, groups are pulled out and disappear, and they assume that they are shot."*

Avraham Tory, another Jew who lived in the ghetto of Kaunas (Kovno) and who kept a diary, wrote on 14 July 1942 (Tory 1990, p. 111):

> *"Four Jews from Łódź have been brought to the* [Kovno] *Ghetto hospital for surgery. They had spent a long time in a labor camp."*

And on 30 July he noted (*ibid.,* p. 116):

> *"The Łódź Jews who had been employed at the construction of the Kovno-Vilna highway and were transferred to Riga will be replaced by 500 workers from the* [Kovno] *Ghetto."*

In two long reports of 25 and 27 May 1942 addressed to Palestinian Jewish institutions, the Zionist delegate Meleh "Noi" Neustadt confirmed (Laqueur 1982, pp. 188f.):

> *"Lodz was more or less cut off from the outside world. There was no direct contact but it had been learned that 'unproductive elements' had been deported from Lodz to Minsk, Kovno and Riga."*

On the other hand, there is also a letter to the Gestapo in Łódź dated 11 May 1942 which reads:

> *"Re.: Delivery of iron material to the Sonderkommando K.*
> *I have brought the following delivery to the Sonderkommando and request to hand back to me the necessary iron bills."*

Among the materials listed there was "1 complete disinfection oven with chimney 2,050 kg" (*1. kompl. Desinfektionsofen m. Schornstein 2.050 kg*).[140]

The camp had to be much greater than what orthodox Holocaust historiography claims, because already on 27 May 1942 it had 370 railway cars full of clothing:[141]

> *"At the Sonderkommando Lange an estimated 370 railway cars with garments are stored, for the removal of which some 900 trucks with trailers are necessary* […]*"*

---

[140] T-1298. Cf. State of Israel 1993, vol. III, p. 1202.

[141] Letter by Otto Luchterhandt, Deputy Head of the Łódź ghetto, to the *Landeswirtschaftsamt* Posen dated 27 May 1942, in: Eisenbach 1946, p. 233.

According to the data claimed by orthodox Holocaust historiography, 79,000 people had been evacuated to Chełmno by May 1942, each of whom was allowed to take along 12.5 kg of luggage in addition to the clothes they wore. This luggage consisted certainly not just of clothes. To have a reference point, 97,000 full sets of clothes for men without underwear, 76,000 equivalent sets for women and 89,000 pieces of silk underwear filled 34 railway cars; 2,700,000 kg of rags in turn filled 400 railway cars.[142]

Based on the latter figure, 340 railway cars would have contained 2,295,000 kg of clothing, so that each deportee would have to have brought along 29 kg of clothing on average! The first figure shows, however, that 76,000 full sets of female clothing occupy less than 34 carriages. Hence it is obvious that the 340 wagons of clothing could not have belonged merely to the evacuated Jews, but must have come mainly from the clearing of all the ghettos in the Warthegau. As of 23 March 1942, all the property of the deported Jews became the property of the ghetto administration:

> *"According to the directive of 23 March 1942 by the governor, all valuables such as money, foreign currencies, household goods, merchandise, which are the property of resettled Jews, become the property of the ghetto administration in Litzmannstadt."*

Among these goods were also "fabrics, leather and other raw materials of all types" (*Textilien, Leder und sonstige Rohmaterialen aller Art*; Eisenbach 1946, p. 209). It is clear that almost 2,300 tons of clothing could not be stored in the so-called "palace" or "castle" of Chełmno.[143] Hence they had to be stored in storage barracks in the camp. And this certainly was the camp's secondary function.

But the Chełmno camp's main function must be considered in relation to the National Socialist policy of deporting the Jews to the east as I have outlined in Chapter 1, including the letter from Himmler to Greiser of 18 September 1941. In this letter, as we have seen, Hitler ordered the transfer of Jews from the Reich proper and the Protectorate to Łódź

---

[142] NO-1257, "*Aufstellung über von den Lagern Lublin und Auschwitz auf Anordnung des SS Wirtschafts-Verwaltungshauptamts abgelieferten Mengen an Textil-Altmaterial*," 6 February 1943.

[143] In the Polish drawing of this area (see Document 16) no. 11 stands for "Piles of clothing 1941-1943 (15×5×4), and in the years 1944-1945 two sorting barracks and a clothes-disinfestation truck." The volume of the dimensions given is 300 cubic meters, but 340 railway cars full of clothing corresponds to more than 21,000 cubic meters.

as a provisional stage of their subsequent deportation to the eastern territories. In this context Chełmno was therefore a transit camp for the ghetto. The choice of a village west of Łódź is explained by the need to reconcile the demands of confidentiality and logistics: Chełmno is located near the major railway line Poznań-Warsaw-Minsk and in a relatively quiet area.

16. The Value of the Content of the Court Verdict

In the introduction to the present book I posited that the image of Chełmno as outlined by orthodox Holocaust historiography is almost exclusively based on trial evidence and in practice on testimonies. The moment has now come to explain the significance of this evidence.

On 5 July 1962, the Public Prosecution Office at the District Court in Bonn issued an indictment against 13 former members of the "*Sonderkommando* Chełmno." The trial started on 26 November 1962 and unfolded in 36 trial days until 30 March 1963, the day when the verdict was announced, which sentenced six of the defendants to prison terms between 3½ and 15 years for "jointly aiding and abetting in murder (mass murder)." The case against one defendant was vacated due to his deteriorated health, and with respect to six other defendants, although also found guilty of the same offense, the court abstained from meting out a punishment for a number of mitigating circumstances.

Since the appeal of this verdict was successful for eleven defendants, their cases were sent back to the Bonn Jury Court for retrial. This began on 5 July 1965 and ended on July 23 after eleven court days. The punishments meted out this time ranged from 13½ months to 13 years' imprisonment for eight of the defendants, while three of them, although found guilty again, once more got away without punishment (Rüter *et al.*, pp. 227f., 271; Rückerl 1979, pp. 248f.; Krakowski 2007, p. 178).

The criminal investigation was started in 1959 with a complaint by the *Landeskriminalamt* of Baden-Württemberg against Kurt Lange. In this document the established "facts" about the Chełmno camp were described thus:[144]

> *"In 1946 a book by the Jewish Historical Commission appeared in Łódź entitled 'Documents and Materials, Vol. I, Camps, which in Chapter VII under the title 'Chełmno' contains a collection of testimonies and documents relating to the construction of the extermination camp and the implementation of the extermination program.* […]
> *The following statements are extracted from this document:*

[144] Landeskriminalamt Baden-Württemberg. Sonderkommission Zentrale Stelle. Strafanzeige gegen Kurt Lange. Ludwigsburg, 13 November 1959; SL, EL317IIIBü2151, pp. 11-14.

....It results from the declaration of Miszczak Andrezej [Andrzej] *that at the end of November 1941 members of the Gestapo arrived at Chełmno and seized and occupied the church, the castle, the parish and many private houses. Some 3 km from Chełmno, between Chełmno and Koło, was an isolated wooded area of about 1 square km. In this area the trees were cut and trenches 6 m wide and adequately deep were excavated. In these pits the execution victims were buried who had been executed at the Chełmno Castle. The executions were carried out against people who had been brought to Chełmno in numerous transports until December 1943. In June 1942 the bodies dumped into mass graves were cremated in two furnaces in the forest. The witness named the plenipotentiary of the Gestapo in Chełmno, Lange, as the person responsible for the crimes. And Bothmann as his successor.*

According to another document, which in said book is referred to merely as number 104, the story of Chełmno is related as follows:

'First of all the Jews of the Koło district were taken out of their homes and transported to Chełmno in trucks. They were told that there would be kind of 'Jewish city' at Chełmno. The entire Jewish population of Koło (2,000 souls) and Dabię (1,000 souls), including infants, children and the frail elderly, as well as the sick and the bedridden, were brought to Chełmno with trucks in groups of 60 people.

The Jewish communities of Kłodawa (1,200 people), Izbica (1,300 people), Bugaj (800 people) and Sompolno (1,000 persons) met the same fate.

Upon the transports' arrival at Chełmno, the newcomers had to leave their luggage in the church located on the left along the main road. About 100 meters away was the Chełmno Castle. Then the transports were brought there. The castle was an old dilapidated house on a plain, the remnants of the castle destroyed during the First World War. In the castle a German SS officer and a civilian of 60 years held a speech to the newcomers. On this occasion it was said to the Jews that they – the Jews – had been brought to Chełmno only in order to be ultimately employed in the ghetto Litzmannstadt, where there were work places and lodgments for their use. At Chełmno a bathing facility had been built where they, the Jews, had to get washed. They would also have to get decontaminated and disinfected. Then those gathered had to undress and go 'to the shower-

room.' In reality they were led through a door onto a ramp from where they were herded into two prepared vehicles. The vehicles had the size of a truck, were gray and sealed hermetically. The back door was locked with an external latch. There were no seats inside. The outer walls were covered with sheet metal, the floor was fitted with small wooden grates covered with straw mats. Under the wooden grates on both sides, the outlets of the gas pipes of about 15 cm were located, covered by a grate. The [gas] *influx pipe was attached to a gas apparatus (*Gasapparate*) in the driver's cabin. Then the vehicles left the castle and drove to a wooded area about 7 km away from the castle, traveling for about 15 minutes. The wooded area was surrounded by armed police. There was a trench 5 meters wide and deep. When no voices could be heard anymore from within the vehicle, the doors were opened and the corpses taken out from the inside. Usually 20-30 gravediggers were in the wooded area and about 30 members of the SS, the police and the Gestapo. The bodies, which still had their normal face color, were then searched for valuables by two civilians. In particular the private parts and the anus were inspected. Then gold teeth were pulled out of the mouths using pliers. Then the corpses were thrown into the pit. Then the vehicle was thoroughly cleaned of dirt and other human excretions and returned to the castle. Every day 6-9 transports of corpses were carried to the wooded area. Each layer of corpses* [in the mass grave] *contained 200 bodies. Soil was thrown on each layer of corpses, and starting on 17 January 1942 chloride was also strewn.*

According to calculations by investigating Judge Wł. Bednarz, who led the investigation in the case of the Chełmno death camp appointed by the Central Commission of Inquiry into German Crimes in Poland, the number of victims of this camp was some 330,000."

The book on which the *Landeskriminalamt* of Baden-Württemberg based his findings on the "history of Chełmno" is the oft-cited *Dokumenty i materiały* (Blumental 1946). It must be pointed out immediately that this work contains only a few German documents, but none of them refers to "construction of the extermination camp and the implementation of the extermination program." And that which is presented as a "document" bearing the number 104 is nothing but the quotation of a propaganda story published in New York in 1943, which I already mentioned in the previous chapter (Note 139, page **Error! Bookmark not defined.**), namely pages 115-118 of Jacob Apenszlak's book *The Black*

Book of Polish Jewry (Blumental 1946, p. 244). Not only that, but this story came in turn from the narrative of "Szlamek"!

The Bonn Chełmno trial was therefore bound to proceed along the lines set by Polish propaganda, which had given this Jewish propaganda a legal look, and the defendants had to comply with it or else risk being sentenced to an even more-severe punishment, had they tried to derail the trial from those tracks.

This explains perfectly the defendants' "confessions," who restricted themselves to confirming this propaganda which had been taken as official truth by the court.

The judicial truth is not necessarily the historical truth, and this applies especially to ideological and political trials of this kind.

17. Conclusions

All that is left is to summarize the conclusions arising from this study.

1) The establishment of Chełmno camp fits perfectly into the National Socialist policy of deporting the Jews to the east.

2) No documentary or material trace exists for the use of "gas vans" in this camp. The truck photographed by the Commission of Inquiry into the German crimes in Poland in the courtyard of the Ostrowski factory was used to disinfest clothing or to carry passengers.

3) There is no evidence for the first alleged systematic extermination of Jews in the Warthegau, and no one can specify when or how it was perpetrated.

4) The first witness account about the alleged extermination at Chelmno, the "Szlamek Report," is completely unreliable. Similarly unreliable and even contradictory are the witnesses of the postwar era.

5) Only one cremation furnace has been confirmed archeologically in the Chelmno camp. It would have taken almost nine years to cremate all the bodies of the alleged victims of homicidal gassings in that furnace. There are no material traces of the alleged mass cremation.

6) Rudolf Höss's visit to the "field incinerators *Aktion* Reinhardt" had nothing to do with Chełmno.

7) The camp's claimed death toll number is not based on any documentation. It was set to 1,300,000 by the Commission of Inquiry into the German Crimes in Poland, but later reduced to 340,000 by Judge Bednarz. Polish historiography today assumes a figure of about 152,000 victims, which in practice coincides with the number of Jews who, according to the Korherr Report, were led "through the camps of the Warthegau… 145,301," plus some 7,000 additional victims for the camp's claimed second extermination phase in 1944.

8) The transports of Jews sent to the Łódź ghetto included a high percentage of people unable to work (elderly and children), only some of whom were evacuated to make room for Jews fit for work.

9) The Chełmno camp ceased operations in April 1943, which would be inexplicable if it really had been an extermination camp for the Jews in the Warthegau, especially for the Jews of the Łódź ghetto. This is all the more inexplicable because on 1 March 1944 4,495 children under 8

years of age and 392 elderly persons aged over 70 years were still alive in the ghetto.

10) Even more inexplicable, from the perspective of orthodox Holocaust historiography, is the reopening of the camp in April 1944. The claim that it had to exterminate the Jews of the Łódź ghetto has no documentary support, and there is no evidence that the 10 Jewish transports evacuated from the ghetto "for labor" between June and July 1944 were gassed at, or even went to, Chełmno. In fact, the analysis of name lists of the deportations permits us to rule out this possibility.

11) No documentary evidence exists for the alleged extermination at Chełmno of Gypsies from the Łódź ghetto.

12) No documentary evidence exists either for the alleged extermination at Chełmno of the children of Lidice.

13) The ultimate destiny of the Jews who passed through the Chełmno camp was not the alleged "gas vans," but the region of Pinsk, in particular the area of the Pripyat Marshes, and partly also the Baltic countries.

Auschwitz, den 17. September 1942

R e i s e b e r i c h t

über die Dienstfahrt nach Litzmannstadt.

Zweck der Fahrt: Besichtigung einer Sonderanlage
Abfahrt von Auschwitz erfolgte am 16.9.1942 5 Uhr früh mit PKW.
von Kommandantur des K.L. Auschwitz.
Beteiligte: ᛋᛋ-Obersturmbannführer H ö ß, ᛋᛋ-Untersturmführer H ö ß l e r
und ᛋᛋ-Untersturmführer D e j a c o.

Ankunft in Litzmannstadt um 9 Uhr früh. Es erfolgte eine Besichtigung des Gettos, anschließend Fahrt zur Sonderanlage. Besichtigung der Sonderanlage und Besprechung mit ᛋᛋ-Standartenführer B l o b e l über die Ausführung einer derartigen Anlage. Die bei der Firma Ostdeutsche Baustoffwerke, Posen, Wilhelm Gustloffstr. unter Sonderauftrag Staf. Blobel bestellten Baumaterialien sollen sofort für KL. Auschwitz geliefert werden. Die Bestellung geht aus dem beiliegenden Schreiben vom W.V.H. hervor und soll der Abruf und die Umleitung der bestellten Materialien im Einvernehmen mit Ostuf. Weber vom Amt C V/3 von der hiesigen Zentral-Bauleitung sofort erfolgen. Frachtbriefe in der angeforderten Anzahl sind der oben genannten Firma zu übersenden.

Unter Bezugnahme auf die Besprechung des ᛋᛋ-Staf. Blobel mit der Firma Schriever u. Co., Hannover, Bürgermeister Finkstr., soll die dort reservierte, bereits ~~in~~ beiseitegestellte Kugelmühle für Substanzen für das KL. Auschwitz zur Lieferung gelangen.

Rückfahrt erfolgte am 17.9.42, Ankunft in Auschwitz um 12 Uhr

Preface

The present study is the result of a confluence of several coincidences. As a matter of fact, its author never intended to write a book on the topic. He merely wanted to translate the book written by another author, and maybe edit it and update it a little where required. But that was not meant to be.

At the beginning there was the idea in early 2010 of translating into English Pierre Marais's French study *Les camions à gaz en question* (*The Gas Vans Scrutinized*), which had been published as early as 1994. This was meant to fill a gap in the series *Holocaust Handbooks*, which at that point did not have a monograph on the topic of the elusive "gas vans." In 2008, Marais's study had been translated to German by Swiss translator Jürgen Graf, who made some minor updates to the text.[1] At that time, I was supplied with both Graf's German translation as well as the French original. The text part itself had only some 100 generously formatted pages, and together with the recent updates prepared for the German edition, it looked like a project which could be wrapped up swiftly, or so I thought.

Although initially by far no expert regarding the "gas vans" of the Third Reich, I had read several papers about this issue in the past permitting me to have a fairly good grasp of the state of the art. Hence, while translating Marais's work, I noticed numerous errors of facts, flawed and missing arguments, and, worse still, so many omissions of important documentary and anecdotal material, a great deal of which had become generally accessible only during the past 15 years, that I decided to give it a complete work over. Well, the more I worked on it, the more material turned up, so I ended up both increasing the book's volume by at least 100%, and rewriting, replacing or even deleting sizeable sections of Pierre's own text, which had become in need of revision and updating due to the added content and the many corrections.

At what I thought was the end of my editing efforts, I had in front of me a book that by 80% of its content was no longer Pierre's, but mine, and in which the parts that still were Pierre's at times read like alien remnants clearly written in the style of a different author and sometimes

---

1 It was published by an Italian publisher; see Marais 2008.

awkwardly misplaced by the book's new structure. There could be no doubt that this would have to be smoothed out as well.

Under these circumstances, could the book still be presented to the original French author – or the public – as a translation of his work? Hardly. Would he accept all the changes made? Well, I was afraid to ask, and when getting in touch with Pierre's literary agent, he balked and suggested to not even submit this typescript to the then 90-year-old Monsieur Marais, as he might have a hard time getting over this unscrupulous gutting and rewriting of his work. Therefore, the decision was made to make the rewrite complete and publish it under my name instead.

Yet in spite of all the rewriting done, this present book still owes a lot to Pierre's original work. First it is the very reason for its existence. Next, some of the basic structure of this book still follows Pierre's lead, and many of his arguments can still be found in it, even if they have been rearranged, rephrased, and at times reevaluated. And last but not least, Pierre's book was a trail blazer at its time, a foundation upon which the present study erects its larger, more thoroughly argued edifice. Pierre's book has been my stepping stone to the present study; his tome is the giant, the pioneer work of the first hour, without which this present book would not be.

Although this book may be regarded as a clear improvement in comparison to Pierre's work – a natural progress to be expected after almost two decades have passed – it is still far from complete, as much archival material held by the *Zentrale Stelle* in Ludwigsburg, Germany, is currently difficult, if not impossible, to access by critical researchers due to German censorship laws. Hence any of this study's conclusions must necessarily be considered provisional in character, and the discussion will remain open.

In addition to Pierre Marais, the present study owes much to the support by Thomas Kues, who tirelessly supplied me with all kinds of documents, some of them on my request, but also many which had been hitherto unknown to me.

Carlo Mattogno helped to improve the book as well by critically reading an earlier version of it, and indirectly by his own research for his book on the Chełmno Camp, about which I was continually informed, so that the present book could profited considerably from this.

I also thank all my other helpers, who for safety reasons will remain unnamed.

Introduction

When it comes to the "Holocaust," the alleged mass murder of European Jews by the Third Reich, most people think they "know." Of course we all "know" that it happened. We "know" that six million died. We "know" that the Nazis pushed the Jews into the gas chambers and gas ovens, that they burned them, dead or alive, in gigantic crematories and on huge pyres. Our knowledge is so certain that anyone uttering disbelief is swiftly ostracized. In many countries people even call the police and have doubters arrested, prosecuted, and sent to prison. He who doubts what everybody knows to be true must be evil, indeed.

Most readers perusing the above sentences might not even notice that it contains a typical error, a falsehood even acknowledged by orthodox historians. This error has to such a degree become a fixed part of the cliché which we consider to be "knowledge" that it passes unnoticed.

There were no gas ovens.

The term makes no sense.

Mainstream historians claim that there were gas chambers on the one hand, designed to quickly asphyxiate hundreds, if not thousands of people at a time within mere minutes.[2] On the other hand everybody agrees that there were crematory ovens, designed to reduce deceased camp inmates to ashes (although the inmates' cause of death and the crematories' capacities are disputed[3]). In the mind of the public at large, though, gas chambers and crematory ovens have merged to some ominously sounding "gas ovens." The public discourse about the Holocaust is replete with that nonsensical term, even though what it describes never existed.

So much about "we know."

Listing and explaining all the false clichés prevailing in the public about the "Holocaust" would fill a separate book, so I will abstain from

---

2 Revisionists contest that notion, though, see primarily the numerous entries for Mattogno in the bibliography.

3 On the only existing scientific-technical study of the cremation furnaces at Auschwitz see Mattogno/Deana.

doing it here. The point I was trying to make is that, although we all have some basic grasp about what is meant by "the Holocaust," most people are quite unfamiliar with even general aspects of the topic.

While gas chambers dominate the public's mind when the specter of the "Holocaust" is raised, "gas vans" are usually absent from the discourse. What percentage of the general populace has ever heard that the Nazis are said to have deployed mobile gas chambers as well, which historians usually call "gas vans"?

This lack of knowledge is excusable, because even in orthodox historiography the "gas vans" have played only a minor role. To this date no monograph has appeared on the topic written by a mainstream historian. Mere articles published in journals or anthologies exist, and most of them do not even focus on the gas vans themselves but instead on some location like the Chełmno Camp in Poland or the Semlin Camp in Serbia, on certain German armed units, in particular the German anti-partisan *Einsatzgruppen* behind the Russian front, or events where they are said to have been used, like the euthanasia action, to name a few. We will encounter many of these papers in the present study. But before doing this, I want to discuss the one mainstream paper which comes closest to a study of the gas vans as such. By so doing we will recognize the dire need for a much more thorough and critical study.

In 1987 German historian Mathias Beer published a paper whose German title translates to "The development of the gas vans for the murder of the Jews." In it he tries to describe, based on 14 documents and many more testimonies, how National Socialist Germany developed this murder weapon. Right at the beginning of his paper he admits that all extant documents are from a late phase of these vans' deployment, hence could elucidate little about their development. To remedy this, he resorts to verbal claims made by various persons asserting to have witnessed something, most of whom were interrogated during some criminal investigation or trial. Knowing that by relying on such statements Beer enters shaky territory, he declares that "due to their peculiarities testimonies" need to always be linked to, that is to say supported by, some documents, and that those documents themselves need to be "subject to thorough source criticism" (all on p. 404).

I agree with this, as this is a standard method of historiography. Yet Beer has missed two important issues here: first of all, each testimony, whether supported by a document or not, needs to be subjected to criticism as well. A medieval testimony claiming that the devil rode by on a

broom stick having sex with a witch, supported by a medieval document claiming to document that very "fact," might fulfill Beer's criteria, but it does not constitute truth. The creator of a document can err and lie just as much as a witness. Next, Beer completely omits the most important group of evidence: physical, tangible evidence. Where is the flying broomstick? Where is the devil? Did the devil leave his semen in the witch?, etc. are all very important questions to be asked.

In our context these questions would be: Where are the vans? Where are the corpses? Where is the poison in their body?

Beer is completely mute on all accounts: no scrutiny of the witness testimony performed, no material traces requested, no questions asked about the construction and operational mode of these vehicles. And worse still: he fails his own criterion that document criticism is pivotal, because his paper does not contain any critical discussion of any of the documents he cites or at least a reference to such a discussion (which does not exist among orthodox historians, I may add).

Hence Beer's paper is a complete failure already on formal grounds. But that is not the end. His self-defined goal to trace the development of the gas vans within the framework of documents falls flat as well. As Mattogno has shown (2017, Chapter 1), Beer's lengthy "reconstruction" of how the gas vans allegedly came into being is not based on any documents, as Beer himself admitted. What remains are the testimonies on which Beer relies heavily. We will encounter most of them in this study, where we will subject their statements to critical scrutiny. The result is shocking: many of the important witness statements used by Beer can be demonstrated to be highly implausible (see, for instance, two of the persons allegedly responsible for the vans' development: August Becker, Chapter 3.7.3.3., and Albert Widmann, Chapter 3.7.4.6.).

While doing his research for his own 1994 study on the gas vans, Pierre Marais had noticed Beer's complete lack of a critical attitude, as a result of which he wrote him a letter with several questions, to which Beer responded accordingly. I have reproduced this exchange with Marais's comments in Appendix 10 (p. 368). Although Marais's questions to Beer weren't as hard-hitting as I would have formulated them, Beer's subsequent refusal to continue the exchange shows who of the two is a dogmatic ideologue and who a critical freethinker.

Any decent researcher would have taken such critical inquiry as a reason to look into his own research again and to amend it where neces-

sary. But such an open-minded approach does not seem to be Beer's cup of tea, for when he had a slightly abridged and updated version of his 1987 paper published in a 2011 anthology (Morsch/Perz/Ley, pp. 154-165), it exhibited the same deficiencies of superficiality. Here again, Beer's references to documents and witness accounts serve only to once more uncritically repeat what he has read. In addition, this new version of Beer's paper also lacks any reference to – and discussion of – any topical criticism made during the past two decades (mainly Marais 1994 and Weckert 2019). Hence Beer, like most mainstream Holocaust authors, has proved to be impervious to critique, which means that he is insusceptible to the scientific method.[4]

In view of the total failure of orthodox historiography to appropriately address the issue of the "gas vans," Pierre Marais 1994 monograph on the "gas vans" was a sorely needed study indeed. Unfortunately it remained without any reaction from the historiographic establishment.

The present study will start by including and summarizing what Marais has already revealed and by carrying the topic farther and deeper.

[4] Beer has added an inconspicuous deception to this paper which is common among mainstream Holocaust authors: He quoted Becker's letter to Rauff with "since December 1941, for example, 97,000 were processed with 3 deployed vehicles" (Morsch/Perz/Ley, p. 164), *i.e.* with a lower case "since," thus giving the false impression that this statement is to be found somewhere in the middle of the letter, whereas it is actually its very (absurd) beginning. See Chapter 2.2.4.1.

1. Material and Forensic Evidence

1.1. Material Traces of the Weapon of Crime

When there is sufficient reason to suspect that a murder has been committed, finding the murder weapon and at least traces of the victim are key issues during the investigation of what has happened. This is so for court proceedings in a state under the rule of law, but this ought to be also a pivotal point for any independent scientific investigation. After all, one of the most important tenets of science is that a claim must be substantiated, or else it is not much more than mere hot air. To be more precise: substantiating a person's claim requires more than coming up with more individuals making the same or a similar claim. If we merely collect claims, we may thus obtain a number, maybe even a great number of identical or similar claims, but they are still mere claims. Substantiation requires most of all substance: hard, physical, tangible evidence beyond mere statements.

In the case investigated here the allegation is made that during the Second World War a huge number of individuals was killed at various points in time and at numerous locations by means of "gas vans" deployed by German units. Some of the killings are said to have happened in the course of fighting partisans in the Soviet territories temporarily occupied by the Germans; others ostensibly happened in the context of the implementation of the so-called "Final Solution to the Jewish question," which, according to orthodox historiography, meant the physical annihilation of many Jews within the German realm of influence during World War Two.

The partisan warfare during World War Two followed its own, at times cruel, rules. In this context, summarily killing partisans was not an illegal activity, if judged by international law as in effect at that time.[5] Even West German courts of law dealing with partisan killings allegedly committed with "gas vans" did not sentence any defendant on

[5] On the sometimes cruel but, during World War II, generally accepted customs of warfare – when it comes to killing civilians – see Siegert 2019; on partisan warfare see Seidler 1998.

this ground alone, as killing partisans by whatever means, as long as it was not excessively cruel, was considered a legal act of war.[6] Communist East German trials, on the other hands, always considered the killing of partisans a crime (see Chapter 3.8.1.). Since the present study is not about legal considerations but rather about the evaluation of evidence presented, the legal aspects will not be discussed any further.

Although most of the killings said to have been perpetrated with "gas vans" are claimed to have occurred within the so-called "Final Solution," I will not enter into a discussion of this term and its historical interpretation either, as this would lead us far astray from our actual topic and because both orthodox and revisionist literature about the "Final Solution" are replete with considerations on this topic.

In these "gas vans" the Germans are said to have used the vehicles' exhaust gases for homicides, the most toxic component of which is carbon monoxide (CO, sometimes also referred to as carbon oxide). This gas is a result of an incomplete combustion of the carbon component of fuels consisting of hydrocarbons, like gasoline and Diesel fuel. Complete combustion leads to carbon dioxide (CO_2), which is much less toxic than CO. I will elaborate on this a little more in Chapter 1.3. Suffice it here to say that the claimed weapon of crime in a more-narrow sense is said to have been a standard truck or van engine as it was mounted into the vehicle by the manufacturer without any modification. The truck itself, however, is said to have been retrofitted with certain additional equipment permitting the actual homicide. What exactly these changes to the serial trucks and vans were is one of the central questions to be elucidated by the present study, next to determining the make and model of the trucks themselves as well as the engines used.

German documents from 1942 prove the order of thirty special cargo boxes mounted onto the chassis of Austrian Saurer trucks sporting Diesel engines.[7] The vehicles thusly equipped are claimed to have been used as "gas vans" especially by the so-called *Einsatzgruppen*, German armed forces officially in charge of combating partisans operating behind the German lines at the eastern front. One would therefore have to expect that one or several of these vehicles were captured by the Soviets during their counter-offensives, but this is apparently not the case. In

---

6 Many defendants in West German trials claimed that they had only killed (or known about the killing of) partisans, but the judges usually did not believe them; see Chapters 3.7.4.3. to 5., 3.7.4.9. & 3.7.6.11. In one case, however, the defendant's claim was accepted, resulting in his acquittal, see Chapter 3.7.5.5.

7 See the "Dossier R 58/871 f° 1" in Appendix 4.

fact, no information exists about a location where one could investigate a wreck of such a gas van or even only some instructive traces of the special retrofitting which inevitably would have been required for the deployment of these vehicles for homicidal purposes. The Soviets, however, are said to have captured some of those responsible for the homicides in gas vans, whom they put on trial in 1943 (see Chapters 3.2. and 3.3.). How do they explain the fact that they managed to catch some of those who had operated the trucks, but that the vehicles themselves simply vanished?

Mainstream historians, like Mathias Beer, are wont to respond to this glaring lack of any material trace of these elusive vans by coming up with a pseudo-explanation (see Beer's letter to P. Marais, p. 371):

> *"It would not be surprising if no gas vans had been found after the war, because the gas vans, like all other traces left by the extermination of people, were destroyed as best as possible in the rush."*

This does, however, render Beer's position even worse, as this claim also requires supportive evidence – this time to prove that the Nazis did indeed manage to erase all those traces, and how this was possible. After all, the lack of evidence does not prove a claim to be true, which is what Beer tries to argue here. If anything, the lack of evidence refutes the claim.

As we will see, the operation of a truck suffocating humans locked inside of it is rather easy. There are no difficulties constructing it, and manufacturing it *a posteriori* as a fake piece of evidence would doubtlessly have been quite easy. That no such attempt was ever made makes the whole issue even more mysterious.

The claim that thirty vehicles retrofitted for mass gassings, which would have served as a vivid example of the "Nazi barbarity," have simply disappeared without trace ineluctably had to raise certain doubts about their very existence. Unless new information surfaces, one cannot but conclude that the "murder weapon" in the form of these infamous "gas vans" has not been produced to this very day. There are absolutely no tangible material items: no truck, no part of a truck, no drawing or blueprint of a truck.[8] As we will see during the analysis of the existing documents, not even a technical study of these ostensible gassing vehi-

[8] In the above-mentioned letter Beer claimed that a gas van wreck actually exists as a memorial in the town of Konin, Poland, near the former Chełmno Camp. But an inquiry by P. Marais with that town's authorities exposed this claim as false; see Appendix 10, page 376.

cles exists, and it is incomprehensible how such a vehicle could have been constructed without a corresponding technical drawing.

1.2. Material Traces of the Victims

Both the Serbs and the Soviets conducted forensic investigations by exhuming mass graves allegedly containing victims of "gas van" mass gassings.

The Soviets conducted their investigations right after they had reconquered territories from the Germans in early 1943. A summary of the findings were published during the war in a booklet containing a summary of two trials staged in 1943, where the defendants had been accused, among other things, of having participated in the mass murder of Soviet citizens with "murder vans."[9] I will analyze the horrific circumstances of these Soviet wartime show trials in Chapters 3.2. and 3.3. Here I will address only the forensic findings of the Soviet investigating committee, which were quoted as follows in the booklet *The People's Verdict* (1944, p. 13; similar on p. 32):

> *"*[…] *623* [exhumed corpses] *were examined by medical experts* […].
>
> *On the basis of the thorough medical, chemical and spectroscopic investigation which was carried out, a Committee of Experts consisting of Dr. V. I. Prolorovsky* […] *arrived at the conclusion that the cause of death in 523 of the cases examined was carbon monoxide poisoning.* […] *In their report the Committee of Experts stated that the carbon monoxide could undoubtedly have had lethal effect if the waste gases from the Diesel engine penetrated the closed van.*
>
> *The Commission stated:*
>
> *'If the outlet for the carbon monoxide (including waste gases) is in closed premises, the concentration of carbon monoxide in those premises increases very rapidly and may cause death even in the course of a few minutes (from five to ten).'*

---

[9] There exists another instance of a claimed Soviet forensic investigation: 214 exhumed, former mentally sick children who are said to have been killed in a gas van. This forensic expert report, also dating from 1943, was introduced as evidence for the prosecution during a West-German court of law in 1972 (see Chapter 3.7.5.3.). I have so far not been able to obtain a copy or even a summary of this expert report. Maybe the exhumed children shown in Illustration 1 are from that source.

Illustration 1: Photograph taken by Soviet commission of corpses exhumed in 1943 from a grave near Krasnodar.[10] The caption reads: *"Atrocities of German-Fascist invaders in Krasnodar. Photo shows corpses of children poisoned with carbon monoxide gas by the German invaders. The dead bodies have been extracted from a pit for medico-legal examination."*
However, who these victims are, how and when they died, and who murdered them, if anyone, is completely unknown.

> […] *The total number of the Soviet citizens asphyxiated in 'murder vans' is 7,000."*

Soviet wartime expert commissions are notorious for faking and lying about their alleged findings, as the Katyn case amply demonstrates (Sanford 2005). That there is something very fishy about the "expert report" discussed here results from the fact that finding carbon monoxide in severely decomposed corpses was still impossible at the beginning of this millennium and even with the much-refined forensic methods, which were far superior to the crude spectroscopic methods used in the 1940s. Only in 2010, a method based on gas chromatography was established which allowed reliable detection of carbon monoxide levels in "severely" rotten tissue and blood samples a few days old (Walch *et al*. 2010, p. 23). Hence, how would it have been possible for these Soviet

[10] http://collections.yadvashem.org/photosarchive/en-us/11290.html; similar but not quite as clear: …/69350.html, …/69926.html; Yad Vashem does not give an archival source for these photos.

experts to prove carbon monoxide poisonings in corpses which have been rotting in their graves for many months, if not more than a year, by using a method that is unsuitable for this to begin with? How decomposed the corpses were can be gleaned from a photo added to one of the reports, see Illustration 1.[11]

Another indicator that this commission most certainly was not expert at what it stated is the fact that they claimed that, due to the "Diesel engine" exhaust gases piped into the cargo box, "the concentration of carbon monoxide in those premises increases very rapidly and may cause death even in the course of a few minutes (from five to ten)." As I will show in the next chapter, this is simply not possible with Diesel exhaust gases.

In addition to the Soviets, their loyal communist allies in Yugoslavia also performed an investigation by having a War Crimes Commission exhume two mass graves after the liberation of Serbia. They presented their results in March 1945. Orthodox historian Byford writes about this (2010, p. 25):

> *"In fact, the* [Commission's] *approach to evidence was determined primarily by political concerns.* […] *For instance, in the winter of 1944/1945, the War Crimes Commission, acting upon reliable evidence, unearthed approximately 11,000 bodies at two sites where victims of the Semlin*[12] *Anhaltelager were said to have been buried. And yet its report, published a year later, stated that the total number of casualties was as high as 40,000. This figure was arrived at by adding up the various unverifiable approximations offered by a relatively small number of witnesses and former inmates whose statements were collected in the course of the investigation. Similarly, in the case of Banjica, although log books discovered after the war suggested that the total number of inmates was 23,637, of whom 4,286 were executed, the War Crimes Commission dismissed both figures as too low and stated that the actual number might be as high as 80,000 dead."*

Hence we face the problem that here, too, propaganda and political purposes irreparably corrupted the record. If the commission did indeed find 11,000 corpses – who guarantees us that this number was not al-

---

11 This Soviet medical expert report is available in the Central Archives of the Federal Security Service (former KGB) of the Russian Federation in Moscow, file H-16708 (Krasnodar trial), vol. 1, part 1, p. 32; quoted acc. to Bourtman 2008, p. 254.

12 Serbian name: Sajmište.

ready exaggerated? – but they lied about that, then how can we trust them about anything we can find in their report?

In early 1942, the Semlin *Anhaltelager* was called *Judenlager* (camp for Jews), as almost exclusively Jews were interned there, until they were allegedly killed with gas vans in the spring of 1942. The number of Jews killed in gas vans is supposed to have been around 7,000 to 7,500 (Byford 2010, p. 6; Manoschek 1998, p. 229f.; Browning 1983, p. 61). After all Jews had been removed from the camp by May 1942, the camp changed its function and was renamed to *Anhaltelager*. Byford writes about this phase of the camp (*ibid.*):

> *"*[…] *Semlin became an* Anhaltelager*, a temporary detention camp for political prisoners, captured partisans and forced laborers, most of whom were subsequently transported to various labor camps in Germany and Norway. Between May 1942 and July 1944, 32,000 inmates (mainly Serbs) passed through the camp, of whom 10,600 died of starvation, exposure and disease or were killed."*

Hence it seems that the 11,000 victims allegedly found by the Yugoslav investigation commission were exclusively victims of this later phase of the camp, when no Jews were held in it anymore. There does therefore not seem to by any forensic proof that even a single person had died in a gas van. If they did, where are their bodies?

Christopher Browning has the following answer to that question (1983, p. 85):

> *"In December 1943, Paul Blobel's Kommando 1005, charged with digging up and burning the bodies from the mass graves left behind by the Einsatzgruppen in Russia, arrived in Yugoslavia, and liquidated the mass graves near Avala* [where, it is said, the gassed victims were buried] *among others."*

We've heard that before: the evil Germans saw to it that all the remnants of these 7,000+ victims disappeared tracelessly, and the traces of the former mass graves along with them. Dare I say that this would have been an impossible feat? (For more on this, see Mattogno 2022.) But if I am wrong, I wonder why the Germans did not perform this same miracle again on those 11,000 victims of the later phase of the camp.

1.3. Forensic and Technical Considerations

1.3.1. The Toxicity of Diesel Exhaust Gas

As mentioned before, it was repeatedly mentioned during Soviet show trials that in the gas vans used by German units in the East, murder was committed by means of exhaust gases from diesel engines. During this study, we will encounter this claim repeatedly.

Before investigating the question what type of vehicles with what kind of engines are said to have been used, we need to clarify first why this matters.

Whether one can commit murder with Diesel engine exhaust within the time spans claimed is a forensic question. U.S. engineer Friedrich P. Berg has done thorough research about this, which he first published in 1984 and, in his latest revised and expanded form, in 2019. Berg also elaborated in detail about the toxic effects of carbon monoxide and other constituents of Diesel engine exhaust gases. I will not repeat any of this here, as it would be repetitive and would lead us too far afield. The interested reader might either consult Berg's paper or any handbook of toxicology from any library directly.

Whereas gasoline engines operate with a dearth of oxygen and therefore produce rather high amounts of toxic carbon monoxide, Diesel engines always operate with a huge excess of oxygen, as a result of which its exhaust gases contain only minor amounts of carbon monoxide, the lethal compound in engine exhaust gases.[13] Although not impossible, it is rather difficult to increase the amount of carbon monoxide in Diesel exhaust gases. If a Diesel engine runs idly or with only a minor load, it must even be considered impossible to produce an exhaust gas whose composition can become acutely dangerous to persons with an average health within the time span of interest here (up to half an hour).

In contrast to this stands the drastically larger carbon monoxide content in the exhaust gases of gasoline engines, which can be manipulated in various ways to increase it even more, for instance by closing the idle-mixture adjustment screw of the carburetor. For this reason gasoline engines would have been the self-evident choice for the construction of "gas vans" (as also for the generation of carbon monoxide for the stationary "gas chambers").

---

[13] It must be kept in mind that the CO contained in the exhaust gases is an incompletely combusted item resulting from a lack of oxygen.

Did the Germans know about the difference between Diesel and gasoline engine exhaust? Both engines had been invented in Germany,[14] and the record shows that German engineers and scientists were very well aware of that difference long before World War Two. Once again it was Berg who has documented the use of Diesel engines early on in coal mines in Germany exactly because their exhaust gases were relatively harmless (Berg 2019, pp. 453-456). Mattogno and Graf have shown in turn that German scientists had made thorough exhaust gas composition analysis of a broad variety of gasoline engines, which was for instance published in a 1930 book dedicated to the toxicology of gasoline engine exhaust gases (Mattogno/Graf 2020, pp. 123-125; cf. Keeser/Froboese/Turnau 1930).

In 1994 Berg drew attention to a forensic study conducted by British scientists who had conducted a test gassing of rabbits, mice, and guinea pigs with Diesel engine exhaust gases. They "succeeded" in killing all their animals only after going to the engine's limit and after more than three hours of exposure (Pattle *et al.* 1957; Berg, in Gauss 1994, p. 333; Berg 2019, pp. 458f.). In this context it deserves emphasis that Diesel exhaust gases have other features than delivering small amounts of carbon monoxide which need to be considered. In particular old engines produced a lot of smoke (particulate matter; see Berg 2019, pp. 451f.), which consisted not only of soot but also of a mixture of highly irritating, smelly chemicals. And like all exhaust gases, Diesel exhaust gases are hot when exiting the tail pipe: well beyond 100°C (200°F). Although the toxic effect of Diesel exhaust gas is moderate at worst, the combined effect of irritating chemicals, smoke, heat, noxious gases and oxygen deprivation will kill most people locked up in an enclosed space filled with such gases after an extended period of time. But as the above experiment shows, it would take hours of horrific suffering.

This proves that attempts at mass gassings with Diesel engines would have been a disaster at best.

Friedrich Paul Berg has not only pointed out that the use of Diesel engine exhaust gases for mass murder would have been absurd, but that

---

[14] The four-stroke gasoline engine was first patented by the German watchmaker Christian Reithmann on 26 October 1860 (http://de.wikipedia.org/wiki/Christian_Reithmann); today these engines are frequently called Otto engines due to the first car engine built by Nikolaus Otto of the Deutz engine factory in Cologne, employing as technical directors for engine construction Gottlieb Daimler (later of Daimler-Benz) and Wilhelm Maybach; the Diesel engine was patented in 1893 by German engineer Rudolf Diesel (http://en.wikipedia.org/wiki/Diesel_engine)

the use of *any* exhaust gas is absurd when considering that the Germans, suffering from lack of petroleum during WWII, had retrofitted almost their entire truck fleet during the war, step by step, with so-called producer-gas generators. I will elaborate on this more in Chapter 2.4. when discussing wartime documents, as the extant documentation about this technology stems primarily from that era.

Surprisingly, this finding of the general unsuitability of Diesel engines for a swift and efficient mass murder was recently confirmed by an orthodox anthology on the Holocaust, where the toxicologist Achim Trunk writes in a paper entitled "The lethal gases" (Morsch/Perz/Ley 2011, pp. 35f.):

> *"It can be derived from the animal experiments* [by Pattle *et al*.] *that it is possible in principle to murder human beings with Diesel exhaust gases – even many simultaneously. In order to generate highly toxic exhaust gases which kill within a maximum of 20 minutes, however, Diesel engines in the facilities for gas murder would have had to be operated under heavy load, i.e., they had to be slowed down. Such a slowing, power-consuming device (such as a dynamometer) was much less simple and cheap to obtain than the large engine from a destroyed vehicle wreck. Slowing down a powerful Diesel inside a gas murder facility would have meant moreover that the engine would have become much noisier and would have vibrated much more intensively. Its exhaust gases would have contained a lot of soot. Whether such features have been observed (or whether clues to power consuming devices exist) is no longer a question to toxicology but rather to the sources and source criticism. According to this author's knowledge, no clues in that direction exist.*
>
> *A different explanation is more likely, according to which the murder weapons were all gasoline engines.* […] *That gasoline engines were indeed deployed in the extermination camps of the 'Aktion Reinhardt' derives from reliable sources. Rudolf Reder, for instance, one of the very few survivors of the Belzec extermination camp, spoke of an engine fueled with gasoline located in a small room next to the gas chamber. It is said to have consumed 80 to 100 liters of gasoline daily. For the later-day extermination camp Sobibór, where one could apply the experiences gained in Belzec, exact statements by the perpetrators exist that the murder device was a gasoline engine;* […] *In the case of Treblinka, which was the latest of the extermination camps of the 'Aktion Reinhardt' to be built (and the big-*

> *gest), science has so far assumed that a Diesel engine was used. This raises the question why, from the point of view of the murdering institution, a successful method should have been replaced by a different, technically much more difficult."*

It is worth noting in this context that Reder, in his testimony about Belzec, expressly and in various ways stated that the engine's exhaust gases were *not* used for murdering the victims, but that it was vented directly outside (see Mattogno 2021b for details). The other star witness of orthodox historiography for the alleged exhaust gas mass murders in Belzec, the mining engineer Kurt Gerstein, speaks repeatedly of a Diesel engine providing the poisonous gas.[15] He, as a mining engineer, certainly knew to tell a Diesel from a gasoline engine. However, contrary to what Trunk wants us to believe, neither Reder nor Gerstein are reliable witnesses, as both their testimonies are riddled with absurdities and impossibilities (see Mattogno 2021b).

With regard to the Sobibór Camp, the situation is by no means as clear-cut as Trunk would have his readers believe, for in this regard there are statements concerning both a gasoline and a diesel engine (see Berg 2019, pp. 439). Finally, one must not forget that in German colloquial language used by laymen, the terms "gasoline" ("*Benzin*") and "gasoline engine" ("*Benzinmotor*") are sometimes used summarily for all types of internal-combustion engines, regardless of whether they run on alcohol, gasoline, diesel, or kerosene, just as in English a "gas engine" certainly includes a Diesel engine. Hence, while one can be fairly certain that someone means a Diesel engine when they use the word Diesel, it is not at all clear that someone means a gasoline-fueled, spark-plug-equipped carburetor engine when they refer to a *Benzin* engine.

I may also mention in passing that it is not at all trivial to run a stationary gasoline engine, as they – in contrast to Diesel engines – tend to overheat quickly. They require special cooling devices to be kept operational.

Trunk's last sentence quoted above about the anachronistic reversal to an imperfect method is of course valid. It also applies to the gas van issue. Here the first generation of gas vans consisting of a mixture of makes, models and equipment with usually undefined engine types, some of which may have been gasoline engines, are said to have been replaced with a more sophisticated "second generation" of vans which,

---

[15] On this see next to Mattogno 2021b also Roques's PhD thesis 1985, two volumes, plus: Roques 1986 & 1989, Chelain 1989.

judging by the brand, were most likely equipped with Diesel engines (more on this in the next section) This fact is glossed over by Trunk who erroneously or deceptively writes (Morsch/Perz/Ley 2011, p. 37):

> *"Reports about the killings with gas vans explicitly give gasoline engines as the source of the lethal gas."*

Trunk is definitely disingenuous when he writes (*ibid.*, p. 37):

> *"The claim by revisionists is wrong that it is impossible in principle to commit mass murder with Diesel engines."*

Trunk, who quotes Fritz Berg's 1984 paper on Diesel gas chambers (his footnote 27, p. 33), hence knows about Berg's work, has used many of the sources and arguments from Berg's various papers, yet he has failed to acknowledge that Berg's claim is *not* that mass murder with Diesel exhaust engines is impossible, but rather that it is extremely cumbersome and absurd, especially when considering the available alternatives – just as Trunk has concluded.

1.3.2. The Vehicles and Engine Type Used

It is important to know that by the mid-1930s the Diesel engine had displaced the gasoline engine almost completely on the heavy utility vehicle market in Europe.[16] This is particularly true for the Swiss-Austrian truck manufacturer Saurer, who equipped their trucks only with Diesel engines[17] – in fact, Saurer had been a Diesel engine pioneer for decades.[18] This is an important observation, because from wartime documents we will learn that Saurer delivered the chassis and engines for the thirty ordered gas vans which are said to have been the vast majority of vehicles allegedly used as gas vans, in particularly for what Mathias Beer calls the "perfectioned" "second generation" of gas vans (Beer 2011, p. 159).

1.3.2. Hermetically Sealed Gassing Boxes

When studying pertinent documents and witness testimonies about "gas vans" in subsequent chapters, we will frequently encounter the claim that the gassing box used to kill the victims was hermetically sealed, hence that the exhaust gases piped into it had no way of escaping but

---

16 See www.flambino.ch/truck/uebersaurer/geschichte_saurer/geschichte_saurer.htm.
17 www.saureroldtimer.ch/5000geschichte/5200chronosaurer/index.html.
18 See http://de.wikipedia.org/wiki/Adolph_Saurer_AG; http://en.wikipedia.org/wiki/Diesel_engine; cf. Wipf/König/Knoepfli 2003.

were accumulating inside the box. I will deliberate about this already now, while discussing forensic and technical matters.

The questions raised by this claim are as follows:

1. How quickly does the gas pressure rise inside the alleged hermetically sealed gassing box?
2. What is the effect of this steady rise in internal pressure on the gassing box and on the engine?

Question two has basically two possible answers:

2.a) Either the gassing box bursts, as it can no longer withstand the internal pressure, or

2.b) the engine stalls, as it can no longer expel its exhaust gases into the pressurized gassing box.

Which of the two events happens depends on the stability of the gassing box and on the capability of the engine to overcome an external pressure, which is called exhaust gas back pressure. We will investigate both next.

With the advent of turbochargers and catalytic converters, exhaust gas back pressure has become an important feature of combustion engines. There exists therefore a plethora of data about it, although none of it reaches back pressures anywhere close to where an engine would stall. Under normal operational conditions, engines running on high rpms can produce a back pressure of up to one atmosphere in extreme cases with no sign of stalling.[19] The exhaust back pressure required to stall an engine would therefore be considerably higher, yet of course also noticeably below the engine's compression rate. The actual value depends primarily on the engine's compression rate, which was somewhat lower for engines during the 1940s than it is today, although Diesel engines have always used higher compression rates than gasoline engines, as they have to compress the fuel/air mixture to the point where it self-ignites. They will therefore stall later than gasoline engines.

If the exhaust pipe of a running engine is connected to a hermetically sealed container, the gas pressure in the latter will rise to the point where either the engine stalls or the container fractures or bursts due to its internal pressure. If the container resists the steadily increasing pressure, the engine will stall as soon as the engine's threshold value for tolerable exhaust gas back pressure has been reached.

---

19 http://www.aa1car.com/library/exhaust_backpressure.htm.

For the sake of the argument, we may assume that a wartime Diesel engine could still be operated at an exhaust back pressure of two atmospheres (ca. 2 bar). We will now calculate the amount of gas produced by such an engine.

For lack of better data, let us assume a moderate truck engine volume of five liters[20] and an engine speed of only marginally above idle – say 1,000 revolutions per minute. A four-stroke engine discharges its exhaust gases only after every second revolution, so we would have 500 times five liters of exhaust gases produced in a minute, which equals 2.5 m^3 of exhaust gas. Although it is true that the exhaust gas is slightly pressurized when exiting the cylinder, it cools down considerably afterwards and hence contracts. Within the error margins of our rough calculations, both effects can be considered to compensate each other, so we will ignore them here.

The cuboid cargo boxes claimed to have been used are said to have had a free volume of some 15 to 20 m^3.[21] This means that the pressure in such a cargo box, if closed hermetically, would have doubled within some six to eight minutes. Although such an overpressure is unlikely to make the engine stall, as Diesel engines run on high compression rates, the pressure exerted on the walls of the cargo box would have been immense: 1 atmosphere (≈ 1 bar) of overpressure equals by definition the effect of a weight of one kilogram per square centimeter, or ten metric tons per square meter. Since the long wall of the cuboid cargo box under scrutiny was 5.8 meters long and 1.7 meters high,[22] hence had a surface area of almost 10 square meters, 1 atmosphere of overpressure would have been equal to a load of 100 metric tons! There is no way such a cargo box could have withstood such a force. Already with a

---

20 One of the vans found after the war which was initially speculated to have been used as a gas van had a 7.4-liter Diesel engine; see http://dss.ucsd.edu/~lzamosc/chelm00.htm. But for the sake of the argument, I reduce it to a smaller size.

21 The cargo boxes manufactured for Saurer trucks were 5.8 m long, 1.7 m high (see the document on p. 312) and probably some 2.3 m wide (the documents do not mention a width, but the width of trucks varies usually between 2.30 and 2.50 m. A standard container today has a width of 2.44 m). This amounts to some 22.7 m^3, of which the body volume of the victims has to be deducted. Some 50 to 130 victims are claimed (see Chapter 4.2.4.), which, with an average weight of 60 kg ≈ (60 liters) amounts to ca. 3 to 8 m^3 of filled space. Hence I subsequently calculate with some 15 to 20 m^3.

22 This is valid for the Saurer trucks. The dimensions of the cargo boxes of the other claimed truck models from Diamond/Renault/Opel/Mercedes/… are unknown, but as they are frequently referred to as the "small vans," they must have been considerably smaller. This does, of course, not have any effect on the pressure exerted per square meter of surface area.

tenth of that load – and at a tenth of the time (less than a minute) – the cargo box would have been bound to burst or even explode, had it really been sealed hermetically.

For this reason truck containers designed to withstand any kind of pressure have cylindrical shapes with convex or semi-spherical bases, as can be gleaned from tank cars and generally with containers holding liquids or gases under pressure, for the circular shape distributes the forces exerted by the pressure equally over the entire structure.

It is therefore impossible that any gas van which is said to have piped engine exhaust gases into its cargo box was equipped with a hermetically sealed cargo box. The box had to have some excess pressure release valve or opening in its coachwork somewhere.

This will become a most important point when discussion the so-called Just document (Chapter 2.2.4.), which insists on the alleged fact that the gassing box needed to be hermetically sealed in order to function, but at once states that “97,000” persons “were processed” “without any defects in the vehicles becoming apparent.” This is technically impossible, plain and simple.

2. Documents

2.1. Photographs

If, due to lack of reliable information, one assumes that not a single gas van and no characteristic part of it survived the war, then the next question to ask is whether photographs of the time span exist during which these vehicles were allegedly used. And in fact, several photos of vehicles do indeed exist about which it is claimed that they served as "gas vans."

The best known of these photographs was reproduced by Gerald Fleming (1984, after p. 92) with the caption:

> *"Gas van used to liquidate Jews at the Kulmhof (Chelmno) extermination camp and near Konitz."*

Christopher Browning reproduced this and a similar photo of the same vehicle with a similar caption (1985):

> *"Gas Vans (2 pictures), taken by Polish photographer after the liberation –Yad Vashem Archives."*

The originals of these photos (four of them all in all) were taken by the Commission of Inquiry into the German crimes in Poland at war's end and are now in the Commission's archives in Warsaw (signatures 47396 to 47399). Copies of the originals of these photos are, *i.a.*, located in the archives of the Auschwitz State Museum and of the Yad Vashem Institute in Jerusalem, from where one can easily procure a copy.[23] In 1988 Yad Vashem has stated in a letter to a revisionist researcher that back then the photos published by Fleming and Browning were the only ones it had showing a gas van, and it asked to send in further such photos, should the occasion arise, from which one may deduce that at that time Yad Vashem didn't have any other photos either (see Appendix 10). The photos are reproduced in Appendix 1 (starting on page 279). What do we see there?

The first photo (Illustration 12) shows a truck which has been photographed from the front slightly to the left so that one can see its left

---

[23] Search online at http://collections.yadvashem.org/photosarchive/en-us/search.html.

side. Three men are looking at the truck. The photo in Illustration 13 shows that the truck had a cargo box closed at the rear by a two-winged door, the left wing of which is standing wide open in the first photo. The cargo box extends into the room over the driver's cabin as is common for moving trucks. The radiator grill sports the logo of a German producer: Magirus.[24] As can be seen from the second image, the wheels of the truck seem to be missing, and the number plate is invisible. A photo taken from the rear shows that the cargo box was made of many vertical wooden boards (Illustration 15, p. 281). A photo taken from the interior of the truck's cargo box, though blurred, does not show the wooden boards, hence has obviously been lined with same sheeting. The picture also shows some probably wooden framework of unknown purpose (see Illustration 16, p. 281). As we shall see later, such a framework is never mentioned by any witness.

Although both Gerald Fleming and Christopher Browning have claimed that this is a homicidal "gas van", an impartial observer can easily recognize that *nothing* visible about this vehicle supports this claim. But then why do orthodox historians like Browning and Fleming present it as a depiction of a gas van for homicide? Have they investigated and verified their sources before they added their caption to this photo of an absolutely mundane, apparently decommissioned vehicle – perhaps one among many thousand others that could be found?

Another detail catches the attentive reader's eye: All witnesses quoted in the literature as well as in the various court protocols claim that the "gas vans" exclusively belonged to the five makes Saurer, Diamond, Opel, Renault, and Daimler Benz (see Chapter 4.2.2.);[25] Magirus is not mentioned a single time.[26] The two important documents which we will discuss later in detail likewise mention merely "gas vans" made by Saurer and Diamond.

---

[24] The Klöckner-Humboldt-Deutz AG in Ulm, Germany, which had been formed in 1936 as a merger of the truck manufacturer Magirus and the engine manufacturer Humboldt-Deutz plus in 1938 with the steel producer Klöckner-Werke AG, used this logo only until the end of 1939 for its trucks, so that the truck in the photo must be older than this. Starting in 1940 a circle with the words "Klöckner-Deutz" was used as a logo; see http://de.wikipedia.org/wiki/Magirus-Deutz.

[25] With one extraordinary exception: A West-German court verdict claimed in 1974 that a Ford truck built in the USSR was converted to a gas van in a makeshift way as late as summer 1944, see Chapter 3.7.5.5.

[26] There are two Polish witnesses who falsely identified the truck shown in the photograph discussed here as a gas van: B. Falborski (Chapter 3.6.2.3.) and S. Srebrnik (Chapter 3.6.3.1.).

The origin of Fleming's photo was publicly revealed only in 1995, when Jerzy Halbersztadt, at that time director of the Polish Program of the United States Holocaust Memorial Museum in Washington, DC, posted the following text to the newsgroup Holocaust:[27]

> *"The commission received the information that in the town KOLO (ca. 12 km from Chełmno) in the former factory of Ostrowski there was a van which, according to the witnesses, was used in the death center at Chełmno. The van was found, photographed and researched.*
>
> *The photos taken then are available in the Main Commission's Archives in Warsaw (signatures 47398, 47396, 47397, 47399; the best one is 47398). The captions of these photographs are till today: 'a car for killing people by the exhaust fumes at Chełmno'. One of these photos was reproduced in the Fleming's book 'Hitler and the Final Solution' with the information that it is a photograph of a 'gaswagon' used in Chełmno.*
>
> *Despite of their captions, the photographs do not show the gas van used in the Chełmno death camp. It is clear from the testimonies of Polish witnesses kept in the same archives of the Main Commission (collection 'Ob', file 271 and others). Witnesses to whom the van photographed in Kolo was shown did not confirm that it was one of those used in Chełmno for killing people. Some of them only said that it was similar to those described in their testimonies, but not the same. The most common answer was: 'I didn't see this one'.*
>
> *The inspection of the van in Ostrowski factory, done on 13 November 1945 by the judge J. Bronowski, did not confirm the existence of any elements of system of gassing of the van's closed platform. The witnesses called this van 'a pantechnicon van' (a van to transport furniture). It was produced by 'Magirus-Werke' with a Diesel type engine of 'Deutz'. The plate on the engine stated: 'Humboldt-Deutz A.G. 'Magirus-Werke' Ulm (Donau) Baujahr 1939 Lieferdat 739 Abn-Stempel. Fahrgestell Nr. 9282/38 Nutzlast kg 2700 Fah*[r]*gestell-Baumuster 023. Ei*[ge]*ngewicht 4980 kg. Motor Baumuster FoM 513 zul. Gesamtgew. 7900 Leistung P.S. 105 cm^3 7412. Zulaessige Achsendruecke vorn kg 2400 hinten 5500.' The thickness of the*

[27] http://dss.ucsd.edu/~lzamosc/chelm00.htm; response to an inquiry by Leon Zamosc, University of California, San Diego, 11 Oct. 1995; Subject: Gas vans in Chełmno; enhanced with illustrations at www.deathcamps.org/gas_chambers/gas_chambers_vans.html; since 1996 Halbersztadt has been Director of the Museum of the History of Polish Jews.

car's wooden body was 7 cm, of the door – 8 cm. The walls, door, ceiling and floor were covered from the inside with the 2 mm sheet iron. The car was painted in grey-lead color. Under this paint the inscription was seen on the door of the cab: 'Otto Koehn Spedition[28] *Ruf 516 Zeulen.....da i.TH'.*

I cite all these details to make possible the further comments to the story of this van. It is my feeling that there are some unclear points in this story. Nobody explained for what purpose this van was used? Its door was tightened with an impregnated canvas. What for? Some witnesses had seen this car in the area of the forest of Chełmno starting from the spring of 1942. It is possible that it belonged to the SS-Sonderkommando Kulmhof, too. I came across a version that this van was used for a disinfection of victims' clothes but there are no grounds for it.

In 1945 the prosecutors came to the conclusion that this van was not a gas van of Chełmno. The van was left incomplete and not serviceable in Ostrowski's factory at least till 1950. The last known documents (a correspondence between the Association of Combatants 'ZBoWiD' in Kolo and the Main Commission) of April 1950 inform that there was an idea to move this van to the museum in Auschwitz or Majdanek (till 1990 there was no museum in the Chełmno forest; first monument was erected there in 1964). Those plans were not accomplished and the van was scrapped, probably.

Thus, there is no reliable graphic illustration of the gas vans used in Chełmno."

This statement speaks for itself. I will address the topic of clothes disinfection or disinfestation in Chapter 2.3.

Today the Chełmno Museum shows one of the photos discussed above in its exhibition with a truthful caption reading: "Vehicle found after the war at Koło on the grounds of the Ostrowski factory." The connection to the gas vans is not made explicitly, but the mere fact that it is exhibited will inevitably lead the visitor to think that this must have been such a vehicle. This disingenuous trick is typical for museums of that kind.

Another photo occasionally reproduced has been taken from a documentary about the Nuremberg International Military Tribunal compiled by Pare Lorentz and Stuart Schulberg probably shortly after the

---

28 *Möbelspedition* is the German term for a moving company.

Tribunal had ended.[29] This footage does not give any indication as to what is shown; this is left entirely to the viewer's imagination. There is also absolutely no proof as to the origin of the footage.

Several scenes from it were later put together by unknown persons to create a photomontage which was published by various sources (Friedländer, between pp. 16 & 17; Höhne, p. 57; see Ill. 20f. on pp. 285f.). Four images from this footage even ended up in the files of German prosecutors who were investigating a gassing crime allegedly committed in Mogilev by German forces.[30] Since both witnesses of this alleged crime insisted that these photos have nothing to do with what they remembered, the photos were never used as evidence (see the case of A. Widmann discussed in Chapter 3.7.4.6., esp. from p. 222 onward).

Schwensen has tried to track down the origin of this footage, but concluded that, contrary to unfounded claims to the opposite, it is most certainly a staged studio scene filmed for this U.S. propaganda documentary about the Nuremberg International Military Tribunal. Irrefutable proof for this is the unnatural way the shadows are cast in this footage, requiring several intense lights from various directions. Finally, the ominous-looking shadow of a person in uniform makes it certain that this setting was arranged for its psychological effect. The viewer will assume that this is the shadow of one of the evil Nazi perpetrators watching how innocent victims are being killed with car exhaust gasses.

This fraudulent misrepresentation of a still taken from a fiction movie is not the only case. Another mis-captioned picture of an alleged gas van appeared in several issues of the German news magazine *Der Spiegel* (1963, 1966, 1967a, 1968, 1988) as an illustration of articles, three of which dealt with trials of defendants accused of having participated in the claimed mass murders with these vehicles. This picture is reproduced in Appendix 1 as well (starting on p. 283). It shows the rear of a vehicle bearing a large cross – no doubt a red cross of an ambulance – which looks huge when compared to the person standing next to it. There is again absolutely nothing about this photograph lacking any details that would justify the captions given: "Mobile gas chamber" (1963), "SS gas van: 'The people didn't scream" (1966), "NS gas van,

---

29 National Archives and Records Administration (NARA), 111 M 7596 Reel 5; cf. www.youtube.com/watch?v=liTspfANDXQ, the relevant scenes between 1:06 and 1:16; Reitlinger refers to this reel in his 1953 book, p. 130, unnumbered footnote.

30 Chief Prosecutor Dr. Hillmann. District Court Stuttgart, letter of 30 Nov. 1961 to Ministry of Justice of Baden-Württemberg; ref. 19 Js 328/60; in: Staatsarchiv Ludwigsburg, EL 317 III, Bü 2152.

'nine to ten per m^2'" (1967a) "Gas van of the SS: 'miserable botchery'" (1968), "Rauff gassing van: Death on the cargo area" (1988). Later on, when discussing contemporary documents, we will recognize the significance of the words "nine to ten per m^2." *Der Spiegel* did not give any information about the provenance of the photo. In 1997 David Cole found out that this photo was taken from the 1961 fictional movie "Ambulans" by the Polish-Jewish filmmaker Janusz Morgenstern.[31] It may be assumed that *Der Spiegel* knew of its origin but hid that fact from its readers.

The first paragraph of the 1967a *Spiegel* article reads as follows:

> *"The two box vans cruised around the courtyard of the Berlin Reichskriminalpolizeiamt (RKPA)*[32] *with smoking exhaust pipes. But the air remained pure: The car exhaust gases were piped into the van's interior via hoses."*

The reader is flummoxed: How can exhaust pipes at once smoke *and* leave the air pure? But better still: considering the relatively small size of city blocks in Berlin: Who would be so crazy and let a van cruise round and round in such a restricted area just to produce some exhaust gas, when Berlin was rich in lethal city gas coming straight from the mains, to name just one source of poison gas readily available?

Since the advent of the Internet, "photoshopped" images of alleged gas vans can be found on many websites. The website http://www.deathcamps.org has created(!) several such images, which, together with their own comments, they use to adorn a reprint of Halbersztadt's above-mentioned text.[33] One image of the moving truck taken by the Polish commission has clearly been mislabeled as "Gas Van, found in the former Ostrowski Factory in Koło." While captions printed on the larger "created" images state that they are merely "based" on a photo or have even been "created." Although a note at the bottom of the page clearly states "The pictures of the Diamond, Opel, Saurer, and gas trailer are not original. They just show their possible appearance," other websites simply copy these images without explaining that they are artwork rather than photos.[34] I have reproduced some of these "artworks" in Appendix 1.

33 www.deathcamps.org/gas_chambers/gas_chambers_vans.html .

34 For instance http://strangevehicles.greyfalcon.us/NAZI%20GAS%20VANS.htm.

All things considered, there does not exist any pictorial evidence for the existence of "gas vans." If photos existed, their owners would most certainly have published them by now. But since this is not the case, the only possible conclusion is that the "murder weapon" can just as little be seen on photographs as in reality, although there is a spate of reports presenting the gas vans as a proven historical reality beyond any doubt.

2.2. German Contemporary Documents

2.2.1. Introduction

If the gas vans existed indeed, then we need to find out the conditions under which they were constructed and used. In view of the thoroughness and the Germans' talent to organize, some documentary traces must have been left behind, unless one accepts the improbable thesis, which is nonetheless systematically invoked by certain historians, according to which this operation had been carefully camouflaged and that all traces have been erased.

Although it is relatively easy to construct a vehicle which asphyxiates its passengers during transit, its manufacture requires certain tasks to be done in a workshop, which are unimaginable to have been performed spontaneously. The decision to build such vehicles inexorably had to come from the top of the hierarchy, and it then had to be handed down from one level to the next lower one down to those responsible for carrying out the necessary experiments and to those charged with deploying the vehicles.

Although I have of course no experiences in this regard – and for good reasons – it seems to me that the construction of vehicles meant to kill persons locked up inside of them during transit had to include under any circumstances three technical adaptations:

a. Since panic among a large number of persons can drive people to extremes, such a cargo box would have to be especially strong. Hence, a robust cargo box structure had to be bolted to the chassis, fitted inside with a cage resembling a zoo's big cat cage, which could withstand both shocks during the ride as well as escape attempts of those lock up inside. This is especially true for the door, which had to be particularly reinforced in order to keep the panicking victims securely locked up inside, even if they all stormed the door. In this context

I may remind the reader that a panicking crowd collectively pressing against doors, fences or even walls can make them collapse. A standard rear door of a normal van would not have done the trick. Needless to say that no such construction can be found in the documents we are about to examine.

b. If exhaust gases were used to suffocate the victims, an engine type had to be used whose exhaust gases produced sufficient carbon monoxide to kill within a few minutes. This is to say: the truck had to be equipped with a gasoline engine. Alternatively and more conducively, a vehicle equipped with a wood gas generator could have been used with a means to alternatively switch the wood gas to flow either to the engine or into the cargo box, although this would have rendered the van immobile during gassing operations.
c. If exhaust gases were used, and if occasionally the truck's cargo box was also to serve as a normal transport device, then a mechanism is expected to have been added permitting to alternatively pipe the exhaust gases either to the outside as usual or through a hole into the cargo box. A flexible metal hose or a telescopic pipe extension which can be reversibly attached to the exhaust pipe comes to mind.
d. The entry hole inside the cargo box emitting the noxious gases needed to be designed in such a way that the passengers, any accidentally falling objects or any fluid would be unable to destroy or block/plug it.
e. Furthermore there needed to be at least one pressure relief valve or opening for the excess gases to escape. The latter point is very important and in my view is a *conditio sine qua non* for the functioning of the gas van.

If thirty such vehicles have existed, as is claimed, this means that these design changes would have been made to thirty vehicles. Under these circumstances, we would have to expect at least a part of the pertinent documents in the archives, namely: correspondence on the highest level about the feasibility of the operation, a decision to allocate the required financial resources, correspondence with companies in order to obtain technical advice, cost estimates including construction blueprints, orders, invoices, etc.

In order to get an idea about the quantity of documents which would have been required for the construction of vehicles, it suffices to imag-

ine that for instance the locksmith shop at Auschwitz received detailed written instructions even for the most minute maintenance work.[35]

Let us now look into the actual situation about documentary proof for the construction of the gas vans.

The first document we will thoroughly analyze, and which I consider to be suspicious for reasons explained later, forms the core of the dossier 501-PS of volume 26 of the document collection compiled by the International Military Tribunal at Nuremberg (IMT, Vol. 26, pp. 103-110). It is a letter dated 16 May 1942, which I will subsequently refer to as the "Becker document." After this I will also address three telegrams of 9, 15, and 22 June 1942 which are part of this dossier and which refer to "S-Vehicles" and the need for "exhaust hoses."

There are indisputably authentic documents on special vehicles used by the *Reichssicherheitshauptamt* (RSHA), which, however, do not give the slightest reason to assume that they were used for homicidal purposes. One can consult these documents in the German Federal Archives (*Bundesarchiv*) in Koblenz, where they are kept in a dossier with the reference R 58/871 fº 1. They are reproduced in Appendix 4 of this book and followed by a translation and my own comments, where due. Among these documents is a note which I will scrutinize next and which I consider to be suspicious for reasons to be explained later. It is dated 5 June 1942 and bears the rubber stamp imprint "*Geheime Reichssache*" (secret state matter) like many military documents of that era. Due to its signatory SS-*Obersturmführer* Willy Just, it is usually referred to as the "Just document."

The documents contained in this dossier of the *Bundesarchiv* are evidently an indiscriminate mixture of unrelated items, which creates the impression that they have been picked arbitrarily from various sources for demonstration purposes. In order to assess their respective import, it would be necessary to know where each one of them originated, so that they could be put into the context within which they emerged.

Next there is a letter allegedly written on 11 April 1942 by SS-*Gruppenführer* Dr. jur. Harald Turner, who was the head of the wartime military administration in Serbia. Although it only contains the word "delousing van," this word is considered to be a euphemism or "camouflage word" for "gas vans" by orthodox historians, which is why I will address this highly suspicious document as well.

---

35 Cf. *Le Monde juif* No. 107, July/September 1982, pp. 109f. Carlo Mattogno has given many examples for this in his various books, e.g. 2019.

Then I will address an "Activity Report" by *Einsatzgruppe* B of 1 March 1942, which is so far the only known document of the *Einsatzgruppen* mentioning gas vans in their motor pool.

Finally I will briefly deal with of a letter by Dr. Erhard Wetzel from 25 October 1941, Nuremberg document NO-365, which is occasionally mentioned in the context of "gas vans," although it does not contain this or any related term.

We ought to have expected to encounter a great number of documents dealing with the design, construction, and deployment of the gas vans, but to my knowledge the items mentioned above are the only ones hinting at the existence of such vehicles – the first group in a poorly disguised, the second in an absolutely open fashion, and the others only in the mind of the believer. In the following I will subject all these documents to a thorough analysis. This will expose the bizarre character of some of these documents as well as a number of improbabilities which should not evade the attention of an alert reader. In my opinion these documents do not only fail to prove the reality of the "gas vans," but quite to the contrary they are a grave argument against the thesis that German units had "gas vans" for homicidal purposes.

The result of these preliminary observations is that no material traces, no photographs and no documents exist which unequivocally prove the historical reality of gas vans for homicidal purposes.

2.2.2. The Becker Document (501-PS), 16 May 1942

2.2.2.1. Origin

This letter is the most important part of the Nuremberg document 501-PS and is frequently quoted (IMT vol. 26, pp. 102-105). The other parts of that document are three telegrams, which I will analyze in Chapter 2.2.3.

Paul Rassinier may have been the first to critically comment on this document (1950, pp. 175-178). Next followed German revisionist Ingrid Weckert in 1985 (pp. 18f.), with an updated and more thorough version nine years later (in 1994, pp. 193-218), which appeared in a slightly revised English translation several years later (now Weckert 2019). In this she writes regarding this document's origin (p. 216):

> *"The author has in her possession two letters from the National Archives in Washington DC, USA, each of which attests to a different origin of the Nuremberg Prosecution Document 501-PS.*

> *An April 26, 1945, memo from the Headquarters of the 12th US Army states that a unit of the 12th Army had found the documents in the 'RSHA reserve depot in Bad Sulza'. The originals, the memo states, were sent to the document center in Paris.*
> *The docket, which usually accompanied the documents that were presented to the Nuremberg Tribunal, is dated September 7, 1945. This paper states that the place where the document was found, as well as its source, is unknown and that it had been received from the OCC London (the British Prosecution).*
> *A document without such identification,* i.e.*, with the note '*source and origin unknown*', lacks even slightest evidentiary value. If the defense had submitted an equally dubious paper, the Court would have rejected it instantly."*

2.2.2.2. Analysis of the Form

Mrs. Weckert has subjected the document to a detailed formal critique (2019, p. 217), after which she concluded:

> *"By now the author has in her possession three different 'copies' of the letter from Becker to Rauff, but a copy of the original letter is still not to be had. Evidently no such 'original copy' exists."*

Her conclusions are based on the assumption that the one version which really could be addressed as an original letter is only a carbon copy of the original, which, so she posits, should have remained with the sender rather than ended up in Berlin. This assumption is based on her hypothesis that the letter was written on very thin paper. Whether or not this letter was written on thin carbon-copy paper remains to be demonstrated, as Mrs. Weckert had access only to copies of the original. But even if so, this doesn't prove that the original letter wasn't typed on such paper.

In fact, the file 501-PS as archived in the U.S. National Archives contains two versions of this letter.

One, which I call version A, is a three-page white-on-black photostat of the alleged original. Since the photographic photostat process used in those years to make copies of documents inverted black and white, the original used to prepare this document must have been a normal black on white document.

The other, version B, is a two-page black-on-white copy full of typos, some of which reveal the Anglo-Saxon background of the typist. Instead of the signature, the letter ends with a note "(Sgd)," *i.e.* the Eng-

lish abbreviation for "signed." Hence it is clear that this version was typed by an Anglo-Saxon. Since it contains proper SS runes, it was obviously written on a German official wartime typewriter. This version also bears all the handwritten marks and words as version A, which are very similar both in position and in style to those on version A – except for Becker's signature. All this is perfectly explicable, if one assumes that this document is a retyped copy of version A, which the typist tried to make appear as similar to version A as possible.

The file 501-PS of the U.S. National Archives contains another document signed by Fred Niebergall, Chief of Document Control Branch of the Office of Chief of Counsel for War Crimes, Evidence Division,[36] prepared on 19 July 1948, in which he certifies that the "attached photostat is a true and correct copy of the original." Since photostats are negative photographic reproductions of documents, this can only refer to version A.

It seems that the black on white (positive) version from which this photostat must have been taken is not part of the 501-PS file stored in the U.S. National Archives, although the Archive itself at one point had a black on white version of the first page of this document exhibited in a showcase, which has been photographed, see version C. This version shows creased paper and a reinforcement around the filing holes, which means that this is not a mere positive reproduction of version A. Since its handwritten marks are identical with those on version A, it may be assumed that this may be the original of page one.

Carlos Porter opines "that the white document [version B] is a first draft for the black one [version A]," that is to say: version B was a draft, which some more sophisticated document "producers" used as a template to manufacture the "original" [version C], from which version A was reproduced as a photostat.[37] There is no way right now to prove this hypothesis.

It is a mystery why version B made it into the U.S. National Archive in the first place, since it has no probative value, never received any official endorsement, and was never used by any court of law to prove anything.

---

36 This office handled the safekeeping and registration of all documents brought to Nuremberg for evidentiary purposes and assembled them into document series.

37 www.cwporter.com/501ps.htm.

So where is the positive original now, if the National Archives insist they don't have it? Porter tried to chase it down and came to this result (*ibid.*):

> *"The National Archives in Washington* […] *claim that the original documents are in The Hague. The Hague claims the original documents are in the National Archives.*
> *The Stadtarchiv Nürnberg and the Bundesarchiv Koblenz also have no original documents, and both say the original documents are in Washington."*

There is another version of the Becker document, version D, which is a photostat made from a document which must have been almost identical to version A. It was presented to Walther Rauff, who confirmed its authenticity by writing a note on the left margin saying "I received this letter in May 1942. 18 October 1945 Rauff" (Nuremberg document 2348-PS). I say almost identical, because the photostat presented to Rauff doesn't have the handwritten paragraph marks as can be found on versions A and C, which therefore must have been added onto the "original" after the Rauff photostat copy (version D) had been made, but before the preparation of the photostat found in the U.S. National Archives (version A). The earlier version D presented to Rauff also bears lower Nuremberg archival numbers (A092586 to A092588) than version B (A090025, A090027, A090028; A090026 seems to have been skipped; see on the lower part of each page in Appendix 2). This in spite of the fact that version D had to make a long journey before it could be registered in Nuremberg (Rauff was at that time incarcerated in Italy, see Chapter 3.5.2.).

The only thing that makes me suspicious about this is the length to which the Nuremberg prosecution went to get Rauff to certify the authenticity of this one document. To achieve this, they sent this one document across war-torn Europe for the sake of obtaining a brief sentence and signature on it plus a supportive yet rather terse affidavit. This seems to have been quite an unusual procedure, which I have not heard of for any other Nuremberg document. Apparently, there was never any intention to have Rauff testify about this in Nuremberg, because in that case they would have moved Rauff himself to Nuremberg rather than the document to him.

All in all, there seem to be reasonable explanations for all the differences in the extant versions. Hence, I cannot find any formal reasons to suspect a forgery in this case. Of course, this does not necessarily mean

that the document is genuine. Forging documents is easy, if all the original stationery, office equipment, and a huge amount of original handwritings and signatures are at one's disposal, as was the case for the victors occupying the German authorities' offices after the German unconditional surrender. The proof is in the pudding, as the saying goes, which I will therefore analyze next.

2.2.2.3. Translated Content

In contrast to the Just document, which will be analyzed in Chapter 2.2.4., the Becker letter is not subdivided in numbered paragraphs. In order to facilitate its analysis, Pierre Marais has numbered both each paragraph and each sentence in his 1994 study, and I will apply this method here too, as it will facilitate the subsequent step by step analysis of this document's content. This analysis follows Marais's arguments to a large degree.

I do *not* reproduce the official English translation of the Nuremberg Tribunal here, because it is riddled with faulty translations which gloss over the at times absurd contents of the German original.

"Field Post Number 32704 Kiev, May 16, 1942

B. No. 40/42 –

TOP SECRET!

To
SS-Obersturmbannführer R a u f f
In Berlin
Prinz-Albrecht-Str. 8

1st paragraph:

- 1st sentence: The overhaul of the vehicles at Group D and C is finished.
- 2nd sentence: While the vans of the first group can also be deployed when the weather conditions are not too bad, the cars belonging to the second group (Saurer) are absolutely stranded in rainy weather.
- 3rd sentence: For instance, if it has rained a mere half hour, the vehicles cannot be used because of plain skidding.
- 4th sentence: It can only be used in absolutely dry weather conditions.

– 5th sentence: The question arises now whether one can use the vehicles only on the execution spot while stationary.
– 6th sentence: First, the vehicle must be brought to this place, which is only possible in good weather.
– 7th sentence: But in most cases the execution spot is 10 to 15 km off the traffic routes and is difficult to access already due to its location, [but] during humid or wet weather not at all.
– 8th sentence: If those to be executed are driven or conducted to this place, they notice at once what is going on and become unsettled, which should be avoided if possible.
– 9th sentence: There is only the one way left: to load them up at the gathering point and then to drive off.

2nd paragraph:

– 10th sentence: I had the vehicles of Group D camouflaged as trailer homes by having had window shutters mounted, one on each side of the small vans and two on each side of the big ones, like the ones which are seen on peasant houses in the countryside.
– 11th sentence: The vehicles had become so well known that not only the authorities, but also the civilian population called them ‘death wagons’ as soon as one of the vehicles turned up.
– 12th sentence: My opinion is that even camouflaged it cannot be kept secret in the long run.

3rd paragraph:

– 13th sentence: The Saurer vehicle which I transferred from Simferopol to Taganrog had a brake defect *en route*.
– 14th sentence: At the S.K.[38] in Mariupol it was determined that the brake sleeve [“Manchete”] of the combined hydraulic-pneumatic brakes was broken in several places.
– 15th sentence: Through persuasion and bribery at the H.K.P.[39] I managed to have a mold turned, after which two brake sleeves have been cast.
– 16th sentence: When I got to Stalino and Gorlovka several days later, the drivers of the vehicles complained about the same defect.
– 17th sentence: After consulting with the commanding officers of these commandos, I proceeded once more to Mariupol in order to have further brake sleeves manufactured for these vehicles.

38 *Sonderkommando* = special command.
39 *Heeres-Kraftfahrzeug-Park* = Army Motor Pool.

– 18th sentence: It has been agreed that two brake sleeves will be cast for each of these vans; six will remain in Mariupol as back-up for the Group, and six brake sleeves will be sent to SS-Untersturmführer E R N S T to Kiev for the vehicles of Group C.
– 19th sentence: For the Groups B and A, the brake sleeves could be obtained through Berlin, as the transportation from Mariupol to the north is too inconvenient and would take too long.
– 20th sentence: Smaller defects of the vehicles will be carried out by technicians of the commandos or groups in a workshop.

4th paragraph:

– 21st sentence: Due to the uneven terrain and the hardly describable way and road conditions, the sealings and rivets become loose over time.
– 22nd sentence: I was asked whether in such cases the vehicle ought to be transferred to Berlin for repairs.
– 23rd sentence: A transfer to Berlin would be too expensive and would require too much fuel.
– 24th sentence: To save such an expense, I gave the order that they themselves solder small leaky spots, and if this could not be done any more, to inform Berlin at once by radio that the vehicle Pol. No… was out of service.
– 25th sentence: Furthermore, I ordered to keep all men as far away from the van as possible during the gassings, in order that they will not be harmed by possibly escaping gases.
– 26th sentence: On this occasion I wish to call attention to the following: after the gassing various commandos let their own men do the unloading.
– 27th sentence: I have drawn the attention of the commanding officers of the concerned S.K. to the tremendous mental and physical harm that this work can do to the men, if not just now then later on.
– 28th sentence: The men complained to me about headaches occurring after every unloading.
– 29th sentence: Nevertheless one does not want to deviate from this decree, as it is feared that the prisoners enlisted for the work could use a favorable moment to escape.
– 30th sentence: In order to protect the men from such harm, I ask to give corresponding orders.

5th paragraph:

– 31st sentence: On all occasions the gassing is not done in the right manner.
– 32nd sentence: In order to get the work done as quickly as possible, the driver gives full throttle.
– 33rd sentence: Through this measure the executees suffer a death through suffocation and not as intended a death by being put to sleep.
– 34th sentence: My instructions have now revealed that death occurs faster and that the prisoners fall asleep peacefully when adjusting the levers properly.
– 35th sentence: Distorted faces and excretions, which have been seen previously, could no longer be observed.

6th paragraph:

– 36th sentence: In the course of the current day, I continue my journey to Group B, where further messages can reach me.

(sgd.) Becker
–Untersturmführer"

2.2.2.4. Analysis of the Content

– 2nd to 4th, 6th, and 7th sentence: The last two sentences are pointless repetitions of the first three. Would anyone believe that a truck can be completely incapacitated after just half an hour of rain?

The author of these lines might be hinting at the difficulties the German army faced in the east, but that had little to do with certain trucks skidding about. Road conditions in the Soviet Union were generally catastrophic during the war. There were hardly any paved roads outside of major cities. In addition, the German army was not prepared for the Russian winter, so their motor pool, as everything else, came to a freezing standstill in November 1941. Diesel vehicles in particular, if not filled up with special winter Diesel or alternatively equipped with heated Diesel tanks, fuel lines, and injection pumps (which they weren't), could not move due to the fuel being frozen solid. When the winter finally ended, the upper layer of the frozen soil thawed, yet lower layers stayed frozen for weeks to come. As a result, any melt water and rain did not drain, so the entire unpaved road system of the Soviet Union turned into a huge quagmire, in which the German army got literally stuck. It was not before April or May 1942, depending on the re-

gion we are talking about, that weather and soil conditions enabled the German army to deploy their vehicles again with some reliability.

Of course, everybody involved in the war knew this, as this catastrophic first Russian winter halted the initial German thrust and was one major reason why the Soviet Union did not collapse in late 1941/early 1942.

It is very strange that the Becker document does not even hint at any of this. Instead, already mere humid weather conditions are claimed to have rendered the trucks useless because of skidding, when in fact getting stuck in the mud had been the big problem of all German vehicles. If what the Becker document insinuates here was German army standard during that war, they wouldn't have gotten much farther than Warsaw with that kind of equipment!

– 8th sentence: According to the author of this letter, sometimes the executees had to walk to the execution site, but at other times they were carried there by a vehicle. From this it has to be concluded that the executees and the gas van were at times brought separately to this spot. If the reason for this was that the respective gas van could not drive, then how did the van get to the execution site? Was it left there overnight? And if this gas van couldn't move about, how did the other "normal" trucks transporting the executees manage to get there? What a logistic mess! I may mention in passing that there is not a single witness statement or court verdict claiming that any victims had to walk to the gas-van execution site (see Chapter 3).

In addition, no reason is given why the executees became unsettled when walking to their execution site and what would have been necessary to prevent this.

– 9th sentence: This sentence is obscure, since it does not fit into the context. In order to understand the second part of this sentence, it has to be assumed that the executees had been gathered in a building or in a fenced-in area. But would it not have been common, even inevitable practice anyway to pick up those to be executed at a collection point?

– 10th and 12th sentence: It is ridiculous to claim that the mere mounting of window shutters on the sides of the truck would have sufficed to give it the looks of a trailer home. Besides, motorized, truck-size trailer homes weren't exactly a common commodity in Russia in those years, to put it mildly, because in that era trailer homes consisted of horse-drawn carriages! Hence, a truck thusly adorned inevitably would have *attracted* attention instead of diverting it, all the more so as

a truck with window shutters, yet without any corresponding windows, would have been a peculiar sight, indeed! Even the author of the letter states shortly afterwards in the 12th sentence that "even camouflaged" such a truck "cannot be kept secret in the long run," which makes me wonder why such puerile attempts at camouflage would have been undertaken in the first place; after all, the letter's author does not mention an order to that effect.

In Chapter 3 we will encounter a number of court verdicts claiming that the gas vans were adorned (as alleged camouflage) with drawn-on windows and even curtains, which was just as puerile and futile, attracting attention instead of diverting it. The first such claim stems from a 1943 Soviet show trial (see p. 120), whose respective statements were later parroted in several verdicts of the Munich district court which gave a kind of rehashed performance of the 1943 Soviet show trial (pp. 120, 236, 237, 241). It may be conjectured that the author of the Becker letter was inspired by this 1943 Soviet claim, although he changed the theme from windows to shutters. If so, this would prove that the Becker letter was written *after* the 1943 Soviet trial.

– 13th sentence: Taganrog at the Black Sea lies some 50 km west of the Russia City Rostov on the river Don; it was occupied by German troops in October 1941. They pushed farther east into Rostov-on-Don, but could hold that city only for a week due to adverse weather conditions. They were subsequently pushed back to Taganrog. During the subsequent months the Germans had to struggle primarily with "General Winter," then during the spring thaw with extremely muddy roads which grounded almost all of their motor pool. Up to late June 1942, when the Germans renewed the offensive with "*Fall Blau*" (case blue), Taganrog was the eastmost frontline town in German hands in the Russian south. Being a frontline town, it was under direct control of the German military front line units, who most certainly would not have tolerated stirring up the civilian population by having gas vans driving around killing civilians. It also seems inconceivable that under these circumstances, with Red-Army units in immediate proximity, the RSHA would have ordered a "gas van" to be sent to a location where they were in danger of being captured by a sudden Soviet counterattack.

– 14th to 19th sentence: The word "Manchete," plural "Mancheten" (with ch and a single t) is not part of the German everyday language nor of technical lingo. Dictionaries merely list the word with a "sch" and a

double t as "Manschette." It has several meanings, of which only the technical one is of relevance here, referring to a usually flexible, elastic sheathing for protection, stabilization, or sealing/separation of an item: cuff, sleeve, cast. This term, which appears misspelled seven times in the Becker document, indicates that at least in this context the document talks about real issues, which could corroborate its authenticity.

In order to find out what these items were, Pierre Marais inquired with the Viennese company Steyr-Daimler-Puch (S.D.P.) which had absorbed the Austrian part of the Saurer company in 1959. They proffered the following information (see their letter to Marais on p. 382):

> *"The wartime Saurer vehicles were equipped with a vacuum-supported hydraulic brake, as they are still being used in today's cars and small vans following the same principle.*
>
> *The 'Manchete' mentioned was a rubber membrane of the vacuum servo device which tore frequently, leading to the loss of the power support so that the trucks could be braked only with the force of the foot. Hence it is not a total loss, but a diminished efficacy of the brakes.*
>
> *The mold mentioned in the letter did not serve to cast, but rather to vulcanize*[40] *the rubber membrane."*

This answer gave rise to the following remarks:

First Point: That the Saurer trucks had a vacuum-supported hydraulic brake is confirmed by other sources, according to which the Saurer C-class trucks introduced in 1935 and produced until 1955 were all equipped with Diesel engines and had "servo-supported hydraulic brakes; max. load up to 11 tons."[41]

The term "combined hydraulic-pneumatic brakes" used in the Becker document (*Öl-Luftdruckbremse*; literally: oil/air-pressure brake) implies, however, that the system required a *compressor* in order to generate pressurized air (*Luftdruck*). Although pressurized pneumatic braking systems might have existed in some vehicles, it makes no sense, technically speaking, to combine a pressurized pneumatic system with a hydraulic system, nor is there a precedent for such a combination to my knowledge. But the point is moot, since we know that these trucks had vacuum-assisted hydraulic brakes. The author of the Becker document was obviously not only unfamiliar with the proper terms, but seems to

---

40 Vulcanization: introduction of sulfur into rubber in order to harden it by crosslinking the individual polymer strands.

41 www.saureroldtimer.ch/5000geschichte/5200chronosaurer/index.html.

have made up a non-existing technical term in order to appear knowledgeable. This is surprising when considering that Becker himself had claimed that he was allegedly selected from the highest quarters "to pay particular attention to the mechanical functioning of these vans" and went out of his way in order to organize repairs of the brake system.

Second Point: The definition of the term *Manchete* fits the context of the document: mentioning damaged sleeves with the resulting effects and with a reference to their frequency is in accordance with the facts and thus does not merit any further comment.

Third Point: This confirms that the rubber pieces could not have been cast under the circumstance described in the document, but it still evades me how they could have been vulcanized in their entirety. This would have required that the manufacturing company sent unvulcanized spare part sleeves, which doesn't seem likely; hence this point remains unclear. One can assume that tears in a membrane could be repaired in a makeshift way by mending them with unvulcanized rubber patches, which were then vulcanized by applying a chemical, as it is done with perforated rubber tubes, but that does not require a mold.

The irrational expressions used in the Becker document about turning a mold and the casting of a sleeve in it are therefore conspicuous. Most likely the author of this document knew only that the Saurer trucks frequently broke down due to damaged sleeves – that couldn't have been a secret – but he obviously had no idea what these items really were. This leaves us with two options: Either the author and signer of said report was technically ignorant and quite naïve, or else we are dealing with a crude forgery clumsily using a characteristic of the wartime Saurer trucks, which was well-known to their drivers back then, in order to give it some realistic content. Considering all the peculiarities of this document, I am inclined to posit the second option.

– 15th sentence: Although the author of the letter can claim mitigating circumstances for his act of bribery due to the described situation, it is very strange that an SS officer admits *in writing* to a higher-ranking superior to have acted that way, all the more so since by so doing he also incriminates the responsible person of the workshop, who has acted for far less unselfish motives than the author himself.

– 20th sentence: the author probably means that repairs will be carried out, not defects.

– 21st sentence: It is not specified what kind of sealing is meant. Concerning rivets, it should be noted that it is highly unlikely that they

became loose as a result of the "uneven terrain" and the "hardly describable way and road conditions": Bolted connections can become loose – this happens frequently – yet rivets hardly ever do. But if they do, such damage is often serious, as loose rivets cannot be repaired but have to be replaced, and while becoming loose, they often widen the holes into which they were fastened. This gives the impression that the author let his fantasy run loose without bothering about the probability of his claims.

In this context it is worth noting that many witness testimonies and subsequently many court verdicts claim that the cargo boxes used were merely lined with sheet metal on the inside, which means that the cargo box itself was made of wood, since a sheet metal lining would have been superfluous, had the box been made of metal. Hence, if we follow the majority of anecdotal evidence, it would have been the sheet metal lining which, according to the Becker document, had become leaky and needed to be soldered to keep it airtight.

– 22nd, 23rd, and 24th sentence: Fissures in metal plates are not sealed by soldering but rather by welding. Such repair work could have been done at the spot, so that it is incomprehensible why the vehicles had to be sent to Berlin for such a repair work.

The perseverance with which the author insists on the issue of sealing the gassing box is noteworthy when considering that gas vans used for homicidal gassings could have worked only, if the *sealed* cargo box, which sported a *sealed* door – the witness statements emphasize this over and over again – had openings permitting the *escape* of the excess exhaust gases (see Chapter 1.3.2.), which is to say: they *could not* and *should not* have been sealed!

– 25th sentence: By referring to "possibly escaping gases," the author once more confirms his underlying hypothesis that a proper operation of a gas van required as sealed cargo box, as this phrase implies that under normal conditions of the gassing operation no gases escape near the vehicle. But as already described in Chapter 1.3.2., an engine whose exhaust pipe is connected to a sealed cargo box will bend and eventually blow the box apart. Hence we have a physically or mechanically impossible claim here.

Not to mention the fact that "possibly escaping gases" could not be more dangerous for those operating the vehicle than the inevitable inhalation of exhaust gases of city traffic or of the idling engine of a stationary vehicle.

– 26th to 29th sentence: The author bemoans that the unloading of the gassing victims, which does "tremendous mental and physical harm" to those doing it, is sometimes performed by his men, and he suggests that orders are given to have inmates do this work. But according to mainstream historiography, the killing method "gas van" had been invented precisely because of the following reason:

> *"However, the mass shooting of Jews, Gypsies and other Soviet citizens affected the morale of the Einsatzgruppen (operational groups) that carried out the executions behind the front-line troops."* (Kogon *et al.* 1993, p. 52)

In the same anthology Walter Rauff is quoted as follows:

> *"At the time to most important consideration for me was the psychological stress felt by the men involved in the shootings. This problem was overcome by the use of gas vans."* (*ibid.*, p. 53; see Chapter 3.5.2.)

I may point out that the last sentence from the above quote allegedly stemming from Rauff is in blatant contradiction to the 27th sentence of the letter at issue, which was addressed precisely to Rauff!

In 1980 the Munich District Court stated that

> "[…] *later, about early summer 1942 and on orders from the Imperial Security Main Office, the so-called gas van was used for the killings in order to save ammunition and to spare the members of the commandos the terrible scenes of the executions."* (Rüter *et al.* 1968ff., vol. 44, p. 250)

From this we ought to conclude that the execution method used previously – shootings – which is common practice during wartime, caused even more mental and physical harm to those charged with it.

As we will see when dealing with various court cases, the situation is contradictory and confusing indeed; while some witnesses or verdicts stated that gas vans replaced shootings due to gassings being less stressful for the executioners, others stated that gas van executions were eventually abandoned (or never implemented to begin with) because this method of killing was allegedly even worse than shootings (see *e.g.* Chapters 3.7.3.1. and 3.7.5.2.). However, I have not found a single occasion where the unloading is said to have been done by SS men.

With regard to jeopardizing their physical health, the respective men could inhale only insignificant amounts of exhaust gases when opening the doors, and since the operation took place outdoors, the risk was minimal in any case.

– 32nd sentence: This sentence implies that the gassings took place while the trucks were stationary, because a driving truck cannot be operated at "full throttle" all or even most of the time. This in turn implies that the truck's engine was running without any load. In case of Saurer trucks with Diesel engines, their exhaust gases would not have had toxic amounts of carbon monoxide under these circumstances; hence they would have been unsuited for murder by asphyxiation (see Chapter 1.3.1.). This way the victims could only have been very slowly cooked to death with the hot gases.

– 33rd & 34th sentence: These sentences make no sense at all, since the cause of death is suffocation under any circumstances. "Putting to sleep" by means of poisonous gas is merely a euphemism for asphyxiation. While it cannot be argued that suffocation under the described conditions can occur while the victims were either awake or asleep, no reason can be seen how "adjusting the levers properly" could have an influence on the drowsiness of the victims.

We must keep in mind that Diesel exhaust gases of yore have always been full of smoke and irritants under *any* circumstances, which arouse people rather than lull them to sleep. It was therefore technically impossible to adjust such an engine in such a way that it would have produced exhaust gasses capable of putting anyone to sleep peacefully.

It is not even clear what "levers" (plural) the author is talking about. The truck had only one accelerator pedal, and that is called "*Gaspedal*" or simply "*Pedal*" in German, not "*Hebel*." One court verdict mentions the adjustment of a stationary vehicle's idling speed (*Standgas*), probably by means of a hand throttle or choke, but as evidence for this it quotes the Becker document (Rüter *et al.* 1968ff., vol. 33, p. 284), so we are going in circles here.

Even though pulling the choke would have increased the engine's rpm while idling and hence the amount of gas produced, it would have had no significant effect on the composition of the exhaust gases. The same is true if the driver of a stationary truck gave "full throttle," as the Becker document mentions (on this see Berg 2019, pp. 447f.). The only effect would have been that the gassing box had been filled faster with the hot but non-toxic Diesel exhaust gases. But the amount of gas produced by the position of the accelerator or the choke has neither an influence on the time it took for suffocation to occur nor on the circumstances under which death set in, that is, whether the victims fell asleep

or remained awake, whether they ended up having distorted faces or not, or whether they lost control of their bowel movements or not.

It is, by the way, astounding that the National-Socialist hierarchy even bothered with such humanitarian consideration in this context and allegedly tried to achieve that the victims fell asleep peacefully and forever, or so the Becker document suggests. But since adjusting the levers properly wouldn't have had any effect anyhow, this story is simply untrue. The real reason why the author included this tall tale was probably to give the impression that he is talking about real events. But since the claims are nonsense, this exposes the author as a liar.

The reference to these "levers" probably inspired later "witnesses" to confabulate about some undefined levers used to initiate the piping of exhaust gases into the cargo box, as we will see later on.

– 35th sentence: as mentioned in Chapter 1.3.1., Diesel exhaust gases are not only hot but also full of smoke and irritants so that no matter which way one *tries* – with or without success – to suffocate anyone with them, it is going to be torture. Hence, quite contrary to what the author of the Becker document claims, it must be argued that, the faster death occurs, the less time the victims have to suffer and panic; "full throttle" would therefore indeed have been the best advice, if it could speed up the process at all, which it couldn't.

The analysis of this letter leaves behind an awkward impression. This impression as well as the criticism I have expressed about each point prompt me to doubt the authenticity of this letter.

I will now turn to the other documents which form part of 501-PS.

2.2.3. The Telegrams of 501-PS

2.2.3.1. Two Versions

The texts of the telegrams of 6 and 15 June 1942 exist in two different versions, which are reproduced consecutively in IMT, Vol. 26 (pp. 106-109). Since the documents reproduced in the IMT volumes have been retyped rather than photographically reproduced, I will subsequently refer to the alleged originals of these documents as archived in the U.S. National Archives.

Both versions of each telegram bear handwritten marks, which give the impression that both versions were prepared in the offices of the RSHA in Berlin. Version A of the telegram of 9 June 1942 – the one reproduced first in the IMT volume – is typed on the *lower* half of a

sheet of paper, while version B of the *later* telegram of 15 June 1942 is typed on the *upper* half; hence they were apparently typed counter-chronologically. Although there were six days between the receipts of these two telegrams, and although 7749 other telegrams arrived at the RSHA in the meantime (or so the serial numbers suggest: version A 144,702, version B 152,452), somebody must have taken the trouble to pull out these two telegrams and retype them in inverted chronological order on a separate sheet of paper. Even the handwritten note "Repair immediately after return – report completion" was added at the top left corner to the retyped telegram of 9 June 1942, although apparently by a different writer than the one which is on the other, ostensibly original version. This version also includes a red underlining of the address line (so the footnote in IMT, Vol. 26, p. 106), whereas version B of this telegram has the secrecy note beneath the address line framed in red (*ibid.*, p. 108, footnote).

2.2.3.2. 9 June 1942 from Belgrade

Apart from the Turner letter, which I will discuss in Chapter 2.2.7., this is the only documentary evidence hinting at the use of special vehicles (*Spezialwagen*–Saurer) in Serbia, although the telegram's content gives no indication as to what exactly was special about it.

In the subsequent English translation, I have removed the upper-case style and fixed some typos to make it easier to read (see Appendix 3 for the German text):

> *"To the R.S.H.A. Office Roem 2 D 3 KL. A–to att. of Major Pradl – Berlin .––*
> *Re.: Special wagon–Saurer.—*
> *Dossier: none.––*
> *The motorists SS– Scharf. G o e t z – a. M e y e r have accomplished the special order, hence the*[y] *named can be* [are] *ordered back with the above-mentioned vehicle. Due to cracked axle of the rear half of the axle a transfer per axle* [cannot take place].—
> *I have therefore order that the vehicle is transferred back to Berlin loaded on the* [by] *railway.*
> *Expected arrival between the 11. a 12 6. 42 The motorists Goetz a. Meyer accompany the vehicle.– –*

The Comm. of SIPO a. the SD[42]*– Belgrade– Roem 1 – BNR. 3985/ 42 42*
sgd. Dr. Schaefer– SS– Oberstubaf–"

The telegram also contains a handwritten note in the upper left corner reading:

"Repair immediately after return. Report completion."

Version A of this telegram's text, which was typed on the lower half of a separate sheet of paper – with the text of the telegram of 15 June 1942 in the upper half – sports a typo not contained in version B. It reveals the originator of this retyped version: the second occurrence of the word "*Fahrzeuge*" (vehicle) is mistyped as "*Fahryeug*." This is a common mistake of a German typing on an English typewriter or vice versa, because on German typewriters the position of the Z and Y are swapped in comparison with their position on an English typewriter. A second typo also included in version A but not in version B is located two words earlier, which sports a question mark instead of a comma. Since the telegram was typed in upper case, this indicates that the typist accidentally forgot to release the upper-case key (or unlock the caps lock). And in fact, old German mechanical typewriters had the question mark as the upper-case alternative of the comma. Although this was not the case for all English typewriters of that age, some did have the same comma/? combination as the German typewriters.[43]

Hence, although this cannot be said with certainty, the most-likely scenario here is that an Anglo-Saxon typist wrote this telegram on a German machine. The less likely scenario is a German typist writing on a somewhat rare English typewriter. The almost impossible scenario is a German typist writing on a German machine or an English typist on an English machine, because then the accidental swapping of Y and Z wouldn't have happened.

It is therefore reasonable to assume that this retyped version was created by either a person normally typing on an English typewriter but in that occasion using a German model, or a person used to typing on German typewriters, but in that case using a somewhat rare English typewriter. This means in plain English that the versions A of the two telegrams were probably (re?)typed after the war in a setting of a mé-

---

42 SD stands for *Sicherheitsdienst* – security service.

43 A Google image search of typewriters shows that some old typewriters had a comma/? combination, while others had today's layout. I don't know when that combination was changed to today's standard.

lange of Germans and Anglos-Saxons as well as German and English typewriters. This wouldn't be a problem, if this sheet of paper didn't have a number of German handwritten remarks on it giving the impression that this document is an original created in 1942.[44] So it is either an incompetent way of creating a copy of the originals – but why are they then part of the set of "original" documents? – or these handwritten remarks were meant to look real and are therefore fake. Hence, the most likely scenario is a person used to English typewriters writing on a captured German typewriter. Hence this summary sheet is suspicious.

Another indication that this telegram is not authentic are the names of the two drivers mentioned: Götz and Meyer. To this day no such individuals who are said to have been employed as drivers by the RSHA have been identified. This stands in stark contrast to other individuals who were never mentioned in any document as gas van drivers but who were nevertheless identified somehow and were even prosecuted for allegedly driving such vehicles (see Chapters 3.6.4., 3.7.4.1., 3.7.4.10f.). This indicates that the drivers mentioned in this telegram probably never existed. Browning has hidden this important fact in a footnote (Browning 1983, p. 79, fn 75):

> *"All attempts to trace the drivers, Götz and Meyer, have been unsuccessful. The few gas van drivers who have been identified were full-time Sipo-SD drivers subsequently assigned to gas van duty."*

The reverse of this telegram (version B, the ostensible original) has the following handwritten text:

> *"II D 3a (2)* *Berlin, 11 June 42*
> *c/o Pr. Sukkel for further action and immediate initiation of repairs. I request to be informed of the arrival of the vehicle.*
>
> pp. Just
>
> *II D 3a (9)* *Berlin, 16 June 42*
> *Note:*
> *The vehicle arrived here on 16 June 42 around 13.00. Repairs will be initiated immediately after thorough cleaning.*
> *pp.* [signature illegible]

---

[44] The red underlined address line already mentioned plus at the top right: "II D 3a Major Pradel Niederhausen (Kop)"; at the right margin below the dotted page halving line: "Nach Rückkehr sofort wieder instandsetzen- Fertigstellung melden (Kop)" = Repair immediately after return– report completion (Kop).

II D 3a 9 *Berlin, 13 July 42*
1. Note: The S-vehicle reg. no. 71463 has been completed ~~and is to be sent to Riga with the driver.~~
2.) Sent to head of motor pool T.J. Niederhausen with the request to take note and for further action.
pp. [signature illegible]

2.2.3.3. 15 June 1942 from Riga

"To the RSHA. – ROEM. 2 D 3 A – Berlin.–
Secret State Matter.––––
Re. S.–Wagon.–
At the commander of the SIPO a. the SD. Belarus a transport of Jews arrives weekly which is to be subjected to a special treatment.– The 3 S-wagons existing there do not suffice for this purpose. I request the allocation of another S–wagon (5 tons). Furthermore I request at once to also send 20 exhaust hoses for the existing 3 S–wagons (2 Diamond, 1 Saurer), as those available are already leaky.
= =
= The Comm. of SIPO a. the SD. Ostland
Roem. 1 T – 126/42 GRS. [secret state matter]
A. sgd.: Truehess. HStuf. [correct: Truehe, SS HStuf.]
Task: [handwritten:]
1) *When can the deployment of another S-wagon be expected?*
2) *Are spare exhaust hoses available, on order or when deliverable?*
3) *Submit draft for answer"*

It is from this document that the claim arose that the Germans used trucks built by the U.S. company Diamond as gas vans. Although Diamond was a big player in the U.S. truck market in the 1930s and during the war, no U.S. truck company ever exported trucks on a considerable scale to European markets. There may have been a few selected Diamond trucks in Germany, and if so, they were probably vehicles with extraordinary designs rather than trivial trucks, but the probability that any of them ended up being used as gas vans was minute. In addition, since Germany could not get any spare parts for these trucks after the entry of the U.S. into the war at the end of 1941, these vehicles would probably not have been used for anything requiring reliability. It is therefore much more likely that the name Diamond was entered in this

"telegram" by a writer who thought that using one of the best-known truck models – best known to him – was a wise thing to do. Since Saurer was a well-known name for Diesel and gas-generator trucks in Germany, it cannot surprise to see this name mentioned in the telegram either, all the more so as the name "Saurer" had already been mentioned during the war in Soviet show trials as the make of gas vans used in the USSR. (I will return to that in Chapter 3.5.1., p. 133.)

Hence, apart from the typo replacing a Z for a Y in the summary version of the first telegram, here we have another indication that the mastermind behind the creation of these documents was probably Anglo-Saxon (i.e., U.S.-American) in nature rather than German.

It should also be noted that the telegram's claim that three existing trucks were insufficient to "process" the incoming weekly transports is untenable. Each of these transports contained some 1,000 people (Mattogno/Graf 2020, pp. 200f.; Rüter *et al.* 1968ff., vol. 19, p. 195), so if we assume five workdays a week, each van had to treat (1,000 ÷ 5 ÷ 3 =) 67 people, which amounts to one gassing each day. It is therefore pure nonsense that "the 3 [existing] S-wagons existing there [did] not suffice for this purpose." That shows that this telegram was produced in order to make the alleged ongoing mass murder look even bigger than it theoretically could have been, if all deported individuals had indeed been gassed. This is yet another indication that the telegram has its roots not in reality but in the imaginations of propagandists.

2.2.3.4. 22 June 1942 from Berlin

This is the draft for an outgoing telegram allegedly sent to Riga in response to their request for more trucks:

"Reichssicherheitshauptamt *Berlin, 22 June 1942*
I1 D 3 a B. No. 240142 s[ecret] *S*[tate]*M*[atter]
Secret State Matter!
1.) T[ele]*G*[ram]
To the Commander of the Security Police and the SD Ostland
in Riga
Subject: S Wagon
The transfer of a 5 t Saurer can be expected middle of next month. The vehicle is currently at the Imperial Security Main Office for repairs and to make minor changes. 100 m hose will be sent along.
p.p.
(signature as head)

2.) F[ollow-]*u*[p]. *immediately at II D 3 a (9)*
p.p.
Rauff
[page 2]
Tasks:
1) When can the deployment of another S-wagon be expected?
2) Are (?) exhaust hoses available, on order or when deliverable?
3) Submit draft for answer"

The typed text on page two is a copy of what had been handwritten below the Riga telegram, where the typist couldn't discern the word "spare" (German: *Reserve*).

This document is the link between the two telegrams discussed before, as a handwritten note on page one of the original allegedly states:

"No. T. J Niederhausen for further action and please note the remark of 13 July 42 on the back of the telegram from Belgrade. For technical reasons only five rings of 10 m each can be sent."

The remark of 13 July 1942 mentioned that the truck sent back from Serbia had been repaired and that it is to be sent off to – where exactly? The telegram requesting the van came from Riga without indicating that the vans ought to be sent elsewhere, so Berlin had to assume that the van had to be sent to Riga. That this was indeed initially anticipated is shown by the handwritten remark on the back of the Belgrade telegram (see Chapter 2.2.3.2.). Fact is that all except one of the mentioned deportation transports to be "processed" went to Minsk, not Riga, which is therefore where the vans would have been needed. This may be the reason why this part of the sentence was crossed out. Yet still, it is striking that the most important information needed to send the van on its way – its destination – is not mentioned anywhere.

What is strange as well is this document's request on page 2 under #3 to submit a draft for an answer, even though it already contains the very answer to the telegram from Riga on its page 1.

2.2.3.5. Leaky Exhaust Hoses

Flexible metal hoses, which are commonly referred to as exhaust, ventilation or suction hoses, are usually made of thin, sometime zinc-plated steel bands coiled up like a spiral.[45] They overlap at the edge, where

[45] Some of today's exhaust hoses are even made of high-temperature resistant plastics or mineral fibers, but such materials did not yet exist during the Second World War.

they interlock in a groove. Although this gives them some flexibility, such hoses are neither gastight (unless especially sealed) nor pressure resistant. Apart from funneling gases, these hoses are also used to transport free-flowing solids (grains, powders, pellets, granules, etc.), which would wear down rubber or plastic hoses too fast. Characteristic for these metal hoses was their relatively low flexibility.[46] In the present case, where the hose is said to have made a 90° bent from the horizontal exhaust pipe to the cargo box floor, this low flexibility would have made an installation difficult, and the metal hose bending first downward from the exhaust pipe and then in an arch back upward toward the floor opening would be in danger of hitting the road surface (see Illustration 27, p. 384). A technician wearing his thinking cap would therefore either have installed an L-shaped pipe in the floor to avoid having to bend the hose, or better still, he would have connected the cargo box with the exhaust pipe through a hole in the lower side wall (beneath the grate), thus also eliminating the risk of items falling or fluids flowing into this pipe. Such a connection would have required only a bend shaped like a flat ~ in the metal hose, if such a hose was necessary at all.

This brings up the next point: Neither does the normal configuration of an exhaust pipe require a hose and usually doesn't have one either, nor can a reason be seen why it is absolutely necessary to use a metal hose in order to convert a van into a "gas van." The exhaust pipe could have been readily connected to the cargo box with a solid pipe, where simple devices suffice to permit a thermal expansion. A reversible connection of the exhaust pipe to the cargo box would have been required, however, if occasionally the truck's cargo box was to serve also as a normal transport device, as I have explained on page 40. And in fact, several court verdicts claim that the gas vans were first driven to an execution site with the victims locked up inside the cargo box, but that the gassing itself occurred only after arrival, when the vehicle was stationary again (see Chapter 4.2.7.). Whether such a procedure would have made sense and would have been efficient is a question I will not discuss here.

An absolute necessity for flexible metal hose would have existed only, if the cargo box had a special design requiring the exhaust system to be both connected to it *and* moveable. However, in all the witness tes-

---

[46] Although today's hoses are quite flexible and usually also sealed, cf. www.flextraction.co.uk/pdfs/hoses/metal-hoses/Metal-Hose-375-Special-Fibre-Seal.pdf.

timonies I have encountered only one claims a movable cargo box, here a cargo box that could be tipped in order to unload its cargo (Kogon *et al.* 1993, p. 70). But even that could have been done after disconnecting the exhaust system from the box. In addition, this statement stands in such crass contradiction to all other witness statements and to the extant documents that it can safely be disregarded.

Since metal hoses for hot aggressive gases were zinc-plated, they could resist corrosion relatively well. Dangerous to exhaust pipes and hoses are primarily acidic components of the exhaust gas itself, like nitrous and sulfuric oxides, which, if dissolved in water, form highly aggressive acids. Water in exhaust pipes and hoses forms primarily during the first minutes of operation, when the exhaust system is cold and water contained in the exhaust gas condenses inside of it. Major amounts of fluids that have accrued inside the pipe due to other reasons would have been blown out right at the start of the engine.

Although the "telegram" gives no reason why the hoses were leaking, the Just document analyzed in the next chapter suggests that "accruing fluids" were responsible for this. It could be hypothesized that human body fluids are meant with this, but it is a fact that such fluids – urine, blood, feces, saliva – are not corrosive in any way. As a matter of fact, the ammonia which develops from urine, the main body fluid to be expected in a hypothetical mass murder scenario, is slightly alkaline and would therefore *reduce* the corrosion of the acidic exhaust gases by neutralizing them partially.[47]

Hence it takes years before metal exhaust hoses or pipes rust through, in particular if they are zinc-plated. Why then did Riga request 20(!) new exhaust hoses for three trucks, and Berlin was prepared to sent 100 m (which amounts to an individual hose length of 5 m), although they had to reduce that amount "for technical reasons" to just 5 m × 10 m. This would mean that theses hoses were expected to become leaky again after just a few months. Was someone slashing them with axes or knives? Or were they really dangling so low that they scraped the roads?

I want to point out moreover that the one information which the Berlin recipient of the telegram from Riga really needed in order to supply these exhaust hoses is not included: their diameter, as such hoses come in a broad variety. Considering that two unusual Diamond trucks had to

[47] On the corrosive effect of various chemicals on steel see www.engineeringtoolbox.com/metal-corrosion-resistance-d_491.html.

be equipped with them, this information would not have been easy to come by and could not be expected to be known by some pencil pusher in Berlin.

2.2.4. The Just Document, 5 June 1942

This file memo is one of the documents contained in the dossier R 58/871 fº 1 of the German *Bundesarchiv* in Koblenz which comprises 22 pages altogether. This dossier contains correspondence regarding "special vehicles."[48] The document quoted below has been reproduced in the German edition of Kogon *et al.* in its entirety (1983, pp. 333-337). The French and English editions contain only a reproduction of the first page and a translation of the complete text (Engl.: 1993, pp. 228-231). Ingrid Weckert has analyzed this document as well in her two papers (1985, pp. 23-28; 2019, pp. 222-227). My subsequent analysis is based to a sizeable part on Marais's observations.

2.2.4.1. Translation[49]

II D 3 a (9) No. 214/42 g. Rs. Berlin, June 5, 1942

Onliest Copy.

Top Secret!

I. M e m o:

Regarding: Technical modifications to the special vehicles deployed in service and in the process of construction.

For example, 97,000 were processed since December 1941 with 3 deployed vehicles without any defects in the vehicles becoming apparent. The known explosion at Kulmhof [=Chełmno] has to be assessed as a single case. Its cause is to be ascribed to an operating error. In order to avoid such accidents, special orders have been issued to the offices concerned. The orders have been kept in such a way that the degree of security has been increased considerably.

The other experiences made so far let the following technical modifications appear to be expedient:

1. To allow for the rapid inflow of the carbon monoxide while preventing excessive pressure, two open slits of 10 cm × 1 cm [4" × 0.4"] are to be located in the upper back wall. These are to be covered on

---

48 See the German original in Appendix 4.

49 Since several versions of this document have different passages underlined, hence are probably later additions, underscores have been omitted here altogether.

the outside with easily movable hinged metal flaps in order to allow for self-regulation of any potential excess pressure.

2. The vans' load usually amounts to 9 to 10 per m^2 [10 sqft]. Although no overloading occurs thereby for the spacious Saurer special vehicles, utilization in that form is not possible, because their off-road capability is highly reduced by this. A reduction of the load area appears to be necessary. This will be achieved by shortening the body by approximately 1 m [39"]. The above difficulty is not to be solved, as has been done so far, by reducing the number of units. This is because a reduction in the number of units necessitates a longer operation time, since the empty spaces also have to be filled with carbon monoxide. In contrast to this, a substantially shorter operation time suffices in case of a shorter loading area and a completely filled loading space, since free spaces are absent.

   In a discussion with the manufacturer, it was pointed out by the latter that a shortening of the cargo box would result in a disadvantageous weight displacement. It was emphasized that an overloading of the front axle occurs. In fact, however, an unintended balancing in weight distribution occurs, because during operation the load striving towards the back door always predominantly lies there. Due to this an additional load on the front axle does not occur.
3. The connecting hoses between the exhaust pipe and the vehicle frequently rust through, because they are corroded on the inside by accruing fluids. To avoid this, the filler pipe is henceforth to be mounted in such a way that introduction proceeds from above downward. This will prevent the influx of fluids.
4. To allow for easy cleaning of the vehicle, a tightly closeable drain opening is to be located in the center of the floor. The drain cover with about 200 to 300 mm [8" to 12"] in diameter is to be equipped with a U-trap so that thin fluids can also drain out during operation. In order to prevent clogging, the U-trap is to be equipped with a sieve on top. Thick dirt can be rinsed off through the large drain opening during cleaning of the vehicle. The vehicle's floor has to slant slightly toward the drain opening. This is to ensure that all fluids flow toward the center immediately. Thus, it is largely prevented that fluids enter into the pipes.
5. The observation windows installed so far can be omitted, as they are hardly ever used. During construction of further vehicles, this omis-

sion of the windows saves substantial labor time with regard to their difficult installation and sealing.

6. The lighting appliances are to be more strongly protected from destruction than they have been so far. The iron grid guard over the lamps is to be domed enough to render damage to the lamp window no longer possible. From practical experience it was suggested that the lamps should be omitted altogether, since they are allegedly never used. It was found out, however, that, when the back door is closed, *i.e.*, when it gets dark, the load always urgently strives towards the door. This is because, at the onset of darkness, the load strives towards the light. This renders it difficult to latch the door. It was established that a din always breaks out at the point when the doors are closed, probably due to the eerie nature of darkness. For this reason, it is expedient to turn the lights on before and during the first minutes of operation. The lighting is advantageous also during operations at night and for cleaning the vehicle's interior.
7. In order to achieve a faster and easier unloading of the vehicle, a retractable grate is to be installed. It is to be guided on small wheels in U-shaped iron rails. The extraction and retraction has to happen by means of a cable winch mounted below the vehicle. The firm commissioned with this installation considers this design to be unfeasible at this time due to a lack of personnel and material. The implementation is to be suggested to another firm.

The above-mentioned technical modifications are to be implemented for the vehicles in service only, if one vehicle has to undergo a different major repair. The aforementioned modifications are to be considered as far as possible for the 10 commissioned Saurer chassis. Since the manufacturer has emphasized on occasion of a consultation that technical modifications are currently not possible or only for minimal modification, it ought to be tried, using a different company, to equip at least one of these 10 vehicles with all the improvements and modifications resulting from practical experience made so far. I suggest commissioning the firm in Hohenmauth with the single implementation.

Considering the circumstances, a late completion has to be expected for this vehicle. It then has to be kept available or to be deployed not only as a model but also as a back-up vehicle. In case it proves reliable, the other vehicles are to be withdrawn from service one by one and are to be converted following the model vehicle.

2.2.4.2. Analysis

2.2.4.2.1. Form

Ingrid Weckert was the first to thoroughly criticize this document, to which I refer the interested reader (Weckert 1985, 2019). I will give a summary of some passages of Weckert’s most recent paper below. But it suffices to have some elementary knowledge of the German language in order to spot anomalies and errors in this document.

First of all there is the non-existing superlative “onliest” (“*einzigste*”) used in the letterhead (although this is quite a common error in German colloquial speech). Much stranger is the expression “for example” used in the letter’s first sentence. As Ingrid Weckert pointed out correctly (2019, p. 224):

> *“It makes no sense to begin a letter with ‘for example’. The term ‘for example’ has meaning only when something was described or claimed in the foregoing, for which an example then follows. In this particular case ‘for example’ cannot even refer to the ‘re.:’-line; the ‘re.:’-line speaks of technical modifications which are necessary, but the text immediately states that no defects have occurred in the vehicles. And that is not exactly an example to demonstrate the necessity for technical modifications!”*

Other than being a nonsensical initiation of a letter, the implication of using “for example” in the first sentence is that the 97,000 processed units are only one example among several. Yet the author leaves the reader in the dark about what this “several” could have been.

It is interesting to note that Kogon *et al.* committed their own forgery twice in their book by omitting these telltale words “for example” altogether with no hint at the fact that they have omitted anything (1993, pp. 55, 228).

Furthermore, the word “*Siphon*” is misspelled with a “y” (which, by the way, is one English way of spelling it); the word “*weitgehendst*” should actually be “*weitestgehend*,” although this mistake has become

part of the German vernacular, hence could not cause suspicions on its own.

The word "lamp window" ("*Lampenfenster*," paragraph 6) is neither part of the German language nor of technical lingo nor does it make sense. It should be "*Lampenglass*" (lamp glass) or "*Lampenschirm*" (lampshade).

The word "*Syphonkrümmer*" (siphon elbow pipe) is a pleonasm, as a "*Siphon*" already refers to a U-shaped pipe, hence there is no need to add "*Krümmer*" to it (literally: bender, meaning a bent pipe).

These first remarks raise the question whether the author of these lines was a native German speaker and whether he was a technician. No less justified is the question: who writes to whom here? The first line of the letter seems to contain the abbreviation of the organization creating this memo: II D 3. The recipient is mentioned unequivocally and by name: the leader of group II D. According to Uwe Dietrich Adam (1985, p. 241), II D 3 refers to "the section automotive transports [...], subordinate to the section for technical matters." The signatory, Just, therefore signed a letter sent to one of his superiors, yet the tone of the memo does not confirm this assumption: Although the author starts out with a statement of accounts, he increasingly slips into the role of a man who is giving orders rather than receiving them.

No indications are given in the instruction that this memo was accompanied by enclosures (in this case the word "enclosure(s)" (*Anlage(n)*) or the respective abbreviation (*Anlg.*) had to be included in the document), yet as we will see during the study of its content, the questions dealt with would have required several drawings and schematic illustrations. The memo does not have the features of a general instruction – for this it goes too much into details: diameter of the siphon, position and size of the slits; nature of the flaps; extraction and retraction of the retractable grate, etc.

These preliminary observations are meant to alert the reader to the highest degree of vigilance during the subsequent study of the content of this document, which exhibits so many formal peculiarities.

2.2.4.2.2. Content

Let us first look at the very first words of this document: "For example 97,000 were processed since December 1941 with 3 deployed vehicles." During my analysis of the Becker letter (p. 51) I explained already the catastrophic conditions which the German army had to deal with in

Russia during the winter 1941/42. Hence, processing 97,000 units (or even several such amounts) under these conditions would not have been trivial at all, if considering that during the Russian winter the majority of the German equipment was inoperational due to the extreme cold, followed by a spring when catastrophic roads conditions did not permit any major German operation. Hence already the three words "Since December 1941" render this first sentence historically unlikely.

The objects of the memo at issue are technical questions; six modifications to existing vehicles as well as one for those to be manufactured in the future are suggested:

1. adding slits and flaps;
2. shortening the cargo box;
3. relocating the exhaust gas filler pipe upwards;
4. adding a drain in the floor and slanting the floor toward it;
5. removing observation window (in future vehicles);
6. better protected lamps;
7. adding a retractable grate.

Before discussing these suggested changes, let me first direct our attention back to the first sentence about the 97,000 processed units.

The second chapter of *Nazi Mass Murder* bearing the title "A Code Language" (Kogon *et al.* 1993, pp. 5-12) deals with the alleged code terms used by the "Nazis" in order to hide the "extermination." Doubtlessly in keeping with this, the author of this memo has not stated in his introductory sentence with the 97,000 figure, what kind of "units" are meant. Yet this measure of precaution was most naïve and futile, as it becomes subsequently all too clear that only human beings can be meant by those "processed." (Let's keep in mind here that this introductory paragraph serves the function of a statement of accounts and is as such directed to superiors.)

97,000 "units processed" within six month (180 days) in three vans means that each truck had processed (97,000 ÷ 3 ÷ 180) ≈ 180 units every single day, which amounts to three "loads" daily per truck of 60 victims each.[50] Considering this result, which must have been very satisfactory in the eyes of those responsible for this operation, one can only be surprised by the demand for so many and certainly important modifications to the vehicles which have accomplished these "achieve-

[50] The wartime Saurer heavy goods vehicle had a maximum load capacity of 5 metric tons, although the RSHA letter of 27 April 1942 mentions 4.5 metric tons (see Appendix 4, which amounts to 60 people of 75 kg each, or 75 people of 60 kg each).

ments" "without any defects […] becoming apparent."[51] If they operated as flawlessly and efficiently as the author claims in his first sentence, why change them? Remember: If it's not broken, don't fix it!

I will now scrutinize and comment on each of the demanded modifications.

1. Adding slits and flaps

The demand to have two slits of 10 cm × 1 cm added to the rear wall of the cargo box so that excess gas can escape means that at the time the memo was written no such slits existed and that the gas had no other way of escaping – or else the slits would have been superfluous. Hence the cargo boxes would have been sealed hermetically and the gas pressure would have built up inside until the doors were opened; many "witness testimonies" as well as the Becker document analyzed before confirm this explicitly. Nonetheless these boxes are said to have gassed almost 100,000 human beings. In my mind this is a radical impossibility.

Connecting an exhaust pipe to a closed cargo box would have resulted in an immediate and rapid increase in gas pressure, which would ineluctably have led to the cargo box buckling and eventually bursting (see Chapter 1.3.2.). That the cargo box could have resisted the resulting high internal pressure is extremely unlikely, but even if that had been the case, then the engine would have died as soon as the counter pressure had reached a certain level.

Considering these facts, how could it have been possible to gas even a single person under the described circumstances? The reference to an "explosion at Kulmhof" does not yield any answer either, for first of all it says that it was a single case, and second it is said to have been caused not by a flawed design but due to an operating error.

---

[51] A flawless operation on such a grand scale indicates that the engines were operated normally, quite in contrast to claims made by Georges Wellers, who writes in Kogon *et al.* (pp. 281f.): "In the 'S-Wagen' and in the first gas chambers of the extermination camps, exhaust gases rich in carbon oxide produced by deliberately maladjusted engines were used." It is unlikely that such deliberately maladjusted engines would have functioned flawlessly for an extended period of time; such maladjusted engines tend to overheat, misfiring, and explosions of explosive fuel/air mixtures in the exhaust muffler. Such engines also have a greatly reduced power while consuming exorbitant amounts of fuel. It is, moreover, known that the flooding of the engine with excessive amounts of fuel leads to excessive wear of the engine, in particular in the case of Diesel engines due to particulate matter (Diesel smoke). Yet even under such conditions, executions with Diesel engine exhaust gases still last several hours; see Chapter 1.3.1. and Pattle *et al.* 1957.

If, however, openings are added to the cargo box, the situation changes instantly; the connecting hose can simply be attached to the exhaust pipe, and in this case the cargo box functions as a giant muffler, through which the exhaust gases flow.

The author of the memo specifies that the slits are to be equipped with flaps "in order to allow for self-regulation of any potential excess pressure." Unless this is simply a case of clumsy wording, we are dealing with an error in reasoning here. Of course it is the slits which prevent an overpressure, not the flaps; quite to the contrary, the latter create a minute overpressure already due to their weight and also because they cover a certain part of the slits, depending on the degree to which they are open. Considering that the amount of gas produced by the engine is considerable, these flaps would indeed have to be constantly in the open position during a hypothetical gassing operation to prevent excess pressures. So what were the flaps good for? The only technically plausible reason for adding such flaps is to prevent both the formation of excess pressure and a free exchange of air while *no* exhaust gases were piped into the cargo box. But why was that necessary, if the vans served no other purpose than gassing people? I will return to this point in Chapter 2.2.6. when discussing the likely real purpose of these RSHA special vehicles. Anyway, the uselessness of these flaps for a hypothetical gassing van seems to have slipped the author's attention.

I should add here that in a later, probably authentic RSHA document of 23 June 1942 reference is made to the fact that the first 20 Saurer trucks delivered to the RSHA had "openings covered with sliders" in their back doors, which means that the cargo boxes of the real Saurer trucks *never sealed hermetically*, although such sliders could have been a major obstacle for excess gases to escape, depending on their design. The RSHA document mentioned requested the *replacement* of these sliders with slits of the same kind as described in the Just document (see point 7 of this document on p. 329), whereas the Just document gives the impression that the slits were not as replacement item but rather a new feature.

2. Shortening the cargo box

The two paragraphs dedicated to this demand seem to be the result of an abstract intellectual construct.

– First the author of the memo states that the Saurer truck cannot be loaded with 9 to 10 per m^2, "because their off-road capability is highly reduced by this," "although no overloading occurs thereby."

1. Remark: If considering that the cargo boxes installed on the Saurer chassis had a surface area of (5.8 m × 2.3 m ≈)[21] 13.3 m², then a loading density of nine to ten persons per m² would have resulted in a load between 120 and 133 persons.

First of all, this amount is at the upper range of what witnesses have claimed about these vehicles, whereas the most frequent claim is about 50 to 60 persons (see Chapter 4.2.4).

Next, assuming an average weight of 60 kg per persons,[52] this density would also have resulted in a total load between seven and eight metric tons, which is two to three tons (40 to 60%) over the maximum load capacity of the Saurer trucks of five tons.[50] Hence the statement "although no overloading occurs thereby" is clearly false.

Finally I may suggest that it is psychologically impossible to pack people that dense under the claimed circumstances without having their disciplined cooperation. Beating them up and threatening them, as the perpetrators are said to have done according to numerous court verdicts, would more likely have led to panic rather than cooperation. In this context Marais cited a newspaper report, according to which the Japanese traveling in Tokyo's subways do not succeed in packing themselves more densely than just over seven people per m², although they all cooperate and try hard (*Le Monde*, 20/21 January 1985).

Hence the claim that nine to ten people per m² could be and usually were loaded into these trucks is simply bogus.

2. Remark: The off-road capability of a vehicle depends for the most part on its design and not on its load. It is primarily ensured by the existence of several driven axles – the front axle among them – a reduction gear unit, and possibly a limited slip differential. (As to the reason of driving the truck off-road: from several court verdicts it emerges that the trucks are said to have been driven to off-road mass graves or tank ditches where the victims were allegedly buried.)

– The author of the memo categorically states next: "A reduction of the load area appears to be necessary."

3. Remark: The way this sentence is phrased it implies that a reduction of the load area would compensate for the reduced off-road capa-

---

52 Usually, an average weight of 75 kg is assumed for adults, but since the lower weight of children has to considered, I have reduced this average weight to 60 kg.

Illustration 2: A heavy goods Saurer Diesel truck, series C, as produced between the mid 1930s and the 1950s.[53]

bility, which is very odd. But when continuing to read, it becomes apparent that the decrease in size is demanded for a different reason.

– Next the author of the letter claims that the impeded off-road capabilities could not be remedied by "reducing the number of units."

4. Remark: Reducing the number of those locked up in the cargo box would indeed have solved the difficulty – if an excess load had been the reason to begin with. Yet such an approach is claimed unsuitable because…

– The author of the document claims to prove that a mere reduction of the number of people per load would increase the time needed for the killing, "since the empty spaces also must be filled with CO."

5. Remark: Assuming a ceiling height of some two meters for the gas vans of an unknown make (*e.g.* Rüter *et al*. 1968ff., vol. XXI, p. 230) – otherwise the victims couldn't have stood inside the cargo box – the volume available for each square meter of floor would have been 2 m³. In case of the Saurer trucks with their cargo box height of merely

53 http://de.wikipedia.org/w/index.php?title=Datei:Saurer1038.jpg&filetimestamp=20041127172501.

1.7 m, it would have been 1.7 m³. Assuming further that 9.5 people with an average volume of 60 liters each (≈60 kg) could indeed be crammed onto one square meter, they would occupy some 0.57 m³, which amounts to 28.5% of the total volume (2 m ceiling height) and 33.5% (1.7 m ceiling height) respectively, hence some 71.5% and 66.5% had to be filled with gas even then. Even when reducing the density drastically to five persons per m² – a density more likely to be achievable with non-cooperative victims – then the percentage to be filled with gas would have risen only from 71.5% to 85% (2 m; +19%) and from 66.5% to 82% (1.7 m; +23%), respectively. Hence, even reducing the density of the victims drastically would have increased this free volume only marginally. Considering that flushing the entire cargo box once with exhaust gases would have taken only a few minutes (see Chapter 1.3.2.), an extension of this time by some 20% isn't exactly something any mass murderer would be worried about. This proves that the author's worries were misplaced at best.

– The author of the document continues his train of thought and claims that the shortening of the cargo box (that is, the gassing box) by one meter would allow "a substantially shorter operation time" due to the reduction of free space while keeping the load.

5. Remark: Reducing the Saurer cargo box length from 5.8 m by one meter reduces its length by about 17%, so the loading capacity goes down accordingly. If assuming a box width of 2.3 meters and a loading density of ten persons per square meter, then the load would go down by some 22 persons from 133 to 111. The corresponding calculations for free space would look similar as those above. Which way ever one looks at it, there is no reason to assume that such a change would lead to "a substantially shorter operation time." Apart: if the gassing device had been constructed properly and if the amount of gas flowing through was sufficient – which could have been the case only and exclusively if an opening existed – then the existence of free space had basically no influence on the speed with which suffocation occurs. It can therefore be ascertained that the "Saurer special vehicles," if maintaining their off-road capabilities had required it (which is not evident at all), could have been loaded with considerably less than nine to ten persons per square meter without noticeably increasing the required gassing time. Hence there was no apparent reason for the demanded shortening of the cargo box.

– As if he had second thoughts, the author of the memo points out that a shortening of the cargo box "would result in a disadvantageous weight displacement" and that "an overloading of the front axle occurs."

6. Remark: This is not true. Although the shortening of the rear part does indeed lead to a shift of the center of mass of the – presumably evenly distributed – load toward the front, this does not result in a higher load on the front axle, because the total weight has also been reduced (this is, after all, the initial hypothesis). Provided, of course, that the vehicle isn't overloaded in general, which would have been the case with a loading density of nine to ten persons per m^2, but that would have primarily affected the rear axle bearing the main load, not the front axle.

– The author of the document is nevertheless convinced that such an overloading would occur, but he discovers a palliative remedy: "the load striving towards the back door always predominantly lies there"!

7. Remark: Can one seriously believe that nine to ten persons crammed onto each square meter can compact themselves even more and thus shift their collective center of mass? And apart from that: How could the victims strive toward any location during a mobile gassing operation, that is, while the car rolled off-road, jostling the load back and forth, left and right? If there ever had been a danger of overloading an axle, it would have been during off-road transit. If this sentence proves anything, then the fact that nowhere near ten persons per square meter were ever crammed into that cargo box, as moving collectively in one direction and coming to lie predominantly at a certain part of the cargo box presupposes that it cannot have been cram-packed with people.

In brief: a slight shortening of the cargo box could not have caused an overloading of the front axle, and even if that had been the case, then this would most certainly not have been compensated by the victims striving toward the rear of the truck. It should also be noted that only a massive overloading can lead to premature wear or even to a broken axle, as the load-bearing capacities of axles is in general generously designed.

3. Relocating the exhaust gas filler pipe upwards

The author of the memo writes:

> *"The connecting hoses between the exhaust pipe and the vehicle frequently rust through, because they are corroded on the inside by accruing fluids."*

In Chapter 2.2.3.5. I have already discussed the improbability that exhaust hoses rust through within a few months. It would have taken years before such metal hoses had rusted through.

The subsequently stated request to change the exhaust gas entry opening implies that as of then the gas had been piped into the cargo box through just one opening in the cargo box floor.

Udo Walendy claims that by connecting the hoses conducting the gases to the floor of the cargo box, it had to be assumed right from the start that fluids would enter into it, be it during a gassing procedure or while cleaning the cargo box (Walendy 1979, p. 30). I don't agree with this, as any engineer would have rightly assumed that any liquid which might have seeped into the hose would have been driven out and/or dried by the hot exhaust gases, hence this issue of fluids would not have been considered to be a problem during a gassing. The hole could have been blocked by any other object, though, which might have been accidentally or intentionally dropped into the hole by a victim. Such a blocking of the pipe would have caused the motor to die right away, which would have ended the gassing operation right there. And if such a blocking of the pipe could occur accidentally, how could one have prevented the victims from deliberately blocking this inlet hole with an object? How can one gas 97,000 people under such circumstances?

I may also point out that the reference to the frequent corrosive destruction of the connecting hoses contradicts the initial claim of the letter that so far no "defects in the vehicles" have become "apparent."

4. Adding a drain in the floor and slanting the floor toward it

While adding a drainage opening in the middle of the floor does not pose any difficulties, it is not at all easy to design the floor in a way that it has an incline toward that opening in order "that all fluids flow toward the center immediately." Since the floor of utility vehicles is generally even, this requested change would either have required the construction of a special concave floor or a second floor of this shape covering the original floor. Both solutions would have required comprehensive efforts.

Regarding the subsequent sentence that such a floor would prevent "that fluids enter into the pipes" (this must refer to the pipes for the in-

troduction of gas), it seems the author of that letter has forgotten that in the previous paragraph he had requested to move that introduction pipe away from the floor, which, if realized, would have completely solved the problem of cleaning the cargo box – unless he assumed right away that his suggestion of moving the gas inlet had hardly any chance of being accepted. But if his superiors would not implement such a small change as moving the exhaust opening away from the floor, how could he seriously assume that they would go through the trouble of installing a concave floor?

5. and 6. Removing observation window and better protected lamps

Removing the observation window would indeed facilitate the production of the vehicles, even though their installation does not pose a technical problem, as Udo Walendy has pointed out.

Demanding a better protection of the lamps makes sense, although it is not conceivable why the victims should have had an interest in damaging the light, if they panicked "due to the eerie nature of darkness." If it was dark, how did they find the lamp in the first place? If the lamp was on, it wasn't dark, was it?

It is more likely that the victims would have tried to damage the observation window, which, if not made of bullet-proof glass, could have been destroyed with a mere stone that a victim could have grabbed just before entering the truck. Hence, a suggestion of *either* securing *or* removing the observation window completely should be expected here.

Although it is conceivable that the victims would have had the tendency to "strive toward the door" after the doors had been closed, the author's explanation is nonsense that this movement toward the door was due to "the load" striving "towards the light" when the ceiling lamp had been turned on. Since the doors were allegedly "hermetically sealed," no light could have entered from it. Apart, the only natural light entering the cargo box after the doors had been closed would have come through the observation window. Hence if they did indeed strive toward the light, the victims would have moved toward the window, particularly after the commencement of the gassing, and if only in an attempt to break the glass for the sake of getting fresh air. If they moved toward the door, then only because they *knew* it was a door and hoped to get out despite it being locked. Such a reaction would indeed be natural and could actually become so intense in situations where crowds fear their demise that they can break open even the most sturdy, locked doors

(while squeezing and trampling to death some unlucky fellows, for sure).

7. Adding a retractable grate

Such a device is seemingly easy to design, but its installation and operation would have caused great difficulties, because this grate needed to be able to carry a heavy load, which would have caused leverage forces when pulling out the grate.

In summary, this document makes a similar impression as the previous one: Its technical improbabilities are no less frequent than those of the former document. Especially the first requested change requires by its nature that the vehicles could not have functioned in their original design; this leads us to radically doubt the authenticity of this letter. As we shall see later, Ingrid Weckert shares out point of view. I will next summarize some of her observations.

2.2.4.3. Ingrid Weckert on the Just Document

Ingrid Weckert's original German analysis of this document (1985, pp. 23-28) was published in a somewhat revised version in English (2019). Instead of quoting it in length, I will only give the highlights of her analysis here and refer the reader to her full text for a more thorough reading.

The contents of the German Federal Archives file R 58/871, which reflect a coherent sequence of events, are as follows:

April 1942: The RSHA considers equipping its special vehicles with a device to accelerate their unloading.

23 and 24 April 1942: Representatives of the RSHA and the Gaubschat Company meet to discuss three possible solutions, of which only the third, the manufacture of a retractable grate, is taken into consideration.

27 April 1942: The RSHA has a note prepared with a precise suggestion for the construction of a retractable grate.

(30 April 1942: In a letter to the Gaubschat Company the RSHA requests the agreed-upon design changes according to the above-mentioned note. This document is not part of the file, but is mentioned in the next document, the response of the Gaubschat Company.)

14 May 1942: In a letter to the RSHA the Gaubschat Company declares that is cannot implement the changes requested in the RSHA letter of 30 April 1942 due to lack of personnel.

23 June 1942: Internal writing by Pradel. As its first point it discusses the impossibility to have the outstanding vans produced by a Czech company, since secrecy could not be guaranteed. Point two of the memo is a draft for a letter by the RSHA to the Gaubschat Company, in which, with reference to a meeting between RSHA officials and Gaubschat employees of 16 June 1942, the originally requested major changes of the vehicle design are abandoned in exchange for seven minor modifications.

18 September 1942: The Gaubschat Company informs the RSHA in its response that the requested design changes will be implemented, but initially only for one vehicle.

24 September 1942: The Gaubschat Company informs the RSHA that it will manufacture the remaining nine vans.

All these documents bear the same file reference number of the RSHA: "II D 3 a (9) Nr. 668/42." Hence these documents were not classified. These documents are reproduced in Appendix 4 with translations and comments, where due.

There are two more documents in this file R 58/871, which have no connection to these documents:

– Letter of the RSHA of 26 March 1942 to the Institute for Police Technology (*Institut für Kriminaltechnik*) regarding a special van for the Mauthausen Camp.
– Note of the RSHA of 5 June 1942 (the Just document).

The first one in the list was probably accidentally filed in that folder by mistake (or with malicious intent), whereas the last one is the Just document, which bears a different reference number: "II D 3 a (9) Nr. 214/42 g. Rs.," where "g. Rs." indicates that the document is classified as "secret state matter."

The unsuspicious documents of file R 58/871 form a logical sequence of correspondence between the RSHA and Gaubschat regarding requested modifications to certain special vehicles, whose purpose is the transport of some goods, without specifying the type of goods. Nothing in them indicates that they deal with anything criminal. These documents all have the same reference number, are not marked as secret, have each sheet numbered (not the pages), and follow one another chronologically. They deal with changes to be made exclusively to fu-

Table 1: Comparison of the Documents in File R 58/871

FEATURE	CORRESPONDENCE	JUST LETTER

Pagination	per sheet	per page

* "Reichssicherheitshauptamt" on 27 April, "Der Chef der Sicherheitspolizei und des SD" on the others.

ture, that is, newly constructed "*Sonderfahrzeuge*," the common German term for special vehicles.

From the contents of these letters, it can be derived with certainty that those vans could *not* have been used for transporting living human beings.

First of all, the height of the vans after their suggested conversion would only have been 162.5 cm at most (5'4"),[54] which is inadequate for transporting standing people. Next, it is stated that a minimum free clearance between a potentially tippable floor and the ceiling would have to have been a mere meter (3'4"), because otherwise the load would be crushed. Hence this load, whatever it was, could not have been people, some if not most of whom must have been expected to stand upright even after their presumed death, if the van had been cram-packed with people.

One suggested change requested that an "angled gridwork" of 30 to 40 cm (approximately 12" to 16") in height was to be added to the end of a prospective floor grate in order "that the load does not fall over the last grate towards the back of the driver's cabin." Living, standing people, however, could never be prevented from falling over such a low trellis.

Weckert therefore concludes that the special vehicles discussed in those letters cannot be the same as those discussed in the Just document.

In contrast to this stands the Just document, which has a different reference number, hence does evidently *not* belong to this line of correspondence. It is also the only one with all its pages numbered and rubber-stamped as "Top Secret." Plus, it talks about changes to future *and* old "*Spezialwagen*" (special wagons), a term never used in the other

54 It might even have been lower, see my consideration on p. 88.

documents. A summary of the discrepancies between this document and the others can be gleaned from Table 1.

2.2.4.4. The Just Document and the Letter of 23 June 1942

In and of itself, the Just document contains, as we have seen, numerous anomalies, which raise doubts about its authenticity. When comparing it with the letter of 23 June 1942, one of the other documents in the file R 58/871, the authenticity of which cannot be doubted due to its internal logic and chronological consistency, Ingrid Weckert was able to show that the Just document is actually a rewritten plagiarism of the RSHA letter of 23 June 1942.

While both documents have seven points, the RSHA letter's content is always innocuous, whereas the Just letter gears them toward homicide (see Weckert's tabular juxtaposition in 2019, pp. 225, reproduced here in on pp. 334f.). Since there is no direct relation between the seven points made in both letters, this alone may not be a strong argument to claim a forgery. The most obvious proof for a forgery, however, is the fact that the Just letter, dated June 5, is actually referring in its point 2 to a consultation between the RSHA and Gaubschat, which the letter of 23 June 1942 shows to have taken place only 11 days later: on 16 June 1942!

It is difficult to imagine that such anomalies are a pure coincidence and that the pre-dating was *not* a deliberate act.

2.2.4.5. Comparison of the Three Versions of the Just Document

Table 2: Differences between three version of the Just letter

Page	German Federal Archives	*NS-Massentötungen…*	*NS-Prozesse*
1	no underlinings	date line underlined; three lines from "*Seit*" to "*auftreten*" underlined	no underlinings
3	no underlinings	three lines from "*Es wurde*" to "*starkes*" are underlined	no underlinings
4	no underlinings	line from "*Drängen*" to "*erfolgte*" is underlined	no underlinings
5	no underlinings	the line "*SS-Obersturmbannführer Rauff*" is underlined	no underlinings
5	right margin marking with word "*ja*" (yes) plus initial with date present: "$R_{10/6}$"	no marking, no word, no initial or date	no marking, no word, no initial or date

Interestingly enough, although the Just document claims to be the "onliest" copy, it actually exists in at least three different "onliest original"

forms. Two of them are easily accessible, as they have been reproduced in widely available books, whereas the third is a photocopy of DIN A4 size (21 cm × 29.7 cm) in the file R 58/871 of the German Federal Archives. The differences between those three versions are summarized here and are also given in more detail in Table 2:[55]

– The first "original" is in the German Federal Archives. We take it as the standard here.
– The second "original" was used by Kogon *et al.* (1983, pp. 333-337). Here several text underlining have been added, plus on the last page vertical marks at the edge, the word "*ja*" (yes) next to them, as well as an initial and date claimed to stem from Rauff ("$R_{10/6}$") are missing.
– A third "original" was published by Rückerl.[56] It is almost identical with the copy in the German Federal Archives, except that here, too, the vertical marks, the "*ja*" and the initial with date are missing on the last page.

Weckert also pointed out that the initial on the last page of the version in the German Federal Archives, which is claimed to be Rauff's, is very similar to that on 501-PS, but decisively different to Rauff's signature and initial on other documents. Be that as it may, since anyone could have made this initial, it doesn't prove much.

These differences do not pertain to the machine-written text, which seems to be identical in all three versions. One may therefore assume that they all derived from the same document.

Since the Just letter exists in three versions, even though it claims to be the "onliest" copy, it must be assumed that the "original" was changed by later additions and/or deletions. How did the original look? Was it the version reproduced in *NS-Prozesse*, which shows the least changes? Or the one in the German Federal Archives, which bears an initial and a date – which is interpreted to stand for the recipient (Rauff) and the date of reception (June 10)? Or the one reproduced in *Nationalsozialistische Massentötungen…*, which contains numerous underlinings?

Logic makes us assume that the original ought to be in the Federal Archives, if the document is authentic. In that case the authors of both

---

55 For the archival version see Appendix 4 (p. 324). For the two version published in books see Appendix 5, starting on p. 340.

56 Rückerl 1971, pp. 209-213; it ought to be pointed out that Rückerl is also among the editors of the book *Nazi Mass Murder* (1993).

books mentioned have reproduced this version, but purged the margin lines and the initial plus date at the end. While the word "*ja*" could simply have been clipped off during reproduction for the book, the lines at the margin and the initial with date run into the text area and thus had to be blotted out manually (in 1971 there was no Photoshop around yet). But why would they have deleted Rauff's(?) initial and the date on the last page, if they support their thesis, as Ingrid Weckert rightly pointed out? And even though it is conceivable that some investigator or prosecutor using a copy of this document has underlined the most incriminating sentences of this document – for this is what is underlined in the Kogon version – why would he also have underlined the date line on page one and Rauff's name and rank on the last page?

It is impossible to come to coherent conclusions from these conjectures, so the questions posed here remain unanswered.

2.2.5. Comparison of the Becker and Just Document

Although both the Becker document of 16 May 1942 and the Just document of 5 June 1942 appertain to the same kind of vehicles, which are claimed to have been prototypes deployed around the same time, there are considerable differences in both documents. In fact, what they state

Table 3: Juxtaposition of the Becker and the Just documents

BECKER DOCUMENT	JUST DOCUMENT
Reference to numerous flaws. No reference to openings for gas release.	Reports 97,000 executions, "without any defects in the vehicles becoming apparent."
In spite of the numerous flaws no changes to the vehicles are requested.	Although no defects had occurred, seven changes are requested (internal contradiction).
Reference to difficulties of moving the vans: during moist and rainy weather the vans are inoperable.	Reference to a highly reduced off-road capability while fully loaded, resulting in the need to reduce the load.
Emphasizes the importance of keeping the cargo box hermetically sealed; it is even considered to send the vans to Berlin for this purpose.	The first of the requested changes concerns two slits of 1 cm × 10 cm to avoid high internal pressure.
The vans were camouflaged without attaining a permanent deception about their purpose.	No attempts at camouflage were implemented.
Thoroughly addresses the danger of the operating personnel inhaling the gases – although the cargo box is hermetically sealed.	No reference to such a danger.
The author wants to ascertain that the victims do not die of suffocation but die a humane death through falling asleep.	No efforts are made to induce a painless death of the victims.

about the alleged gas vans is at times outright contradictory, giving the impression that both authors were *not* writing about the same objects. A summary of the main discrepancies is given in Table 3. They clearly show that only one of these documents can be genuine, if any.

Regarding the layout one difference is conspicuous: While the Just document was made in flawless machine writing and contains no typos or corrections (see Appendix 4), the version B of the Becker document (single-spaced) is riddled with all sorts of typos and handwritten corrections (see Appendix 2); versions A, C, and D (double-spaced) seems to have been written with more care, but as far as can be judged from the extant reproductions – photographs – this version still does not reach the meticulousness with which the Just document was produced.

In summary: The Becker documents, versions A, C, and D, give a better impression of authenticity than the three versions of the Just document, which are based on one single machine-written, impeccable text that had obviously been tailored after the war to achieve a certain goal. It goes without saying that this does not imply that the authenticity of the various versions of the Becker document is historically beyond reproach!

2.2.6. The Real Purpose of the RSHA Special Vehicles

The information contained in the file R 58/871 about the cargo boxes of the RSHA special vehicles do not reveal anything about the nature of the intended load. All one can ascertain is that the material wasn't particularly fragile, since the unloading was to occur "fast" and "automatically"; for this reason, it was considered making "the entire cargo box or a second floor tiltable."

Here is Pierre Marais's hypothesis about the nature of the intended load:

The RSHA special vehicles with the described cargo box allowing a fast automatic unloading were meant for the transportation of corpses.

The following points support Marais's hypothesis:

1. The organization responsible for the conversion of these vans was responsible for security and police issues, which indicates that third persons were meant to remain unaware of the load. The load could have been corpses – of executions, "natural" deaths, or war casualties – which had to be transported *en masse* to crematoria, open air incineration places, or mass graves.

2. The load was obviously not (or no longer) fragile or delicate.
3. The weight of the load, 4,500 kg, corresponds to some 60 to 75 corpses, which would have amounted to an average of six corpses per square meter, which sounds plausible.
4. The requested hygienic measures:
   a. In order to permit a thorough and effortless cleaning, the inside of the van had to be covered with smooth sheet metal. The protruding parts of the back wall had to be beveled with sheet iron. A large opening had to be included in the cargo box's floor.
   b. In order to limit foul smells from exiting the van, the cargo box was to be sealed, though obviously neither airtight nor pressure-resistant. Openings in the upper part of the side walls served to allow any excess pressure building up inside to escape while preventing a free exchange of air.

   In addition to Marais's supportive points, I may add my own:
5. The technician at the Gaubschat Company who supervised the design and construction of the cargo boxes ordered by the RSHA, a certain M. Bauer, testified in 1961 that the RSHA employees Pradel and Wentritt had told him during a visit that they would need the vehicles in order to transport corpses caused by typhus.[57] Since Bauer had to know what the load would be for which he had to build a cargo box, it surely didn't matter what the cause for the victims' death was. Hence I consider it likely that Pradel and Wentritt told Bauer the truth about the cargo, but not necessarily about the reason for their existence.
6. In the original version of his Nuremberg testimony, Otto Ohlendorf consistently used the term "*Totenwagen*" = corpse vehicle (or wagon for the dead). The "*Toten*" was later struck out and replaced by "*Gas*" (IMT, Vol. 31, p. 41; see Chapter 3.5.3.). It may be assumed that he did this either due to habit, as he used to call these vehicles that way, or in order to somehow slip a message into his affidavit for future readers.
